SIR,—There is want and misery in the West of Ireland. The potatoes were almost a complete failure last year. The oat crop was wretched. The men who go harvesting in Wales and England earned little or nothing last summer, because the crops were quickly and easily saved. Other years a man has often brought back £10 to £15 to pay the rent and provide for the winter's needs. The girls go to Scotland to earn money. But the last was a bad year for them also. A chairman of County Council "has never seen such a clamouring for work." He had work for a few days to give to 150 labourers. 700 applied to be taken on! He knows many families now living upon Indian meal. Another credible witness avouches that many poor creatures have had nothing but Indian meal to live upon since last June. The terrible thing is that now credit is exhausted most of the peasants are heavily in debt to "the shop," and no more meal will be given them! There are no rich neighbours in the congested districts to help the poor to tide over the crisis. Some say a worse season than "the black '47" is close at hand.

All this is *known!* Well, Carlyle told a story of pious Scotch lawyers. Faced by regrettable facts, Lord Rea said: "Well, God mend all!" But Sir David Ramsay cried out: "Nay, by God, Donald, we must *help* Him to mend all!"

Surely, Ramsay's line was the *right* line to take! But the cautious say: "You must not pauperise the starving!" and the clever folk quote the Spanish proverb: "All the harm in the world is done by the good people!" and they affirm that in trying to stave off a famine the charitable will do a world of mischief.

Surely, surely, we want, all of us, to "help God to mend" Connaught misery! How do it safely? that is the question! The State limits itself to a promise of seed potatoes by-and-by; and local authorities are levying an extra 3d. rate which will enable Belmullet, Swinford, and Westport Unions—a large area in Galway and Mayo—to apply to Government to set going relief works. But how long will it be before the complicated machinery of Public Offices has started these works? How will the famished workers live through a laborious week till they receive their first wages? How will they exist *meanwhile?*

For my part, I can think of nothing better than strengthening the hands of a few employers of labour in Connaught. The Sisters of Charity at Foxford and Ballaghaderin, when they have money to distribute, exact work for wages—unless in the case of the very old and the sick. Those Sisters have done a great deal for the agriculture of Mayo; and at Foxford they have woollen mills, which turn out first-rate serges, tweeds, homespuns, cheviots, railway rugs, blankets, etc. At Ballaghaderin they make hosiery. Merely *to buy* in these cases is to help in an hour of great need. Father Denis O'Hara, P.P., I believe, sets men tasks on their own poor land or huts, paying them for improvements that they profit by later themselves. Father Hegarty, P.P., does all that, I am told, and makes roads and drains swamps besides. Father Lavelle, C.C., follows in Father Hegarty's steps. Father Dolphin, P.P., of Erris, could place a round sum wisely I have no doubt.

All the *danger* in almsgiving would be done away with by these and similar agents, because they know *how* to give.

The need is *very* pressing!—Faithfully yours,

E. M. L.

HOW CHRISTIANITY BENEFITED WOMEN.

IN the *Positivist Review* Mr. Swinny feels constrained to defend Christianity against the attacks of Mr. McCabe. Mr. Swinny says:—

In spite of Mr. McCabe, I think that women did gain considerably by the introduction of Christianity. The old Paganism had been greatly a religion of civic duty, closely connected in its most imposing ceremonies with the public life of the City. The great moralists of Greece and Rome carried the same social spirit into their teachings. But Christianity found its chief field in private life; in the building up of fine characters—wherein women could shine as well as men; and in the cultivation of family affection—in an especial measure the province of women. Whereas the old world had held up the martial virtues as the highest, the new sects that were struggling for its inheritance, and not least Christianity, especially honoured those virtues in which the women could equal or excel the men. No women of the ancient world ever obtained the same wide influence as did St. Matilda of Tuscany, or St. Catherine of Siena. It is a necessary part of the modern movement to restore to its proper place the morality of social service, and though not the martial, the civic virtues, but this constitutes another, though a subsidiary, reason for the distrust felt by women, with whom for the most part the morality of private life is still dominant. But the main reason of their opposition is, as Mr. McCabe says, that conservatism which makes them more anxious to maintain the old and moral guidance than to accept the new. And this, perhaps, is connected with the great function of motherhood.

POETRY IN THE PERIODICALS.

MR. HERBERT TRENCH contributes six striking stanzas to the *Independent* on Tolstoi in his old age. He questions whether Tolstoi is not some sleepless Titan that would compel the winged Reason and Beauty and other art to serve as drudges under the peasant's smock. Is it because the ray that leads him on "shines from a long-annihilated star"? The poet then proceeds:—

The Man upraised on the Judaean crag
Captains for us the war with death no more.
His kingdom hangs as hangs the tattered flag
Over the tomb of a great knight of yore;
But no law shall to unity restore
Souls of this world.

Why seek to mould mankind to one conception?
Hast thou not felt
The whole high scheme in which we move and melt
With the swift world—that its last secret is
Not Good, nor Immortality,
But Beauty—once to behold the immensities
Filled with one soul, then to make room and die?
Hence the true faith:—to the uttermost to be
Thyself—to follow up that ecstasy
Compelling—to let being take its course,
Rise like a song, and like a dream be free.

It is this spectacle which is to satisfy his soul. So the stern Russian is adjured:—

Rejoice then, Master, at the multitude
Of wills in the many-coloured nations—yea
At the clouds of destinies distinct—the flood
Of exploring visions—all the radiant spray
Of hostile forces on their upward way;
Spirals of the interweaving elements
And species, these are but the long ascents
Of the self-poised waters of the Universe
Opening like a rose,
Ingathering all it loses—to disperse
Its soul in fragrance on the night's abyss,
Yet to build for aye the rainbow as it flows.

EMIGRATION OF WOMEN TO SOUTH AFRICA.

A WARNING BY AN ENGLISHWOMAN IN THE TRANSVAAL.

"REFORM is required here. Many of the women being shipped out to South Africa come out for reasons which can only help to injure a young country irretrievably. So pressing has the need become for a Maternity Home for the unmarried women who come out per emigration that the Salvation Army Home for such now refuses to take them, and I am *told* it has actually become necessary for the Emigration authorities to have a Maternity Home of their own at Pretoria for girls, who, often a few months or weeks after arrival, become mothers!

"Now what must be the result of such carelessness on the part of those employed to examine medically and make stringent enquiries concerning every applicant for emigration to South Africa? Women rush out here to conceal their shame, get rid of the child as best they can, and then return to England. The unhappy child is left in Africa to anybody who will take charge of it, and soon the country will be full of illegitimate children, belonging to no one who cares what becomes of them, brought up anyhow, and never to know father, mother, or a home that is theirs by right!

"As regards those women who come to Africa pure and good, their temptations are frightful. Some of course remain straight, either as good, devoted, domestic servants, or married to honest working men. But we fear they are in the minority. It is a common phrase in Johannesburg, for instance, among them that 'a man's mistress has a far better time than a man's wife.' Some men in Africa much prefer the temporary bond to the permanent one, and are prepared to make the path so pleasant to her who will consent to tread it with them, that one feels more of pity than of censure for the inexperienced, light-hearted girl who falls so often into such men's clutches.

"The working man's wife in Africa is often a down-trodden, hard-worked creature compared to the woman, who is able, if ill-treated, to change her lord and master at once.

"Women, especially in this country, far from kith and kin, have a natural and womanly longing for a protector, a companion, a home and love. They look around at their friends, and for one happy marriage see nine wretched ones, the cause usually being a selfish and often brutal husband, fond of drink, women, and anything except his home. Extreme poverty in Africa amongst the working classes is very rare. Any artisan can earn £1 a day, and with a little care and knowledge of the life in Africa could often save half that. But does he? No. He spends it out of doors, comes home drunk, and beats or abuses his wife, who, after a time, leaves him in despair, some kinder, better man offering to take care of her. It is a common story. Happy marriages there are, of course, and good husbands. Of these we do not speak.

"The 'Emigration Girl' soon sees and hears all this, and should her lot be cast, on reaching this country, where a gilded or even kindly temptation is offered her, backed by the knowledge that if not successful the bond can be broken, she sometimes prefers it to an offer of marriage. Some wisely prefer to remain in domestic service, and many a one who has left it for matrimony bitterly deplores it, for a domestic servant in this country has an easy, good time. But only a sad experience can teach them that.

"The emigration is not all faulty. It must be a mighty difficult thing to make such a scheme perfect, but that there is something wrong somewhere is obvious.

"We are told that the hostels in Africa for the women are homes in every sense of the word, with every comfort and protection provided at a minimum charge. The ladies and matrons appear to be all that is kind, good and zealous. But we have shown the weak spot, and to others must leave the cure of it."

On the other hand, it is only fair to add to the Englishwoman's letter that a Boer lady in Johannesburg, to whom I had also written for information, is much less severe. She writes:—

I have found it most difficult to get to the truth of the affair. The statements of different people are so contradictory. I know one of the lady committee members of the Hostel very well, and in casual conversation I have heard from her that there are 800 emigration girls in Johannesburg, and though there have been a few cases of going to the bad, on the whole the committee is very well pleased with the results of the scheme. They try to keep in touch with the girls, and every month they have a tea-meeting for them, at which the committee ladies preside, and it is always well attended, and most of the girls seem quite happy. Personally, I think it is a great risk for English girls coming out here quite alone, as the temptations for girls going wrong are greater here than almost anywhere else.

A lady actively engaged in the immigration work at Cape Town says that in Cape Colony few of those sent out under the auspices of the society go wrong. But she is very emphatic in her condemnation of those who advocate the sending out of the better-class English girls on their own account:—

Better-class girls usually travel unprotected on board, live in boarding-houses, and, away from all home influences, are surrounded with danger. They usually come from the dullest of lives at home, so lose their heads on board. I have been amazed how even the most unlikely woman loses her equilibrium in consequence of this sudden emancipation from the conventionalities of English life. This is especially the case on board ship.

I ought to add that it seems to me that no better-class girls should be sent to this country unless she has strong enough religious convictions to withstand some temptation, and to influence her life when here. For many girls fling aside their old principles and habits as soon as they are out of reach from home influence. Hence the need of only the right sort of girl being sent.

Another danger is drink—this is a terrible source of danger—and could be much lessened if no girl were sent who had any tendency to intemperance.

THE REVIEWS REVIEWED.

THE AMERICAN REVIEW OF REVIEWS.

THE contents of the April number are marked by much variety. Mr. C. M. Harger describes the battle on which the State of Kansas has entered against the Standard Oil Company, in defence of the interests of the oil producers now menaced by the boycott of the colossal monopoly. There are two papers bearing on the exhibition with which Portland (Oregon) intends to celebrate this year the centenary of the explorations of Lewis and Clark. A centenary of a very different kind is touched on by Julius Moritzen in his sketch of the home and habits of Hans Christian Andersen. Professor Kent gives an interesting account of the University of Virginia, founded by Thomas Jefferson.

Dr. Osler's Baltimore address, which urged that no productive work was done by any man after forty, and that professors over sixty should be retired to a lethal chamber, is explained as a piece of humour. Mr. H. K. Job extols the superiority, as a sport, of bird-hunting with a camera to bird-hunting with a gun. Dr. Baumfeld's description of the crisis in Austria-Hungary is referred to elsewhere.

THE AUSTRALIAN REVIEW OF REVIEWS.

THE *Australian Review of Reviews* for February is copiously illustrated and full of matter of topical interest. Mr. A. G. Stephens has an illustrated article on Mr. Livingston Hopkins, better known as "Hop," the famous Australian caricaturist. With this I have dealt elsewhere.

SUGAR-CULTURE IN QUEENSLAND.

The fourth paper on Australasian Industries deals with sugar-growing. The present profit reaped by the Queensland planters, says the writer, is from £6 to £10 per acre; but owing to improvements now being made it will eventually be doubled.

AUSTRALIA'S COLOURED PROBLEM.

The editor comments severely on the exposures made in the report of Dr. Roth, the Commissioner appointed to inquire into the condition of the West Australian aborigines. Dr. Roth drew up a stern indictment against the methods employed by the police in dealing with the natives, which have resulted in the increase of drunkenness, prostitution and disease.

The number of aborigines brought in being the great desideratum (each having money value to the escorting officer), it is not surprising to find that little boys of immature age have been brought in to give evidence; that children varying in age between ten and sixteen are charged with killing cattle; that the blacks do not realise why they are sentenced; and that an old and feeble native arrives at the end of his journey in a state of collapse, and dies eighteen days after admission into the gaol.

It is only fair to state, with regard to cattle-killing by the children just referred to, some of whom were found neck-chained in Roebourne Gaol, that as soon as the attention of the Executive was drawn to them by the Commissioner they were released.

Besides being half-starved, the blacks are beaten on the way down.

Rations are charged for to take witnesses home again, but it does not follow that they are escorted back. In some cases they are certainly not; in others, they may hardly have time to get to their destination before they are rushed in again by the police with another mob.

It is no secret that the police say if the ration allowance was cut down or taken away they would not arrest so many natives. By their own assertions, every native caught means more money in their pockets. At present there is nothing to prevent a constable arresting as many blacks as he chooses, while there is no limit to the number of witnesses he is allowed to bring in with him to secure a conviction.

The accused are made to plead guilty at the muzzle of a rifle, if need be.

THE FORTNIGHTLY REVIEW.

THE *Fortnightly* for April contains several excellent articles, some of which are noticed elsewhere.

Mr. W. B. Duffield sets forth "The True Truth About the Mythical Colonial 'Offer,'" which Mr. Chamberlain has made the basis of his Fiscal Reform adoption. Mr. J. F. Kenney, writing on "Devolution and the Future in Irish Politics," explains and defines the attitude of Lord Dunraven in the Irish Reform Association. Mr. W. S. Lilly, writing of "The Cost of Cheapness," bewails upon the wretchedness which results from the cut-throat competition of sweaters, and pleads for the recognition of the right of all workers to a minimum wage. Mr. J. B. Firth describes the extraordinary love affair of Sir Thomas Lawrence, the great artist, who was in love first with one and then with another of Mrs. Siddons's daughters. The first died of consumption, pledging the other on her deathbed not to marry Lawrence, so he married neither, and consoled himself elsewhere. There is an interesting article on Japanese poetry, which seems to be as delicate and beautiful as other products of Japanese art. Mr. Chesterton gives us the fourth instalment of his vivacious papers under the title of "Time's Abstract and Brief Chronicle." Mr. Archibald S. Hurd defends the present policy of the Admiralty against its critics. There are several other literary papers not calling for any special remark.

THE WORLD'S WORK AND PLAY.

THE *World's Work and Play* is a very good number. It contains several articles which have already been noticed elsewhere. Mr. Alder Anderson gives an interesting sketch of Ernest Solvay, whom he describes as a modern alchemist, who discovered how to make carbonate of soda out of ammonia water and common salt. For once the inventor is the millionaire. "The dipping process of painting," which consists of submerging the article to be painted in a tank of paint, was introduced at Woolwich Arsenal for the painting of artillery and waggons with khaki. On the question "Can the Townsman Farm?" a number of teachers in agricultural colleges combine in urging the importance of practical experience of a farm before scientific agriculture can be profitably learned at college. Interesting illustrations are given of the Simplon Tunnel, and of the new transporter bridge which is being erected at Newport, Monmouth, and on the Mersey at Runcorn. There is a discussion on the taxation of land values. Mr. Kearley, M.P., describes how we suffer from the sugar convention. Among the many portraits with which the issue is enlivened may be mentioned an admirable one of Mrs. Humphry Ward.

THE CONTEMPORARY REVIEW.

I NOTICE elsewhere Mr. Eltzbacher's paper on Agricultural Prosperity of Germany, but regret to see, from Mr. W. M. Acworth's paper on the Railways of Germany and England, that Mr. Eltzbacher is not quite trustworthy as an authority on railway rates. Mr. Acworth says :—

Mr. Eltzbacher apparently believes that "the British railways charge, in nine cases out of ten, the full maximum rate" of 1d. per mile third-class; while in Germany "the average charge is little more that ½d. per mile." But the official statistics of the German railways for 1902 show that the average sum received by them for carrying one passenger one mile was ·53d. In August, 1903, the North-Eastern railway compiled a similar statistical return, and found that on this one line at least the average sum was less than the German—namely, ·48d. per mile.

DR. DILLON ON THE PROSPECT IN RUSSIA.

Dr. E. T. Dillon says :—

Let there be a body recognised at once by the population and the Autocracy as the spokesman of the Russian nation, and it will modify, dissolve and create at its pleasure. Speaking in the name of 140 millions it will act on their behalf without fear of the consequences. In those potentialities, and not in the precise character or functions of the coming body, lies the real significance of the Imperial Rescript.

A constitution is become necessary; it is even now in sight; the first step towards it has been taken. Six months ago the Autocracy might have obtained a new lease of existence with a much smaller measure of reform, on condition that it had a statesman to represent, think and act for it. To-day Russia and Autocracy are on the eve of eternal separation.

MR. MALLOCK'S RECONSTRUCTION OF BELIEF.

After having demolished the foundations of Religion in "The Veil of the Temple," Mr. Mallock is now going to reconstruct, by an apologetic by means of which, in the face of all that science may demonstrate, the claims of religious belief to the respectful consideration of the world can be most clearly and most incontrovertibly established. It is an apologetic which treats the religious and the scientific doctrine as if they were two kinds of food offered to man for his sustenance; and assuming that they are nourishing in proportion to the amount of truth contained in them, seeks to trace their effects on those who use them respectively as a diet. If it is found that when a man adopts the diet of science he shrinks and withers away as an individual man and as a citizen, that his energy declines, and that his powers of discrimination fail him, and then that, the moment he changes from the scientific diet to the religious, his energies revive, and his tastes and his faculties come back again, there will be strong grounds for supposing that the religious doctrine of life contains an element of truth in which the scientific doctrine is wanting.

MINIMISING CHRISTIAN DOCTRINE.

The Rev. A. W. Hutton contributes a brief paper on Liberal Churchmen and the Reproach of Christ. His aim, he tells us,

has been to vindicate a "wise and gentle minimism," as a true and adequate presentation of the necessary Christian faith, and at the same time to protest against the attempt to overburden the simple faith of a Christian with a number of extra beliefs, some of which at least are calculated in this our day to make our religion contemptible, if they are held up as a necessary part of it. It is a libel to say of those who reject these things that they are "ashamed of the Gospel of Christ." These are not the things that constitute the "foolishness" of the message preached. That is to be found in the moral asceticism of the Sermon on the Mount, in the doctrine of the Cross, in the belief that death is the entrance to true life.

THE GEOLOGY OF SOCIETY.

Mrs. Mary Higgs, of tramp fame, writes briefly, but suggestively, on human society considered as a series of geological strata :—

The geology of human personality implies that if we take a section through the various strata of Society, we shall likewise find phenomena representing the eras of history. We may roughly indicate the four stages of mankind as migratory, pastoral, agricultural, and industrial. Rock-life means the squeezing together of units into too close proximity for usefulness. Life becomes unfruitful. We have reached the rock stage already. Which will win, the forces of progress or retrogression? The whole issue hinges on how we deal with our unemployed and vagrant problems.

THE CHILDREN'S COURTS OF NEW YORK.

Mr. E. K. Coulter, Deputy Clerk of the Children's Court of New York, describes how the

Children's Court Law of the State, enacted in 1903, works. This law provides that all cases involving the commitment or trial of children, actually or apparently under the age of sixteen years, for any violation of law, in any court, shall be heard at suitable times to be designated by the Court, separated from the trial of other criminal cases. It is in the Children's Court that child-saving methods are being reduced to a science. The general plan of the Court is to assist convicted children to work out their own reformation without commitment, by the parole system, which is of immense value.

"THE BANKRUPTCY OF HIGHER CRITICISM."

Dr. Emil Reich, replying to Dr. Cheyne, pursues the Higher Critics remorselessly. He says :—

There are four points requiring the utmost care and fulness of research. The four points are: (1) The Hebrew Nation; (2) The Hebrew State; (3) the great Hebrew Personalities; and (4) the Hebrew Sacred Book, the Bible. Unless we arrive at a clear and well-differentiated conception of these four main pillars of Hebrew history, we cannot possibly hope to raise any permanent edifice of knowledge with regard to Hebrew antiquity. The principal charge I advanced and do advance against the so-called Higher Critics is this, that as to the first three points they have not studied the problem at all; and as to the fourth point (the Bible), that they have indeed studied it, but in a hopelessly wrong manner.

THE FEEDING OF SCHOOL CHILDREN.

Mrs. Mary A. Davies discusses "how far the cookery classes are—or could be made—helpful in supplying either free meals, or meals at a price within the children's means." She maintains that "the true educational value of cookery teaching has been frequently overlooked. Cookery, properly and practically taught, is found to have a very beneficial effect in developing intelligence and quickening the powers of observation. It is an occupation which cannot be carried on mechanically: thought and judgment are required."

OTHER ARTICLES.

The Hon. Rollo Russell writes on Scientific Local Weather Records. Mr. A. P. Nicolson defends the art of Parliamentary Reporting, and in the course of his article vindicates the *Manchester Guardian*, the *Scotsman*, and the *Glasgow Herald* from the reproach of using news agency reports. Mr. Nicolson does not spare Mr. Pearson and the *Standard*.

THOSE interested in the art of singing will be glad to read the articles in *World's Work* and the *Young Woman*, both for April. Madame Arctowska writes in the former on the making of a successful singer, whereas Madame Blanche Marchesi, in the interview recorded by the *Young Woman*, gives an account of some of her experiences in her musical career, and adds what she considers the qualifications necessary for a successful singer.

THE NATIONAL REVIEW.

MR. MAXSE, the editor of the *National Review*, has lost all patience with Mr. Balfour. He says :—

The constituencies no longer share the Ministerial view that the maintenance of the present Cabinet is a national necessity, while an ever-increasing amount of exasperation is being accumulated against a party which is apparently willing to sacrifice everything in order that a particular set of politicians, who are neither very remarkable nor successful, should remain in office.

As a considerable number of Unionist members of Parliament share our view as to the desirability of ringing down the curtain on the present sorry farce, it argues an amazing want of resource on their part that they should be unable to secure the desired result.

Lord Llandaff replies to the late Prime Minister of France as to the anti-Clerical policy of the French Government. The chief protests against the Bill for separating Church and State have come from the Protestants and the Jews. He quotes Louis Blanc's saying : "We understand by Clericalism, not only Catholicism, but all religion and all religiosity, whatever it may be."

A member of the German General Staff explains the functions of the German Navy in case of war with England and the United States. He says :—

It should be pointed out that Germany is the only Great Power which is able to tackle the United States single-handed. England could be victorious on sea, but would not be able to protect Canada.

Mr. Francis Kossuth, writing on the Hungarian crisis, says :—

Our demand on the language question is moderate—so as not to interfere with the tactical unit of the battalion viz., that the word of command shall be given to the troops in Hungarian by the major and all subordinate officers, while from the major upwards the commands shall be given (as now) in German. Even this mild proposal meets with an absolute Imperial *non possumus*.

Admiral Fitzgerald describes as a great naval blunder the changes introduced in the education of lads for officers and engineers in the Navy.

The anonymous writer of the article on "The Overlord and the Admiral" maintains that the Tsar is but the tool of the Kaiser, who at one time intended to help him, who thwarted the peace overtures made by Japan in August, and who is now eagerly making terms with England, America and Japan on anti-Russian lines, and secretly laying hold of China.

Captain G. C. Tryon, writing on "Commercial Strategy," says that commercial unity is an essential part of the federation of America, Canada and Australia. Lieutenant-Colonel De La Poer Beresford writes a long and detailed description of the Battle of Mukden. Sir Robert Gresley expresses the hatred and contempt with which the Conservatives regarded the present Government. The American and Australian *chroniques* are, as usual, excellent.

THE CENTURY.

THE value of the bill of fare presented to the readers of the *Century* for April may be inferred from the fact that we have separately noticed no fewer than five articles. Among the illustrations calling for special note are pictures by Sigismond Ivanowski of three Tolstoian heroines, Katia, Mariana, Anna Karénina ; and the drawings, partly in colour, partly in black and white, of the Châteaux of the Loire. There is an interesting description by Miss Helen Zimmern of Holy Saturday in Florence, which is signalised by the explosion before the cathedral of a triumphal car stored with fireworks.

THE INDEPENDENT REVIEW.

THE April number is distinctly good. Noticed elsewhere are G. W. E. Russell's "Liberal Administration," Michael Davitt's "Irish National Assembly," and Herbert Trench's stanzas to Tolstoi.

CHARLES BOOTH, JUN.

Many who regretted that Mr. Charles Booth had consented to serve on Mr. Chamberlain's Commission for Fiscal Inquiry will find some measure of consolation in the resolute and trenchant utterances of Mr. Charles Booth, jun., as he contends that both Mr. Balfour's policy of retaliation and Mr. Chamberlain's more pronounced policy is likely to undermine the foundations of British shipping.

BIOLOGICAL CATHOLICITY.

The Rev. J. H. Skrine writes on the appeal to the first six centuries, and urges that the true Christian tradition is life, and life is an inter-action of the individual living thing and the whole, of which it is a part, of the individual will and the all-will. Primitive may be catholic, but catholic is not primitive. The point of his argument is :—

Life (once more to recall the attempted analysis of it) is the mystic union of the soul with God, through a reciprocal self-surrender of the organism and the whole. That surrender of the organism is not effected when we adjust ourselves only to the revelation of an era, even of an era six centuries long. It is made when, in thought or action, we attempt response to the Finger of God nearing us, as in the past, so in the passing moment, and are aware that by the touch we live.

"THE LAND OF THE FAR HORIZONS."

Northumbrians at least will be grateful to Mr. G. M. Trevelyan for his delightful paper on the Middle Marches. Take this sketch of the Border county :—

In Northumberland, both heaven and earth are seen ; we walk all day on long ridges, high enough to give far views of moor and valley, and the sense of solitude above the world below, but so far distant from each other, and of such equal height, that we can watch the low skirting clouds as they "post o'er land and ocean without rest." It is the land of the far horizons, where the piled or drifted shapes of gathered vapour are for ever moving along the furthest ridge of hills, like the procession of long primeval ages that is written in tribal mounds and Roman camps and Border towers, on the breast of Northumberland.

OTHER ARTICLES.

Mr. G. L. Strachey passes the tragedies of Voltaire under review. He says everyone has heard of Voltaire, but who has read him ? It is by his name, not by his works, that he is known. Mr. Strachey proceeds to analyse the tragedy of "Alzire," and concludes that perhaps the most infamous achievement of the classic tradition was that it prevented Molière from being a great tragedian ; its most astonishing one was "to have taken, if only for some scattered moments, the sense of the ridiculous from Voltaire." Victoria de Bunsen continues a very vivid description of her tour on the Tigris.

THE *Grand Magazine* (No. 3) is hardly up to the high level of its predecessors. The problem story seems to have interested the reader, so do the ghost stories. But, I confess, I get tired with such debating society discussions as "Which is More Beautiful, Man or Woman ?" "Do Women Cheat at Bridge ?" etc., etc. The one original idea in the magazine, "The Rise of the Seton Indians," is noticed elsewhere.

THE NINETEENTH CENTURY.

I HAVE noticed the best articles—those by Mr. Morley, Carmen Sylva, and Miss Kingston—elsewhere. The rest of the Review is good average—but no more.

THE GROWTH OF INTERNATIONAL ARBITRATION.

Sir John Macdonell, writing on the International Arbitrations of the century, says :—

Looking back on the arbitrations of last century, they are seen not to be detached incidents in its history. We witness the formation of a new institution, a new organ for harmonious relations between States, with functions of its own ; an evolution not unlike that which created ages ago in most countries tribunals for the settlement of domestic disputes. The sixteenth and seventeenth centuries gave the world permanent embassies, permanent means of conducting intercourse between nations. The eighteenth century at its close gave the rudiments of a rational law of neutrality. The nineteenth gave international arbitrations, which, in the words of William Penn, tend not a little "to the rooting up of wars, and planting peace in a deep and fruitful soil."

Mr. Morley, by the way, declares that the Hague Tribunal opens a new door of hope to mankind.

THE SHAKESPEARE MEMORIAL.

Mr. Sidney Lee decides the question as to what should be the Shakespeare Memorial by declaring it must be a monument, and nothing besides, on the best site procurable in London. Foreign sculptors are to be invited to compete, for—

it was a Frenchman, it was the romance-writer Dumas, who pointed out that Shakespeare is infinitely more than the greatest of dramatists, who declared that Shakespeare holds the second place in the universe. "After God," said Dumas, "Shakespeare has created most."

The crucial decision as to whether the capacity to execute the monument is available should be entrusted to a committee of taste, to a committee of liberal-minded connoisseurs who command general confidence. If this jury decide by their verdict that the present conditions of art permit the production of a great memorial of Shakespeare on just principles, then a strenuous appeal for funds may be inaugurated with likelihood of success.

THE JAPANESE VICTORIES AND ISLAM.

Dr. Vambéry says that—

If Islam in general had but now attained the high degree of civilisation which has helped the Japanese under the present circumstances, the position of the Christian rulers over Mahometans would undoubtedly become critical. It would be idle to deny the moral effect of the Japanese successes on Asiatics in general, for we read that Tokio is gradually becoming the place where Hindus, Indian Mussulmans, Javanese, and Siamese like to go to acquire modern culture. We must not be astonished at that. Asiatics will always give preference to an Asiatic teacher over the European one, since they have so many views and modes of thinking in common ; but such a predilection cannot be regarded as any open sign of hatred or of revolutionary tendencies.

No, perhaps not ; but if it engenders the idea of Asia for the Asiatics, where shall we be ?

A JINGO WAIL OVER TIBET.

Mr. Ian Malcolm, M.P., wrings his hands over the snubbing Mr. Brodrick justly gave to Lord Curzon for the cynical fashion in which Colonel Younghusband's Treaty with Tibet violated the assurances which we had given to Russia. He says that the Government has "left Colonel Youngbusband and the Indian Government in the lurch, surrendered to Russia the legitimate fruits of hard-won negotiations, and censured before the whole world the agent of its choice."

BRITISH SHIPPING AND FISCAL REFORM.

Mr. Evelyn Cecil, M.P., thinks that British shipping is in a bad way, and remarks :—

Remedies may possibly be found against unfair foreign competition in shipping by varying the Board of Trade regulations, by altering the incidence of light dues, by Government control of certain maximum rates of freight, by qualified reservation of coasting trade, by giving a preference within the British Empire to goods carried in British ships, and by permitting foreign material for shipbuilding to enter the country duty free.

OTHER ARTICLES.

Mr. P. T. McGrath declares that "To make the protection of Canada as complete as geographical conditions will permit, the establishment of a fortified seaport on the Newfoundland coast is imperative." Baron Suyematzu translates verses composed by the Mikado to enable the British public to get some outline of the thinking of the Emperor's soul. Lady Jersey writes an interesting paper on Charity a Hundred Years Ago. Lady Priestley tells the story of Sir Thomas Lawrence's love affairs, and Bishop Welldon illustrates in a paper of twenty pages the almost extinct art of classical quotation.

THE NORTH AMERICAN REVIEW.

THE March number of the *North American* contains so many good articles that very few remain to be dealt with here.

TENNYSON'S VIEWS ON MARRIAGE.

Julia Magruder complains that Tennyson, in the two Idylls, "Lancelot and Elaine" and "Guinevere," has drawn a picture which, if it means anything in the way of ethical teaching, means that, in marriage, the letter is everything—the spirit nothing ; that the form is the essential part, and the sentiment the non-essential.

Guinevere was married to Arthur, whom she had never seen, after she had fallen in love with Lancelot. Hence the inherent blasphemy to real marriage that is to be found in the "Idylls of the King." "The marriage ceremony is not marriage. It is only a small part of the bond—the mere outward and visible sign of an inward and spiritual state. Like the coronation of a king, it only declares to the world a fact which already exists."

THE PANAMA CANAL.

"No sea-level canal for me," says Brigadier-General Hains. The Atlantic rises and falls twenty feet, the Pacific is nearly tideless. A sea-level canal would cost £50,000,000, and take twenty years to build :—

After the failure of the De Lesseps project for a sea-level canal, and after more thorough surveys and studies, no less than three Boards or Commissions, comprising among its members no less than thirty-one engineers, reported in favour of the *abandonment of the sea-level* project and the building of a *canal with locks*. They may all have been wrong in their conclusions, but the unanimous verdict of these thirty-one engineers, who gave years of study to the problem, should not be set aside, unless new and convincing evidence be found to justify the change. Has such evidence been discovered ?

OTHER ARTICLES.

The President of the Delaware and Hudson Company protests against the proposal that Government should fix the rates in railways. Mr. C. A. Conant describes how the Stock Market reflects values ; and writers in London, St. Petersburg, and Berlin describe the political situation in their respective countries.

PALL MALL MAGAZINE.

BESIDES the two "Studies in Personality"—Mr. Winston Churchill and Sir Henry Campbell-Bannerman—the April number of the *Pall Mall Magazine* has several interesting articles.

Mr. William Sharp gives us a picture of modern Athens. The first impression of Athens, he says, depends largely on the time of year and the weather. The best months for the tourist are February and April, but the true Athenian considers May and June to be perfection. When all things concur in good fortune, what light, what radiancy, what beauty are to be found in the first impression! Mr. Sharp calls what seems to be the affected pose of some of the casual visitors for anything not archaic archæologitis. The beauty of Athens, he says, is for the most part a beauty that has changed, but not passed. He recommends the visitor to wander about the city at hazard instead of starting straightway for the Acropolis. Of the Acropolis he writes :—

> There is nothing in Athens so impressive (as in kind there is nothing in the world so impressive) as the majestic grandeur of the Acropolis, crowned with the surpassing loveliness of the Parthenon; and it is true that nothing of this loveliness and nothing of this grandeur can be attributed to any effort of human genius since before the Christian era.

Writing on Westminster, Mr. Bart Kennedy gives us a sketch of the House of Commons—the building as well as the Ministers and the Members. He thinks the lot of the Speaker worse than the lot of the Minister :—

> The Speaker is condemned to listen eternally to everybody. Other men may interrupt and make noises or shout insults guised in a Parliamentary manner at a droning orator, or go out. They may even go to sleep before his face.
>
> He must have the tact and patience of twenty ambassadors rolled into one. And then he will fail. . . . He is the father of this cockpit. In fact, he is all things rolled up into one. The timekeeper, the referee, the interposer, the encourager, the discourager—the everything.

THE MONTHLY REVIEW.

THE two most important articles, that on the Psychology of the Russians, and that on Germany's policy with regard to England, have been noticed separately. The point of Mr. Howley's article "Ave atque Vale Honestates" is that British reserve is disappearing; its last stronghold is the "middle class." They alone at present "keep alight the sacred fire of gentility and carry into the twentieth century the traditions of Mansfield Park." The influence of the somewhat stodgy but respectable Victorian middle class, personified by the late Queen, is passing away. And the writer asks rather doubtfully, "What will it profit John Bull if he ceases to be a hypocrite, only to become a brute?"

There is a very interesting paper on "Popular Songs of Old Canada," from which it appears that the ballads brought originally from the old French provinces, belonging to the fifteenth and sixteenth centuries, have been preserved in Canada, where they are still sung to the ancient airs, though many of them have entirely disappeared in France. A fine field for the folk-song collector truly.

The point of Mr. Moreton Frewen's very long article about "Thinking Imperially" is that the time has come, before the colonies have got any further from us, to make up our minds, as Lord Rosebery says, whether they are to remain with us at all, and if so, how. It is easier, he says, to do this while the Australians and Canadians are still our brothers, not our second-cousins.

There is a pretty and amusing paper on "Quaint Memories," of a long ago parish on the Sussex Downs, apparently. Not so very long ago, either, but the memories of it are indeed very quaint. M. Ferdinand Brunetière pays high tribute to Sainte-Beuve's critical genius, and there is a light article entitled "A Side-light on India: the Byle," the byle being what we call the bullock.

THE OCCULT REVIEW.

THE *Occult Review* for March is a first-rate number. I notice elsewhere Mr. Beriah G. Evans' "Merionethshire Mysteries." Dr. Hollander describes some simple experiments in hypnotism. Mr. Henry Anderson tells some weird experiences of a psychometric seer. There is a paper, needlessly mysterious, about the Ghost at Cambridge University. Dr. Hartmann writes on Vibrations, but not to much purpose.

The April number is excellent. Mr. Lang contributes a theory of haunting, that the persistent ghost is merely the reproduction, by a kind of natural living kinetoscope, with phonographic attachment, of a filmy emanation thrown off by the living. Of the possibility of this natural phonograph, Mr. Lang quotes the following illustration :—

> Mr. W. B. Scott and Dante Rossetti were staying, one summer, with Miss Boyd at her house in Ayrshire. Rossetti was wont to walk up and down in his room, over the drawing-room, repeating poetry aloud. The sounds were very audible in the drawing-room, and continued to be so for weeks after Rossetti had returned to London.

As to the living photographic reproduction of the emanating films, Mr. Lang says :—

> I happen to know a country road on which persons of my acquaintance have several times seen, in broad daylight, a phantasm in the costume of a Presbyterian minister of about 1760–1780. When pursued he dodges towards the hedge by the roadside, and vanishes.

There is an interesting article on Telepathy, by Dr. Saleeby, which suggests that the N-rays which emanate from the nervous tissue of the human body are the medium of the telepathic transmission of ideas. By the N-rays Mr. Charpentier of Nancy has seen himself think.

HARPER'S.

THERE is much in the April number of *Harper's* that is eminently readable, though little that can be quoted, beyond Professor Duncan's suggestion that the N-rays may yet explain the "aura" and power of thought-transference. The pleasantest pictures are those drawn by Frank French to illustrate his paper on "The Brook." It is a very vivid account of a new mining camp in Nevada, which Mr. P. V. Mighells contributes under the title of "When Mammon Makes a Camp." In contrast with the feverish haste of the gold-miner stands the leisured fishing in Arctic seas which Mr. J. B. Connolly sketches from experiences in Norway. Mr. W. D. Howells chats very pleasantly about his experiences of Plymouth in England. Dr. Waldstein, Vice-President of the Hellenic Society, holds out fascinating prospects of what Herculaneum offers to archæology, not merely in the way of sculpture, but also in the possible discovery of the missing masterpieces of the great writers of antiquity. Isador Ladoff gives a graphic account of his exile to Siberia, and contrasts his present position as a citizen of the United States with his former slavery under the Tsar. Singular pictures, with elucidatory text of the mediæval library, are given by Dr. E. C. Richardson.

THE ARENA.

THE *Arena* for March is an excellent and exceptional number. The Editor seems to have set himself the task of making it a mirror of the progressive thought and action, not only of America, but of the whole world.

Mr. Rudolph Blankenburg continues his remarkable series of articles on "Masters and Rulers of 'The Freemen' of Pennsylvania" this month, dealing with the strange personality and the stranger career of Senator Quay. I have dealt elsewhere with the articles "The New School of Socialism in Europe," "How Four Men Rescued a City," and "A Great Radical Meeting in Paris."

GERHART HAUPTMANN.

Dr. Archibald Anderson has an interesting paper entitled, "Gerhart Hauptmann: Social Idealist." He says:—

Gifted thus diversely, this fertile and original genius is a master of poetry as well as of prose; poetry as delicate, as impassioned, as tumultuous as his prose is realistic, life like, natural. A poet whose fancies and images spring from nature, the woodland, and the primitive forest, a *prosateur*, whose pictures and characters body forth the essential lineaments of the real life of to-day. Charming poet, finished *prosateur*, yet more—a mystic and a master of that symbolism in art inextricably associated with the names of Ibsen, Maeterlinck, and D'Annunzio.

Hauptmann is continually surprising the critics and astonishing the world with some new proof of his versatility, some new illustration of his artistic virtuosity, some new demand for a reconsideration as to his place in contemporary literature. One moment putting literary Germany in a ferment with his "naturalism without fig-leaves," the next jarring the nerves with his pathologic and neurasthenic types of modern morbidity, now arousing imperial opposition to his dramatic presentment of socialistic doctrines; now evoking admiration for his clever studies of local character and provincial humanity; appealing next to the poetic instincts and the Christian ideal, he performs the impossible by blending together, in a consistently wrought and emotionally touching picture, the idealism and realism of our sleeping and waking life. After his bitter disappointment over the failure of his realistic drama of suffering and distress, of fifteenth century setting, he returns to his idealistic and poetic vein and writes one of the most widely-discussed and highly-praised dramatic poems of the last half-century. Since that time his works have all shown a realistic exterior, often veiling the idealistic and mystic longings of the poet of humanity.

The Madonna—A Twentieth Century Conception.
(William Ordway Partridge, Sculptor.)

DIVORCE LAW REFORM.

Mr. Henry Gaines Hawn, in an article on "The Divorce Problem," says:—

We have tried the plan of the one man owning many women; of one man owning one woman; our last experiment will be that where there is no ownership, but a mutual consenting; marriage will be founded upon this consenting, and will cease with the consenting.

It should be self-evident that a co-partnership entered upon with mutual consent should be similarly dissolvable. As to restrictions, let a Marital Court safeguard the home by such required limitations that abuse of divorce becomes well nigh impossible. Let parties to a desired divorce file their petition a year in advance of the suit, such petition to be kept secret. In this twelve-month time will be granted for the man and woman to fully weigh their differences, ascertain how much of their antagonism is due to temper, pique, or to some flippant cause. At the end of the year advance the petition to a public marital court, the couple to live apart for a year of probationary separation. This will still further test the desirability of the union, and give friends and families a chance to act as peace-makers.

The illustration on this page is reproduced from one of the plates in the April *Arena*.

THE "LABOUR RECORD AND REVIEW."

LAST month saw the appearance of the first number of a REVIEW OF REVIEWS for Labour. It is published at a penny, edited by Mr. F. W. Pethick Lawrence, of the *Echo*, and contains many of the features of the original REVIEW OF REVIEWS. The Character Sketch is devoted to James Sexton, President of the Trades Union Congress, and Labour candidate for Central Hull. The Interviews, of which there are four with prominent Labour men, discuss the question, "What is the most pressing reform of the day?" Mr. C. Fenwick says that it is trade union law amendment. Mr. Philip Snowden puts in a plea for such a radical change of taxation as would lay the burden upon the rich. Mr. Cummings, the secretary of the Boilermakers' Society, would provide for the feeding of the school children, and in this he is supported by Mr. W. Sanders, the Labour candidate for Portsmouth. The Book of the Month is Mr. Holyoake's autobiography. There is a serial story dealing with the Russian crisis. The article entitled "Latest News about Labour Candidates" says that there are now 84 in the field; 14 sit in the present Parliament. Of the others, 44 are supported by the Labour Representative Committee. Only six are professed Socialists. The *Labour Record and Review* ought to succeed on its contents. The first number, however, left some room for improvement in its general appearance.

THE REVUE DES DEUX MONDES.

THE article on Roumania, by André Bellessort, in the *Revue des Deux Mondes*, is continued in both of the numbers for March. The instalment of March 1st deals with the Jews and the peasants, and the writer concludes: "If I were a Roumanian I should regret that my ancestors had been imprudent enough to attract the Jews to their country. If I were a Jew I should protest against a military law which would compel me to serve a State of which I was not a citizen. If I were an historian, I should admire both the Roumanians and the Jews for having persevered, notwithstanding all the storms in their national life, the former for having liberated themselves from secular oppression, and the latter for offering to their many vexations so splendid a resistance."

In another article in the first March number, René Pinon compares the Yellow Peril in the thirteenth century with that of to-day. Whatever may be the outcome of the present war, he is quite certain that one consequence of it will be the intimate connection of the life of Europe with that of Asia. It is a law of history that war brings nations together more than ever commerce does, and the writer thinks that, in this respect, the present war is analogous to the conquest of Asia by the Mongols.

In the second number J. Bordeau has an interesting article on Political Strikes—the Chartist Movement in England, the agitation for Universal Suffrage in Belgium, the strikes in Barcelona and Stockholm in 1902, the strike in Italy in 1904, etc.

THE REVUE DE PARIS.

THE French translation of a selection of Wagner's newly-published letters to Frau Mathilde Wesendonk, throwing new light on the creation of "Tristan," which appeared in the *Revue de Paris* of November 1st and 15th, was followed by discussions in the *Revue des Deux Mondes* of December 1st, and in the *Correspondant* of December 10th. These letters belonged to the years 1858-9, the period immediately following Wagner's departure from Zürich. The *Revue de Paris* now begins a second series of letters from Wagner to the same lady, written from Paris and Vienna between 1859 and 1862, and instalments of these appear in the two March numbers. In 1860 Wagner was entertaining the possibility of the first performance in German of "Tristan" at Paris, and he was devoting all his efforts to that end, but alas for the enterprise! The rich patron thought that for German opera the risks would be too great, and "Tristan" was not heard in Paris till 1899.

An article on the Organisation of Workmen also appears in both March numbers. Maxime Leroy also gives a brief history of the movement in France, beginning with the founding of the International Association in London in September, 1864, after the insurrection in Poland. Notwithstanding the sympathies aroused, Poland served rather as a pretext, the real business being a conference with English workmen.

Victor Bérard writes in both numbers on the Russian Problem. The French Alliance with Russia, he says, has to run certain risks, but these arise chiefly from ignorance or imperfect knowledge of each other of the two nations. The Russian people know nothing of France, and the French have only a rudimentary notion, or, it may be, a fanciful idea of Russia. During the ten years of the Alliance, France has had nothing but admiration for her ally. To-day, now that the honeymoon is over, it behoves France to learn more of her ally, and especially of the possibilities and necessities of Russian national life. Affection and anger must both be put aside, and the Russian problem must be studied with a calm and open mind. The writer then discusses at length the geography, the races, the religions, etc., of the country.

In the first number Félix Le Dantec, writing on Infection, is dissatisfied with the use of the word or the meaning attached to it. The word infection is generally used to signify the introduction of parasites into a living being, but an organism may be infected with useful as well as with mischievous parasites. The meaning of the word should be more precise. There is no definite line of demarcation between infection thus defined and the living competition among creatures preying on one another, for in many cases the parasite devours its host. Infection is only a chapter in the struggle for existence. The writer gives numerous examples of the different kinds of infection.

THE NOUVELLE REVUE.

IN the first article in the *Nouvelle Revue* of March 1st Jules Delvaille discusses the Moral Crisis of the century, and the causes and the remedy. Notwithstanding the scientific conquests of our century, he writes, we cannot but be aware of a certain depression from the moral point of view. This problem is not one for metaphysicians and philosophers only; it is a national problem, and its solution will occupy the intellectual and moral future of the country. The writer thinks it is due to a general want of ideas. The educationist should teach that ideas have a real influence in life. He who has strong ideas about conduct will meet with many obstacles, but the effort which he makes will be better than the tranquillity of the man who allows circumstances to lead him.

In another article on Italy and Austria, Raqueni says the friends of peace cannot but congratulate the Italian Socialist Party for its courageous campaign against irredentism; it is socialism more than alliances which has maintained and which will maintain peace in Europe. Socialism is one of the chief factors of International peace.

Joseph Ribet writes in the second number on the Formation of the United States; its Ethnic Psychology. He believes the deep attachment of the different nationalities in the United States for the Old World constitutes the most formidable basis of power in America. The spirit of tradition is the first element in the American mind, the second is the spirit of innovation, and to the latter must be added a certain pride and love of gold. Every man hopes to become a ruler of men, a sort of tyrant; he will not take advice, he only accepts praise. The writer has much to say of the Monroe Doctrine. Without it, Pan-Americanism and Yankee Imperialism could not exist.

THE Australian Commonwealth is alarmed at the growth of French ascendency in the New Hebrides, and complains that France has designs on the Pacific. France, on the other hand, accuses England and the Australian Commonwealth of serious designs on the islands, and a writer in the *Correspondant* of March 25th states the case against Australia and England, and quotes passages from the interview with Dr. John Paton, which appeared in the ***Australasian Review of Reviews*** for October last.

LA REVUE.

IN *La Revue* of March 1st the editor, M. Finot, concludes his second study of the fallacy of the Psychology of Race. The people of to-day, he says, is not the people of yesterday any more than it is the people of to-morrow. Everything is in a state of evolution, and the qualities of the mind form no exception. A superior race may become inferior; but there are no such things as aristocratic peoples, or superior or inferior races. The negroes, hitherto regarded as the most degraded of races, have made more progress in fifty years than the German race in eight centuries.

Emile Faguet, of the Académie Française, discusses the question of the Simplification of French Orthography. He does not attach much importance to the question. He says French orthography will always take a long time to master, about five or six years, and the few simplifications will not save the pupil more than three or four weeks of study.

Nichan Effendi, the Sultan's translator and director of the Foreign Press in Turkey, is sketched by Yrcam in the concluding part of his article on the Court at Constantinople. Nichan is an Armenian, a traitor, a corrupter. His title seems to give him the power of muzzling the foreign press as he terrorises the local press. He reads the French, English, and German papers, and picks out for the Sultan the articles relating to the Sultan and to Turkey. He has a special service of spies to control the foreign correspondents at Constantinople.

In the second number we have Mr. W. T. Stead's article on the Revival in Wales; and Claude Anet, who writes on the Knights of Robbery in the United States, takes the corruption at Minneapolis for his subject. There is an article, by Camille Mauclair, on Alfred Bruneau, the composer, who takes the libretti of his operas from the works of Zola. The writer shows how much the composer is indebted to Zola for his subjects, and how interesting have been the results of the collaboration of the novelist and the musician.

CHAMBERS'S JOURNAL.

THE April number of *Chambers's Journal* contains several articles of interest. An article by Mr. W. V. Roberts tells us something of the Rewards of Public Service. Judged by the standard of money, the reward awaiting those who enter the House of Commons is not great. Several members have sat continuously in the House of Commons since 1868, and have not held office of any sort. But when office is secured the financial gain is not overwhelming. Mr. Roberts cites the cases of Lord Beaconsfield and Mr. Gladstone, and says:—

> Put in round figures, the whole sum only represents an average income for the time that Lord Beaconsfield was in public life of something like four hundred pounds a year.
>
> It would be surprising if Mr. Gladstone's emoluments from public work averaged more than one thousand pounds a year during the long period of sixty-three years that he devoted himself to the public service.

With reference to the honours which it is in the power of a Government to bestow, Mr. Roberts, taking the number of these rewards in the Parliament of 1895-1900 as a basis, estimates that one in four of all the members of the party in power has something to show for the exertion or sacrifice.

The Rev. S. Baring-Gould gives a number of Smugglers' Tricks. In one case the figures of a waxwork show were taken about the frontier towns of Belgium and France stuffed with lace, or brandy, or silk, or jam.

THE STRAND MAGAZINE.

THE first article in the April *Strand Magazine* tells once more the history of Downing Street, and, indeed, all the articles in the number are on well-worn topics.

Mr. J. F. Rowbotham has an article on the Music of Fire, Air, Earth and Water. He shows, first, how fire may be made to sing:—

> Take a lighted candle (he writes) and blow gently against the flame. You will hear a peculiar fluttering sound. The fluttering sound is fire's first attempts at music.
>
> Instead of the unsteady breath of our lips let us employ the steady blast of a blow-pipe. Instead of the pale and flickering light of a candle let us use the bright and ardent glare of a chemist's lamp. When you have a lamp and a blow-pipe you can make fire sing in earnest.

A third test is made with a ring-burner with twenty-eight orifices. Over it is placed a tube of tin or glass about five feet long and two and a half inches in diameter. Soon the fire begins to flutter, and after a moment or two it will burst into a clear, musical tone. By varying the length of the tube different notes may be produced, as in the organ which Professor Wheatstone made on this principle.

THE LADY'S REALM.

THE April number of the *Lady's Realm* has an interesting notice of the Constantine Alexander Ionides Collection at the Victoria and Albert Museum, by T. Beaugeard. The collection comprises some 1,200 examples of old and modern masters, and the writer in the present article deals with the modern pictures by Burne-Jones, Rossetti, Degas and others.

Another article, by M. A. Rutherford, is devoted to the wonderful collection of shoes at the Cluny Museum in Paris The writer thus refers to the follies of footgear known as pattens or choppines:—

> In Venice, in the seventeenth century, every lady of any pretension to fashion or position wore what were called "choppines"—that is to say, high clogs or pattens, to elevate them from the ground.
>
> Choppines are said to have been introduced into Venice from the East, and from Venice into England. Shakespeare knew of them, for Hamlet says, "Your ladyship is nearer Heaven than when I saw you last, by the altitude of a choppine"; and Evelyn suggests that the reason of their invention was to keep the proud dames at home, it being very difficult to walk with them. Those shown in the Cluny Museum are covered with white or delicately coloured kid, and beautifully embroidered in floral or fanciful designs.

THE LONDON.

IN the April *London* Dr. Wilfred Grenfell gives an account of his medical work among the fishing fleets and along the shore of Labrador and the north shores of Newfoundland. Eskimo patients, he says, are so indifferent to pain that anæsthetics may almost be dispensed with.

Mr. Frank Banfield asks, Who will be the Next Premier? Lord Rosebery, the writer is sure, will be Prime Minister or nothing. He will not be Foreign Secretary in another man's Ministry. Lord Spencer, being nearly seventy, might find the duties too onerous for his physical vigour. Mr. Asquith can afford to wait. Sir Edward Grey, if not the Prime Minister, is pretty certain to be the Foreign Minister.

Count Tolstoy, writes Mr. Vance Thompson, is the only free man in Russia. He is freer than his master, and his liberty is absolutely untrammelled, and it is to the Tsar that he owes his freedom.

THE ITALIAN REVIEWS.

THE most weighty article in the *Rassegna Nazionale* is one by Aldobrandino Malvezzi on the revival of mysticism in the present day and the general revolt against materialism. The author welcomes the change, even though, as he states, the revolt occasionally takes the exaggerated form of a return to "the visionary science of the alchemists and the 'illuminati.'" With the March number is issued a petition sheet, to be signed by all who approve of an agitation against the detailed reporting of crime and criminal cases, which has been inaugurated in the interests of public morality by the *Giornale d'Italia*. On this subject the *Rassegna* finds itself for once in sympathy with the *Civiltà Cattolica*, which also publishes an article in a similar sense.

Professor Toniolo, the editor of the *Rivista Internazionale*, writing in its pages (February) on the White Slave traffic and international legislation, notes with satisfaction the growing solicitude of public opinion in Italy for the protection of women and children, and points out the absolute need both of preventive and curative measures if the present disgraceful traffic from the Italian ports is to cease. No one has a higher repute than Professor Toniolo as a student of social problems, and his outspoken article cannot fail to influence beneficially public opinion. The recent development of artificial silk manufactured from vegetable fibre inspires E. Mancini in the *Nuova Antologia* to give a sketch of the production of pure silk from the days when the Roman matrons paid for it by its weight in gold, to the present time, when it may be bought almost for a few pence the yard. The article contains much interesting information—for instance, that owing to ever-increasing adulteration, pure silk is an unknown article on the market. Artificial silk is mainly "made in Germany," and its development will prove a severe blow to one of the most ancient industries of France and Italy. General Luchino dal Verme, whose admirable summaries of the Boer War will be remembered by our readers, is performing a similar service in regard to the Russo-Japanese conflict, and making plain its perplexities in a series of illustrated articles. Under the title "Hibernica" G. Boni continues his learned disquisition, fully illustrated, of the dolmens and other prehistoric remains of Ireland.

In the *Rivista d'Italia* G. Bandini, who was in India at the time of the Coronation Durbar, makes an able and outspoken attack on English administration, quoting both English and native opinion in his support. He dwells, very naturally, on the shocking frequency of famines; but the gist of his article is that native discontent, as represented by the educated native element that predominates in the annual national congresses, is far more potent and widespread than English officialdom realises; that we cannot give education with one hand and withhold political rights with the other; and that unless we are prepared to treat India as a free colony and grant her self-government, our supremacy will be of but short duration.

The illustrations of *Emporium* continue to be of a very high quality, and its printed matter full of interest. A study of the Venetian painter, Pietro Longhi, who was, so to speak, rediscovered by the De Goncourt brothers in the middle of the last century, well repays perusal. There are biographical sketches of Humperdinck, the composer of "Hänsel and Gretel," and of Pompeo Molmenti, the distinguished Venetian critic, who is about to publish a "Social History of Venice." A charmingly illustrated article on the Basque country completes an exceptionally good number.

THE DUTCH REVIEWS.

Elsevier has a sketch of Steinlen, the artist, with reproductions of his work, all of the French type, and most of them interesting. There is one showing a garret, and called "The Joys of Summer": one of the poor woman's joys seems to be that she has a chance of saving lamp oil to the extent of three hours' consumption per diem! The continuation of the article on Egyptian antiquities in the Leyden Museum is worthy of notice, and the contribution on Dutch churches, dealing this time with the Cathedral of Utrecht, is very entertaining. The architecture, as shown by the illustrations, is very fine.

There are many good things in the current *Onze Eeuw*. The long and exceedingly interesting paper on Japanese and Russian Expansion in Asia gives a complete history of the reasons for this extension and its progress, going back, in the case of Russia, to a very distant period. Russia wants openings in all the great seas; Japan is forced to extend by reason of her population. That is the question in brief, but the history of the question forms the entertaining part of the article. Another very readable contribution is that on Germany and Holland. The Dutch have been described as half-Germans; there are 30,000 Germans in Holland, and the trade and intercourse between the two countries is not only increasing, but also increasing far more rapidly than between Holland and Great Britain or France. About half the Dutch imports come from Germany. The Germans who settle in the Netherlands soon assimilate Dutch ideas and become absorbed in the population as though they had not come from the dominion of the Kaiser; nevertheless, there is a fear that Germany may absorb Holland unless the Netherlands are wide awake. Holland must have better home defences, and be able to take an independent stand. The article on the universe and science shows how our thoughts and impressions change with scientific discoveries, and takes us through the systems of Copernicus, Newton, and others down to the present time.

De Gids has an article on the school question and the new Bill for dealing with education; this matter has given rise to as much strife as our own school question. The present proposal will lead to free education, and that point is discussed in the present essay. The writer leaves the financial aspect on one side, and he appears to think that free education, properly carried out, will be beneficial. The unfortunate part of the matter is that we cannot well leave the financial aspect to take care of itself, especially when Londoners have just been informed that the school rate will probably be increased by 2d. in the £, making the rate 1s. 6d. A description of a German Country Educational Home is well worth perusal; the school is at Haubinda, and the tuition is partly carried on in the open country or in the forest, while gymnastic exercises interrupt the indoor instruction at intervals, so that there shall be no undue strain on the mind. The pupils learn quickly and well, and they remain in excellent health. Another interesting article, of a lighter character, treats of the lives of two officers in the French service under the First Empire. Some curious details are given, among which is a description of a garrison at Lyons; there was one battalion composed of returned deserters, another was called "Irish," but it did not include one single native of the Emerald Isle! The commandants were men who had fallen under a cloud.

Vragen des Tijds has two articles on election topics, and one on the subject of workmen's contracts and the giving of "notice" on the part of employer or employé.

Coming Men on Coming Questions.

A Handbook for the General Election.

WHO are our Coming Men, and what are the Coming Questions? No subject is of more importance, but hitherto no one has attempted to answer either inquiry. Therefore I am going to try.

This month I shall publish the first part of a book under the above title, which I am editing. Each weekly part will be complete in itself, and the book, when complete, will consist of twenty-six such parts, and be published as a Handbook for the General Election and the next Parliament.

It will be a composite work—part of it probably from the pen of the Editor, the bulk of it being contributed articles on Coming Questions by the Coming Men who after next Election will be the leading factors in the new Parliament which will control the destinies of the British Empire.

The first number, which will appear almost simultaneously with the REVIEW, will be Mr. Winston Churchill's "Why I am a Free Trader." In the opening passage Mr. Churchill says:—

> A hundred years ago the Press was weak, but its writers were strong. Individual pamphleteers shaped the policies and shook the stability of powerful Governments. Nowadays the letters of Junius would sell for a penny a line if, indeed, they could find a purchaser. Nevertheless, as in war the soldier uses all means of attack and defence, despising none, in our political warfare we cannot afford to neglect the pamphlet. I make no claim for originality in this statement of the case for Free Trade. It is compacted out of the ingredients of many addresses delivered to audiences in various parts of the country, of speeches in the House of Commons, and of articles contributed to the magazines, and may be accepted as embodying in the briefest compass the main lines of the great argument which has been pressed, not without success, upon the people of this country.

The book will be mainly devoted to a careful handling of Coming Questions by Coming Men. The list is by no means complete, but most of our Coming Men have promised to contribute the essence of their views on the question in which they are most interested. For the information of the Electors they have all expressed them many times in speeches—but in these papers they will present the condensed extract, the final essence of their thinking distilled from all their previous utterances, revised and brought up to date. Among those who will appear in the series are the following:—

Mr. WINSTON CHURCHILL, on Free Trade.
Mr. JOHN BURNS, on Labour Questions.
Dr. MACNAMARA, on the Physical Improvement of the Race.
Mr. JOHN REDMOND, on the Financial Case for Home Rule.
LORD ESHER, on the British Army and its Work.
Mr. HALDANE, on the Brain of the Empire.
Mr. LLOYD-GEORGE.
The Hon. PHILIP STANHOPE, on Peace and Arbitration.
Mr. KEIR HARDIE, on Woman's Suffrage.
Mr. J. R. MACDONALD, on the Independent Labour Party.

Each paper will be preceded by a brief character sketch of the writer by the Editor, and every part will have as its frontispiece a reproduction of the latest photograph of the Coming Man.

The question as to who are the Coming Men who will dominate the new Administration will be dealt with in a series of three numbers. The first, which deals with the Liberal leaders in the Lords and the Commons, contains appreciations of Lord Spencer and Lord Rosebery in the Upper House. The second is devoted to Sir H. Campbell-Bannerman and Mr. John Morley as the Liberal leaders in the Lower. The third, which is devoted to the Liberal Leaguers, deals with the able but somewhat discredited group of Liberals who were misled by Lord Milner into a support of the War in South Africa, such as Mr. Asquith and Sir Edward Grey. There is no intention to pillory anyone. One and all, the returning Prodigals who are wearying of the husks that content the Jingo swine will be welcomed in true Evangelical fashion, but I shall be sparing with my veal.

The question of the composition of the new House of Commons, and the proportionate strength of the various groups, will be dealt with in another number, in which an attempt will be made to estimate the probable majority upon which the Liberals can count. Never before has there been any such attempt to employ the science of electoral meteorology for the purpose of political prediction. The result is startling, and will certainly interest many.

Next to the composition of the House of Commons, the most important question is the probable constitution of the new Administration. This will be dealt with in a separate part, and a serious attempt will be made to ascertain what is the opinion of the best informed as to the men who ought to be in the new Ministry and the men who should be left out.

The series of Coming Men and Coming Questions will be closed by another Catechism, dealing with the Liberal Programme, into which will be condensed, also in the form of question and answer, the arguments in favour of the various measures which are likely to be pressed in the new Parliament.

The aim of the Editor is to provide the Elector, before he goes to the poll, with a concise, simple compendium of the facts and arguments relating to the questions that are to be decided at the General Election.

The volume, when completed, will be a handy encyclopædia of facts and figures, political, social, and biographical, covering most of the important questions to be dealt with in the new Parliament. And the weekly parts, each of which will form a booklet complete in itself, will be invaluable for all taking part in the General Election, on account of their brevity, completeness, and accuracy.

The Best or the Worst of Empires.

Which Shall It Be? An Appeal to the Electors.

I HAVE in the press, and am about to publish, a book which, although primarily addressed to the people of South Africa, may be of some little use in educating our people at home as to the true nature of the British Empire. That Empire, as it is, is the Best of Empires, as distinguished from the Brummagem Empire made on German or Roman models, which is the Worst. Between Liberal Colonial Imperialism, which is the Best, and Jingo Imperialism, which is the Worst, there is a wide gulf fixed. The most fanatical Little Englander can never hate Jingo Imperialism with such intense detestation as does the true Liberal Colonial Imperialist. For Jingoism is the Anti-Christ of Politics, and the remedy for Jingoism is Home Rule, and if not the entire elimination of the Imperial Factor, then its ruthless restriction to the irreducible minimum necessary for its continued existence.

"The Best or Worst of Empires" has as its motto the familiar tag, *Corruptio optimi pessima*, and it is dedicated to the widows and orphans of South Africa. The preface indicates the scope and spirit of the book. It is as follows:—

"Mr. Gladstone on a famous occasion, challenged anyone to place his finger on any point on the map of Europe and to say, 'Here Austria did good!'

"Returning from my first visit to South Africa, where I had been engaged in the somewhat romantic adventure of endeavouring to reconcile my brother Boers to their new status as British subjects, I have been engaged in the forlorn attempt to lay my finger upon some point in the map of South Africa where I could honestly and in good faith assert, 'Here Downing Street has done good.'

"The net result of my researches has, I must ruefully confess, been the reverse of encouraging. So far as I can see, looking back over the history of the last sixty years, it would have been better for South Africa if, as Mr. Rhodes once suggested, the Imperial factor had been eliminated from the problem, and the South Africans had been left to work out their own salvation without the blessing or curse of the Providential oversight intermittently exercised by the Home Government.

Mr. F. S. Malan.
(Editor of *Ons Land.*)

"Nevertheless, I venture to repeat the appeal which I addressed to my unwilling fellow-subjects at Bloemfontein, at Johannesburg, and at Pretoria, to accept the flag, which at present is to them only a hateful symbol of foreign conquest, with a fixed determination to co-operate with all true Liberals throughout the Empire in making the best of the situation in which they find themselves. For it lies largely with them to decide whether the Empire in South Africa is to be the worst or the best system of Government which mankind has yet invented.

"Hitherto they have only had experience of the Empire at its nethermost worst. If they would know it at its highest best, they must, first of all, accept it; and, secondly, they must regard it as the highest form of loyalty which they owe to their new Sovereign to oppose to the very uttermost the evil counsels which may be given him in Downing Street or elsewhere, in opposition to the advice of the responsible Ministers to whom the duty of governing South Africa will be entrusted by the Crown as soon as responsible government is established in the Colonies.

"This little volume is an attempt to represent to

South Africans the British Empire as it appears to Liberals at its best, and to point out by illustrations drawn from the history of South Africa how utterly impossible it is for that Empire to be a blessing to the world unless the subjects of the King in all the self-governing Colonies know their rights under the Constitutional Empire, and, 'knowing, dare maintain.' Incidentally it may serve, I hope, as an encouragement and inspiration to our new fellow-subjects, and, at the same time, contribute something to the overthrow of that use of the most pestilent of all delusions, which is so diligently fostered for the undoing of Empires, that loyalty is synonymous with subservience, and that the British Empire can be maintained on a basis of British ascendency.

"I have been greatly cheered in my self-imposed task by the address delivered by Mr. Malan, of Cape Town, on September 2nd, 1904, on 'The True Ideal of South African Politics.' Mr. Malan is a leading member of the Afrikander Bond. He is the editor of its organ, *Ons Land*. He has suffered imprisonment in the cause of South Africa. He is a member of the Cape Assembly, and I hope that he will be the next Prime Minister of the Cape Colony. Speaking of the future of South Africa, Mr. Malan referred to the differences about the flag which had in times past divided the country, and deprecated the continuation of a barren and deadly quarrel. He said:--

They could have a free, united South Africa, united by the Union Jack, and not divided. How were they to attain this?- because they hadn't got it yet. One thing essential was that they should respect one another, try and trust one another, and try and understand that they had not all got the same feelings on all subjects. For instance, there was the question of the Dutch language, which was a bone of contention. They should not dislike him because he spoke and loved the Dutch language, and would continue to do so. Another thing essential was registration. They must be practical, and see that the registers were clean and accurate, and having done that, they must put men into Parliament whom they could trust to work for the attainment of the ideal they had in mind. Do not let them work for a policy which they believed in their hearts was not a right one. Another thing was to educate the masses up to that ideal. He believed in the development of the permanent population, and the industries of South Africa. Speaking to men who lived in the towns, if they studied their own interests merely, they would perhaps say that protection of South African products was a bad policy. But their ideal must be to work together united in a common love of freedom, united in a common mission the great mission that has been put before us, and that will continue before us so long as we South Africans have civilised life in South Africa. He said a free united South Africa, but under the Union Jack. And he said that because he thought it was a possible ideal. Looking to the history of the Union Jack, not unfortunately in the past in South Africa, but in other parts of the Empire, he believed that a free united South Africa was possible under that flag. Do not let him be misunderstood on this point at all. He did not say that all of them in South Africa had the same feelings for the Union Jack that a man who was of British blood had. It would be impossible to expect that after what had happened, but he did say they must try to understand one another, and try to meet one another. It might be that there were some who would say that a free united South Africa was impossible under the Union Jack. His reply to that was, "Let them try," and give it a fair trial, and he believed that they would come to see it as he did.

I do not believe in magic, that is in instantaneous conversion to new political beliefs; but I do believe in the strong pressure of a big ideal always determinedly, unintermittently going onward and onward. I say that, although the task is a difficult one, and although you will perhaps have to wait long for the realisation of your ideal-- I say, let us be of good cheer. We must work for this ideal that should unite us and help us over the difficulties of the present. We should link our forces—our poor forces—to the forces of the Eternal and of the Infinite. If we do that, the day may be dark and dreary, the task may be arduous, the disappointments may be great, but I believe we can always be of good courage, and that we can always lift our eye to the bright star of our destiny—a free, united South Africa, under the Union Jack.

"It is in the firm belief that Mr. Malan represents the best sentiment of the great majority of the South Africans that I venture to issue this appeal to my fellow-subjects in the South African Colonies.

"In the Old Country we are about to hurl from place and power the Ministry whose policy has been impolicy, and whose Imperialism has betrayed the true principles of the British Empire. But the change will be made in vain, so far as South Africa is concerned, unless South Africans constantly bear in mind the fact that they must also play their part. The loyal duty which they owe to the King imposes upon them the supreme obligation, first of asserting their right to complete responsible self-government so solemnly promised in his name, and secondly of exercising the rights and privileges of self-governing states with the same courage and confidence as 'the independent sister nations' of Canada and Australia."

"The Best or Worst of Empires" will be published in paper at 1s., in cloth at 2s. It will contain about 400 pages of letterpress. Among its other contents will be a series of three chapters on Downing Street in South Africa: -(1) as Despot; (2) as Meddler; and (3) as Devastator. It will also contain the chapter on my impressions of South Africa in 1904; a statement of the views of the Boers upon the questions at issue between them and Lord Milner; and some account of the pro-Boer agitation in Great Britain during the war. Added to these is a chapter describing the contrast between the realities and the rules of war, as illustrating the contrast between Britain at the best and Britain at the worst.

The volume will be published about Midsummer, and orders will be taken by any bookseller. The book will be supplied post free to any part of the world at 1s. 3d. from the Book Department, REVIEW OF REVIEWS Office, Norfolk Street, London.

Languages and Letter-writing.

THE Modern Language Association, that organisation which, with small means and under great difficulties, is doing such fine work in the encouragement of Modern Language Teaching, has just made a desirable change with regard to its official organ the *Modern Language Quarterly*. In future, instead of one journal there will be two, and of these two the first number of *Modern Language Teaching* (A. and C. Black, Soho Square. 6d.) has already been issued. It is a journal devoted to the discussion of all matters connected with Modern Language teaching in schools and colleges and the training of teachers. It is not identified with any particular methods, and the expression of every view, if earnest, will be welcomed by the editor, Professor Rippmann. The annual subscription is four shillings, but it is, of course, sent to members free. This first issue has invaluable matter in it from such men as Professor Sadler, Mr. Cloudesley Brereton, Mr. Milner-Barry, Mr. Storr, Miss Pope, etc., etc. The academical journal which is to be its fellow has not yet come out. Professor Robertson will edit it.

Last Easter the Modern Language Association paid a visit to Paris. This year the French Société des Professeurs de Langues Vivantes are coming to London on May 4th, when the Marquis of Londonderry will open the Congress. I hope the French teachers will have as hearty a welcome as our teachers received in Paris.

The University of London opens its holiday course for foreigners and others on July 17th. Only 150 students will be admitted, and July 15th is the very latest date for applications for tickets. Full details can be obtained after May 1st from the Registrar of the University Extension Board, University of London, South Kensington.

EXCHANGE OF HOMES.

Several parents who arranged last year have sent letters of hearty appreciation. One French lad, however, arrived at his destination in the North of England, ill and having been robbed. I will always do my best to arrange for meeting the exchangees in London if desired, and if I have sufficient notice. It once unfortunately happened that a telegram giving notice of departure arrived at the office of the REVIEW OF REVIEWS on the Sunday before the August Bank Holiday, and as naturally no one went to the office on that day the poor young lady who had despatched it had to spend many solitary hours in the station on the Sunday in question.

L'Entente Cordiale (Hon. Sec. H.W. Sands, Esq., 6, Fig Tree Court, Temple) offers for competition amongst members of University Colleges of either sex two scholarships of £20 each. The names must be sent in before May 10th. Examination in June. Competitors must be at least twenty-three years of age British subjects, of British parentage, and educated in Great Britain and the scholarship is for the purpose of attending a course in France. An entrance fee of 5s. is needed. For full particulars apply to Mr. Sands.

Will any Oxford resident correspond with an Italian gentleman, a mathematical teacher, Signor Scorra, Istituto Tecnico, Terni. He wants to spend two months in Oxford, and would like a correspondent there.

Adults who desire correspondents should send age and occupation, together with one shilling, towards the cost of search.

. Will any one take a French youth as guest next August.

ESPERANTO.

Here in a charming little book on my table is one good reason for such a language as Esperanto. How much do you know, friends, about Flemish literature—its beginning--fluctuations and change of headquarters? Well! here, translated by several Esperantists and collected by Doctors Seynaeve and Van Melckebeke are delightful peeps into this little-known subject, stories, merry and pathetic, leading one into the homes of a worthy people. You will be told: "Oh! everything that is worth reading is always translated into English." Read "Paĝoj el la Flandra Literaturo" (its price is 1s. 8d.) and then say if the statement is quite correct. It will probably be found that many national writers who, though not considered of the first rank internationally, yet write delightfully of pastoral life and quiet home scenes, have not made an appearance in English dress, and it is to be hoped that Esperantists will turn their attention to these in the future. The "Paĝoj" tell us that the first home of the Netherlands Literature was Flanders; but the military wars sent writers from Antwerp to Amsterdam. In the nineteenth century the national spirit was again aroused and has not since slumbered. Of course, the "Paĝoj" give us only glimpses. Snieders contributes a merry conceit of two rival coachmen. Hendrik Conscience a "letter to a recruit." Streuvels gives a picture of the harvesters' journeys which for pathos is on a par with similar scenes in the West of Ireland.

ESPERANTO AND THE BLIND.

Mr. Merrick, of Manor Farm, Shepperton, started the Esperanto Correspondence branch last year, but very few English have responded. Dozens of foreign blind people are eager for English correspondents. In this particular we are behind the United States, for from Boston applications to be placed on the Adresaro have come from the blind. What is needed is sighted people who will volunteer to teach Esperanto to the blind. Anyone sighted, or otherwise, desiring to become a member of the Braille Correspondence Club, should write to Mr. Merrick, if Esperantist otherwise to Mrs. Philips, Braillecot, Broadstairs.

BREVITIES.

Mr. Bardlyh's treatise has aroused much amusing comment. In the *Chronique de Londres* M. Hamonet calls upon all Frenchmen to rally to him and help to repel "this Machiavelian Esperanto conspiracy - the sole aim of which is to destroy that French language which is the highest expression of civilisation." In answer M. Hugon justly points out that it is an error to suppose Shakespeare and Schiller charm because they express national sentiments. The great writers are so reputed because they express the sentiments of a world-wide humanity, not simply those of a special nationality.

The Peace Societies are, at all events, realising that an international language is of value. On page 302 of the Report of the last Universal Congress the question is referred to the Berne Bureau with power to act- and the same Congress calls upon the Governments for the natural correlative--a universal 2 cent. postage stamp.

The Russian fortnightly magazine *Esperanto* has at last appeared. It is a very valuable addition to Esperanto Literature—its price is 8 francs per annum.

Grammars, dictionaries, etc., can be obtained at the Office of the REVIEW OF REVIEWS.

THE BOOK OF THE MONTH.

"THE MARRIAGE OF WILLIAM ASHE."* BY MRS. WARD.

MRS. HUMPHRY WARD'S new story reminds us that she is becoming almost as popular a novelist as Miss Marie Corelli. Of "Eleanor" 120,000 copies have been sold; of "Lady Rose's Daughter," over 165,000. Possibly the latest will reach a circulation of 200,000. What is the secret of her popularity? "Robert Elsmere," by which she achieved her first success, was a kind of Unitarian stew, with hardly enough of the onion of romance to give it flavour. "The Marriage of William Ashe" is much more after the style of Miss Marie Corelli. The following passage from the middle of the book, in which Kitty, the heroine, describes the novel which she has written, might be applied with little alteration to the story under review:

> "You see"—it is Kitty who is speaking, not Mrs. Ward—"I have a good many advantages. If people want Society with a big S, I can give it them!"
>
> "Naturally," said Darrell.
>
> "And it always amuses people—doesn't it?"
>
> Kitty clasped her hands round her knees and looked at him with candour.
>
> "Does it?" said Darrell. "It has been done a good deal."
>
> "Of course," said Kitty impatiently, "mine's not the proper thing. You don't imagine I should try and work like Thackeray, do you? Mine's *real* people—*real* things that happened, with just the names altered."
>
> "Ah!" said Darrell, sitting up, "that sounds exciting. Is it libellous?"
>
> "Well, that's just what I want to know," said Kitty slowly. "Of course I've made a kind of story out of it. But you'd have to be a great fool not to guess. I've put myself in, and——"
>
> "And Ashe?"
>
> Kitty nodded. "All the novels that are written about politics nowadays except Dizzy's are such nonsense, aren't they? I just wanted to describe—from the inside how a real statesman"—she threw up her head proudly "lives and what he does."—(P. 291.)

There you have Mrs. Ward, all unconsciously, describing herself and her latest book. Of course, it is a caricature, which would be a cruel caricature were it not so unconscious; but it is of a piece with all the rest of the book. Possibly Mrs. Ward is as unconscious of what she is doing when she describes her hero in terms which suggest Mr. Balfour, and dresses up her heroine as a monstrous travesty of the wife of another prominent politician; but no one who reads her story can help feeling the truth of Kitty's remark, "You'd have to be a great fool not to guess." So people will guess and find amusement, malicious amusement, in guessing who were the originals who supplied the germ idea of the leading characters in Mrs. Ward's novel. For "mine's real people—real things that happened—with just the names altered."

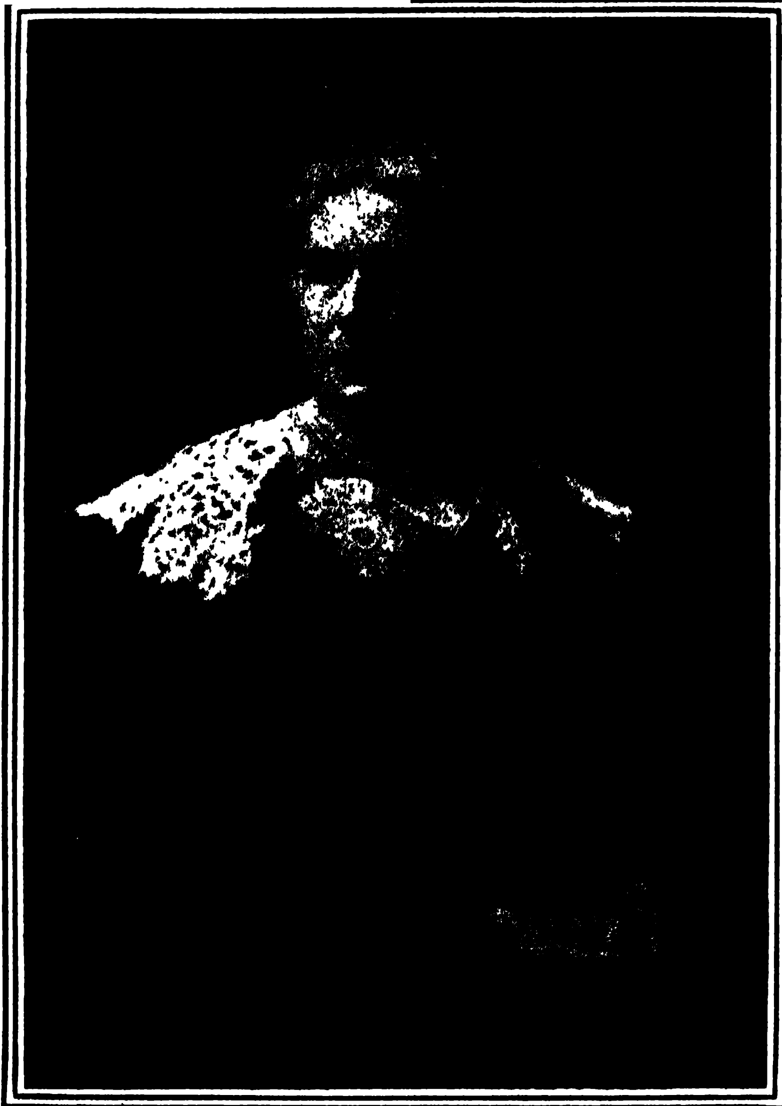
Of course, no one charges Mrs. Ward with deliberately sitting down to paint a recognisable portrait of any prominent personage in contemporary society. But it is impossible to acquit her of allowing her imagination to be so governed by her observation of certain of her acquaintances that her finished picture instantly reminds the reader of the original. Novelists must draw more or less from real life. They all put their acquaintances into their stories, more or less disguised. But as in improvised amateur theatricals, when you borrow the scarfs and hats and cloaks of your friends in which to disguise the players, the spectators are apt to recognise the wardrobe from which the costumes came. The question is whether Mrs. Ward has not gone perilously near Miss Marie Corelli in her borrowing from real life. Miss Corelli is always quite unconscious of her caricaturing. When she produced a lifelike study of Mr. Chamberlain which everyone recognised, no one was so astonished as she, and Mrs. Humphry Ward is, no doubt, equally ingenuous and innocent. But it is difficult not to suspect that the mother-idea in Mrs. Ward's mind must have been something like this. Supposing the Prime Minister, when an Under Secretary, had married Dodo when she was eighteen, what would have happened?

Mrs. Ward's method of creating her characters is well illustrated in her villain, Geoffrey Cliffe. In this case the original appears to have been Lord Byron. But in order to bring him up to date she has borrowed the journalistic exploits of Mr. Henry Norman, and her artist has given him the outer semblance of Mr. Whistler. In Geoffrey Cliffe, therefore, we have a compound of Byron-Norman-Whistler, reminding us at every turn of one or other of the original models. There is no harm done here. It will amuse Mr. Norman, and both Byron and Whistler are dead. But with other characters in the story it is different.

WHO ARE THE "REAL PEOPLE"?

"Mine's real people" only in the sense in which a convex or concave mirror gives true reflections of real people. The glass of the novelist distorts their features out of all proportion, but without destroying their identity. No one can say that this wayward, half insane Kitty is a portrait of any living woman; neither age, nor period, nor tragic ending fit anyone. But everyone who reads "The Marriage of William Ashe" will be reminded at every page of some characteristic trait, or speech, or act of one of the most charming and interesting figures in London society. And although William Ashe can hardly be accepted as a full-length portrait of the present Prime Minister, it is impossible to deny that the authoress must have had Mr. Balfour in her mind's eye when she drew the portrait of her handsome, nonchalant politician, who

* "The Marriage of William Ashe." By Mrs. Humphry Ward. (Smith, Elder and Co. 6s. 556pp.)



was always ready to desert politics for theology, and who was so philosophically superior to the ordinary failings of other men. Novelists, like artists, must, no doubt, have models. As in the Academy every year artists recognise the originals of the painted figures on the canvas, so in Mrs. Ward's pages you constantly feel "you'd have to be a great fool not to guess" who sat involuntarily for the *dramatis personæ* of her romance.

NO MISTAKE ABOUT "THE SOULS."

It may be asserted that the story is not laid in our times; that, as one reviewer suggests, it is to be regarded as a kind of historical novel, dealing with Lord Melbourne, Lady Caroline Lamb, and Lord Byron. That yarn may be appropriately told to the marines. The atmosphere, the conversation, the spirit of the story are no more early Victorian than they are Anglo-Saxon. But any doubt on this point may be set at rest by the following vivacious description of the well-known group of the Souls, whom Mrs. Ward describes under the sobriquet of the Archangels, in accordance with Kitty's maxim, "Mine's real people—just the names altered."

He was thinking of the other members of a certain group, at that time well known in London society—a group characterised chiefly by the beauty, extravagance, and audacity of the women belonging to it. It was by no means a group of mere fashionables. It contained a large amount of ability and accomplishment; some men of aristocratic family, who were also men of high character, with great futures before them; some persons from the literary or artistic worlds, who possessed, besides their literary or artistic gifts, a certain art of agreeable living, and some few others—especially young girls—admitted generally for some peculiar quality of beauty or manner, outside the ordinary canons. Money was really presupposed by the group as a group. The life they belonged to was a life of the rich, the houses they met in were rich houses. But money as such had no power whatever to buy admission to their ranks; and the members of the group were at least as impatient of the claims of mere wealth as they were of those of mere virtue.

On the whole, the group was an element of ferment and growth in the society that had produced it. Its impatience of convention and restraint, the exaltation of intellectual or artistic power which prevailed in it, and even the angry opposition excited by its pretensions and its exclusiveness, were all perhaps rather profitable than harmful at that moment of our social history. Old customs were much shaken; the new were shaping themselves, and this daring coterie of young and brilliant people, living in each other's houses, calling each other by their Christian names, setting a number of social rules at defiance, discussing books, making the fame of artists, and—now and then—influencing politics, were certainly helping to bring the new world to birth. Their foes called them "The Archangels," and they themselves had accepted the name with complacency.

Photograph by] [*H. Walter Barnett.*

Mrs. Humphry Ward.

The description of the fancy ball which figures in Kitty's book and also in Mrs. Ward's is another real thing, being suggested by, if not actually copied from, the great ball at Devonshire House some years since.

IS NOT THIS MR. BALFOUR?

William Ashe, who when the story opens is voted "the ablest, handsomest and charmingest of men," is

appearance one of the idlest young men alive, but whose idleness is only a *façon de parler*, for he works hard enough at the things which please him, is in essentials modelled upon Mr. Balfour. He is described as a Liberal and as a married man. Whereas, as everyone knows, the Prime Minister is a Conservative and a bachelor. But it is for Mrs. Ward and her readers a piquant piece of amusement to imagine what would have happened if Mr. Balfour had been a Liberal and had married the original of Kitty. Here, for instance, is Mrs. Humphry Ward's character sketch of William Ashe, which might be printed without the alteration of a word as a description of the present Prime Minister :--

He was glad to be an Englishman, and a member of an English Government. The ironic mood, which was tolerably constant in him, did not in the least interfere with his normal enjoyment of normal goods. He saw himself often as a shade among shadows, as an actor among actors; but the play was good all the same. That a man should know himself to be a fool was in his eyes, as it was in Lord Melbourne's, the first of necessities. But fool or no fool, let him find the occupations that suited him, and pursue them. On those terms life was still amply worth living, and ginger was still hot in the mouth.

This was his usual philosophy. Religiously he was a sceptic enormously interested in religion. Should he ever become Prime Minister, as Lady Tranmore prophesied, he would know much more theology than the bishops he might be called on to appoint. Politically, at the same time, he was an aristocrat, enormously interested in liberty. The absurdities of his own class were still more plain to him perhaps than the absurdities of the populace. But had he lived a couple of generations earlier he would have gone with passion for Catholic Emancipation, and boggled at the Reform Bill. And if Fate had thrown him on earlier days still, he would not, like Falkland, have died ingeminating peace; he would have fought; but on which side, no friend of his—up till now—could have been quite sure. To have the reputation of an idler, and to be in truth a plodding and unwearied student; this, at any rate, pleased him. To avow an enthusiasm or an affection generally seemed to him an indelicacy; only two or three people in the world knew what was the real quality of his heart. Yet no man feigns shirking without in some measure learning to shirk; and there were certain true indolences and Sybaritisms in Ashe of which he was fully and contemptuously aware without either wishing or feeling himself able to break the yoke of them.

DODO REDIVIVA?

And Kitty? The wild, impulsive *enfant terrible* of eighteen, who recites, dances, and indulges every caprice; who is at once charming as a goddess and as impish as a Puck, a creature all aflame with enthusiasm at one moment and cast down into the very depths the next, a woman ambitious by fits and starts, devoted to her dresses and her diamonds, the spoiled darling of her husband, the mother of an only child; this is not the first portrait caricature of the original to be found in the pages of British fiction. But is it altogether the right thing, this utilisation of your acquaintances as jumping-off points for fictitious characters, whose careers suggest an insult? It is, of course, to a certain extent a compliment to devote a whole novel to a speculation as to what Mrs. X. or Mr. Z. would have done if they had married fifteen years since, and possibly in this case Mrs. Ward may believe that no readers will be more amused by her story than those whom she has selected as victims. But if she has no such assurance—why, then?

HENRY NORMAN, SURELY?

The character of Geoffrey Cliffe only resembles Mr. Norman in the appropriation of his journalistic career almost *en bloc*. We have his expeditions to the Balkans, his visit to the Far East, and even, most obvious of all, his famous telegrams from Washington at the time of the Venezuelan crisis. There is no mistaking the original of the following :—

He arrived at San Francisco just as the dispute had broken out, was at once captured by an English paper, and sent to New York, with *carte blanche*. He had risen with alacrity to the situation. Thenceforward, for some three weeks, England found a marvellous series of large-print telegrams, signed "Geoffrey Cliffe," awaiting her each morning on her breakfast table.

"The President and I met this morning." "The President considers, and I agree with him." "I told the President," etc. "The President this morning signed and sealed a memorable despatch. He said to me afterwards," etc.

Two diverse effects seemed to have been produced by these proceedings. A certain sense of Radical opinion, which likes to see affairs managed *sans cérémonie*, and does not understand what the world wants with diplomatists when journalists are to be had, applauded, the old-fashioned laughed.

It was said that Cliffe was going into the House immediately; the young bloods of the party in power enjoyed the prospect, and had already stored up the *ego et Rex meus* details of his correspondence, for future use.

THE G.O.M.

Similar extracts might be multiplied. But I will content myself with this brief thumbnail sketch of Mr. Loraine, the leader of the Opposition. Even Mrs. Ward would not deny that she drew this from the G.O.M.:-

. . . . She was free to observe the two distant figures in conversation, Geoffrey Cliffe and Mr. Loraine, the latter a man now verging on old age, white-haired and wrinkled, but breathing still through every feature and every movement the scarcely diminished energy of his magnificent prime. He stood with bent head, listening attentively, but, as Lady Tranmore thought, coldly to the arguments that Cliffe was pouring out upon him. Once he looked up in a sudden recoil, and there was a flash from an eye famous for its power of majestic or passionate rebuke. Cliffe, however, took no notice, and talked on, Loraine still listening.

"Look at them!" said Lady Parham venomously, in the ear of one of her intimates. "We shall have all this out in the House to-morrow. The Opposition mean to play that man for all he's worth. Mr. Loraine, too!—with his puritanical ways. I know what he thinks of Cliffe! He wouldn't *touch* him in private. But in public, you'll see, he swallow him whole—just to annoy Parham. There's your politician!"

BUT WHO IS HER PRIME MINISTER?

But apart from this practice of dressing up her puppets in the clothes of her friends or enemies, Mrs. Ward has laid herself open to more severe criticism by inventing an altogether imaginary Prime Minister, and supplying him with the most odious of wives. Now English Prime Ministers are as conspicuous personages in history as English monarchs. It is surely no more permissible to invent a Prime Minister than it is to invent a King. If novelists want to create imaginary Prime Ministers, they ought, at least, to

supply them with an equally imaginary state. But this Mrs. Ward has not done. Her Lord Parham is an English Prime Minister who holds office under Queen Victoria, after Disraeli had published his novels, and about the time when the electric search-light first began to be used for purposes of illumination. But in that period, even if we make it as elastic as possible, there were only three Prime Ministers—Lord Derby, Lord Palmerston, and Lord Russell. Now, which one of the three was Lord Parham, and who was the original of this odious creature?—

Elizabeth turned and shook hands with Lady Parham. That extraordinary woman, followed everywhere by the attentive observation of the crowd, had never asserted herself more sharply in dress, manner, and coiffure than on this particular evening—so it seemed, at least, to Lady Tranmore. Her ample figure was robed in the white satin of a bride, her wrinkled neck disappeared under a weight of jewels, and her bright chestnut wig, to which the diamond tiara was fastened, positively attacked the spectator, so patent was it and unashamed. Unashamed, too, were the bold tyrannous eyes, the rouge spots on either cheek, the strength of the jaw, the close-shut ability of the mouth. Elizabeth Tranmore looked at her with a secret passion of dislike.

Lord Parham was an aged man, who in the fourth year of his Premiership was a solid and impressive figure—which would not fit Lord Russell. He is again described as a white-haired, bullet-headed, shrewd, and masterful man. But if it is intended for Lord Palmerston, it is ludicrously out of drawing, and the picture of Lady Parham would in that case be a wicked lampoon. (Of course, there may never have been any originals of the Parhams; but in that case Mrs. Ward has made a mistake in placing her story in England. It exceeds the limits of the story-teller's license to describe the men and women, and the Souls of the present generation, as living under the administration of a mythical Prime Minister in an unverifiable period of the Victorian age.

THE PLOT OF THE STORY.

A truce, however, to criticism; now for the story, which is not uninteresting, although by no means wildly exciting. It turns solely upon one problem. If a rising politician, say Mr. Balfour fifteen or twenty years ago, had married a half-crazy, spoiled beauty, who had absolutely no common sense, what would have happened to the two of them? Would she wreck his career, or would he be able to prevent her from kicking over the traces and going to the devil? "The Marriage of William Ashe" describes one solution of that problem, but there are others that could easily be suggested. William Ashe, despite the excellent model on which he is fashioned, strikes one as a slightly impossible person. A rising statesman familiar with philosophic doubt might, of course, commit the incredible indiscretion of losing his heart and head over an eighteen year old chit, but having done so, he could hardly have been so blindly reckless as to leave his child-wife without any guidance. Of course, beautiful young lunatics have often swept grave statesmen off their feet, but such a flibbertigibbet as Kitty, with such an adventuress of a mother—not even passion *plus* pity would constitute a strong enough force to render the marriage of William Ashe conceivable in anything except its tragic finale.

THE HERO

The story opens with the election of William Ashe to a seat in Parliament, an electoral success which carries with it, thanks to his mother's affectionate wirepulling, the position of Under-Secretary for Foreign Affairs. William Ashe was the younger son of the paralytic but wealthy Lord Tranmore. His elder brother had just died, and William had suddenly become a personage. The next thing to be done was to marry him. The natural eligible lady, Mary Lyster, his cousin, rich, religious, demure, but nevertheless with a latent devil in her heart, did not attract him. "Polly was very nice, quite sweet-tempered and intelligent. She looked well, moved well, would fill the position admirably." But her slightly pedantic tone, her habit of quoting her bishop, and the infinitesimal hint of management that her speech implied, chilled him off.

THE HEROINE AND HER MOTHER.

He was in the habit of frequenting the more or less disreputable salon of Madame D'Estrées, a lady of more than doubtful character, and there he found his destiny in Lady Kitty, Madame's daughter, who had just arrived in London from her convent school in France. Lady Kitty was the daughter of a spendthrift Irish peer, Lord Blackwater by name, who had married his mistress, who, after his death, had married a rich old M. D'Estrées, whom she also outlived. Lady Kitty was very pretty, extraordinarily bewitching, the most fantastic creature in the world, who looks up at Ashe audaciously with her small, sparkling face.

The hair and skin were very fair, like her mother's, the eyes dark and full of fire, the neck most daintily white and slender, the figure undeveloped, the feet and hands extremely small. But what arrested him was, so to speak, the embodied contradiction of the personality—as between the wild intelligence of the eyes and the extreme youth, almost childishness, of the rest.

The child-woman was quick to discern that there was something wrong in the salon of her mother, which no ladies ever attended. The pained protest of her innocent soul was only too evident to Ashe, owing to her total lack of the reserve, the natural instincts and shrinkings of the well-bred English girl.

KITTY'S DÉBUT.

They meet shortly afterwards at the Cambridgeshire seat of Lady Grosville, where Lady Kitty alternately scandalises and fascinates the whole household. She makes her *début* by arriving half an hour late for dinner, with a grey terrier puppy barking furiously under her arm. She refuses to give him up, and was going in to dinner with him when—

suddenly the puppy, perceiving on the floor a ball of wool which had rolled out of Lady Grosville's work-table, escaped in

an ecstasy of mischief from his mistress's arm and flew upon the ball. Kitty rushed after him; the wool first unrolled, then caught; the table overturned, and all its contents were flung pell-mell in the path of Lady Grosville, who, on the arm of the amused and astonished Minister, was waiting in restrained fury till her guests should pass.

After this promising entrance it is not surprising that Lady Kitty becomes the centre of attention. She captures a delightful little old Dean (who might be Dean Stanley, but who is not), meets and detests with unerring instinct Mary Lyster, makes an appointment to meet Ashe in the garden next day when the others have gone to church, and horrifies Lady Grosville by reciting a love scene from Victor Hugo's "Hernani." Next day she discovers from her half-sister, who is living in retreat in the neighbourhood, some inkling of the truth about her disreputable mother.

THE KEY TO HER CHARACTER.

In her subsequent interview with Ashe she told him why she had been such a wild cat at school:—

"Yes," she said, with stubbornness, "I must. Do you know why I was such a wild-cat at school? Because some of the other girls were more important than I—much more important and richer—and more beautiful—and people paid them more attention. And that seemed to *burn* the heart in me;"—she pressed her hands to her breast with a passionate gesture. "You know the French word *panache*? Well, that's what I care for that's what I *adore*! To be the first—the best—the mo distinguished. To be envied—and pointed at—obeyed when I lift my finger—and then to come to some great, glorious, tragic end!"

To discover that everyone scorned her and that her mother was not received, that it would be thought a disgrace to marry her, was a cruel awakening. She told Ashe, "I would never *look* at a man who did not think it the glory of his life to win me." Then she tells him that she has always been spoiled: "I want a guide, that's quite certain—somebody to tell me what to do." "I would offer myself for the post," said Ashe, "but that I feel perfectly sure that you would never follow anybody's advice in anything." "Yes, I would," she said wistfully—"I would." Their conversation was interrupted. In the afternoon Geoffrey Cliffe, the Byronic villain, arrives on the scene. Lady Kitty is at once fascinated with him, and completes the upset of the household by playing billiards with him on Sunday afternoon. In the evening, however, Kitty rehabilitated herself by reciting the scene from Corneille's "Polyeucte" with such effect that all were enthralled by the gestures and tones of the slight, vibrating creature—whom but ten minutes before most of them had regarded as a mere noisy flirt—suggesting and conveying the finest and most compelling shades of love, faith, and sacrifice.

WHY HE MARRIED HER?

Net result, William Ashe resolved to marry her straight off.

Why? He scarcely knew her. His mother, his family would think it madness. No doubt it was madness. Yet, as far as he could explain his impulse himself, it depended on certain fundamental facts in his own nature—it was in keeping with his deepest character. He had an inbred love of the difficu unconventional in life, of all that piqued and stimulated hi superabundant consciousness of resource and power. A had a tenderness of feeling, a gift of chivalrous pity only l to the few, which was, in truth, always hungrily on the v like some starved faculty that cannot find its outlet. The th of this beautiful child in the hands of such a mother as Ma D'Estrées, and rushing upon risks illustrated by the half-mo attentions of Geoffrey Cliffe, did in truth wring his heart.

No!—he would step in—capture her before these wa whims, now merely bizarre or foolish, stiffened into what in truth destroy her.

. . . . And, if she married him, he vowed to himself, pro that she would find him no tyrant. Many a man might marr who would then fight her and try to break her. All tha most fastidious and characteristic in Ashe revolted from s notion. With him she should have *freedom*—whatever it cost. He asked himself deliberately, whether after marria could see her flirting with other men, as she had flirted tha with Cliffe, and still refrain from coercing her. An question was answered, or rather put aside, first by the fidence of nascent love, he would love her so well and so re that she would naturally turn to him for counsel; and the the clear perception that she was a creature of mind rather sense, governed mainly by the caprices and curiosities o *intelligence*, combined with a rather cold, indifferent tem ment. One moment throwing herself wildly into a dang or exciting intimacy, the next parting with a laugh, and wi a regret,—it was thus he saw her in the future, even as a "She may scandalise half the world," he said to hi stubbornly, "I shall understand her!"

HOW HE PROPOSES.

Kitty promptly gives him a chance by throwi flower that night into his room weighted with a st She cannot sleep. He comes out, and she angrily, "Why did you let me go and play billi alone with Mr. Cliffe?" She admits, "I flirted him abominably all the afternoon. And I shall al want to flirt with him wherever I am and whatev may be doing. He excites me. He is bad, f selfish; but he excites me." She has also div that Mary Lyster is in love with him. Ashe prom proposes. "I should be bored by the domestic d I want the hawk, Kitty, with its quick wings and its bright eyes." Kitty is very frank. She tells him has a wicked, odious, ungovernable temper, that has fancies—overpowering fancies—which she r follow. "I have one now for Geoffrey Cliffe. I c help it. It is my head that seems on fire." She him, "I should be the ruin of you. I should s everything. You don't know the mischief I can It is in my blood. I am clever. But there is alw something that hinders, that brings failure." Of co Ashe does not heed her warnings. She accepts h and they marry. But they by no means live hap afterwards.

AFTER THREE YEARS.

After three years we find that Kitty has brou Ashe a crippled son, their only child, at whom she hardly bear to look. She is ruining him financi by her reckless extravagance, and compromising h by her no less reckless flirtations. He let her whatever she pleased. Scenes of coldness w followed by scenes in which the two melted into f

delight and intoxication, which more than effaced the memory of what had gone before :—

In this state Kitty was one of the most exquisite of human beings with words, tone, and gestures of a heavenly softness and languor. The evil spirit went out of her, and she was all ethereal tenderness, sadness, and remorse.

THE VILLAIN OF THE PIECE.

But Geoffrey Cliffe came back, and was going to marry Mary Lyster. Kitty overhears Mary telling Lady Parham horrid things about herself and her mother, and sneering at the idea that "this baby making eyes at him" could possibly attract a man like Cliffe. Thereupon the mad spirit rises within Kitty, and with devilish malice aforethought she swoops down upon Cliffe, carries him off from Mary Lyster, and begins a flirtation which is the scandal of London. Her long-suffering husband puts up with it most meekly. It culminates at last in his wife going out on the river all day with Geoffrey. At night she did not return. Cliffe had attempted to abuse the advantage of his position, she had repulsed him and fled. But the last train had gone, and she had to spend the night alone in a country cottage. The scandal caused by her carryings on had before this been so great that her husband had been passed over in the distribution of Cabinet offices entirely on her account. But so great was her charm, he forgave her everything. She begged him to send her away. She loathed Cliffe, she said, but if he came back—

"Then it is not my fault. I don't know what's wrong with me," she said sombrely; "but I remember saying to you that sometimes my brain was on fire. I seem always to be in a hurry—in a desperate, desperate hurry! -to know or to feel something,—while there is still time,—before one dies. There is always a passion—always an effort. More life—*more life!* -even if it lead to pain—and agony—and tears."

Of course Kitty triumphs. How could Ashe doubt the love shown in this clinging penitence, those soft kisses? Kitty had had her own wild way. No fiat from without had bound her, but love had brought her to his feet.

KITTY WRITES A NOVEL.

Kitty goes down to the family seat at Haggart, where, being left much alone, and being, moreover, in want of money, she conceives the mad idea of writing an anonymous novel in which she would help her husband by letting the world see the real man as he was known to her. Geoffrey Cliffe had gone off abroad, leaving as a Parthian shot behind him a poem attacking her as a light woman whom the great passions passed eternally by, whom it was a humiliation to court and a mere weakness to regret. Kitty solemnly burns his portrait and his poem, and replies shrewishly by lampooning him in her novel. Her husband had now become Home Secretary, and they were to entertain Lord Parham at their country seat. Kitty, instead of being on her best behaviour, was at her wildest and worst. The old Premier, offended and scandalised, refused to take part in the fête prepared in his honour, and Kitty avenged herself by adding a chapter full of intimate personal touches of malicious description of Lord Parham to her novel. She confides the MSS. to one Darrell, a poor college friend of Ashe's, whom he has just offended by refusing to appoint him to an office in his gift, and out of revenge he takes it to a publisher, who buys it for £100.

CRISIS COMES.

That night, after a scene of wild excitement, their child dies in convulsions, and Kitty falls a prey to brain fever. It was with a mere physical wreck of a Kitty that Ashe, ten weeks later, departed for Venice. When there, Geoffrey Cliffe reappears, and, worst of all, the fatal book makes its appearance in London. Ashe at once leaves for home to place his resignation in the hands of his chief. Kitty, left behind in the care of a friend, falls an easy prey to Geoffrey Cliffe, who implores her to fly with him to the Bosnian highlands, where she could nurse the wounded while he was fighting the Turks. Before she finally yields, Lady Tranmore appears on the scene, imploring her to return. Kitty wavers, and decides to break with Cliffe and rejoin her husband. She will go for two days to Verona, she tells Lady Tranmore; she wishes to be absolutely alone. Lady Tranmore tells Mary Lyster, and that demure maiden, seeing an opportunity of being avenged both upon Ashe and Cliffe and the woman who robbed her of both her possible husbands, sends Cliffe an anonymous letter telling him where Kitty has gone. He follows her, she succumbs, and flies with him as his wife to the Bosnian highlands.

THE END.

There the inevitable occurs. He treats her horribly, and takes up with a healthy Bosnian girl, while Kitty, a broken-down wreck, seeks refuge with her half-sister at Treviso. Her husband refuses to allow her to return to Haggart, where she longs to be near her child's grave. A short time after the husband and wife meet by accident in a Swiss inn. Kitty says: "William, William, what a good thing it is I'm dying."

It gives one such an unfair advantage though, doesn't it? You can't ever be angry with me again. There won't be time. William dear!—I haven't had a brain like other people. I know it. It's only since I've been so ill—that I've been sane! It's a strange feeling—as though one had been *bled* —and some poison had drained away. But it would never do for me to take a turn and live! Oh no!—people like me are better safely under the grass. Oh, my beloved, my beloved! -I just want to say that, all the time, and nothing else.—I've hungered so to say it!"

And so death comes. She protests that he did quite right not to let her come back to Haggart, even recognising the justice of the retribution which had befallen her at the hands of Mary Lyster. "I had killed her life, I suppose—she killed mine. It is what I deserved, of course."

The story is cleverly written, the characters well conceived and sharply cut. But like all Mrs. Ward's novels, as in Kitty's character, "there is always something that hinders," which, if it does not bring failure, is fatal to the achievement of real success in touching the reader's heart.

The Review's Bookshop.

April 1st, 1905.

IT has been a dull month in the world of books. The numbers published have not been large, and the quality has been below the average. A fine though brief Life of Chatham, an excellent biography of Coventry Patmore, a new and remarkable Life of Christ, a few books on various aspects of the Empire, a study of the first importance on the American spirit, and Mrs. Humphry Ward's new novel, sum up the roll of notable books of the month.

THE GREAT IMPERIALIST.

The most readable biography of the month, beyond all dispute, was Mr. Frederic Harrison's monograph on Chatham (Macmillan. 239 pp. 2s. 6d.). It completes that very admirable series of short biographies edited by Mr. Morley and published under the title of "Twelve English Statesmen." For years the Statesmen have only numbered eleven, for Mr. Morley, who had intended to write the Life of Chatham himself, was prevented from doing so by other and more urgent work. At length he was compelled to abandon the idea and commit the task to the very capable hands of Mr. Harrison. Mr. Harrison has done his work well, though the sketch is not so brilliant an effort as his Life of Cromwell in the same series. The subject could not have been wholly a congenial one, for in Mr. Harrison's eyes Imperialism is an abomination, and Lord Chatham was the great Imperialist and virtual founder of the British Empire beyond the seas. Of this lack of sympathy there is occasional evidence in the portion of the Life chronicling the achievements of Chatham's early career. But the concluding chapters, recording his vehement protests against the criminal folly of the American war, are written with all Mr. Harrison's accustomed vigour. It is a fine portrait of the Great Commoner, and the only one yet written that gives an adequate idea of the man, the statesman, and his policy.

THE SPIRIT OF AMERICA.

With Chatham's dying words still ringing in your ears, take up Professor Munsterberg's volume on "The Americans" (Williams and Norgate. 618 pp. 12s. 6d. net). It is the best and truest, the most subtle and informing interpretation of the Spirit of Americanism that I have ever read. Professor Munsterberg is no indiscriminating eulogist, but he knows America thoroughly, he understands Americans as few foreigners do, and he has the very rare gift of seeing below the surface of things. The result is a profoundly interesting and instructive study of the American spirit, and an explanation of the real secret of the immense success of the great Republic. This book supplements Mr. Bryce's monumental work on the American Commonwealth. It is one of those volumes—and they are not very numerous—that all thoughtful and well-informed men whose interests are not limited to a narrow circle should not fail to read. The whole book is instructive and well worth careful perusal, but the essence of it is contained in the four chapters dealing with the spirit of self-direction, self-initiative, self-perfection, and self-assertion.

THE EMPIRE, PAST, PRESENT, AND FUTURE.

The Empire, its past history, present condition, and future destiny, has been the most prominent subject dealt with in the books of the month. For a painstaking and thoughtful attempt to trace and explain its growth you should read Mr. George Peel's "Friends of England." Discarding Seeley's view that the Empire was built up in a fit of absence of mind, Mr. Peel insists that, on the contrary, it is the fruit of "a long, deliberate, persistent and conscious effort on the part of our statesmen to avert the predominance of any European Power." In other words, the Empire was forced upon us in self-defence. For a sympathetic study of the Empire as it appears to-day to an intelligent foreigner you should look at Vicomte d'Humieres' "Through Isle and Empire" (Heinemann. 300 pp. 6s.). It is a collection of snapshot impressions of life in England, Egypt and India by an observant and well-informed Frenchman. Many of his observations on our national characteristics are shrewd; they show an open mind not much hampered by continental prejudices, and an eye for the picturesque rather than the important. His knowledge of the English people is confined, however, to a somewhat small circle. And it is necessary for foreigners, and also for some Englishmen, to remember that London is not England, and that the society of the capital does not constitute the whole of the English people. If only by way of contrast to these studies of some aspects of a complex problem you should read Dr. Emile Reich's "Imperialism: Its Prices; Its Vocation." Never was there a man more wedded to a preconceived theory than Dr. Reich. His ingenuity in fitting his facts to his theories is unlimited. A Sherlock Holmes is not more resourceful, or more far-fetched. In this latest volume you will read many marvellous and startling conclusions reared on a very unstable foundation of "facts," or what pass for such with Dr. Reich. The book is brilliant and clever, for Dr. Reich is always brilliant and clever, even when he is writing nonsense.

A STRIKING LIFE OF CHRIST.

After the scores and hundreds of lives of Christ that have been written there hardly appears to be room for another, or that it is possible to treat the well-worn subject in a manner that is at once new and suggestive. This, however, has been done in a remarkable book by Giovanni Rosadi, a famous Italian criminal lawyer. His "Trial of Jesus" (Hutchinson. 342 pp. 6s. net) has now been translated into English, and may justly claim to be an important contribution to Christian literature. The life of Christ, and more especially his trial and condemnation, is described from the point of view of a trained lawyer or judge on the bench reviewing all the facts of the case. The customs, the laws, and the social and political conditions of the time in which Christ lived are all given due prominence; the limitations imposed by the Roman rule are fully noted. The trial is followed step by step in the light of all these facts, illegalities and irregularities are pointed out, and the conclusion arrived at that the death of Christ was obtained by means of a conspiracy which, to secure his condemnation, disregarded all judicial rules and rode roughshod over the established laws. The condemnation of Christ was, in short, not only unjust, but, even judged by the rules of Jewish and Roman law, grossly illegal.

THE LAUREATE OF WEDDED LOVE.

Mr. Gosse's biography of Coventry Patmore (Hodder. 252 pp. Illustrated. 3s. 6d. net) is the latest addition

to the series of Literary lives. Mr. Gosse is a trained biographer, and he has turned out an excellent study of Patmore's life, work, and career. It is a well finished whole, short, but giving all that it is necessary to know about the man and the poet. Mr. Gosse had the advantage of knowing Mr. Patmore intimately in his somewhat grim old age, and he gives us a lifelike sketch of the poet, whom he well describes as an intellectual and moral aristocrat, after he had joined the Roman Communion. His independence was by no means diminished by his submission to the authority of the Church. The greater part of the book is, naturally, devoted to the history of Patmore's "Angel in the House," his unique contribution to English literature. But Mr. Gosse never allows the work to obscure the worker, nor the details of life to obliterate the personality of the subject of the biography. There are several admirable portraits and illustrations.

THE CURSE OF WAR.

Papers and magazines for months past have been full of ghastly details of what war really means to the combatants, but I doubt whether all these columns and pages of description will bring home so vividly to the mind the real tragedy and curse of war as the old Greek play of "The Trojan Women," whose latest translator is Mr. Gilbert Murray (Allen. 94 pp. 2s.). It is a poignant and pathetic description of the after-effects of war, when the victory has been won and the foe vanquished. The shouting and the fighting are over, the men slain, and the women are being led captive to a foreign land. It is they who pay the full penalty for "glorious war" in sorrow and heartbreak, in desolating agony, and madness and black despair. Euripides's little group of Trojan women gathered beneath the crumbling and flaming walls of their ill-fated city is the eternal symbol of the price of war measured in the scales of human anguish.

A RECANTATION.

The whole-hearted faith of at least one disciple of Tolstoy has not been able to stand the strain placed upon it by a closer acquaintance with the master's peculiar people, the Doukhobors. Mr. Aylmer Maude, in a volume entitled "A Peculiar People" (Constable. 338 pp. Illustrated. 6s. net), does public penance for his acceptance of the Tolstoyan assumption that the Doukhobors were morally far above ordinary humanity. A more accurate knowledge of their beliefs and customs in the new land where they have found a refuge from persecution, has not borne out that pleasing illusion. Mr. Maude has seen sufficient reason to greatly modify his original estimate, and in this volume he sets forth these reasons, and so "tries to atone for a blunder." But this was only the beginning of his enlightenment, and in one of his chapters Mr. Maude seriously questions the practicability or the morality of the Tolstoyan gospel. He vigorously states his objections to the master's "errors and exaggerations," while acknowledging the immense debt humanity owes to his courage and intellectual force. He admits that the doctrine of non-resistance, as held by Tolstoy, is logically unassailable, but he questions its practical utility.

TALKS ABOUT BOOKS.

Mr. Andrew Lang has made up a delightful volume from old articles and papers in which he describes his "Adventures Among Books" (Longmans. 312 pp. 6s. net). No one can talk more pleasantly about books or to better purpose than Mr. Lang. His opening paper on his own adventures among books is altogether charming. He describes his experience in childhood and boyhood in the reading of books, which ones he liked and why, which ones he disliked and the reason. Mr. Lang distrusts "courses of reading." People who really care for books, he says, should read all of them. He certainly followed his own precept and read all the books that came in his way. But then all young men are not like Mr. Lang, who profits by what he reads, and is not lost in the ocean of literature good, bad and indifferent. The other papers in the volume on Stevenson, Oliver Wendell Holmes, William Morris, St. Augustine, Smollett, and Nathaniel Hawthorne, among others, may be recommended to the young men whom Mr. Lang declines to provide with "courses of reading," as excellent substitutes and as introductions to many admirable books.

TWO PRESSING SOCIAL PROBLEMS.

There are two books on questions that have recently claimed a large amount of attention—the condition of the nation's children and the problem of the immigrant. Mr. Sherard has written a truly appalling book on the "Child Slaves of Britain" (Hurst and Blackett, 267 pp. Illustrated. 6s.). The chapters were first published in a monthly magazine, and Mr. Sherard claims that their accuracy has not been impugned. It is a deplorable account of the conditions under which many English and Scotch children are brought up. The facts presented in the volume were gathered in a six months' investigation, two of which were spent in the East End of London. More terrible than even the degraded and poverty-stricken condition of East End children is the amount of child slavery existing in other large towns and centres of population—Manchester, Birmingham, Grimsby, and the chief Scotch towns. The book is extremely interesting, and there is a kind of horrible fascination in turning over its pages. The volume dealing with the immigrant is the work of a scientific student who spent a year in studying the problem in thirteen European countries. "The Problem of the Immigrant" (Chapman and Hall. 295 pp. 10s. 6d. net) is one beset with innumerable difficulties. From Northern, Eastern and Southern Europe there marches every year an immense army numbering 1,500,000, pressing ever westward. Mr. J. D. Whelpley, after briefly discussing the various complex questions that have arisen as the result of this vast migration, summarises under each country the laws and regulations that have been put in force to cope with the inflow of immigrants.

PEACE—INTERNATIONAL AND INDUSTRIAL.

A most useful book of reference for the social student is Mr. Douglas Knoop's "Industrial Conciliation and Arbitration" (King. 241 pp. 7s. 6d. net). It is a careful and exhaustive inquiry into the methods employed in many countries for the settlement of industrial disputes. Mr. Knoop has digested the vast amount of scattered information on the subject which hitherto has been unobtainable in any convenient form. He has added ample footnotes and references, so that the student may know where to turn for fuller information. A full bibliography at the end of the volume adds greatly to its value. A close study of the subject has not made Mr. Knoop unduly optimistic. He will go no further than to say that though the prospect of industrial peace in the future is not brilliant, it is at least bright and hopeful. The road to peace in industrial matters, he maintains, lies through war; but it is possible to do much to minimise the evil results of conflict by building up and consolidating a voluntary system of arbitration in which trade boards are given

the first place. Another valuable book for the student deals with the problems of international law. Mr. L. Oppenheim has compiled an encyclopædic treatise on the subject, the first bulky volume dealing with questions of peace (Longmans. 610 pp. 18s. net). It is intended as an elementary book for those beginning the study of international law, and is written in clear and lucid language, is admirably arranged and brought down to date. For those who wish for a convenient and reliable guide and book of reference on questions regarding the laws of nations this volume will admirably suit their purpose.

READABLE NOVELS AND TALES.

There have been many readable but, with one exception, no remarkable novels published during the month. To select a dozen is an invidious task, but you will find any of the following novels and tales excellent reading should time hang heavy on your hands. To take the exception first. Mrs. Ward's "Marriage of William Ashe" need only be mentioned here, as it is noticed at length as the book of the month. Mr. Quiller Couch is always worth reading, and his well-told tale of Cornish life, "The Shining Ferry" (Hodder. 6s.), is no exception to the rule. It is fully as good as any of Mr. Couch's previous novels. If you like tales of mystery and adventure there are three I can commend to your attention. The resuscitated "Sherlock Holmes" (Newnes. 6s.), saved from the falls of the Reichenbach, is once more at work, and the records of his ingenuity and resource in tracking down criminals and unravelling mysteries already fill a volume. The "House of Merrilees," by Archibald Marshall (Rivers. 6s.), is an exciting mystery tale. The chief mysteries, the disappearance of the dead body of the owner of the House of Merrilees, and the parentage of the hero of the story, are eventually cleared up. It has not a dull page in it from beginning to end. "Dr. Silex," by J. B. H. Burland (Ward, Lock. 6s.) is an exceedingly romantic tale of an Arctic expedition. The story goes with a swing and never drags. If you prefer novels which deal with the shortcomings of society, there is Mrs. Elinor Glyn's "Vicissitudes of Evangeline" (Duckworth. 6s.). Evangeline, although assured on all hands that she is predestined to be wicked, is really not such a heartless little hussy as her predecessor Elizabeth. And also, it must be admitted, not so amusing. But, all the same, the book is amusing reading, and is brightly written. The vicissitudes, of course, end in a rich marriage. "Duke's Son" (Heinemann. 6s.) is a tale of smart Society life, which grips and holds tight from start to finish. "Mrs. Galer's Business" (Methuen. 6s.), as related by Mr. Pett Ridge, makes a very bright and amusing story. Mrs. Galer is the capable manageress of a Clerkenwell laundry, the possessor of a worthless husband, a scamp of a son, and a house large enough to admit of lodgers. Her good humour and good sense are absolutely unfailing. A picture of a very different side of London life is given by Mr. C. F. Keary's "Bloomsbury" (Nutt. 6s.). A great variety of not always particularly attractive intellectual types are represented. Lastly, there are two volumes of short stories. "The Rice Papers," by H. L. Norris (Longmans. 6s.), have at least the merit, we are assured, of not being true. True or not these sketches of Eastern life are told with great humour. Jane Barlow's collection of short stories, "By Beach and Bogland" (Unwin. 6s.) are, of course, studies of Irish character, with a strong element of the humorous in them. They will be welcomed by all lovers of Ireland.

THREE HISTORICAL BIOGRAPHIES.

Miss Eva Scott, already known for her writings about the Stuarts, has produced an elaborate study of the wanderings of Charles II. from June, 1646, to July, 1654. "The King in Exile" (Constable. 495 pp. Illustrated. 15s. net) only records the events of the first eight years of the exile. Reading the closely-written pages of this serious historical study, the wonder grows almost with every page that such a contemptible and utterly worthless character as Charles should ever have found a single loyal adherent. The King's wanderings lead him to Scotland, and the history of Dunbar and Worcester, of Whiteladies and the Royal Oak, with the hairbreadth escapes of the fugitive, are all narrated. The chief defect of a book which certainly ranks with the best published during the month, is a lack of humour and an over-sedateness of style. Another historical sketch of the same period is Mr. C. S. Terry's "John Graham of Claverhouse," the bloody Clavers of the Covenanters (Constable. 377 pp. Illustrated. 12s. 6d. net). Claverhouse's career is told in a straightforward fashion, his conduct defended, and when we come to the concluding scenes culminating in the battle of Killikrankie, Mr. Terry's narrative is full of vigorous description and thrilling interest. In her study of "Matilda Countess of Tuscany" (Long. 12s. net) Mrs. Huddy has selected an excellent subject, to which, however, she has failed to do full justice. The book is badly constructed, and there is no special charm or even individuality of style in what might have been an intensely interesting account of "La Grande Comtesse," who commanded an army at fifteen, and who at sixty-three was still a beautiful and regal woman, the admired of all beholders. She was born in 1046, and received an education before which that of most modern girls pales. Yet she was all that is charming and typically womanly. Her life was one long championship of the Church of Rome and of the rights of its Pontiffs. It is a pity that so picturesque and adventurous a career has not found a more skilful historian.

REMINISCENCES—LITERARY AND POLITICAL.

Personalia are always popular, and the supply is inexhaustible. Mr. Edmund Downey's reminiscences, published under the title of "Twenty Years Ago" (Hurst and Blackett. 299 pp. Illustrated. 6s. net), are mostly about people not very well known to the public outside the literary circles of Fleet Street and the Strand. Many of the personalities dealt with are little more than names now, except to those old enough to remember those historic streets in the seventies and eighties. The book is brightly written, and contains a wealth of anecdote which will make it pleasant reading to the general public. If your preference is for political recollections, you will find "The Reminiscences of a Radical Parson" (Cassell. 268 pp. 9s. net) quite to your taste. The Rev. W. Tuckwell does full justice to his title, as a reference to the modest little social programme with which he concludes his recollections amply demonstrates. He describes his experiences on innumerable political platforms, his meetings with Liberal statesmen, discusses the causes and expounds his remedies for English misery. The whole is made eminently palatable to the popular taste by the anecdotes liberally strewn in every chapter.

MARTYRS AND PREACHERS.

Two excellent books, very different in style and treatment, describe the Christian martyrs of the early Church and the Christian preachers of this latter day. Rev.

A. J. Mason has retold for the ordinary reader the most trustworthy narrative of the sufferings of the primitive martyrs. No account has been inserted in this volume on "The Historic Martyrs of the Primitive Church" (Longmans. 423 pp. 10s. 6d. net) that cannot claim to be historically true. It is an inspiring record of steadfast faith and unflinching courage, of tenacious adherence to the truth, and of firm determination to lay down life rather than be false to principle, that should do much good in these days of indifference and feeble faith. "The Man in the Pulpit" (Methuen. 203 pp. 2s 6d net), by James Douglas, is a

A Country Boy.

Reproduced from an original soft-ground etching by Catherine Maria Fanshawe, painter-etcher (1765–1834), that shows the mingled influences of Gainsborough and Morland.

collection of brief but striking impressionist sketches of the leading preachers of the day. Mr Douglas has a quick eye for character and for the mannerisms by which it is expressed. In a few pages he dashes off a portrait of a preacher which, while lacking the finer shadings, is in all respects a truthful and in many cases a remarkable likeness. He has undoubtedly a happy gift for literary portraiture.

TALES OF BEASTS AND BIRDS.

There is nothing of the conventional scrappy animal book about "Monarch, the Big Bear of Tallac" (Constable. 214 pp. Illustrated. 5s net). It is a "historical novel of bear life" told by Mr. Ernest Thompson Seton, who has combined the known experiences of several bears into the life story of a single splendid bear personality. Jackey as a cub pet is as mischievous and amusing as a spoiled child. With all his soft ways the baby grizzly is a shrewd fighter. Against terrible odds he makes his way back to the hills, where for several years he is master of the country, killing men, cattle and sheep. One follows the adventures of the big bear with breathless sympathy from chapter to chapter to the close of the story. Another book on natural history is Mr. A. H. Beavon's "Birds I Have Known" (Unwin. 256 pp. Illustrated. 5s.), in which he describes the birds he has met with in all parts of the world. Two of the most interesting chapters are devoted to the habits and haunts of the feathered citizens of the metropolis.

BOOKS ON ART.

It was certainly high time that the women painters of the world should have some worthy memorial of their labours. After four and a half centuries, justice at last has been done them, and now in a handsome volume, containing some three hundred reproductions, the work of the most famous women painters is placed on record ("Women Painters of the World." Hodder and Stoughton. 5s., 7s. 6d., and 10s. 6d.). It is a notable collection, gathered from all nations and every age, and one which deserves to be extremely popular. A small reproduction of one of the illustrations is given on this page. I note also the inclusion of Millet in Messrs. Methuen's excellent series of Little Books on Art (thirty-five illustrations. 2s. 6d. net). Florence, too, has now been added to the series of coloured books (A. and C. Black. 20s. net). The illustrations are admirably selected and reproduced with the perfection to which we have become accustomed in these guide books *de luxe*.

DO WE BELIEVE?

Some time ago the *Daily Telegraph* opened its columns to the discussion of what was the belief of the average man to-day. The more interesting and suggestive of the contributions have now been gathered into a volume and published under the title of "Do We Believe?" (Hodder. 376 pp. 3s. 6d.), with an introduction added by Mr. W. L. Courtney, in which he endeavours, somewhat too briefly, to dispel the doubts and answer the objections brought forward by many correspondents. It is a volume that deserves careful study, for it undoubtedly represents the state of mind among a large section of the community, and sets forth with great frankness their doubts and difficulties. A little book that many, I am sure, will find both helpful and suggestive is Josiah Royce's "The Conception of Immortality" (Constable. 174 pp. 2s. 6d.). Starting by an inquiry of what we mean by an individual man, Mr Royce leads up to a definition of his Immortality, and what, to his mind, is a true basis of a rational conception of Immortality. I regret that space only permits me to call the attention of the thoughtful reader to the book and to strongly commend him to read it for himself.

A POOR MAN'S LIBRARY.

The latest attempt to provide literature of the first class that has stood the test of time and criticism, at prices which will bring it within the reach of everyone, is Messrs. Methuen's admirable project of a Standard Library. Under the general editorship of Mr. Sidney Lee, they propose to publish at regular intervals the best books in the world, in volumes which can be bought for

sixpence in paper backs, and one shilling cloth bound. The volumes are of the ordinary octavo size, are printed in clear type, and on as good paper as can be expected at the price. This is certainly the most ambitious and promising attempt that has yet been made to provide the poor man with a library that will contain all the best of the world's literature. The first six volumes have already been published, and they give a good idea of the range and variety of the books to be included. For three shillings and sixpence you can obtain Bacon's Essays and "New Atlantis," five plays of Shakespeare, "The Meditations of Marcus Aurelius," "The Pilgrim's Progress," Jane Austen's "Sense and Sensibility," and 440 pages of Gibbon's "Decline and Fall," a double number published at one shilling. Mr. Heinemann is adding to his Favourite Classics "The Early Poems of Tennyson" and "The Princess," each with a photogravure frontispiece (6d. net each). Mr. John Murray has published Samuel Smiles' famous book "Self-Help" in a new edition at 3s. 6d. John Wesley's translation of "The Imitation of Christ" can also now be had for 6d. (Fifield). Messrs. Nelson offer to provide the man of moderate means with a new and up-to-date encyclopædia published in forty fortnightly parts at 7d. each. Besides containing some 50,000 entries and numerous illustrations, one of the most useful additions is a list of the principal books on all the chief subjects dealt with. This admirable feature would have been made still more useful had the price of the books been added.

HOW TO MAKE AN INDEX.

With the enormous increase in the volume of literature we have to rely more and more upon the discretion and judgment of the skilled index-maker. Mr. Wheatley published recently a book on "How to Make an Index." Mr. A. L. Clarke has now brought out a volume on the same subject. It is entitled "Manual of Practical Indexing" (Library Supply Company. 5s. net), and it will probably be the text-book on indexing for library assistants and others. The main section deals with the indexing of periodicals and books, the second being devoted to commercial indexing and the mechanical production of indexes. The book contains much useful advice, and practical demonstrations of the methods advocated or criticised are given. Mr. Clarke does not seem to favour classification; perhaps he has discovered how difficult it often is. On pages 36 and 38 he quotes items on France from our "Annual Index to Periodicals," and from an American Index, to prove apparently that facility of reference is gained from the alphabetical arrangement of titles adopted by the latter. The comparison of the two methods is interesting, but it would have been clearer had the two quotations been from the two indexes to periodicals for the same year. In the short specimens we have in the American index references to Catholicism or the Church in France in three different places, for presumably "France *and* the Papacy," "*Catholicism* and Democracy in France," and three other articles on "*Church* and State in France," all have Catholicism in France for their subject. Again the Colonial Policy of France appears in, at least, five different places—"France *and* Algeria," "France *and* Her Colonies," "France *and* Siam," "*Colonial* Policy of France," and "*Colonies* in the East." The italicised words show how the alphabetical arrangement has been made. Should the searcher happen to have "Colonies" uppermost in his mind he will only get the last two articles out of the five, and he will miss the second, and "Algeria" and "Siam" as well. No allusion whatever is made in the book to the *Times* "Index" or to the indexing of the Parliamentary Debates; this is surely an oversight.

MISCELLANEOUS.

I should also like to direct your attention to a volume of Colonial verse. The literature of a colony has always an interest in itself, apart from its intrinsic merit. One watches hopefully for local colour and the first signs of a national spirit. Much of the former and some of the latter will be found in "Loraine and other Verses," by George Essex Evans (Melbourne: Robertson and Co. 4s. 6d.). Mr. Evans, however, is not an Australian born, and his verse does not, I think, catch the peculiar charm of Australian scenery, and does not reflect the Australian spirit quite as Mr. A. B. Paterson's does, for instance. Nevertheless, it was Mr. Evans whose "Commonwealth Ode" was adjudged the best—a poem included in this collection. Read as poetry, the reader will derive much pleasure from these poems; read as Australian literature, they are less interesting and less characteristic than the poems of other writers. Only one—the title poem—is long, and in some ways it is perhaps the best. Pervading the poems is that sense of vast space which seems sooner or later to overpower everyone familiar with Australian landscapes; pervading them, also, is a tone of melancholy.

The dead are entering into competitive authorship with the living, and the "Letters of Julia" have now many successors. One of them "Thought Lectures" (*Light* Office. 1s. net), which were given by Father Stephano, who "just went to sleep" in Yorkshire in the reign of Henry I., and has just now been able to find a medium through whom to communicate his thoughts to mankind. "Father Stephano" has a great deal to say, and says it well. Another writer from the Beyond is a child, whose letters to its mother after its death have been published by Gay and Bird (2s. 6d. net). It is interesting to note how the departed carry their atmosphere over with them into the Spirit Land. This child is High Church, and the Church Festivals are all duly observed in its world.

Note.—*I shall be glad to send any of the books noticed above to any subscriber, in any part of the world, on receipt of their published price, except in the case of net books, when the amount of postage should also be sent. Subscribers who deposit the price of a book can have it sent them on approval. If they do not like it, and return it uninjured, their deposit will be returned minus postage. In the case of more expensive books we are prepared to sell them on the instalment plan to our regular subscribers. I shall also be glad to receive suggestions, criticisms, and even complaints, from my customers, and invite their co-operation in making this department of practical service to them. Any information my readers may desire as to the books and other publications, either of the current month or of earlier date, I shall endeavour to supply. All communications must be addressed to "The Keeper of the Review Bookshop" at the Office of the* REVIEW OF REVIEWS, *Mowbray House, Norfolk Street, London, W.C.*

A Supplement to the "Review of Reviews."

No. 46. Issued as an integral part of the "Review of Reviews" of April, 1905.

The Post Office Slow-Coach.

WHEN all the world is forging ahead the Postmaster-General is going slow. For some years past it has been accepted by everybody, including the British Treasury and the British Post Office, that the present abominable, disreputable, and altogether intolerable system of carting mails about London was doomed. But for the impecuniosity of an Exchequer depleted by wasteful wars in Africa, the Government would two years ago have provided for the laying of the pneumatic tubes which would enable the Post Office to deliver mail matter in as many minutes as it now takes hours. A private company was formed to relieve the Government of all cost. The capital was subscribed, and the Post Office authorities co-operated with the company in drawing up plans for the installation of the system. All went merry as a marriage bell, and we were confidently expecting that the metropolis would have the advantage of swift, cheap, and certain delivery as soon as ever the tubes could be put under ground. When suddenly, no one knows how, from quarters located no one knows where, an opposition arose to the scheme. It grew in volume. It made itself felt here, there, and everywhere. Finally it appears to have taken possession of the Postmaster-General, and it appears that he is going to oppose the scheme before the Committee of the House, to which, after Easter, the Pneumatic Tube Bill will be sent.

I must honestly say that at first I did not believe this story. Lord Stanley is not a genius, neither does he pretend to be a statesman, but he does aspire to be a decent administrator, and I utterly reject the notion that he has been got at by the vested interests affected by this reform. If we were in America, nothing would be simpler than to explain why this great and much-needed public improvement is threatened with being held up. It would be said at once that it was being held up for Boodle. The authorities were opposing the scheme until they could compel its promoters to bribe them for their consent. Fortunately no one in this country ever dreams that any such motive can prompt the opposition to the Bill.

But Boodle can make itself felt in more respectable fashion. The owners of the 1,000 mail-carts, and the carriers who now do the business of parcel delivery, know that the pneumatic tube would deal them a damaging blow. The company claims that it will be able to relieve the congested streets of London of some three thousand vans and other vehicles, the use of which would no longer be needed. Here there is a strong monetary interest which can be relied upon to leave no stone unturned to defeat the pneumatic tube. Their opposition was inevitable. It is the opposition of the stage coach to the railway engine, of the sailing ship to the screw. But it is intolerable that such an obviously interested opposition should be able to influence Lord Stanley under the specious plea which the opponents of progress always advance to justify a policy of reaction.

If Lord Stanley were to oppose pneumatic tubes, he ought not to stop there. He ought to bring in a Bill re-establishing the stage-coach and the pack-horse, and make it penal to send mail-bags by railway trains or in mail steamers. But as he cannot do the latter without covering himself with ridicule, neither can I believe that he will attempt to do the former.

He is reported to have said in the House of Commons that he shared the views of the City Corporation and the London County Council as to

> the great inconvenience which would result to the inhabitants of London from so extensive an interference with the streets of the Metropolis as that contemplated by the proposed company. He shared that view, and was unable to see that any advantage for the postal service could be derived from the creation of a system of pneumatic dispatch which would counterbalance the grave evils arriving from the construction and maintenance of a new and extensive system of underground tubes. He therefore viewed with disfavour the proposals of the Bill, and was strongly of opinion that no such measure should be proceeded with until the Royal Commission which was considering the question of London traffic had made its report.

What a deplorable plea for obstruction, and how characteristic of the old slow-coaches of St. Martin's-le-Grand!

The opposition of the London County Council is unworthy of Progressives. It might have been expected from the Moderates: but I confess I am amazed to find the name of Mr. Benn associated with such a policy of obstruction pure and simple. Of course, it cannot be persevered in. The development of rapid communication between one part of London and another cannot be hung up indefinitely.

Those who object to the pneumatic tubes because to lay them would involve a very brief interruption of the traffic, chiefly of side streets, where there is hardly any traffic at all, may be recommended to read the arguments by which the landowners of fifty years ago opposed the introduction of railways. And when they wonder at the perversity and shortsightedness of our nobles whose innate conservatism led them to oppose an improvement that doubled the value of their property because of their dread of the line disturbing their fox coverts or their game preserves, let them remember that posterity will hold in equal contempt the shortsighted custodians of the streets who oppose a great and permanent relief of street congestion because it entails a very brief disturbance of the traffic while the tubes are being laid. In the most crowded streets the tubes will be laid without disturbing the traffic by the adoption of the cut and cover system. But even if they had to rip up every street in London, the gain would be worth it in the enormous relief it would give to the traffic, and the immensely increased rapidity with which parcels and letters would be delivered throughout the capital.

AN AMERICAN VIEW OF ENGLISH RAILWAYS.

MR. F. A. VANDERLIP, writing in the April number of *Scribner* on English railway management, says :—

English railroad managers are beginning to wake up a little; but, compared with the men who manage our own railroad properties, they are unquestionably deficient in practical knowledge and they make a very sorry contrast so far as intensity of application is concerned. The English roadbeds are thoroughly well built and the English passenger trains are able to make time which compares favourably with the rate of railroad travel in any other country; but when it comes to handling freight, some of the statistics of the English railroads are ludicrous.

A friend of mine was standing on the towering deck of the *Cedric* last summer when she came alongside the dock at Liverpool. By his side was a huge Californian, who was making his first European trip, and was full of curiosity. He looked far down from the upper deck to the little train of coaches that was waiting to carry the passengers up to London, and asked what they might be. He was told that it was the special train to London.

"Do people travel in those things here?" the big Californian said. "Why, when I was a boy I used to play with trains like that."

The comparison was not inapt. As late as the year 1900 the average freight-train load in England was but fifty tons; that is to say, the average train-load was only equal to the capacity of one of our modern freight cars. There has been some improvement since then, and there is now a marked tendency toward heavier equipment, but it all seems like toy equipment when compared with our own heavy trains.

But after this somewhat drastic criticism of our toy trains, Mr. Vanderlip concludes his article as follows :—

While we are inclined to criticise English railroads with much freedom, they have a record in one respect which our own railroad managers must look upon with respect. The gross earnings of the English roads never showed an unfavourable fluctuation, as compared with a previous year, of over one and one-half per cent. With all the talk of poor railway management, of decadent industries, and of the economic evils of war, it is confusing to find that the commercial development of Great Britain, measured by her gross railroad traffic, presents an almost unbroken record of advance. Net earnings, however, have been badly cut into by the rise in wages and by the higher cost of fuel.

HOW JOHN BULL LOSES BUSINESS.

A WOOLLY-BRAINED DRUNKARD.

A CANADIAN man of business has been interviewed in the *Christian World.* He had been arguing in favour of Protection, but finding his argument would not go down, he exclaimed :—

"Well, if England does not need Protection, I'll tell you one thing she needs to save her trade. She needs her manufacturers to stop whisky drinking. If she does not want Protection she needs Temperance. I see the need of it every day I'm in England. I come over from Canada," he said, "twice a year, and I've done so for twelve years. I come to buy English dry goods for the Canadian market. And the oftener I come the more I see how your drinking habits injure your trade. I go to the United States, and I go to Germany, and to France, but I find nothing in those countries like your English habit of drinking over business deals.

"Your business people, your manufacturers and heads of business houses drink too much. They drink too much overnight, and when they begin business in the morning their brains are what I call 'fuzzy.' They are sober enough—I dare say they never get intoxicated; they can 'carry' so much liquor—but they are muddleheaded in the morning and quite incapable of any initiative. I go to them early in the day, and they don't grasp what I propose. They are foggy in their brains and don't like to strike bargains early in the day. I can't get my business done in anything like the time I can do it in America or France or Germany, simply because your manufacturers and warehouse people are not clear-headed enough in the mornings. They have their nip of whisky about eleven o'clock, but that does not really quicken their wits. There's too much drink in connection with business in England. I've noticed it ever since I began to trade in England twelve years ago, and it gets worse rather than better.

"Your people in England simply throw away business by such carelessness. And I attribute it all to your drinking habits. As soon as a 'deal' is fixed up your manufacturers call for champagne. Now I never touch it. I'm not a teetotaler, but I never touch liquor in business hours, and as I've been a customer of theirs for twelve years, your traders ought to know I don't want champagne. They call for it, not for me, but for themselves. Any excuse is good enough for uncorking a bottle. It is not all manufacturers who do it, but a very large proportion do.

"I never find this custom in America or in France. And in Canada we never dream of it. A man might have a drink once in business hours in Canada, but he wouldn't want it a second time. He'd be 'fired' out of the office. And the worst of it is that your people drink all through the day—about eleven o'clock, at lunch, and in the afternoon; and after office hours they keep it up till late at night. You can't expect them to pick up the threads of business transactions early in the morning under such conditions. It's not likely they will. They are bound to be woolly brained."

THE FRUITS AND FALLACIES OF PROTECTION.

THE BIG REVOLVER.

ONE of the most absurd delusions of the Balfourian Retaliators is that if we arm ourselves with the big revolver of a Retaliatory tariff the hostile tariff walls of other nations will promptly be levelled. It is obvious that the immediate result would be just the opposite. This has frequently been pointed out, but the Retaliators are so dense that it may be well to call their attention to the new German tariff, some account of which is given in an article on the International Aspect of our tariff situation in the *North American Review.* America has had the biggest of big revolvers in her hands for years, and the only result so far is that the duties on American imports have been increased all round. Now there is the case for the use of the big revolver. But the writer ruefully says :—

Should we resort to reprisals, or even should we grant to any nation more favourable terms than to Germany under our construction of the most-favoured-nation clause, the German Government is authorised by Section X. of the new tariff law to have our goods "burdened with a surtax ranging to 100 per cent. of the tariff duty imposed on such goods, or even with a surtax equivalent to the total value of the goods themselves. Goods free of duty by virtue of the tariff may, under the same conditions, be taxed with a duty not exceeding 50 per cent. *ad valorem.*"

THE RUIN OF AMERICAN SHIPPING.

In the same Review Mr. James W. Garner gives an exhaustive account of the merchant marine investigation which was ordered to ascertain why the United States stands near the foot of maritime nations. Mr. Garner says :—

Americans can no longer build and operate ships profitably, under existing laws, in competition with foreigners. It lies within the power of Congress to change these conditions to a large extent. The relief need not be in the form of subsidies or bounties. The removal of the tariff on ship-building material, the abolition of the restrictions with regard to the employment of seamen, possibly the freedom of purchase in foreign yards, certainly discriminating duties or tonnage dues, are some of the remedies short of direct grants from the Treasury.

How to Prevent Accidental Poisoning.

A Useful Invention: The Cheap Patent Locked Poison Bottle.

IN England and Wales, on an average, two persons poison themselves accidentally every working day in the year. The figures taken from the latest Blue Book on the subject of the sale of poisons show that there were 636 deaths by accidental poisoning in the year 1899. Besides these cases of deaths by misadventure there were 521 suicides, with which we are not at present concerned. That between 600 and 700 persons come to a violent death every year by mischance, swallowing virulent poison by mistake, is a serious matter, and one that has long engaged the anxious attention of Parliament. A Departmental Committee, appointed by the Lord President of the Council, sat in 1901 and 1902, and reported in 1903, on Schedule A of the Pharmacy Act, and the Minutes of the Evidence taken by this Committee fill with Appendices 168 pages of the Blue Book. With a good deal of this evidence we have little or nothing to do, as it was directed to prove the wisdom or the unwisdom of allowing greater liberty for the sellers of poisons required for agricultural or horticultural operations. The Committee, however, found practical unanimity among the experts examined as to the need for further precautions than any yet taken against poisoning by misadventure.

At present when poison is sold it must be labelled "poison." But labels tell nothing in the dark, and many of the most painful accidents are due to the mistaking in the dark of a bottle of poison for a bottle of medicine. Various suggestions have been made from time to time. Many of them were put before the Committee in favour of making it compulsory to supply poison in a bottle of peculiar shape, so that the deadly nature of its contents would be perceptible to the touch. Mr. W. G. Whiffen, F.I.C., manufacturing chemist at Battersea and Southall, told the Committee: "I should certainly suggest that bottles that contain poisons should be, if possible, uniform in shape and colour. I would further suggest that they should be of entirely different form from those employed in holding medicine" (1125). The form should at once proclaim the nature of the contents of the bottle (1210).

Mr. Newsholme, F.C.S., and President of the Pharmaceutical Society of Great Britain, agreed in thinking it desirable to put restrictions upon the sale of poisons in any but distinctively shaped poison bottles (373). On the other hand, Mr. M. Carteighe, a past president, said he had no faith in the use of a distinctive poison bottle. The bottle, he said, would be used for something else when it was empty (1263), and so its distinctive character would disappear. Mr. J. Lewis Major, of Hull and Wolverhampton, also doubted whether it was practicable to insist upon a uniform and distinctive poison bottle. His remedy was to forbid the sale of poison, especially carbolic acid, except in "original sealed packets." Mr. Major said:—

The accidents mostly occurred through carbolic acid having been put up in ginger beer bottles and any bottle which came handy, and being handed out uncorked and left on the mantelpiece, generally among the poorer class, and perhaps mistaken for stout or beer, or some other liquid, and taken by accident (2160).

Mr. W. W. Westcott, coroner for North East London, advocated the compulsory use of coloured glass bottles with certain labels (1533).

On the other hand, Mr. J. Lytte strongly objected to the octagonal-shaped bottle.

"These poison bottles," he said, "are sometimes more dangerous than the ordinary package. They have too many corners, and the corner of the bottle, the maker will tell you, is most easily broken. The more rounded the bottle the safer" (1710).

It appears, from the evidence, that carbolic acid is the poison with which accidents most frequently occur. In 1899 in England and Wales 45 persons, or nearly four a month, were accidentally poisoned by carbolic acid, while there were 167 persons who used it to commit suicide. In the three years ending 1899, 637 died from carbolic acid poisoning, of which probably 170 were accidental. Twenty per cent. of all deaths from poison were deaths from carbolic acid. It is so useful as a disinfectant that it cannot be dispensed with.

Some idea of the immense demand which exists for carbolic acid may be gained from the fact that a single firm in the North of England sell 250,000 bottles every year, and they are only one firm out of a very large number (3337).

In 1900, carbolic acid, and all preparations containing more than 3 per cent. of carbolic acid, were declared poisonous, and could only be sold by chemists. The result was the production of a multitude of preparations of such reduced strength that they could be sold by everybody, for they did harm to nobody. Unfortunately, they did no good, for their efficacy as disinfectants largely depends upon the strength of the poison.

The law already lays severe restrictions upon the sale of poison. The 17th section of the Pharmacy Act says: "It shall be unlawful to sell any poison, either by wholesale or retail, unless the box, bottle, vessel, wrapper, or cover in which such poison is contained be distinctly labelled with the name of the article and the word poison. The bottle must also be distinguishable by touch from ordinary medicine bottles.' The regulation is, unfortunately, so generally disregarded that its very existence is unknown to many of those who are in the business of purveying poisons.

The need for some more effective method of preventing accidental poisoning, especially by carbolic acid, was brought very forcibly home to the public last month by the lamentable death of Lieutenant Davenport. The

facts were brought out at an inquest held by Dr. Danford Thomas at Paddington on March 7th. The victim of this sad but only too typical case of accidental poisoning by carbolic acid was a young lieutenant in the Royal Irish Rifles, who had contracted blood poisoning when serving in South Africa. His name was Talbot Neville Fawcett Davenport; he lived at Oxford Terrace, Edgware Road, and he was only twenty-six years old when he met his death. Young though he was, Lieutenant Davenport was married, and not the least tragic feature of the sad story is that the poison was unwittingly administered by his wife.

The evidence showed that Lieutenant Davenport had returned home from South Africa a year ago, invalided with blood poisoning. His wife, in her devotion, declined to have a professional nurse, and during the last fortnight had nursed her husband day and night. The doctor on Friday, March 3rd, prescribed a sleeping draught, to be taken in two doses. The deceased had taken one dose, and the bottle was placed on a table near his bed. Beside it stood another bottle, similar in shape and size, which contained carbolic acid, a dilution of which with water the deceased used occasionally as a mouth wash. On Friday night Mrs. Davenport, prior to taking a little much-needed rest on a sofa in her husband's bed-room, proceeded, in the dim light shed by an ordinary night-lamp, to pour—as she thought—the rest of the sleeping draught into a glass within his reach. Shortly before midnight she was awakened by the invalid saying, "I have taken the wrong medicine." Then, to her horror and dismay, Mrs. Davenport discovered that she had mistaken the carbolic acid bottle for that which held the sleeping draught, and had put the poison in the glass. She at once raised an alarm, and Dr. Rendel was instantly sent for, but on his arrival Lieutenant Davenport was in a state of collapse, and died within twenty minutes from the effects of the poison.

The Coroner said that Mrs. Davenport, who appeared in court, and showed signs of great distress, was doubtless fatigued and exhausted by her long-continued attendance on her husband. There was no blame to be attached to the chemist, as the carbolic acid bottle was duly labelled.

A juryman stated that this was another illustration of the inaction of the authorities and its consequences. If the Home Office made it compulsory to put poison in a specially-shaped bottle such accidents would never happen. He thought something ought to be done; but despite these deaths things went on in the old way.

The jury returned a verdict of death from misadventure.

Here we have a good average sample of the kind of accident that is constantly occurring. The *Daily Mail*, from its well-indexed files, compiled the following list of a few of the fatal cases of accidental poisoning which had been reported in its columns:—

March 18th, 1903.—Labourer dies through mistaking ammonia for soda water.

May 27th, 1903.—House decorator mistakes caustic potash for whisky, with fatal results.

July 21st, 1903.—Photographer dies from bichloride of mercury taken in mistake for vinegar.

July 29th, 1903.—Woman dies from drinking carbolic acid, thinking it stout.

October 1st, 1903.—Dentist dies from carbolic acid mistaken for nerve tonic.

January 30th, 1904.—Shop assistant dies from drinking aniline dye in error for ginger beer.

April 4th, 1904.—Two men at wedding at Selby die from carbolic acid mistaken for liquor.

December 8th, 1904.—Labourer's child dies from laudanum mistaken for tincture of rhubarb.

December 22nd, 1904.—Woman dies from carbolic acid, taken in mistake for hop ale.

February 10th, 1905.—Child dies from accidental transposition of syrup of mulberries and syrup of white poppies.

As the result of the public attention drawn to the case of Lieutenant Davenport, various suggestions were made as to how similar accidents could be avoided in the future. None of them, however, met the case until Messrs. Thomas Christy and Co., of Old Swan Lane, London, E.C., exhibited at the Chemists' Exhibition, held in Covent Garden, what the *Westminster Gazette* described as the latest and best device yet invented for preventing accidental poisoning—a 12oz. bottle of carbolic acid at 1s., and empty poison bottle, with nickel-plated lock, 1s. This was the clever invention of a Mr. Katz. It consists of a simple and economical arrangement by which the stopper of a poison bottle is locked by a small key chained to the bottle, which can be removed and carried in the pocket, or attached to a bunch of keys. By this means all desiderata suggested by the witnesses before the Pharmaceutical Committee are secured. (1) There is no need for the impracticable effort to secure a uniform-shaped bottle. (2) There is no danger of weakening the bottle by departing from the usual shape. (3) The nature of the contents of the bottle is indicated unmistakably in light or in darkness by the locked stopper. (4) No one can open the bottle without a key. The locked bottle possesses all the advantages of an ordinary bottle plus the distinguishing characteristics of an ideal poison bottle. In future no poison should be

sold except in locked bottles, which would render mistakes absolutely impossible.

WHAT THE CORONERS SAY.

I sent a proof of the previous pages to all the coroners in the three kingdoms, asking them for their ideas on the subject. I append a condensed summary of some of the replies that have come to hand.

CAMBRIDGE (A. L. Lyon).—"The locked bottle would be a great protection, but I fear that as anything that will lock is specially attractive to many people, they would use it for scents and spirits, unless the bottle were of an uninviting uniform shape and colour."

CORK (M. J. Horgan).—Recalls how a physician at the Bandon Workhouse Hospital was poisoned by drinking carbolic acid instead of magnesia. Both bottles were alike in shape. The doctor poured out the carbolic acid in the presence of the nurse, saying he was going to take some magnesia. He died in agony in a few minutes. Such an accident would have been prevented by the locked bottle.

DEAL (F. W. Hardman).—"The locked bottle is ingenious, the idea seems to be cumbrous and troublesome to use. In practice the poison would come from the chemist's in another bottle, and would not be transferred to the safety bottle."

DUBLIN (L. A. Byrne).—"I approve of the locked bottle, but the price, I fear, would be prohibitive for general use."

DUNOON (J. B. Dickson).—"The invention of Mr. Katz seems to supply the proper means for preventing accidental poisoning. Such cases are, unfortunately, too frequent, and Mr. Katz's locked bottle should prove *the* protection in every household where poisons are used for domestic and other purposes."

EXETER (H. W. Gould).—"I had a case of an old lady who had two ginger beer bottles in her bedroom, one containing carbolic acid, the other some harmless drink. She got up in the night and drank the carbolic acid by mistake. I think some such plan as the locked bottle would be the only effectual method of preventing similar cases of poisoning. But can we make the sale of poisons in bottles like that compulsory?"

FOLKESTONE (G. W. Haines).—"I don't think there is any invention that could make a careless person careful. The lock up bottle would suggest to a careless and lazy person leaving the same unlocked, losing the key, or removing the top."

FORFAR (Thomas Hart).—"The lock and key bottle seems an excellent invention if practicable and cheap enough. I have seen a similar arrangement used on a whiskey decanter. The objection that the bottle, when empty, might be used for something else I do not agree with, as people are naturally chary of putting other substances in a poison bottle."

GREAT YARMOUTH (J. Tolver Waters).—"Something should be done, but I think the lock and key is too cumbersome."

GREENWICH (H. K. Oswald).—"Judging by my own experience and the light of common sense, I should say that the locked bottle was the best of all suggested means for preventing accidental poisoning—if its adoption could be ensured. Short of locking up poisons in a special cupboard, I can imagine no invention would be better calculated to attain approximately such an end than some."

HALIFAX (F. H. Hill).—"I have known a registered practitioner supply carbolic liniment in a bottle identical with that in which he sent medicine, and the person died through using the wrong bottle. Sellers should be forbidden to put poison into any bottle brought by the purchaser, unless it was of the proper shape. Poison labels are apt to get washed off."

HEREFORD (J. L. Lambe).—**Thinks the best practical protection would be a luminous light label Poison, which would show in the dark.**

HULL (A. Thorney).—"I incline to an ordinary bottle of ribbed glass. Carefulness cannot be taught to certain people in all classes of Society."

HUNTINGDON (C. B. Mergetts).—"I should be glad to see the locked bottle adopted generally."

IPSWICH (A. F. Vulliamy).—"I like the idea of the locked bottle, but I think it would be a mistake to have the key detachable from it; the means of opening it ought to be always available. I would suggest that such locked bottles should be used for all embrocations, liniments, and other fluids used for external bodily application."

LINCOLN (A. Trotter).—"Doctors as well as chemists should be compelled to dispense poisons in easily recognisable bottles, clearly labelled."

LINLITHGOW (J. Main).—"The lock and key bottle is a very good idea. During the past three years there have been at least three cases in this county where poison has been mistaken for medicine, and where patent bottles would have prevented the mistakes made."

LIVERPOOL (T. N. Sampson).—"If the locked bottle were used it would be a great safeguard. The last accidental poisoning case I had it would have prevented. A nurse in a hospital had side by side in the pantry two bottles, one containing poison, the other the medicine. She mistook the poison for the medicine, and death resulted. The Home Office should take steps to make it compulsory that all poisons should be sold and kept in distinctively-shaped or locked bottles."

LOUGHBOROUGH (H. J. Deane).—"I think that the universal adoption of a distinctive shape would go far to minimise the risk."

MANCHESTER (A. Holmes).—"Accidental poisoning is mostly caused by drunkenness or gross carelessness. The bottle to be corked with a spiked metal top would be cheaper than the lock and more practicable."

MAYO (J. Kelly).—"I believe the patent locked bottles should be the only ones used, nor should poisonous liquids be sold in any other bottles."

MIDDLESEX (W. B. Gordon Hogg, M.D.).—"People forget to lock jewel cases, they lose the key, and break open the box. Even with locks you cannot prevent people lending carbolic acid, putting it into ginger beer bottles, or in ordinary medicine bottles when it is wanted for purpose of a lotion. The lock of the ordinary Tantalus alcohol bottle is as often as not left open. The only way to prevent carelessness is to return a verdict of manslaughter when a death arises through leaving about or placing a liquid or solid poison without a poison caution in an open position."

NEWARK (F. B. Footitt).—"The lock and key bottle is a good idea, and so is the patent stopper with a small bell. It is called 'Orchard's alarm signal.' The great trouble is the carelessness and apathy of the people. Poison disinfectant stuff is often given by the half-bottleful by one neighbour to another for cleansing purposes, and the unused portion is a standing menace to the careless people."

NORTH EAST LONDON (W. W. Westcott).—"I fear the key would but add another burden to civilised life, and to avoid trouble the owner would leave the bottle unlocked. Still, even if this were so, the cranky neck of the bottle would call attention to the danger of its contents, and that is so far an advantage. Poison should always be sent out in bottles of special shape and

colour, and all persons should be warned never to put poison into any other sort of bottle I don't think anything further is practicable."

NORWICH (H R. Culley)—"The locked bottle will apparently render impossible in the future such careless accidents as those that recently occurred"

NOTTINGHAM (C L. Rothera) Suggests instead of the lock a stopper with a tinkling bell, such as is attached to a pet dog's collar, so that the bottle cannot be moved in the dark without the bell giving warning

PENZANCE (G I Bodilly) "The locked bottle is a step in the right direction, but I am very much afraid that some people would simply break the lock, or tear it off and throw it away The carelessness of the lower orders is such that hardly any human device will guard against accident

PETERBOROUGH (J W Buckle)—"The locked bottle would no doubt lessen the chance of mistake but the more distinctive you make poison bottles, the more it suggests suicide

POOLE (F J Conway)—"I am rather inclined to a bottle with a rough surface, something of the character of sandpaper on one or both sides"

PRESTON (John Parker)—Is afraid that the expense of the locked bottle would prevent it coming into general use

READING (W Weedon)—Suggests that it should be a spring lock But it is a spring lock It will lock without the key, but the key is necessary to unlock it

RETFORD (J Housley) "The lock and key is a good arrangement, and will act as a caution

ROCHDALE (F W Molesworth)—"I had a case of accidental poisoning this month A medicine bottle and a poisonous liniment were placed together on a washstand The two bottles were much alike in the dark The result was a valuable life was lost I like the idea of the locked bottle but probably the bottle would seldom be kept locked

STRANRAER (J M Rankin)—"I fear the lock would soon become disused, people cannot be bothered If people were careful enough to use the lock, they would be equally careful in seeing that the bottle was the proper one instead of this cumbrous device I suggest a knobbled or roughened bottle and make it unlawful to put poison into any other kind of bottle The mere shape of a bottle is too fine a distinction, and might not be universally recognised

TRURO (—— Carlyle) "A few people might find the patent useful, but I fancy the general public would sooner run the risk of being poisoned than be bothered with it An Act protecting the public certainly ought to be passed

TIPPERARY (R N M Gleeson) "The use of the locked bottle, should, I think, be made compulsory as then mistakes could rarely occur, as any cases of accidental poisoning which I have ever heard would have been avoided by the use of Mr Katz's bottle"

WEST HAM (G F H Mary)—"The locked bottle is an excellent idea, but would be beyond the means of the majority of the inhabitants of this neighbourhood"

PROPOSED LEGISLATION

I do not go so far as to suggest that there should be anything so drastic as a compulsory measure But the suggestion of the Coroner for Middlesex, that a verdict of manslaughter might be returned against those who supply poison except in bottles minimising the possibility of accident, might be acted on in cases where poison was not supplied in locked bottles. One such verdict would probably secure the universal use of the locked poison bottle.

Sir Thomas Dewar asked the Home Secretary on Monday, March 13th, whether he proposed to introduce legislation this Session to regulate the sale of poisons, and, in view of the deaths which had occurred through the taking of poisons by misadventure, notably a recent case, in which a fatal dose of carbolic acid was administered to a patient under the impression that the bottle contained the prescribed medicine, he would take into consideration the advantages to be derived from a clause directing that all poisons should be sold in bottles of a distinctive shape, so that the risk of bottles of poison being mistaken for medicine might be reduced to a minimum

Mr Akers Douglas, who replied to the question, said "The Lord President of the Council has under his consideration the question of legislation on this subject, but I am not in a position to make any statement as to the introduction of a Bill Under the regulations made by the Pharmaceutical Society under Section 1 of the Pharmacy Act, 1868, and approved by the Privy Council, it is at the present time required that all liniments, embrocations, lotions and liquid disinfectants containing poison must be sold in bottles rendered distinguishable by touch from ordinary medicine bottles, and that each bottle must bear a label giving notice that its contents are not to be taken internally

Dr Macnamara also addressed a question to the Home Secretary on the same subject He asked Mr Akers Douglas whether his attention had been called to the number of deaths which had recently occurred through accidental poisoning whether he was aware that a locking poison bottle had been recently invented, by which at a trifling cost, accidental poisoning could be prevented and if so whether he would take steps to compel distributors of carbolic acid and other virulent poisons to refrain from selling poisons except in some kind of locked bottle

Mr Akers Douglas replied "My attention has been drawn to several recent cases of accidental poisoning, and also to several inventions designed to minimise the risk of such accidents" After quoting the regulations made by the Pharmaceutical Society, which he had given in reply to Sir Thomas Dewar's question, the Home Secretary proceeded "The Lord President of the Council is of opinion that it would be undesirable to prescribe the use of any special form of bottle which might give a monopoly to the patentee, and, further, that the inconvenience of a locked bottle might not improbably lead careless purchasers to transfer its contents into some ordinary vessel"

The *Chemist and Druggist* understands that Sir Thomas Dewar proposes at an early date to himself introduce a Bill dealing with this admitted evil. The hon member has been moved to do this owing to the inconclusive reply which he received from Mr. Akers Douglas

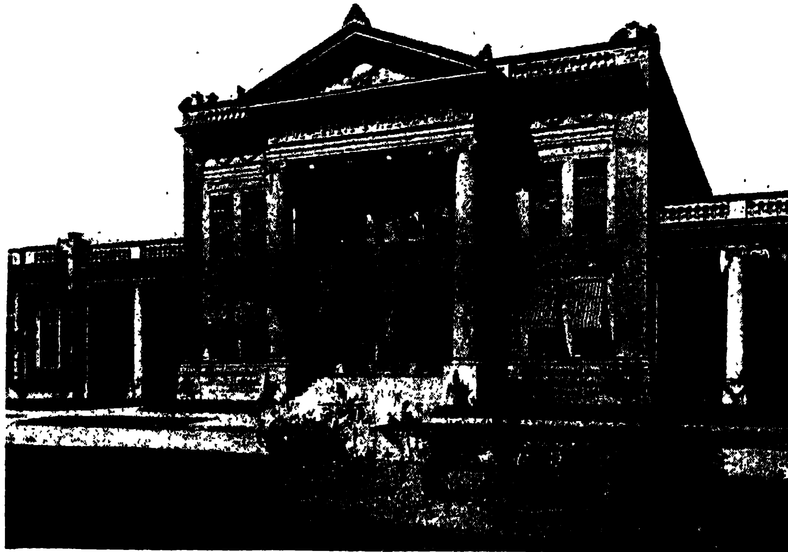
The Salvage of Human Wrecks.

What the Keeley Institute is Doing in London.

GENERAL BOOTH once lamented that human beings were not regarded as creatures possessing the economic value of a cab-horse. Other philanthropists deplore that it is almost impossible to induce society to recognise that a wrecked man is as worthy an object for the operation of a salvage company as any merchantman that has been overwhelmed by the storm. For the salvage of sunken ships there is no lack of men and means. For there is money in it. The salvage companies pay dividends, and everyone admits they have earned their money. The labourer is worthy of his hire. But we have not yet reached that point in civilisation where we can in similar practical fashion appraise the cash value of human salvage.

If it were conceivable that slavery were to be re-established—leasehold slavery, terminable on the expiry of voluntary contract — the difficulty might be got over. Suppose, for example, that it were to be the law that any man who had from intemperance lost his economic value should be regarded as a wrecked ship for whose salvage commercial companies could tender, and that the salvors were to be paid by a percentage upon the earnings of the reclaimed drunkard for one, five, or ten years, as the case might be — what would happen? Every capable man, whose earning power before he became a sot was high, would be eagerly sought out; and rival companies would bid against each other for the privilege of taking him in hand. They would require, of course, that the subject of their salvage operation should make over to them a guaranteed proportion of his future earnings. The man would become, to a certain extent, their chattel, until he had worked off the salvage charges. There would, no doubt, be a margin of speculation about the operation. As some vessels lie in water too deep for the operation of the Salvage Corps to be successful, so some drunkards are irreclaimable. But if once the sporting interest were aroused which springs from the rivalry of free competition, very few originally capable inebriates would be left alone. The harder the case, the heavier the premium. There are some men who are such hard cases that no sane salvage company would take them in hand, even if their surplus earnings were made over for the rest of their lives. But that is a mere matter of detail, of calculation or speculation. The point I am driving at is that the operation of salvaging derelict human wrecks will never be as systematically undertaken as the salvage of wrecked ships until it is put on a sound business basis, and men can make money out of the rescue and reclamation of their fellow-men.

Dr. L. E. Keeley, Founder of the Cure.



That sounds very cynical. But is it not true? Philanthropy, plus 5 per cent., or, still better, plus 10 per cent., can be counted upon as a far more constant force than that which springs from purely disinterested love of mankind. There are some short-sighted people who imagine that a man who discovered, let us say, an absolutely certain cure for cancer, ought, for the benefit of the great army of martyrs who are dying from cancer to-day, to make known the secret to the faculty, so that all the world should profit by it, without money and without price. But everyone who reflects upon the ethical problem in the light of practical experience will come to an exactly opposite conclusion. The prejudice against new remedies is so great, the pressure of the whirling clamour of the events and cares of every day so continuous, that if the infallible remedy were proclaimed aloud in a given issue of every medical journal on this planet, the immense majority of the doctors would ignore it. And as it would be nobody's interest to advertise it—that is to say, to bring continuously and in the most effective fashion before the minds of men the fact that such a remedy had been discovered—it would soon be forgotten, or, if adopted here and there, it would make but slow progress. Whereas if the discoverer kept the ingredients of his remedy a secret and clapped a good high price upon the sale of his medicine, he would at once find himself in a position which would enable him to spend immense sums in dinning into the ears of the pre-occupied, hard-of-hearing human race, the reality and the beneficence of his discovery. If he were a man of unadulterated philanthropy and of independent means, he might spend every penny of his profits in advertising. Being an ordinary mortal, he will spend a very large percentage of his profits in advertisements if only in order to make more profits. But in either case, the first fundamental thing is that he

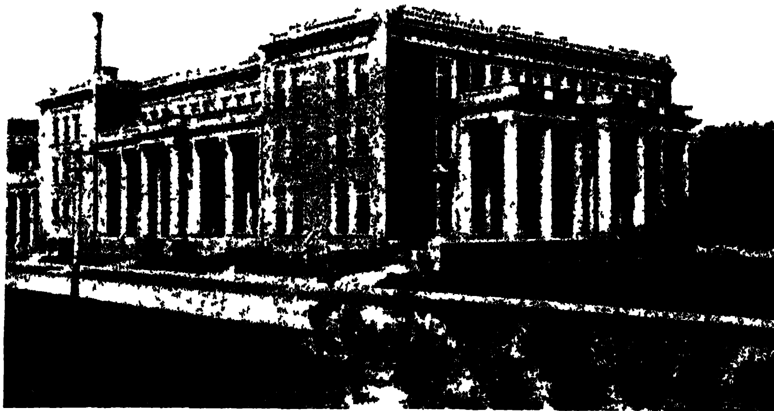
must have the means with which to pay for his advertisements, and if he does not keep his secret in his own hands, how is he to raise the money to pay for his publicity department?

Hence, instead of apologising for the secrecy of their remedies, all owners of proprietary medicines should boldly vindicate not only the right but the duty of keeping their secrets as essential for the provision of means and methods for bringing their remedies to the knowledge of the sufferers whom they wish to help. It is money makes the mare to go, and without money nothing can be done with the owners of organs of publicity. Now and then, no doubt, individual editors, being moved with a sense of compassion for the afflicted, will devote columns or paragraphs, pages or articles to setting forth the benefits of a certain kind of treatment. But even the most benevolent of editors recoils from the constant reproduction in every issue of the story of the virtues of any particular specific. For that, recourse must be had to the advertisement department, and the door of that office can only be unlocked with a golden key.

So far from objecting to the practice of these vendors of secret nostrums, these practitioners of secret treatments, they deserve to be had in high regard, especially by the Press, which, to a large extent, lives and thrives upon their earnings. If the newspapers and periodicals of this country were to be dependent for their livelihood upon the eleemosynary assistance vouchsafed them by the regular faculty, they would all be stony broke in twelve months. The medical profession is an unkind step-brother to its sister profession of journalism. It is willing to take as much advertisement in the news columns as gracious editors choose to bestow free gratis and for nothing. But if any grateful practitioner offers a *quid pro quo*, he is promptly hounded out of his profession as a man guilty of infamous conduct under the provisions of the Medical Act. Far different is the generous fashion in which the noble army of the owners of specifics, patent medicines and secret treatments subsidise the agency by whose aid they live, and to whose advertisements they owe no small part of the efficacy of their nostrums. Doctors declare that if they administer much advertised pills under another name they have not the efficacy of precisely the same pill prescribed under its ordinary title. It is the influence of suggestion. A certain thaumaturgic efficacy is imparted to the medicine by the simple process of constant, effective and original advertisement. In this way the Press repays its debt to its munificent patron, following the Bismarckian principle of *Do ut des.*

All of which preliminary observations lead up to a lamentation that no keen financial genius has yet devised a method of combining philanthropy with ten per cent. in the salvage of "drunks." There are various drink cures here and still more in America, some of which are financially profitable enough. But these drink cures correspond rather to the diving bell, by which the salvor conducts his subaqueous operations than to the salvage company which raises capital and organises the agencies necessary to get the divers in their diving bell to start work upon the wreck. Take, for instance, the Keeley cure, which is the oldest and the most widely known of all the remedies for intemperance. Why should there not be Human Salvage Companies for ever on the prowl for wage-earners and money-makers who are wrecked on the reef of Drunkard's Woe, who would stand between the Institute and the public, who would advance the sum necessary for the cure, and recoup themselves by a lien upon the earnings of the restored drunkard? No doubt they would lose the money paid for the cure sometimes, just as salvage companies lose the cost of their abortive efforts. But at other times they would make heaps of money. Take, for instance, a story reported at the Keeley Institute in West Bolton Gardens, South Kensington, in February, 1903. Canon Fleming, who was present and heard his testimony, says:—

Keeley Office and Laboratory at Dwight, U.S.A.



> There came a gentleman to testify who had sunk so low through drink that it is impossible to specify the disgusting conditions under which he lived. He went through the treatment, won a good position in business, and now earns an income of £12,000 a year.

A percentage of, say, 10 per cent. on the earnings of this reclaimed derelict for ten years would cover a good many unfortunate speculations in less profitable quarters.

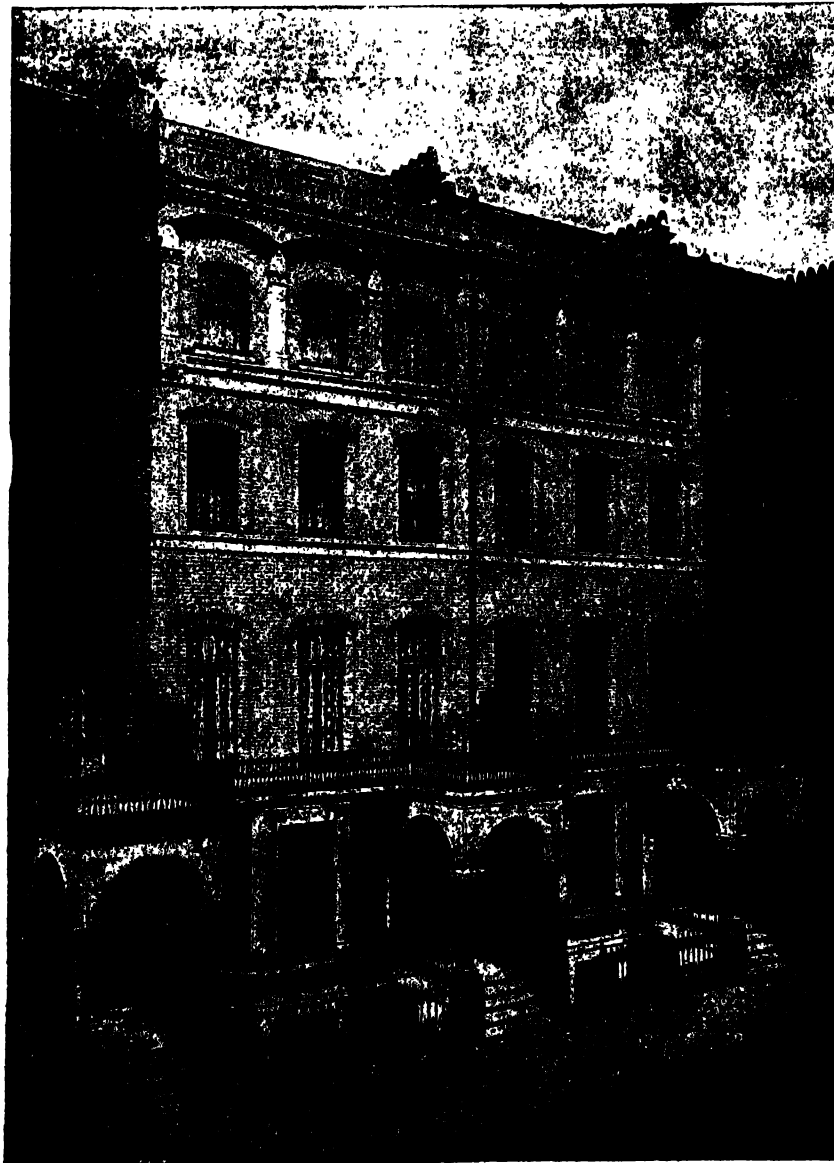
Such a salvage company would supply the two things which are wanted in order to enable the Keeley cure to render the benefit which it is capable of bestowing upon mankind, viz., Faith and its equivalent Credit. The mere fact that a public company was formed prepared to advance money for the treatment, on the principle of no cure no pay, and limiting its takings solely to the restored earning capacity of its clients, would do more to extend the operations of the Keeley Institute than anything else. Dr. Keeley in his lifetime claimed, and apparently on good grounds, that he had cured of confirmed habits of intemperance no fewer than 250,000

citizens of the United States. But for his remedy these quarter of a million would have been a heavy and miserable burden upon the economic resources of the country. They earned nothing; they lived, like human cancers, by consuming the substance of their sober relatives. By their cure not only was this drain stopped, but they resumed their position as money-makers. Speaking from a close knowledge of the patients who had passed through his institutes, Dr. Keeley estimated that the mean annual average income earned by the 250,000 reclaimed intemperates must have amounted to £200 per man, or £50,000,000 a year! A percentage of 10 per cent on this sum would have paid a handsome dividend upon the capital of the Human Salvage Company which I am imagining. The average cost of salving a drunkard in a Keeley Institute may be put down at £40. Of this, £25 represents the charge for the treatment, the other £15 defrays the cost of board and lodging in the Institute for four weeks. Reducing this to round figures, Dr Keeley cured 250,000 persons, at a cost of £10,000,000, and enabled them to become at once capable of earning an income of £50,000,000 per annum.

These colossal figures are far exceeded by those revealed by more recent statistics. The number of inebriates cured by the Keeley method is probably double the quarter of a million which Dr Keeley claimed some years before his death. It is an achievement almost without precedent. In 1880 a country doctor in an Illinois village discovered a remedy, and in a quarter of a century £20,000,000 sterling has been paid in the English-speaking world by persons eager to benefit by the Keeley treatment.

The Keeley Institute in Dwight—Residential Hotel.

The Keeley cure appears to thrive chiefly in the United States and in the United Kingdom. But whereas there are in the American Republic forty-two Institutes, in Great Britain there is only one. It was established thirteen years ago, and although it ought to have increased and multiplied many times since 1892, it still remains in solitary majesty. It has shifted its site, that is all. It used to be at 6, Glenville Place, Cromwell Road; it is now at 8 9, West Bolton Gardens, South Kensington. They are thinking of establishing another in Glasgow; but at present the Keeley cure holds only one outpost in the Old World. The Americanisation of Europe, *viâ* the Keeley cure, is not progressing as rapidly as it ought to do.



I know at least one capable business man who a few years ago seemed as if he were going all to pieces under the insidious encroachment of alcoholism. He is now hale and well and as fit as ever—thanks to the salvage operations of the Keeley Institute. It is some years since he took the treatment, and he shows no sign of backsliding. Neither does the cure of his besetting malady appear to have been attended by any accompanying drawbacks. My experience is not exceptional. There are many in every part of the country who can testify to the permanent good results of the Keeley treatment. I went last month to Bolton Gardens to see how the Institute was getting on. I found everything very nice, clean and neat and comfortable, and so respectable that it was difficult to believe that I was really in an Institute for the cure of one of the most distressing and degrading maladies of mankind. And what I saw and what I heard from the patients, and from their doctor, and from the manager, made me somewhat impatient at the comparatively slow growth of the system in this conservative, drink-cursed land.

The Institute, when full, can only accommodate 30 patients. The parent institute at Dwight can take in 1,000 at a time. As the treatment only lasts four weeks, the maximum number that can be treated at Bolton Gardens is 360 a year, or if we add the lady patients, who do not reside on the premises, say, 500 a year. That does not represent a very appreciable inroad upon the dipsomaniac wreckage of Great Britain. Of course, it confines its operations almost exclusively to the well-to-do middle-class. Doctors, clergymen, officers in the Army and the Navy, country gentlemen, and the like, supply the most of those who go for a cure. If I were to become a drunkard, or even to feel any inclination in that direction, I think I should tell my friends I was going to take a month's holiday in a place where I did not want to be bothered with letters, and, shutting myself up in the Institute in West Bolton Gardens, I should not re-appear until I had rid my system of the last trace of the craving for alcohol. It would cost me from £40 to £50, according to the quality of the rooms which I occupied, so that for the cost of a month's continental tour I could cast out the obsessing demon and come home clothed and in my right mind.

There is no doubt that it can be done. It is being done to-day. Nor does there seem to be any reason to fear failure when the victim seeks the Institute with a genuine desire to rid himself of the clinging curse. There are, and probably will always be, men in the Institute who come in under *duresse* from friends or relatives, who have no wish to be other than soakers, who are drinking surreptitiously even while professing to undergo the treat-

ment, and who will infallibly go back to their cups as soon as they leave the place. But given a man who has enough manhood left to play the game, to keep his pledged word to abstain from secret drinking during his treatment, and to honestly desire to start afresh, of him it may be said almost with certainty that he will leave the Institute in four weeks as free from the craving for alcohol as if he were a new-born child. Of course, even as the most innocent of children may become the most depraved of drunkards, so the Keeley-cured man may relapse. A surgeon may successfully set a broken leg. No doctor can guarantee that it will never be broken again. So no cure can guarantee those who go through it with absolute immunity against succumbing again to the temptation, the force of which proved too much for them in the first instance. But as a matter of experience the manager of the Institute declares, as the result of long observation, that not more than 15 per cent. of all who enter its doors relapse, and 10 per cent. of that 15 never really gave the treatment a fair chance.

One special fact about the Keeley Institute is that it keeps the best and purest whisky in London. It is somewhat of a surprise to learn that any patient can at any time obtain whisky should he ask for it. That, however, is the fact, and nothing shows better how strong is the faith of the directors in the efficacy of their treatment. The Institute is run upon principles of absolute liberty. The patients go in and out and wander round about the public houses and hotels of the neighbourhood as they please. They promise on entering not to drink alcohol outside. They can have it when they like, if they ask for it, inside. But no one dogs their footsteps when they take their walks abroad. They are absolutely free. They can smoke all day long if they please, if only they abstain for fifteen minutes on each side of the four daily injections. A day or two before I visited the place a patient arrived who would not leave the cab at the door until some whisky was brought him from the house. He drank it, and then crossed the threshold. He has probably by this time almost completed his cure. He lost the craving for whisky within two days of his entrance.

The Keeley Institute, 9, West Bolton Gardens, London, W.

A little child, misled by the similarity of sound, once declared that a miracle was a thing that they do in America. While listening to the statements of patients, and of ex-patients and of their friends, I feel as if the lassie had not been so very far wrong. Dr. John Flavel Mines (Felix Oldboy), who wrote long ago in the *North American Review* of his experience—he was cured at the Keeley Institute at Dwight—said :—

> A fellow patient said to me, "I tell my friends that all I know about it is that I went to Dwight, and there Dr. Keeley cured me"; and as he said this I thought unconsciously of the blind man by the pool of Siloam, and his reply to the doubters who gathered around and tormented him. To all of us who suffered and have been healed it is a resurrection. . . . To-day I meet my fellow man with open gaze, knowing that I have conquered the black lion of the desert; and my sense of freedom and happiness no man can paint.

When you ask how it is done, the answer is that it is done by four injections per day, and regular doses of a tonic medicine every twenty-four hours, the exact nature of the injections and of the medicine being known only to the discoverer of the secret. When people

asked Dr. Keeley how he made up his remedy he replied as follows :—

This information I maintain a secret, believing that the only protection for suffering humanity lies in guarding the formula, so that it can be safely and successfully administered. In the hands of the ignorant or the careless its use would soon be abused and discredited. If I believed my remedy would be made in all its purity, handled only by the educated members of the medical profession, and administered in the proper way, I would most cheerfully have made it known to the world. The fact is, however, that my cure is the result of a system, and cannot be accomplished by the simple administration of a sovereign remedy. Unscrupulous persons would pretend to improve upon and adulterate it for added pecuniary profit; others would not exercise the care and intelligence that are essential to its successful administration. This would result in repeated failures, which would finally and utterly discredit it.

It does not matter one straw to me why Dr. Keeley refused to reveal his secret. If he had published it in all the papers in 1880, there would not have been half so many cured as there are to be found to-day.

The medical profession, thousands of whose members have been cured by the secret remedy whose use they decry, ought to regard him as a kind of natural spring, the qualities of whose water experience has proved to be medicinally valuable, but whose secret their analysis fails to discover. No doctor would refuse to prescribe the waters of such a medicinal spring, because he could not explain wherein lay the secret of their power. Neither should doctors worry themselves about the similar reticence of the holders of the Keeley medicines.

Captain Boxer.

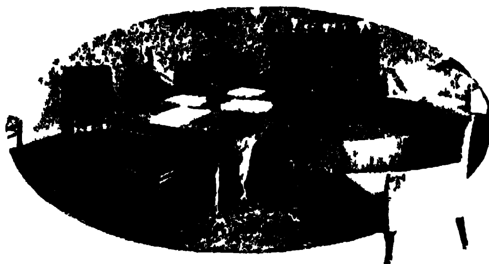
(Manager of the Keeley Institute, Kensington.)

The method of the treatment is as follows :—Every patient must present himself before the doctor at nine, at one, at five, and again at nine, to receive a hypodermic injection in his left arm. At injection time the patients assemble at the foot of a small staircase. On a landing, a few steps up, stands the doctor with his syringe, who administers just as much and as little of the secret remedy as the patient requires at that particular stage in his recovery. It is over in a moment, and the patient, descending a few steps on the other side of the landing, regains the entrance to the billiard-room. In fifteen minutes he can smoke, but he must be back in four hours to receive a new injection. He receives a small bottle containing the tonic which he must take every two hours. It is a wonderful pick-me-up and helps mightily in the recovery of the patient.

In a few days the craving for spirit disappears, the natural appetite for food returns, and a new life seems to have entered into the man. With the new life new hope, and the hope grows brighter day by day. The inmates seem to be on very good terms with each other and with the manager. The premises are commodious, airy, and convenient. When the billiard-room and the drawing-room are thrown into one, it will be a splendid apartment. The place needs a good library. But with that exception, it seemed excellently well furnished, like the temporary retreat of gentlemen under stress of the alcoholic storm.

Capt. Boxer, the genial and capable manager, was himself one of those cured by the Keeley treatment. One remarkable peculiarity about Keeley men—and Keeley women—reminded me of converts to Christianity in time of revival. I remember noticing that phenomenon at Chicago twelve years ago. Those cured by the Keeley treatment are not ashamed to testify to all the world the wonderful deliverance which they have experienced. In America, Keeley Leagues, entirely composed of ex-drunkards, are thousands strong, nor do the members seem to be a bit abashed at avowing the fact that they were once in the deep pit and the miry clay, before the Keeley cure set their feet upon a rock.

One thing should not be omitted. The Keeley-cured must be teetotalers for the rest of their days. If they were to venture on moderate drinking, no matter how moderate it was, they would backslide. Some of them do. But most of the backslidings occur in the first two years after they leave the Institute. If you stand two years you are practically safe. And 85 per cent. do stand two years.



The Keeley system is not less efficacious for the cure of drug maniacs. Doctors are the most frequent victims of morphia and cocaine. Opium smokers are the worst to deal with—opium smoking apparently having a far worse effect upon the moral nature than opium taken hypodermically or swallowed in the shape of laudanum. In such Institutes you gain a profounder respect for the recuperative powers of nature. Man must be very adaptable and very tough to stand the doses of drink and drugs with which he poisons himself. Some patients smoke 100 cigarettes a day, others have been in the habit of taking forty nips of Scotch or Irish every twenty-four hours. Sometimes a man comes along who thinks nothing of drinking two bottles of brandy every day. The Americans break the records in this as in other more reputable trials of strength. One woman who was cured at an American Keeley Institute used to drink a pint of laudanum a day, which is equal to 384 ordinary doses. A man who was successfully treated had acquired the habit of injecting 350 grains of morphine into his body every day. Two grains are usually held to be sufficient to cause death. Milo's feat with the ox was not a patch upon the exploit of this champion, who every day survived injections strong enough to kill 175 men. Cocaine is a drug the use of which is increasing. It is very insidious, and very difficult

A Dining Room—Keeley Institute.

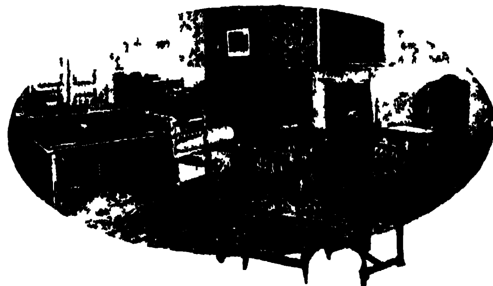
to shake off The usual dose is one fourth of a grain, but one patient took 240 such doses a day, and survived to be cured These patients usually mix their drugs In every 1,000, only 140 were faithful to a single drug Seventy four per cent attributed their devotion to drugs to the prescriptions of their doctors Of 1,000 drug patients only 20 were in good health But the habit was of old standing, 300 had been addicted to drugs for ten years, and six had been taking them for forty years Of 1,000 patients, 158 in America would die between 21 and 30 332 between 30 and 40, 292 between 40 and 50 They had eight between 70 and 80 Of every ten drug patients, four would be women and six men The physical status does not seem to be governed by the amount of drugs taken by the patient

I asked Captain Boxer if he did not think that it would be useful to make the Keeley treatment compulsory upon all those who are twice convicted of drunkenness He said that he did not think it would be advisable to go further than to ask the State to provide a free treatment for all those who expressed a wish to undergo it with the object of escaping from the thraldom of drink Some men, he said, love drink and like getting drunk They don't want to be cured, and if you cured them against their will they would break out What might be done, he thought, was to improve upon the example of various American States where the Government offers every inebriate soldier free treatment if he wishes to avail himself of it Extend the same offer to all citizens, and you will save money now wasted on inebriate asylums

A Quiet Room for Reading and Writing.

In reply to my inquiry about other drink cures Captain Boxer was guarded He said the field was wide There was plenty of room for all who could cure men of this distressing disease All that he could say was that the Keeley was the first in the field, it had by far the largest number of cures to its credit He was very emphatic in asserting that no bad results of any kind follow the treatment, and as for the objection which some took to the hypodermic injection, he could not see the force of it It was not like morphia No one could get the medicine even if he wanted to use it The puncture was not painful, and it produced marvellous results

Canon Fleming, who was the first friend of Keeleyism on its introduction into this country, is still as staunch as ever in his advocacy of the treatment. He has been a member of the Committee from the first. He says —



> But the most interesting part of my committee work comes when it is time to hold the annual meeting, and when ladies and gentlemen who have been through the treatment assemble before a small board to "testify" It is like one of those missionary meetings, at which converts come forward to declare their conversion It is a curious and a deeply impressive scene as man after man passes before us, declaring how he was once the slave of drink, but is now free There are men of all callings—doctors, clergymen, lawyers, and commercial men—to declare that from the lowest depths of despair they have been uplifted to manhood and position again, and many of them have travelled long distances thus to testify

"The Keeley treatment," says Canon Fleming, "not only cures drunkenness it restores will power, restores health, restores manhood"

Among my own personal friends who have testified from their observation, although not from their personal experience, of the proved efficacy of the treatment, are Mr Lyman J Gage, recently Secretary of State for the Treasury at Washington Mr Melville Stone, Manager of the Associated Press the late Rev T de Witt Talmage, the late Miss Willard, and the late Governor Altgeld of Illinois Governor Altgeld was one of the most remarkable men in America he reminded me more of Abraham Lincoln than any other American I ever met He told me he had not enough religion in him to hurt But he was a most enthusiastic Keeleyite He said —

> In my mind the greatest discovery of this the most marvellous century is the Keeley cure for inebriety, because its results are more far reaching than all other discoveries which have been made

That it must be admitted, savours of the exuberance of the Western man, for when Altgeld grew up Illinois was a Western State But it is a discovery which ought to be better known and more recommended by doctors, who at present seem disposed to use it for curing themselves, but to shrink from recommending it to their patients, which seems somewhat odd

A Recreation Room—Keeley Institute.

Diary for March.

PRINCIPAL EVENTS OF THE MONTH.

March 1.—It is announced officially that Lord Milner has resigned his position as High Commissioner in South Africa, and that Lord Selborne is appointed his successor ... Nearly the whole of Poland is under martial law ... Mr. Sifton, Minister of the Interior in Canada, resigns in consequence of a difference with the Premier over education in the new North-West Provinces .. The political crisis still continues in Hungary because the King has not called on the Parliamentary majority to undertake office.

March 2.—Navy Estimates for 1905-6 are issued. Reduction from present year, 1904-5, of £3,500,000 ... Dr. Gore is enthroned as Bishop of Birmingham.

March 3.—A manifesto is issued by the Tsar to the people; he adds a rescript to the Minister of the Interior, in which he announces his resolution to convene elected representatives of the people to participate in reforms, which must conform to the fundamental institutions of the Empire.

March 4.—Lord Cawdor is appointed First Lord of the Admiralty in room of Lord Selborne ... The polling of graduates of Cambridge University on the question as to whether Greek is to remain a compulsory subject results in the four proposals of the Syndicate being rejected by majorities ranging from 507 to 440.

March 6.—Mr. Balfour announces the resignation of Mr. Wyndham as Secretary for Ireland .. The strike in St. Petersburg again becomes general .. President Roosevelt sends to the Senate his nominations for the members of his Cabinet. . Dr. Talbot is appointed Bishop of the new See of Southwark, and Dr. Hamer to succeed him as Bishop of Rochester Mr. Churchill publishes a disclaimer to Mr. Wanklyn's charge against him at Bradford Prince Ferdinand of Bulgaria arrives on a visit to the King.

March 7.—The National Council of the Evangelical Free Churches opens its annual meeting in Manchester .. It is estimated that 50,000 men are out on strike in St. Petersburg.

March 8. In Germany the new Army Bill passes its first reading A Parliamentary paper is issued containing a part return of the vessels struck off the list of effective ships of war The Rev. J. P. Hughes is appointed Bishop of Llandaff.

March 9.—The Russian Ambassador in London hands over to Lord Lansdowne the amount of the indemnity on the North Sea incident, which amounts to £65,000 . Thirty-four thousand deaths from plague occur in one week in India.

March 10.—A new Norwegian Cabinet is formed .. President Roosevelt attends the funeral of Senator Bate of Tennessee . The Cape Parliament opens.

March 11.—Ministerial changes announced are: Mr. Walter Long to be Chief Secretary for Ireland, Mr. Gerald Balfour to be President of the Local Government Board, Lord Salisbury to the Board of Trade ... The explosion at Clydach Vale Colliery proves very serious. Thirty-two men are killed; of seventeen rescued many are severely injured A census taken of the homeless poor of London reveals the fact that 2,481 are without shelter in one night alone ... The King of Italy accepts the resignation of the Giolitti Ministry.

March 13.—The news from the Russian provinces is daily more alarming ... Sharp encounters between Bulgarian bands and Turkish troops occur in the neighbourhood of Kumanovo ... The British Army Estimates, 1905-6, are issued by the Secretary of War; they show a net increase of £983,000.

March 14.- The negotiations in Paris to raise a new Russian loan are broken off, owing to the uncertainty as to the military position in Manchuria ... A great public demonstration takes place in London in favour of the passing of a Bill this Session giving the franchise to women on the same terms as it is exercised by men ... The London County Council elects Mr. A. E. Cornwall as chairman and Mr. Evan Spicer as vice-chairman.

March 15.—A violent southern gale rages; many wrecks, attended with loss of life, occur ... The British Ambassador in St. Petersburg hands in to Count Lamsdorff the British claim on account of the sinking of the *Knight Commander*, which amounts to about £100,000.

March 16.—Lord Stanley, in reply to a deputation of members of Parliament, asking for a reduction in postal rates on newspapers and magazines to Canada, says the revenue cannot afford the loss at present ... Five gunners are shot at Warsaw for refusing to go to Manchuria...The Russian Government proposes to have recourse to the Hague Tribunal in the case of the s.s. *Knight Commander*.

March 17.—The Queen and party sail from Portsmouth in the Royal yacht for Lisbon ... Señor Garcia, inventor of the laryngoscope, celebrates his hundredth birthday in London; he is received by the King at Buckingham Palace; the King of Spain confers on him the Order of Alphonso XII ... The Conference of the Home Counties Liberal Federation is held at Reigate.

March 18.—The American Senate adjourns *sine die* without voting on the Santo Domingo Treaty ... Mr. Hay sails from New York for Italy . An agreement is concluded with the Mullah of Somaliland; he places his country under the Italian Protectorate, and promises to keep the peace with Great Britain and Italy . The British steamer *Harbarton*, carrying 5,000 tons of coal to Vladivostok, is caught by the Japanese.

March 20. -M. Mjasajadoff, Governor of Viborg, in Finland, is shot at and severely wounded An Inter-Departmental Committee is appointed to inquire into the nature of the voluntary agencies for the feeding of hungry children in the schools.

March 21. — The Indian financial statement for 1904-5 is published; the surplus is stated to be £903,800 . A new Japanese island, 4,800 yards in circumference, emerges from the sea in the Riu-kin Archipelago.

President Castro.

March 22.—The Queen arrives in Lisbon on a visit to the King of Portugal . A peace demonstration is held on the Nevsky Prospect, St. Petersburg, with cries of "Down with the war!" . Mr. Logan's motion in the Cape Parliament for a tax on diamonds is defeated by a majority of two .. Peasant risings continue in Russia; 500 arrests are made in Dvinsk .. President Castro refuses to submit the claims of foreign bondholders in Venezuela to arbitration.

March 23.- M. Buleguine receives delegations from the Moscow Zemstvo and Duma . The Kaiser signs a Bill for the construction of a railway from the Cameroons to Lake Chad .. Mr. Chamberlain writes a letter approving of Protectionist opposition to Lord Hugh Cecil at Greenwich.

March 24. -The Kaiser arrives off Dover on his way to the Mediterranean . . A joint conference of Welsh Nonconformists is held in Shrewsbury .. Mr. Alfred Beit gives £25,000 to the Institute of Medical Science ... The Board of Education agrees to a course of instruction on hygiene in schools.

March 25.—Mr. W Abrahams, M.P., President of the South Wales Miners' Federation, is presented at Cardiff with a national testimonial of a draft for £1,750 and a silver salver.

March 27.—The debate on the Separation of Church and State is continued in the French Chamber ... A Bill for the reform of the conditions of labour in the Prussian mines is brought into the Prussian Diet, and supported by Count von Bulow ... The King of Greece opens the new Parliament in

person. King George of Crete issues a proclamation to the Cretan people, the insurgents one to the Foreign Consul. A Plague Investigation Committee is appointed by the Royal Society and the Lister Institute in conjunction with the India Office.

March 28.—Five French Cardinals address a letter to President Loubet in which they recapitulate arguments in favour of the Concordat. The German Emperor is entertained by the King of Portugal in Lisbon. The Queen arrives at Gibraltar on her way from Lisbon to Cadiz. The Marshals of Nobility in Russia assembled at Moscow demand the prompt convocation of a National Assembly.

March 29.—The insurrectionary movement against Russia is strong in the Caucasus. Mr. Lyttelton, as Secretary for the Colonies, writes a letter for the Government, thanking Lord Milner for his administration of South Africa. An agreement is concluded between the Ameer of Afghanistan and the Indian Government. The Japanese Loan is so popular in America that crowds assemble in Wall Street, New York, to bid for shares.

BY-ELECTIONS

March 2.—The result of the polling to fill the vacancy caused by the resignation of Mr. King, in the Appleby Division of Westmoreland is as follows:

Mr. Leif Jones (L.)	2,922
Major Noble (C.)	2,702
Liberal majority	220

There is no change in the politics of the constituency.

March 3.—The result of the polling in Buteshire to fill the vacancy caused by the appointment of Mr. G. Murray as Lord Justice General is as follows:—

Mr. N. Lamont (L.)	1,460
Mr. L. T. Salvesen (C.)	1,426
Liberal majority	34

This is a Liberal gain.

In 1900 the Conservative majority was 195.

THE WAR.

March 1.—A hot fire from the Japanese siege guns is poured in on Lutick Hill. The artillery action extends along a line of eighty miles.

March 2.—The fourth Domestic Loan has been fully subscribed in Tokio alone. The Japanese capture two important positions in Manchuria.

March 4.—The battle in Manchuria, which has been raging a week, still continues, the Japanese pressing the Russians back; they have captured a whole series of positions of importance.

March 6.—The great battle still continues, the real nature of Marshal Oyama's plan of attack becoming apparent; its rapid advance north-west drives the Russians before it in disorder; the Japanese capture many big guns.

March 8.—The Russians are driven out of Machun-tan and Hudi-jen. They evacuate the whole line of the Sha-ho and retreat northwards. From the railway to the east bank of the Hun the whole district is in the occupation of the Japanese.

March 10.—The Japanese capture Mukden with immense booty and many prisoners. The enveloping movement is successful. General Kuropatkin sends a telegram, which says "I am surrounded."

March 13.—The retreat of the Russian army from Mukden becomes a disorderly rout; 175,000 are killed, wounded, or taken prisoners. The ammunitions of war, food, fuel, clothing and forage captured by the Japanese are enormous. General Kuropatkin resigns his command, being worn out in body and mind.

The War Council at St. Petersburg decides to mobilise at once two more army corps. General Kuropatkin explains his defeat.

March 14.—The Japanese are within a few miles of Tie-ling, and fighting is hourly expected.

March 16.—The Japanese occupy Tie-ling and Shing-king. The Russians sustain a severe loss at Tie-ling, being obliged to abandon their remaining stores and artillery. The Emperor of Japan thanks the Army for their splendid victory over a powerful enemy.

March 17.—General Linievitch is appointed Commander-in-Chief of the Russian army in Manchuria. The Japanese capture ten guns at Tie-ling.

March 18.—The Russians evacuate Kai-yuan, which is occupied by the Japanese. France refuses to lend more money to Russia until Russia signs a treaty of peace.

March 20.—A number of Russian guns are found buried at Mukden. There is a slump on the Bourse in Russian Fours.

March 23.—The Japanese enter Chang-tu-fu, ten miles north of Kai-yuen, as they follow after the retreating Russians. The internal loan for £20,000,000 is signed in St. Petersburg.

March 24.—The Japanese are carrying out another flanking movement south of Harbin, the Russians fear being cut off. The new Japanese loan for £30,000,000 is to be raised half in America, half in London.

March 25.—From the beginning of the war to date the Siberian Railway has delivered at Harbin 761,467 soldiers, 13,657 officers, 146,408 horses, 1,521 guns, and 351,000 tons of stores. The *Syna Otetchestva* calculates that the Manchurian enterprise, inclusive of the war, has cost Russia £200,000,000.

March 26.—The Russians are still retreating; they are driven out of all the districts watered by the Liau River.

PARLIAMENTARY.

House of Lords.

March 2.—Second reading Military Manœuvres Bill.

March 3.—National defence; speech by Lord Selborne.

March 6.—In reply to Lord Rosebery, Lord Lansdowne acknowledges that the resignation of Mr. Wyndham is a fact.

March 7.—Coopers Hill Forest Department, removal to Oxford, defended by Lord Bath.

March 9.—Second reading of Advertisement Regulation Bill.

March 10.—Re-vaccination considered.

March 13.—Import duties in India; speeches by Earl Northbrook, the Marquis of Bath and Lord Lansdowne.

March 14.—Sunday Closing Bill introduced by Lord Avebury, supported by the Archbishop of Canterbury, is read a second time and referred to a Select Committee.

March 16.—Report Stage of the Street Betting Bill is disposed of.

March 17.—Military Manœuvres Bill, second reading.

March 21.—Education in Scotland discussed.

March 21.—Prevention of Corruption Bill. Strength of the Navy; speech by Lord Spencer on the stupendous sum now spent on the Navy.

March 23.—Sunday Closing (Shops) Bill committee appointed.

March 27.—African Army stores; speech by Lord Donoughmore.

March 28.—The Macedonian Question; speech and statement by Lord Lansdowne.

House of Commons.

March 1.—The Address. Mr. Buchanan moves an amendment on the increase in national expenditure under the present Government. The House then divides on the Address, which is agreed to by 235 votes against 175. Government majority, 60.

March 2.—Army Supplementary Estimates; Somaliland expedition cost £2,500,000. A motion to report progress moved by Mr. Lloyd George is defeated by only 24.

March 3.—Shipowners' Negligence (Remedies) Bill is read a second time. Compensation for Damages to Crops Bill read a second time.

March 6.—Mr. Balfour announces the resignation of Mr. Wyndham. Supply: Navy Estimates. Mr. Pretyman's statement. Mr. MacNeill brings on his motion for the adjournment of the House, censuring the Government for appointing Lord Selborne as High Commissioner in South Africa, he having been Under Secretary to the Colonies at the time of the Jameson Raid. Mr. Keir Hardie seconds the motion. Speeches by Mr. Balfour and Mr. Chamberlain. The motion is rejected on

a division by 236 votes against 178; majority for the Government, 58

March 7—Navy Estimates; supplementary estimate of £550,000 for Army services. Irish Evicted Tenants, speeches by Mr. J. Redmond and Mr Morley, the motion is rejected by a majority for the Government of 38

March 8—Army service debate (Somaliland) continued. The vote agreed to by a majority of 54. Mr Churchill, in a brilliant speech, introduces his fiscal resolution, speeches by Mr Lyttelton, Mr Chamberlain, Mr Balfour and Mr Asquith. On a division the previous question is carried by a Government majority of 42

March 9—Supply. Irish Land Commission, vote carried by Government majorities 28 and 37. Whitaker Wright Prosecution, speeches by Mr Whitley, Mr T. W. Russell, and the Attorney General

March 10—Mr Whittaker moves the second reading of the Trade Unions and Trade Disputes Bill, speeches by Mr Asquith and the Attorney General. The second reading is carried by a majority of 97. The Bill is referred to the Grand Committee on Law, by a majority of 105

March 13—Supply. Navy Estimates. Cabinet reconstruction, speeches by Mr Balfour, Mr Lloyd George. The Government majority on a motion to report progress falls to 21

March 14—Consideration of Navy Estimates continued on the wages vote of £6,672,000. Closure vote agreed to. Distress in Ireland

March 15—Mr Balfour moves the resolution for closure on stated days of the outstanding stages of the Supplementary Estimates for the Army and Navy. Mr Asquith moves the adjournment of the debate. The closure is carried by 249 votes against 213, majority for Mr Balfour, 36

March 16—London County Council (General Powers) Bill considered and adjourned, speeches by Mr Burns, Mr Benn, and Mr W. Crooks

March 17—Second reading of the Coal Mines Employment Bill is passed by 190 to 132

March 20—Malpractices of contractors who supplied stores to the Army in South Africa, statement by Mr Lyttelton. Irish Land Act, speech by Mr Long (as Chief Secretary of Ireland). Transvaal constitution and representative government, speeches by Mr Lyttelton, Sir M. Hicks-Beach and Mr Labouchere

March 21—Supply. Supplementary Estimates, £12,000 for law charges. The Bekeree Irish Land Act, 1903, speech by Mr Long. Government majority, 35. Dr Macnamara again raises the question of wasted stores in South Africa

March 22—Supply. Transvaal liability, £30,000,000, speeches by Mr Lyttelton, Mr Churchill, Mr Burns. The vote is carried by a Government majority of 60. Physical deterioration Committee, speech by Sir J. Gorst. Mr Ainsworth moves his anti-Protection Resolution, speeches by Mr Balfour, Lord H. Cecil and Sir H. Campbell-Bannerman. On a division the anti-Protection Resolution is carried by 254 votes against 2, Free Trade majority, 252

March 23—The Supplementary Vote on the Army, an amendment is negatived by a majority for the Government of 33, closure

March 24—Town Tenants (Ireland) Bill, second reading carried, the Bill is referred to the Grand Committee on Law

March 27—Consolidated (Second Reading) Fund Bill, Mr Keir Hardie on underfed children in elementary schools, speeches by Dr Macnamara, Sir John Gorst, and Sir W. Anson

March 28—Army Estimates. Fiscal Reform. Mr Walton's resolution on the Prime Minister's policy of fiscal retaliation, speeches by Mr Lloyd George, Mr Asquith and Mr Churchill, the only Minister present is Sir A. Acland Hood, who walks out during Mr Labouchere's speech. Mr Walton's resolution is carried *nem. con.*

March 29—Mr Churchill asks the Prime Minister how he is to act with regard to the resolution passed yesterday condemning *nem. con* fiscal retaliation policy. Sir H. Campbell-Bannerman asks the same question. Mr Balfour replies he will remain Prime Minister as long as he has a majority in the House. Army Estimates

SPEECHES.

March 1—Mr John Morley, in London, on the Welsh national spirit

March 3—Mr Lyttelton, at Birmingham, on Great Britain and the Colonies. Mr Churchill, at Bradford, criticises the Government very severely,

March 4—Mr Asquith, at Dilston, on the want of straightforwardness in the Government. Mr Lloyd-George, at Gloucester, on Welsh nationality and the Empire

March 9—Lord Rosebery, in London, on Liberalism and Toryism

March 10—Lord Londonderry, at York, on the perfections of the present Government. Mr Haldane, at Godalming, on the Trades Disputes Bill. Mr Bryce, at Wolverton, on the weakness of the Government

March 14—Mr L. Courtney, in London, on granting the suffrage to women

March 15—Sir E. Grey, at Northallerton, urges the desirability of an early dissolution

March 16—Mr J. Redmond, in London, strongly condemns Lord Rosebery's attitude on the Home Rule question

March 17—Mr Churchill, at Cardiff, on the effects of Mr Chamberlain's fiscal campaign. Mr Bowles, at King's Lynn, condemns the protectionist movement. Lord Hugh Cecil, on the need of independent opinion in Parliament

March 18—Lord Rosebery, at Esher, on Home Rule and the disaster to the nation of the present Government. Mr. Redmond, at Liverpool, comments on the MacDonnell incident

March 20—Mr Morley, in London, on the tactics of Mr Balfour, which lower the dignity of Parliament. Mr. Redmond, in London, replies to Lord Rosebery on Ireland

March 22—Lord Milner, at Pretoria, on his administration of South Africa, which he vigorously defends

March 29—Herr Bebel, in the Reichstag, on Morocco and the Kaiser's visit. Count von Bulow replies. Lord Curzon, at Calcutta, on the remission of taxation in India. Lord Hugh Cecil, at Greenwich, on his attitude towards his party and Mr. Chamberlain's policy

OBITUARY.

March 1—Mr Guillaume (French sculptor), 82. Canon W. W. Gibbon, 82

March 2—Sir Charles Hamond, 87. Ex-Senator Wolcott, Colorado, U.S.A.

March 6—Baron Lambermont (Belgium), 86

March 7—Rev. John Bond

March 9—Senator Bate, of Tennessee

March 11—Mr A. Spalding Harvey, 64

March 12—Sir James Gell (Isle of Man), 82. Prebendary W. A. Whitworth, 65

March 13—Mr J. A. O'Shea (journalist), 64

March 14—Lord Anglesey, 29

March 15—Sir Edward Blount, K.C.B., 96

March 16—Mr Meyer Guggenheim, 78

March 20—Miss J. C. Shaw Stewart (late Second Superintendent Army Nurses), 83. Baron von Hammerstein, 61

March 22—M. Antonin Proust

March 23—Hon. Oliver Borthwick (of the *Morning Post*), 31. Sir A. J. Cadman (New Zealand)

March 24—M. Jules Verne, 75

March 25—Mr Edward Dalziel, 87

March 27—Lord Norton, 90

List of the Leading Contents of Current Periodicals.

N.B.—The Editor of the REVIEW OF REVIEWS regrets that owing to the exigencies of space the Contents of Periodicals received after date can no longer be inserted in these columns. The following Table includes only the leading articles of the Periodicals published in England for the current month received before going to press and those of the Foreign Periodicals for the past month.

THE

REVIEW OF REVIEWS

THE PROGRESS OF THE WORLD.

LONDON, May 1st, 1905.

Light at Last.

At last there is light dimly visible in the Cimmerian gloom which has so long hung over Russia like a pall. It is but a faint light, but it presages the dawn. The military situation seems to be as bad as ever, the financial position shows no improvement, domestic affairs seem to be almost desperate. No great man capable of command has emerged from the millions. But at long last the conviction seems to be dawning upon the Russian mind that the soul of man must be free, and that the State in enslaving the Church has paralysed the mainspring of progress. The lack of political liberty is bad. But the denial of religious liberty is ten times worse. The memorial which M. Witte recently presented to the Tsar on the subject of the Russian Orthodox Church, starts from the assumption that religious liberty is to be granted to all Russian Nonconformists, and follows this up by a bold and well-reasoned plea for the restoration of liberty to the Established Church. For the moment nothing came of it. But everything may come of it. The Church itself seems to be stirring beneath its bonds. The bureaucratic police system imposed by Peter the Great upon the Greek Orthodox Church has been like the ice with which the Russian winter covers the waters of the Neva. The living water is still there, but navigation is stopped, the surface is as hard as iron and as cold. Not until spring-time does the ice melt and the river is restored to the use of man. The Russian winter is long, but the winter of the Russian Church has lasted two hundred years. What matters that, however, if now at last, after all these weary years, the Church of the living God is about to be roused from slavery and death.

Religious Liberty at last.

On the eve of the May Day which was to have witnessed all manner of bloody disorders, on the morning of the Russian Easter, the Tsar published a decree which, standing side by side with the Rescript which led to the Hague Conference, will place him—all his indecision notwithstanding—on a higher pedestal of glory in the Temple of Fame than that to which any contemporary sovereign can lay claim. For since, in Whittier's phrase, Alexander the Second "With the pencil of the Northern Star Wrote Freedom o'er his land," there has been no such beneficent revolution effected as that which the Tsar accomplished when he proclaimed absolute religious liberty to his subjects, be they Nonconformist, Roman Catholic, or Buddhist. The decree is so comprehensive, so thorough-going, so revolutionary in the best sense of the word, that we can only hold our breath with awe and gratitude. And one of the best results of this Imperial decree is that it will entail as a corollary the extension of religious liberty to the Orthodox Church as well as to its Dissenting rivals. It is seventeen years since I ventured to plead, and plead entirely in vain, with Alexander the Third and M. Pobyedonostseff for some slight instalment of this great act of emancipation. Now that it has come in full measure, we can only thank God and take courage, and keep on hoping that Nicholas II. may be spared to carry out yet other reforms. But if he lived to be a hundred years old, he could do nothing greater than the two achievements by which he will live in history.

The Russian Church.

"It takes a soul to move a body," said Mrs. Browning, "even to a cleaner stye." And until the soul of the Russian nation awakes, until the Church—including in that term not merely

the Orthodox State Church, but the numberless sects which have hitherto been persecuted—becomes a living force, there is no hope of much improvement. The institution which should have been an effective check and control upon the immorality, materialism and corruption of the State was not merely muzzled and paralysed. That would have been bad enough. But in Russia much worse happened than that; for the Church was made pimp and pander to Cæsar's House of Ill-fame. It is almost incredible, were it not admitted in M. Witte's memorial, that every parish priest in Russia is bound to violate the secrecy of the Confessional if his penitent in the hour of remorse incriminates himself or others by admitting any offence against the State. The confessor must become the denouncer, the priest the spy, the winner of souls the tool of the police. In Russia, Church and State were one, and the State was that one. Fortunately, not even all the infamies of such a position have been able to destroy the essentially religious nature of the Russian people. The Church, paralysed and moribund, having a name to live while indeed it is dead, has still an immense hold upon the hearts of the peasantry. If only this half-dead paralytic force could be raised into effective action as a great agency working for righteousness, who can foresee the results? The salvation of Russia of the future may be hidden in M. Witte's memorial to the Tsar.

What will the Tsar do with it?

Once more the Tsar stands at the turning of the ways. Nicholas II., from his anxious desire to do the right and the just thing, has contracted a dangerous habit of halting too long between two opinions. But it is fatal for a Tsar to follow the example of Buridan's ass. Promptitude in giving effect to his own strongest convictions would have averted the Japanese war with all its disastrous consequences. There are certain situations in which indecision is the supreme crime. In the internal situation there are welcome signs that Nicholas II. has made up his mind that his people must be taken into council, and that the promises of his Rescript shall be loyally and strictly fulfilled. "My will regarding the convocation of representatives of the people is unswerving." That is well. But this question of liberty for the Church presses not less earnestly for a decision. The Tsar is a profoundly religious man. He believes in the Providence of God, in the Divine institution of the Church, in the potent presence of the saints, in the efficacy of prayer. No man knows better than he what a weak, frail, ignorant, worried, and sinful creature is the mortal who is at the head of the State, or how worldly, self-seeking, short-sighted, and mediocre are the Ministers and Grand Dukes who surround him. How dare he allow this secular apparatus of overdriven incompetence to continue to cripple the spiritual energies of the Christian Church? He may reply that the Bishops are at least as hopeless as his Ministers. But the soul of the Church is not to be found in its ecclesiastics. They are often its worst enemies. The whole body of simple believers who are only anxious to serve their Lord in spirit and in truth, it is these faithful souls who are the Church of the Living God. And Cæsar surely has quite enough to do in his own secular domain to justify the Tsar in refusing any longer to lay impious constraining hands upon the Ark of the Covenant of God.

The Separation of Church and State.

Russia's ally, France, has been making progress with the Bill for the separation of Church and State. On April 15th the essential clause of the Separation Bill was carried by 336 votes to 236. It runs as follows:- "The Republic neither recognises, pays salaries to, nor subsidises any form of worship" A week later a still more crucial clause transferring all Church property real or personal to the new associations which replace the old was carried by 509 to 44. This large majority makes the Bill practically secure. On January 1st, 1906, the Concordat will be abolished, and the connection between Church and State dissolved. We should feel much more satisfied with the success of disestablishment in France if we did not have an uneasy suspicion that the dominant party in the French Republic has not even an elementary notion of the right of the Church to liberty. So long as the Church sold its freedom for a mess of State pottage it had no right to complain. But it remains to be seen whether the disestablished and disendowed Church will be permitted any greater liberty than it was allowed when in alliance with the State.

The Scottish Church Settlement.

Lord Elgin's Commission has made its Report. It was appointed to inquire into the mess created by the intolerable prejudice of the Lord Chancellor, when almost out of sheer perversity he and his satellites plunged Scotland into confusion by handing over all property of the Free Church to

the handful of the Wee Frees. The report is on the whole a good one. The Commissioners do not in so many words say that the House of Lords was guilty of the grossest injustice, but they do point out very clearly that their verdict had results so colossally absurd that Lord Halsbury and his colleagues must feel themselves in the pillory. They had to deal with an enormous trust, and in the name of the sanctity of trust property they handed it over to a handful of men who could no more administer that trust than the crew of a fishing smack could navigate a first-class battleship. The Commissioners, therefore, have adopted Mr. Thomas Shaw's proposal They do not suggest that the judgment of the Lords should be repealed by an Act of Parliament. But they ask that an Act should be passed to prevent the judgment having any legal effect. A Commission is to be created into whose hands all the property of the church will pass This Commission will make over to the Wee Frees just so much of the church property as they can administer. All the rest, that is to say, nineteen-twentieths of it, will then be legally conveyed to the United Free Church, to whom it rightfully belongs One fool destroyeth much good, and one perverse Lord Chancellor can make more trouble in a day than Parliament can put right in a year. It is a curious outcome of the struggle for the spiritual independence of the Church that the only way out that can be found is the transfer of all the possessions of the church into the hands of Cæsar's nominee.

The Exodus to Canada.

Lord Grey has been on the stump in Canada discoursing with that genial magniloquence natural to the occupant of a post once held by Lord Dufferin of the glories and the destinies of the Canadian Dominion The more he can advertise the attractions of Canada the better, and, as the representative of the King, he is at his proper work as Advertiser-General of the advantages of the Dominion as a field for emigration. At home, one of the most significant occurrences of last month was the despatch of 1,000 emigrants chosen and personally conducted by the Salvation Army from Liverpool to Canada. General Booth, it will be remembered, in the interview which we published in these pages some months since, hinted that the Salvation Army was on the eve of a great development as the Emigration Agents of the World. They have made a good start. Mr. Rider Haggard, who has just returned from an official inspection of the farm colonies established by the Salvation Army in the Far West, is favourably impressed. It will be strange indeed if Carlyle's question as to who were to be the Alarics and the Attilas to lead the industrial armies of the new era to the conquest of new worlds were to be answered by the scarlet-jerseyed Salvationists. General Booth has reached New Zealand, where his Majesty Richard Seddon has received him in the fashion set by his Brother King Edward. The proceeds of Self-Denial week this year amounted to £63,000.

Woman's Suffrage as a Test.

When the General Election comes the nation will turn down the present Ministry by what promises to be a phenomenal majority. The one test -the only decisive test—which the majority of the electors will apply will be to ask whether the candidate who solicits their votes will use his vote to turn the rascals out This is right and natural enough. But it has its drawbacks. In the just wrath of an indignant nation it is tolerably certain that electors will not discriminate very closely as to the character and capacity of candidates so long as they are warranted sound in the one essential point—viz., that of ejecting from office with ignominy the makers of wanton wars and of unjust laws. Consequently it is probable that while we are turning the great rascals out a number of little rascals will get in. By little rascals we mean men of indifferent moral character, apologists for the South African War, and opponents of Woman's Suffrage It is here where the unenfranchised but, nevertheless, invaluable woman has an opportunity of rendering great service. As she is deprived of a vote she is not responsible to the State, which disdains her counsels, for the application of the immediate supreme test- for or against the Government? She can, therefore, with a clear conscience apply the minor test, and see to it that no woman's help is given to any candidate who, after full and repeated warning, refuses to help women to the franchise. It is the only way in which women can bring it home to the average male politician that he has got to reckon with women or get "left." I should be exceedingly sorry if one or two leading Front Bench Liberals did not find their way into next Parliament But if they were to lose their seats because of their obstinate refusal to recognise the civic rights of half the nation, their fate would probably put so much fear of God into the hearts of the survivors that it might be well worth the sacrifice.

A Case in Point.

On the 1st day of March the Local Authorities (Qualification of Women) Bill was read a second time by the House of Commons by 171 votes to 21. The minority, however, obstructed

he Bill out of existence. They feel they can do so vith impunity because women have no votes, and because they believe they are not in earnest enough o punish the betrayal of their cause. What women need to do is to concentrate on securing that whatever civic rights are enjoyed by the man shall also be conceded to the woman. Nothing more fatuous can be conceived than the attempt to hang up the whole question until adult suffrage can be obtained. So fatuous is it that it is difficult to believe that its supporters are not the unconscious tools of the opponents of all enfranchisement for women. All that we can ask is that the law shall be as colour blind as to sex when it fixes franchises as it is when it levies rates and taxes. When the Liberal caucus meets at Newcastle on the 18th and 19th of this month, we have a right to expect that the resolution passed by the General Committee at Crewe shall be endorsed by the Council. It is about time the organisation was formally brought into line with the views expressed individually by the great majority of Liberal members and candidates. The division in the House on the Woman's Emancipation Bill on the 12th will be regarded as a dividing of the sheep from the goats. Every member who votes against the Bill, on whatever pretext, has, of course, a perfect right to express his own convictions, however inconsistent they may be with Liberal principles, but no member who so votes ought to have the impudence to solicit the influence or support of women as canvassers or speakers when he goes to meet his constituents. If women are not fit to vote they are not fit to canvass.

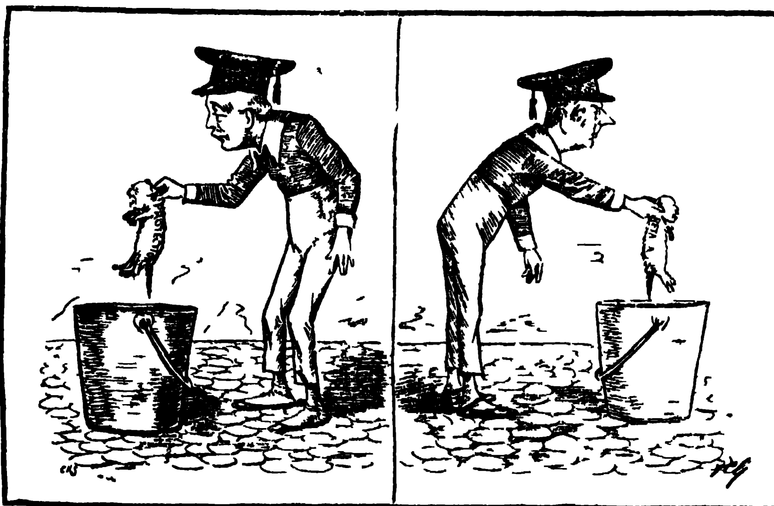
[illegible]

[illegible] series of bye-elections which, with almost monotonous regularity, have recorded the dissatisfaction of the nation with the Ministers who misrepresent it, culminated on April 5th by the return of the Liberal candidate for Brighton by a majority of 817. Only those who have kept their eye upon the steady increase of the percentage of Liberal votes were prepared for so crushing a victory in the most Conservative of seaside watering-places. The last time Brighton polled there was no Liberal candidate in the field. In 1895 the mean Tory vote was 7,614 against a Liberal poll of 5,082. The Tory majority was therefore 2,602, which had been converted into a Liberal majority of 781. There was no mistaking the significance of this knock-down blow. The immediate result, however, was to prolong the lease of life of the Government. In face of such a *débâcle*, no Unionist felt he could count upon re-election. If the Brighton standard were to be universal there would not be 100 Unionists in the next House of Commons. Therefore, at all costs, and at whatever defiance of sound constitutional principle, the Ministerialists resolved to hold together and postpone as long as possible the day of election, which, for most of them, will be the day of execution. What a blessed thing it would be if every single member responsible for the South African War were to be placed at the bottom of the poll!

The Liberal Victory at Brighton.
Portraits of Mr E. A. Villiers, M.P., and his wife

The Fiscal Fizzle.

Before Parliament rose for the Easter Recess Mr. Chamberlain had been reduced to such extremities that he formally had to tell his Tariff Reformers that he, even he, the beloved leader of Mr. Chaplin, was



against any taxation of food for the purpose of raising the price of home produce. Mr. Chamberlain, in short, has been beaten, and prefers to take it lying down. It remains to be seen, however, whether he will bear being trampled upon by such men as Mr Brodrick. That Minister, speaking at Godalming on April 27th, lifted up his horn on high over Mr Chamberlain and his protectionist horde. The Secretary for India did not even stop short of welcoming the victory of the Liberals over his blameless colleague Mr. Loder at Brighton. Brighton was a warning against the futility and unwisdom of coquetting with Protection. He denied that Mr Balfour's policy was a diluted edition of Mr Chamberlain's policy. The Sheffield policy was not a mere Birmingham and water policy, not merely a Protectionist policy mixed with water. He believed Mr Balfour's Retaliation policy would exist long after the Protectionist *per se* had gone back into the obscurity from which he had frequently emerged. Mr Brodrick tried to discriminate between Mr Chamberlain and the Protectionist *per se*, but it was a vain pretence. Mr Chamberlain's only strength from the first has lain in the fact that he rallied round him what Mr Winston Churchill called the scattered commandos of the Old Guard of Protection. It remains to be seen how he will take Mr Brodrick's plain handling. Poor Joe! Is none so low as to do him reverence?

Feline Amenities.

IT'S ONLY JOE'S KITTEN | IT'S ONLY ARTHUR'S KITTEN

[Mr Balfour having refused to save Mr Chamberlain's policy from defeat in the House of Commons on the Ainsworth resolution, the Chamberlainite retort in kind was to insist that Mr Balfour's policy should receive an exactly similar "damnation" by the Walton resolution.]

The Budget.

A commonplace Budget by a commonplace Chancellor of the Exchequer has reduced the tea duty by twopence in the pound, added a million to the sinking fund, and left the income-tax unaltered. There was nothing notable in Austen Chamberlain's speech, except his speculation as to the cause of the shrinkage of the revenue from beer and spirits, which was £137,000 below the estimate. He said that in his opinion it was—

largely attributable to a change in the habits of the people. The masses were discovering other places in which to spend their leisure time and money than public-houses. They went more to theatres and music halls, and cheap excursions absorbed much of the money that once was spent on drink. He did not doubt that, with reviving prosperity, the revenue from this

source would regain some measure of its old elasticity; but he did not think they could count on it to provide in the future as large a proportion of our revenue as it had provided in the past.

That is good news. If we all turned teetotallers and swore off smoking, we should find ourselves confronted with a deficit in the revenue of £50,000,000. It is a deficit that we might face with composure, for the gain in other directions would recoup the nation a hundredfold. The amount of money actually received last year by the exchequer was £143,370,000. When the Liberals left office they carried on the government of the country for £86,000,000.

The Feeding of Starving Scholars.

On April 28th the Local Government Board by a stroke of the pen has established a principle that may carry us far. It is the principle of the State compelling a man to accept a loan to meet a liability in order to facilitate his prosecution for default. It is to be applied by Boards of Guardians to fathers who send their children starving to school. The children are to be fed for a month and the cost of their food lent to the father, and the loan is made recoverable by County Court process. If a loan is needed a second time within six months the father is to be prosecuted under the Vagrancy Act or under the Child's Protection Act. This principle of lending money to meet legal liabilities so as to facilitate sending a man to gaol for failure to do his duty is capable of a wide extension. Take, for instance, all affiliation orders which the unfortunate mothers now find it most difficult to collect. By extending this principle the Guardians would pay to the mother the weekly dole, charge it as a loan against the father, and clap him into prison if he failed to repay the loan. The principle of making the State the poor man's banker to lend him money to meet his obligations with drastic powers of recovery is novel, and it will be interesting to see how it works.

The Ratepayer as Providence.

Ministers have introduced under the Ten Minutes Rule a Bill constituting a central organisation for London for the purpose of providing work for the unemployed at a cost never to exceed a penny in the pound. The scheme is compulsory for London, optional for the rest of the country. The stipulation is made that work is always to be found for the unemployed in a farm colony. The *Spectator* denounces the whole scheme as one for establishing national workshops *in petto*. It is more open to objection on the score that it is a piecemeal, hand-to-mouth scheme. What is wanted is a comprehensive attempt to deal with the whole question of sickness, accidents, old age, unemployment and death, in the same scientific way in which it is handled in Germany.

The Revolt of the Ratepayer.

"The ratepayer is poor." That pregnant aphorism, upon which Lord Milner wrote a leader in the *Pall Mall Gazette* when the Glasgow householders refused to adopt the Free Libraries Act, has been too much forgotten of late. The Education Act of 1902 has created a good deal of friction by the opposition of the Nonconformists; but it seems destined to create a great deal more by the increased burden it throws upon the ratepayer. The net effect of that measure has been to increase or to promise to increase the education rate by threepence or fourpence in the pound all over England. The London County Council is face to face with a tremendous problem in the shape of some hundreds of voluntary schools which are insanitary and otherwise in need of a heavy expenditure. East Ham, however, is the place where the ratepayer has revolted. East Ham is a poor man's town, one of the worst examples of the segregation of classes which is so marked a feature of modern life. It has elected to have a Mayor and Corporation of its own. It is outside the London area, and therefore can obtain no relief from the wealthier districts. Until the Education Act was passed it got a certain amount of relief under the Necessitous School Board Act. But School Boards having been abolished, East Ham finds itself confronted with an Education rate of three shillings in the pound. East Ham has gone on strike. The Town Council has unanimously passed a resolution that "from June 1st next the Council will decline to administer the Education Act." They have given notice to all their teachers, and the youth of East Ham is revelling in the prospect of an unending holiday. If East Ham Town Council is not promptly brought to book the revolt will spread, and no one can see the end of it.

A Hotel de Ville for London.

The present moment has been seized by those who are primarily responsible for spending £228,000,000 in wanton war and unnecessary rainbow-chasing in South Africa to preach a crusade against even the most necessary expenditure on the needs of the people. London, for instance, has long been in sore want of a decent house in which to accommodate its County Council—a body which last year had to raise and spend five millions and a half of money. It is proposed to buy a site on the south side of the river, running east from Westminster

Bridge, for £600,000, and to erect a County Council Hall at a cost of another million. The sum sounds large, but it is only the capitalised sum of the money at present frittered away every year in rents for the innumerable offices which are scattered all over London. That matters nothing to the *Daily Mail* and its supporters, who are as bitter against all remunerative expenditure for the public good as they are enthusiastic in favour of all wasteful expenditure for the purposes of destruction. There is, however, no doubt that they are wise in their generation. If once the condition of the people question is seriously taken in hand, there will not be many millions to spare for the pastime of Mullah hunting in East Africa or slaughtering Lhamas in the heart of Thibet.

Local Finance.

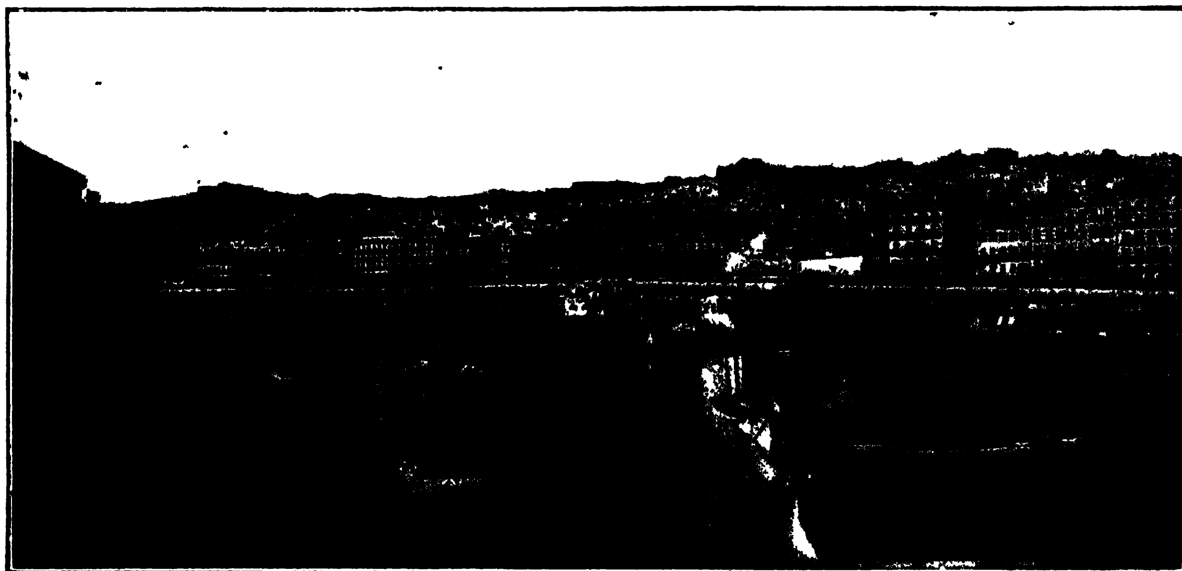
The cry of the suffering ratepayer led the leaders of the Liberal party last month to acquiesce in the renewal of the Dole Bill, whereby the agricultural ratepayers are subsidised out of the rates in the interest of the Conservative Government. The Bill was a stop-gap measure passed in 1896 for five years to allow the Government time in which to settle the rating question. In 1901 they were too busy with war and bloodshed to deal with domestic problems; so they renewed it for another four years. They have made no use of the extended term, and now they are proposing to renew it for another four years. Fifty-nine members voted against this, but the party, as a whole, deemed it better to acquiesce in the inevitable. They will have an opportunity of dealing with the whole question before this third term runs out. Mr. Trevelyan's Bill providing for the rating of land values was read a second time last month by a majority of ninety. His idea is that unoccupied land in towns should be assessed at 3 per cent. of its selling value, instead of, as at present, upon its agricultural value.

The Fate of the Russian Armada.

The Russian Admiral with the Baltic Fleet, now reinforced by the Third Baltic Fleet, have steamed out of French waters in Kamranh Bay, faring northward to Vladivostock. They form an imposing Armada. Admiral Rojdestvensky had forty-seven vessels under his command, and there must have been twenty more under Admiral Niebogatoff. The kernel of their fighting strength consists of ten battle-ships, of which six are first-class. Against these the Japanese have five battle-ships, four of the first-class, and eight swift armoured cruisers. The Russians have stiffened their *personnel* by recruiting naval adventurers of all nations, among whom English are, as usual, well to the fore. They are, however, at the disadvantage of having no base or dock nearer than Vladivostock, and the Japanese can dog them as Drake and Raleigh and Howard dogged the Invincible Armada of Spain. If Japan chooses to use her third-class ships as shell, launching them at night like the old fire-ships against the Russian battleships, she will have bad luck indeed if she cannot ram one or two before her doomed ships go to the bottom. As it would be worth spending three slow, weak ships to put one first-class battleship out of action, it is probable the Japanese will not hesitate to incur the sacrifice. The probability is that before the war is over neither Russia nor Japan will have any battleships left. Russia, foreseeing this, has decided to build at once 10 battleships, 24 armoured cruisers, 15 scouts, 50 destroyers, and 100 torpedo-boats.

The Land War.

The Russians, with 300,000, are still falling back before the Japanese, who have 475,000 men in the field, and who threaten to raise another 500,000 before the end of the year. The Russians are said to have lost 435,000 men, the Japanese 250,000, of whom only 50,000 were killed outright. 41,000 prisoners were captured in Port Arthur. The Japanese maintain that they can keep the land war going even if they should lose command of the high sea. In the narrow seas, what with their new submarines and their flotilla of torpedo boats, they expect to be able to hold their own, no matter if all Admiral Togo's big ships go to the bottom. No one talks of peace; nor is this to be wondered at while the Russians still believe the Baltic Fleet will deal the master stroke which will convert defeat into victory.



Monarchs in the Mediterranean.

The King and Queen have been disporting themselves in the Mediterranean, visiting Algiers, and enjoying the sunshine of which their subjects in these islands had a lamentable lack this Easter. The King, on his way South, had a pleasant talk with President Loubet in the train, and on his way back he visited and dined with the President again—this time unofficially. The British Fleet is going to pay a friendly visit to Brest in July, and in August the officers of the French Fleet are to be entertained at the Mansion House. These international junketings are all to the good, and the more we have of them the better. The Kaiser, after leaving Morocco, called upon the King of Italy at Naples and the King of Greece at Corfu. It is a pity he did not go on to Crete, where that bad egg, Prince George,

is getting on worse than ever with his subjects, who are clamouring to be annexed to Greece. As the Powers have told them it is impossible, the insurgents are beginning the old game of starting a provisional government of their own in the interior. While the King and the Kaiser are thus combining diplomacy with holiday-making, President Roosevelt is revelling in a return to the fierce joys of frontier life, and in hunting wolves and shooting bears is as happy as a schoolboy on his summer holiday.

The Moroccan Trouble.

The Kaiser's visit to Morocco passed off without other result, so far, than to provoke a debate in the French Chamber, which led to the resignation of M. Delcassé—subsequently withdrawn. There has been an extraordinary amount of fencing about this matter, chiefly in the semi-official German press. The gist of the complaint against M. Delcassé was that he did not officially communicate the text of the Anglo-French agreement about Morocco to France. M. Jaurès held that this ought to have been done to avoid misunderstanding, and he probably was right. M. Delcassé communicated the Franco-Spanish agreement on the same subject to the German Government, and there was no reason why he should not have taken the same course with the earlier agreement. But he did communicate the contents of the Convention fourteen days before it was signed to the German ambassador. When communicating the Spanish agreement, the French Ambassador pointed out that it contained yet another guarantee for the commercial freedom stipulated for in the Anglo-French agreement. To this the German Minister for Foreign Affairs made no objection, so that by reference and by silence the French Government did officially call the attention of the German Government to the English Convention. As a matter of fact, twelve months ago Count von Bulow not only admitted his knowledge of the Convention, but expressly declared that there was no objection to be made to it on the score of German interests, which were not threatened, but indeed rather benefited. After this it is surely somewhat nonsensical to stand upon one's p's and q's and make a grievance of some unnoticed omission in the detail of diplomatic etiquette. M. Delcassé's withdrawal of his resignation was hailed with universal satisfaction.

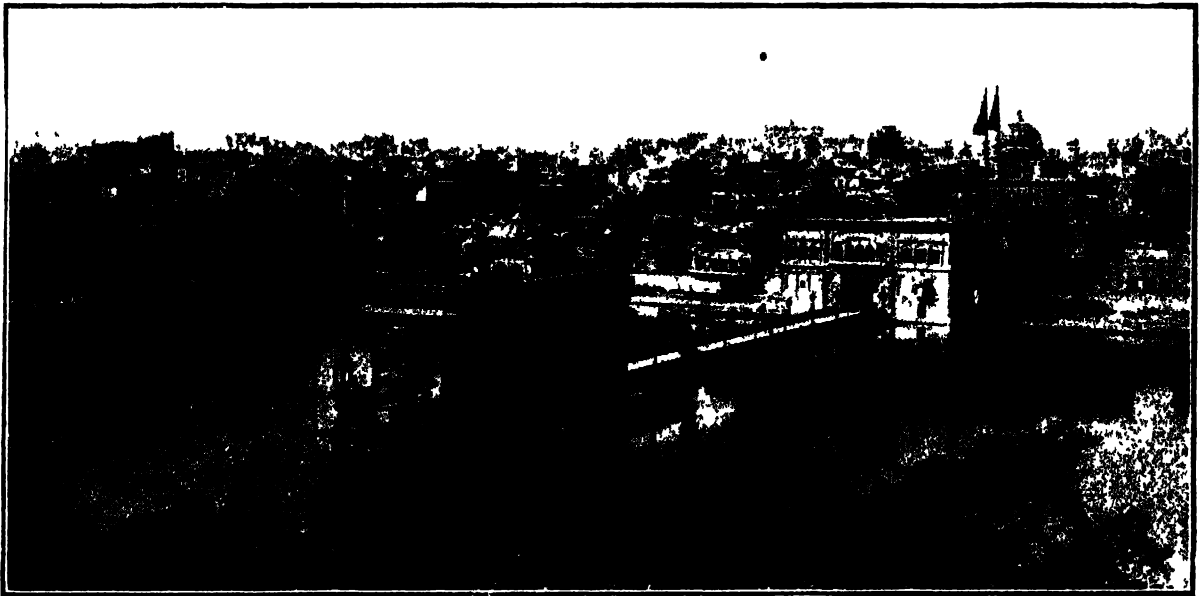
The Kaiser's Object

The following is the authorised version of the Kaiser's discourse at the German Embassy at Tangier, where he spent only two hours:—

The Emperor replied that he had come expressly to Tangier to assert that he would maintain the absolute equality of German economic and commercial rights, and would not allow any Power to obtain preferential advantages. The Sultan was the free Sovereign of a free country, and Germany would insist on always carrying on her affairs direct with him, and would never allow any other Power to act as intermediary. The present was an unsuitable time to introduce any reforms on European lines, and all reforms should be founded on Islamic law and traditions. What Morocco required was only peace and quiet, and he would

find means later on for making his opinion known to the Maghzen on questions of detail.



As France disclaims any desire to secure preferential advantages, and as no one asked Germany to accept France as her intermediary, it is somewhat difficult to see the *rationale* of this declaration. If the Kaiser really desired peace and quiet in Morocco, he ought not to have gone to Tangier. His visits have, no doubt, many excellent results, but the promotion of international tranquillity has never been their exceptional characteristic.

The Scandinavian Scare.

Since the appearance of the Norwegian case, as it was last month stated by Dr. Nansen, the explorer Mr. Sven Hedin has placed the Swedish case before the British public, and Mr. Bjornsen has added his quota to the controversy. The intervention of the Prince Regent has failed to heal the breach. The Swedish Prime Minister has resigned, and the Norwegians are going ahead with their scheme for appointing Norwegian consuls. There is a tendency to represent Russia as a certain aggressor upon the Norwegian strip that divides Russia from the Atlantic. The Swedes threaten to leave Norway to be eaten up by the Muscovite bear. But surely if that much-abused animal really meant business, it is not the protecting shield of Sweden that would save the Norwegian littoral. The fact is, the Swedes are making use of the Russians as a useful bogey to scare the Norwegians into submission. The Prince Regent might do worse than summon Baron Bildt to his counsels. There is no difficulty in the situation which that shrewd, hard-headed, long-sighted diplomatist could not straighten out if he were allowed a free hand.

The Earthquake in India

Punctually in accordance with the prediction of Zadkiel's Almanac, the earthquake shook a tract of territory, viz., North-West India, the Paltampur and Kangra districts, at the beginning of last month, destroying 15,000 lives. The region immediately affected was the size of the United Kingdom. Dharmsala was the centre of the shock, but it affected Simla, where Lady Curzon had a narrow escape. Later in the month there was a slight shock of earthquake felt in the English Midlands, but no lives were lost or buildings destroyed.

The Earthquake in India: Amritzar one of the places which suffered.

Mr. Choate and Mr. Whitelaw Reid.

The retiring American Ambassador was entertained last month at a farewell banquet at Lincoln's Inn by the Bench and Bar of England. He made a speech full of eloquence and goodwill. The finest passage was that in which he glorified the profession of the law. He said:—

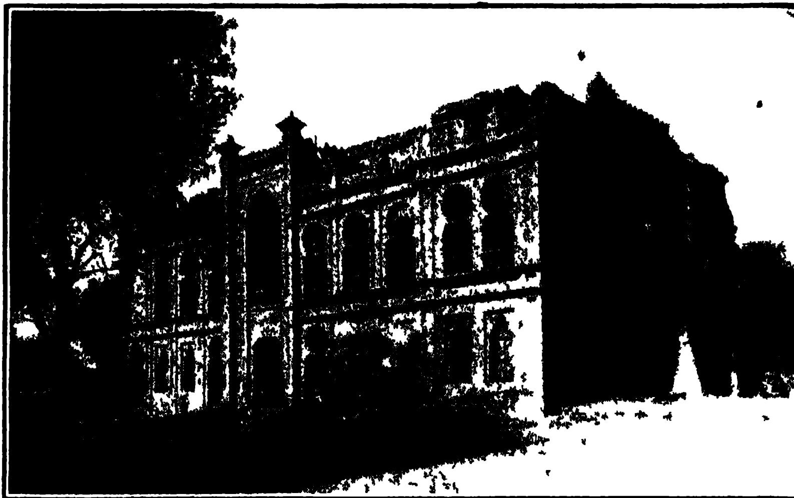
Until I became an Ambassador and entered the *terra incognita* of diplomacy I believed a man could be of greater service to his country and his race in the foremost ranks of the Bar than anywhere else; and I think so still. To be a priest, and possibly

a high priest, in the temple of justice, to serve at her altar and aid in her administration, to maintain and defend those inalienable rights of life, liberty, and property upon which the safety of society depends, to succour the oppressed and to defend the innocent, to maintain Constitutional rights against all violations, whether by the Executive, or by the Legislature, or by the resistless power of the Press, or, worst of all, against the ruthless rapacity of an unbridled majority, to rescue the scapegoat and restore him to his proper place in the world--all this seemed to me to furnish a field worthy of any man's ambition.

On St. George's Day Mr. Whitelaw Reid, the newly-appointed Ambassador, made a speech in New York which, if less eloquent than Mr. Choate's, was not less full of enthusiasm and goodwill. If the journalists of London give him a banquet he might give an idealised picture of his profession not unworthy to hang beside that of the tribute of his predecessor to the calling of the lawyer.

The Latest Fool's-cap for John Bull.

Mark Twain once told me that when he was learning to ride a bicycle his teacher told him that he had discovered more ways of falling off than anyone he had ever seen. In dealing with South African affairs the present Government is very much like Mark Twain with his bicycle. The ingenuity of foolishness in devising disaster and in organising failure which they have so often exemplified reached its climax in the fantastic simulacrum of a Constitution by which they propose to confer "representative institutions" upon the Transvaal. Mr Lyttelton and Lord Milner divide the glory of devising this latest fool's-cap with which they propose to adorn the head of poor, patient John Bull. "What fools these mortals be!" It is, however, as well that they can write themselves. They have no need to cry, with honest Dogberry, for someone to write them down an ass. They have done it themselves to save us the trouble. And in this precious Constitution for the Transvaal they have written it out large in good bold round text-hand, so that the wayfaring man, though a bit of a fool himself, cannot mistake its significance. All that can be said in praise of their latest piece of handiwork is that in ineptitude, in futility, in fatuity, it is entirely consistent with all their other achievements in the same field. *Finis coronat opus.*



The Transvaal Constitution.

The first thing to say about this Transvaal Constitution is that it is a distinct breach of faith. Once more they set about a South African policy with a lie in their right hand. When peace was made, both Lord Kitchener and Lord Milner promised the Boer generals and Mr. Steyn that they were to have a Constitution like that of the Cape—the Transvaal probably in three years' time, the Orange Free State earlier. This was not inscribed in the bond. It was an explanation given in all good faith by Lord Kitchener. Believing that they were dealing with a man whose word was as good as his bond, the Boers laid down their arms and signed the Treaty of Vereeniging. How do they find themselves to-day? Three years have passed since the treaty was signed, and instead of a Constitution like that of the Cape, which was promised them, they have a Constitution that is as unlike the Cape as it can be made, and instead of its being granted to the Orange Free State before the Transvaal, the Orange Free State is doomed to remain indefinitely under arbitrary government. The *Times* says frankly that this is because the Boers are in a majority in the Free State, and therefore they must be denied the Constitution promised them when they laid down their arms. This is a swindle. Whether it is rogues of contractors, imbeciles of generals, unscrupulous High Commissioners, this Government has never been honest and straight in any of its dealings with South Africa. The Constitution of the Cape is a Constitution which allows extra representation to the country districts to counterbalance the numbers of the towns. The Transvaal Constitution is based on the principle of "one vote one value," expressly in order to enable the towns to override the country. The Cape Constitution gives the Cape Colony responsible government by placing the executive under the direct control of the majority of the elected representatives. The Transvaal Constitution establishes an irresponsible executive appointed by Mr. Lyttelton or Lord Selborne, and deprives the elected representatives of any control.

A Swindle, an Outrage, and a Folly.

The new Constitution is, therefore, a swindle to begin with. It is an outrage to the intelligence of the Empire. We have a right to expect that the Ministers of the King, when acting in his name, will not flagrantly offend against the principles of Colonial government which have long since been worked into the fabric of our self-governing Empire. Lord Durham's Report on Canadian government settled once for all the questions with which Ministers are now attempting to deal on opposite principles. The fundamental principle of that Report was that it is fatuous and suicidal for the Imperial authority in London to attempt to govern a Colony to which it has given representative institutions by an Executive which is not responsible to the elected representatives of the people. The Home Government made a long struggle against applying this principle to the Cape, with no end of mischief accruing for many years. But at last

Downing Street was compelled to give way. The whole story is told at length in Molteno's life, and very interesting and instructive reading it is Now Mr. Lyttelton has the effrontery to refer to that period of confusion and agitation as a justification for repeating the blunder in the Transvaal. The folly of it is as conspicuous as its bad faith As Gibbon Wakefield said long ago, to grant representative institutions without responsible government is like lighting a fire in a room the chimney of which is stopped up It is not very pleasant for the people in the room, and how long it lasts depends entirely upon the strength of the fire. In the nature of things the Colonists in South Africa, whether British or Boer, who are accustomed to self-government can acquiesce in the existence of an assembly which "might refuse or pass laws, vote or withhold supplies, but could exercise no influence in the nomination of a single servant of the Crown" "It is difficult to conceive," said Lord Durham about a similar set of wiseacres, "what could have been their theory of government who imagined that in any Colony of England a body invested with the name and character of a Representative Assembly could be deprived of any of those powers which, in the opinion of Englishmen, are inherent in a popular legislature"

Photograph by] [Mrs L. Va Nur

The Earthquake in India Wreck of the Victoria Jubilee Town Hall, Lahore

The Voice of Experience.

No one had better and closer experience of the working of such a system as is now proposed to be set up in the Transvaal than William Porter, who was Attorney-General until 1875, when responsible government was established He gave it as his deliberate opinion in the Cape Chambers, July 30th, 1871 :—

I have always held the view that to work representative institutions without responsible government is a rash and dangerous experiment I wish this South African Colony may possess that, without which parliamentary institutions become a mockery, a delusion and a snare—I mean a responsible Ministry, possessing the confidence of the Legislature and the people —Molteno, vol 1, p 172.

Lord Durham laid down the law once for all in his Report on the affairs of British North America when he said—

The Crown must submit to the necessary consequences of representative institutions, and if it has to carry on the Government in unison with a representative body, it must consent to carry it on by means of those in whom that representative body has confidence In England this principle has been an indisputable and essential part of our constitution It surely cannot be the duty or the interest of Great Britain to keep a most expensive military possession of these Colonies in order that a Governor or Secretary of State may be able to confer Colonial appointments on one rather than another set of persons in the Colonies For this is really the question at issue —Report, pp 205–208

That last sentence touches the point with a needle. All this fraud and folly and extravagance is to be incurred in order that the Executive posts may be given to persons favoured by the ruling Junto of the Rand, rather than to persons chosen by the representatives of the Colony.

"A Mockery, a Delusion, and a Snare."

What are the details of this new Constitution which the former Attorney General of Cape Colony accurately described in advance as 'a mockery, a delusion, and a snare"? To begin with, it postpones responsible government for four years, the duration of the new Legislative Assembly, which is to consist of thirty or thirty five elected and six or nine official members, the latter being members of the Executive appointed by the Crown The thirty or thirty five representatives are to be elected by white adult male subjects of the King who have been entitled to vote for the First Volksraad under the Republic, or who may be earning £100 per annum, or who may now occupy land and premises worth £100 or of the annual value of £10, if they have occupied such premises or drawn such salary for any six of the

twelve months preceding the day of registration. A board of three Commissioners shall divide the Colony into single member electoral districts on the basis of the number of voters. Mr. Lyttelton refused to allow the basis to be the number of population, because he wished to handicap landed fathers of families by giving them no more voice in the management of the country than migratory young bachelors who have no stake in the country, but whose vote might be anti-Boer. The only proper franchise is to give every living human being a vote, fathers voting for sons when minors, and mothers voting for daughters till they are of age. Only in this way can the family be adequately represented. In the Transvaal Mr. Lyttelton has deliberately and avowedly adopted a basis of representation intended to increase the electoral power of young unmarried men. The Legislative Assembly may make laws for the peace, order, and good government of the Colony, subject to the right of the Governor to send them back for amendment or to reserve them for two years for the discretion of the Colonial Secretary. It may not vote any money unless such vote is recommended by the Governor. English is to be the official language, but with the permission of the President any member can address the assembly in Dutch. The control of the railways and of the South African Constabulary is reserved for the Intercolonial Council.

What will the Boers do?

"His Majesty's Government," says Mr. Lyttelton, "expect co-operation" of the Dutch. Will they get it? It is more than doubtful. The whole scheme is a fraudulent trap designed avowedly to secure a majority in the Assembly for the minority in the country, and to evade the execution of the Treaty by palming off a sham upon the world. The Boers may fairly refuse to have any part or lot in the silly imposture, (1) because the Orange Free State is denied the alleged privilege offered to the Transvaal, and as the two Republics were solidaire in war, they will act together in peace; (2) because representative institutions cannot be worked without responsible government; and (3) because the system of representation is unfair to the country as against towns. The right of rural districts far from the centre of power to have representatives in excess of their numbers is recognised in the Cape as well as in other Colonies. I well remember Dr. Jameson's right-hand man in the Cape Parliament declaring that they would never for a moment tolerate the principle of one vote one value in the Cape Colony. It would place all the rest of the country in the hands of those whom Mr. Rhodes called the screamers of the towns. Such an arrangement seemed to him absolutely unthinkable for the Cape. What General Botha thinks about it we know from a speech delivered at Gezina last March. Speaking of the cry of one vote one value, he said:—

It is something which stands in direct opposition to the best interests of the whole country; it is a thing which is not tolerated even in England itself; why, then, should we submit meekly to having it forced down our throats? Superficially it may appear sound: "one vote one value"; but what does it signify? Simply this: the placing of one section of the people on top of all the others. It is the intention of those who advocate this principle to ignore entirely the country's territorial claims to representation, the old electoral divisions are to be done away with, and representation is to be based entirely on the number of voters. Thus it would be laid down that—to give an instance—say every 2,000 voters will send one representative to the Legislature; and under such a scheme two entire districts like Waterburg and Zoutpansberg, comprising almost half of our State and having peculiar and complicated interests of their own, would hardly be able between the two of them to depute one member, whilst, on the other hand, places where there is temporarily congregated a floating, restless and unsettled population would be able to elect three, four or five and even more representatives! What does such an electoral system signify, but the deliberate ignoring of the settled and permanent interests of the country, and sacrificing the same to give undue preference to a temporary and unsettled population, which can have no interest in the country beyond the immediate confines of the industry with which it busies itself?

The Alternatives.

The idea entertained by Mr. Lyttelton that the British residents in the Transvaal are opposed to responsible Government is one of the characteristic delusions of the Jingo party. The only reason why I doubt whether the Boers will reject the whole scheme is the possibility that they may know that *het Volk* and the Responsible Government Association between them are so strong that they can sweep the country in favour of responsible government. If the Boers and the Responsibles could elect nineteen or twenty-three members, as the case may be, to the Legislative Council pledged to refuse any consideration of the war contribution, or the passing of any legislation whatever, until responsible government has been established in both the Transvaal and the Orange Free State, they would be in a very strong position. It would be a justifiable policy, if the Boers and Responsibles are strong enough to make the election of such a majority a dead certainty before the polls open. Otherwise they had better treat the whole scheme with contempt, and persist in their present dignified attitude of abstention coupled with organisation. But the line of policy to be adopted by the King's new subjects in the Transvaal is one for their own discretion. Their friends in this country can only assure them that whichever policy they adopt it will have our loyal support.

CURRENT HISTORY IN CARICATURE.

"O wad some power the giftie gie us,
To see ourselves as ithers see us."—BURNS

IN the Eastern hemisphere fun of the cartoonist chiefly hovers around the Kaiser's visit to Morocco the comedy of which is broad enough without the aid of the caricaturist—the crisis in Russia, and the change of Governors at the Cape In the New World the Trusts are still, as ever, the principal butt of the penciller's wit.

Can We Federate Our Piebald Empire?

I.—NO. By MR. J. EDMOND, Editor of the "Sydney Bulletin."

MR. CECIL RHODES in his later days held the *Sydney Bulletin* in holy horror. Americans and *Sydney Bulletin* Australians he regarded as the great enemies of the Union Jack in South Africa. The *Sydney Bulletin* which he thus honoured by his dread is indeed one of the most notable journals of the world. It is brilliant, lawless, audacious, scoffing, cynical, a compound of the paragraphs of *Truth* at its zenith, with the cartoons of the *Tomahawk* when Matt Morgan was at his prime. No other weekly paper has such an Australasian circulation. It is fearless, insolent, cocksure. It is a veritable haggis of confused and undigested materials. The note is raucous, sometimes rancorous, and singularly lacking in the old world graces of chivalry and courtesy. The *Sydney Bulletin* is the Australian larrikin disporting himself in type, full of gibes and sneers at all ideals but its own. In dealing with the cause of woman's enfranchisement it is coarse and vulgar. On the subject of Protection it is as fanatical as Mr. Chamberlain, and about as well informed. It is the champion for "Australia for the White Australians, and let the rest of the world go to the devil." John Bull is to the *Bulletin* not the genial old gentleman of *Punch*, but an odious, sensual Jewish usurer. Nevertheless and notwithstanding—and, indeed, all the more on that account—those who are interested in the future of the British Empire will do well to keep their eye on the *Sydney Bulletin*. I was therefore very much pleased to receive last month a contribution written from Burmah, where Mr. Edmond, the Editor of the *Bulletin*, had gone to see with his own eyes some of his dark-skinned fellow-subjects. I print the article and commend it to the attention of those tariff reformers who imagine that preference will secure free trade within the Empire. I need not point out the delusion of the writer that the balance of trade is in favour of a country which exports more than it imports, for that is common to all Protectionists. It is not with the political economy of the *Bulletin* that I am concerned so much as with its politics. The Editor has a voice heard throughout the Empire, and I shall be glad to accord a similar publicity to the reply of anyone competent to answer the question in the affirmative.—ED. REVIEW OF REVIEWS.

ANY article which deals with Imperial Federation from the standpoint of the Colonist of British origin may fairly commence with these two propositions:—

(1) That the present Imperial system, or lack of system, is so utterly untenable that it can only end in the disruption of the Empire by the breaking away of the great dependencies which are peopled principally by members of the Anglo-Saxon race.

(2) That the chief obstacle in the way of the establishment of a more permanent system is to be found in the United Kingdom itself.

THE PRESENT SITUATION.

The present position is based first, last, and all the time on the assumption that the Englishman who leaves England to help in carrying the flag a little farther out is necessarily an inferior as compared to the one who stays behind, and, it may be, moulders in some sleepy little country town and sells cheese in some murky little shop. The adventurous Englishman, who goes forth to Canada or South Africa or Australia and invades the wilds, and shifts the boundary of living Anglo-Saxondom a few miles farther into what was till then a wilderness, is, in fact, a mild form of criminal in the eye of the law, and a degraded individual in the view of public opinion. He ceases at once to be a full and complete citizen of the Empire. He loses his Imperial franchise and his share in deciding the Empire's policy, and in controlling the army and navy. Instead of being the possessor, he becomes the thing possessed. *Whitaker's Almanac* and other books of reference begin to describe him as "Our Colonial Possessions," whereas if he had stayed at home and been a cheesemonger or a churchwarden he would have been classed among the owners instead of among the property. He is liable to be spoken to patronisingly by the great aggregate cheesemonger who never left his native village, about the gratitude he should feel towards "us" for all that "we" have done for him in endowing him with these splendid colonies, and the man who fights the almost endless droughts in inland Australia, or wages war with the snows of North-West Canada, sometimes fails to see exactly what the cheesemonger who stayed behind *has* done for him. It is true that the adventurous Englishman who shifts the real and workable boundary of the Empire a few miles farther on gets something in exchange for the loss of his rights as an Imperial citizen. He acquires a small local franchise and certain local rights of self-government. But he has lost his share of the control of the Empire's policy. His local Acts of Parliament are subject to the veto of a power which he has no more share or voice in creating than if the veto were exercised by the Sultan of Turkey or the Shah of Persia, and he is sometimes driven to the conclusion that neither of these potentates could exercise the veto much less intelligently than the present authority. He is cut off from any chance of rising to eminence in Imperial politics or in the Imperial military or

naval service unless he repents of his sin and returns to England, and there begins his career afresh. He is unfit to be even a Colonial Governor—a position to which the pettiest member of the British Parliament or the mildest scion of the British aristocracy may aspire. All this is the penalty for carrying the flag into the back regions of the globe, and helping to prevent the British Empire being again what it was in the time of James I.—a little archipelago off the French coast.

THE NAVAL TRIBUTE.

So far as concerns Australia, one of the chief controversies with the Imperial Government concerns the question of defence. The Commonwealth maintains its own military forces. Whether, as compared with its population (which is one-tenth that of the British Isles), they are equal to those of the United Kingdom, it is impossible to say. Considering the British forces in the light of the fact that they took three years to suppress a handful of farmers in South Africa, and considering the Australian forces in the light of the assistance they rendered in that lamentable and sinful proceeding, the Commonwealth may be doing its share in a military sense—or it may be doing less. As regards naval matters the Commonwealth contributes £200,000 a year to the support of the British Fleet, and the demands for a larger contribution are loud and frequent. Comparing its population with that of the whole Empire the Commonwealth's subsidy is not very much less than its fair proportion of the whole cost of naval defence. Comparing its population with that of the British Isles the subsidy is ridiculously small. Compared with the voice Australia has (or rather has not) in deciding the naval policy of the Empire, in controlling the Navy, in auditing the naval accounts, and in the division of naval positions, emoluments, and dignities, the subsidy is so exorbitant as to amount to an outrage. In time of real trouble it is safe to say that the British Isles would be defended by every vessel which Britain could command, while Melbourne, Sydney, Adelaide, and all the other Australian coastal cities are not guaranteed the protection of so much as a tugboat—this despite the existence of the so-called Australian Squadron, over which Australia has no more influence or control than if it were the Chilian Squadron or the Turkish Fleet. Yet in every negotiation on this subject the impossibility of bringing British statesmen to understand that if an Englishman outside England is to contribute to the support of the British Navy on the same scale as the Englishman in England, he is also entitled to some shred of control, has been unutterable and pathetic. Every British statesman who has approached the subject has done so from the standpoint of the complete and incurable inferiority of the Englishman outside England. About the "duty of the Colonies to carry their share of the burden of Imperial defence" a very great deal is heard. About the corresponding right to a share in deciding on the Imperial policy, in resolving in what quarrels the Army and Navy shall be employed, in considering what alliances (tending to possible or probable war) shall be effected, and in auditing the national accounts to find out why it is that the United Kingdom has the smallest and yet the most costly army among all the great Powers, and apparently (judged by the story of the Boer war) almost the least efficient—about these matters it is impossible for us in the Commonwealth of Australia to hear anything.

TARIFF RECIPROCITY.

On one point, however, some small attempt has been made to lay the foundation stone of some sort of Imperial union. At the best, however, it has been a very small attempt. Joseph Chamberlain has come forward as the Apostle of Tariff Reciprocity, or Retaliation, or Protection—it is difficult, amid the vapour of words, to find out which he means or how far he means anything. If Mr. Chamberlain would publish in detail his idea of a tariff that would meet the case, there would at least be some tangible basis for discussion, but at present there is very little. So far all the suggestions that have reached Australia have referred to how it is our alleged duty to give a preference to the goods of the Englishman in England; but about his equally obvious duty to give a preference to the goods of the Englishman or the man of English descent in Australia, we hear practically nothing. At present Australia is mildly Protectionist (not nearly so Protectionist as I trust it will be in the future) from purely selfish motives. The United Kingdom is Free Trade from purely selfish motives, so from a moral standpoint things are equal. Australia gives a tariff preference to every Englishman within the scope of its legislation; the United Kingdom gives to its own English people no more preference than it gives to its worst enemy. Therefore, from Joseph Chamberlain's standpoint, the Australian is already a much better Englishman than the Englishman himself. But to come down to the purely business aspect of the case—and even Imperial sentiment of the worst Chamberlain brand cannot wholly obscure the business aspect of the case—the position is this: The Commonwealth of Australia, despite its Protectionist tariff, sells very much less merchandise (shipments of gold to pay interest on our liabilities I do not include as merchandise) to the United Kingdom than it buys from the United Kingdom. This is taking the values at the Australian end of the voyage, but as the difference between these and the values at the British end of the voyage consists of freights paid to British shipowners, it is the values at the Australian end which count. On this basis it seems to us that we are more entitled to receive a preference than to give one, or at all events that we should hear a little more about the preference we are to receive, and not so overwhelmingly much about the one it is our alleged duty to give. Other countries, from which we buy much and to which we sell little, are

Japan and the United States—in fact, it seems to be our ill-fortune that our bad customers are the United Kingdom and the States, which the United Kingdom regards as its best friends, while our good ones are those which it views with hostility or indifference. But in the main our customers outside the United Kingdom buy from us much more than they sell to us, and it is the balance in our favour on this trade which, to a great extent, enables us to pay the interest to the British moneylender on our stupendous external debt. So far, therefore, the proposals for reciprocity—a strangely one-sided reciprocity!—which have reached us are, to all intents and purposes, proposals that we should commit a violent outrage on our good customers for the benefit and selfish gratification of our bad ones. If we did so, and if France, Belgium, Scandinavia, Chili and a few other countries were moved to effective retaliation, the probable result would be that we would have to offer the British money-lender 10s. in the £. Whether our creditors' yearning for Imperial ideals would counterbalance that shock I do not pretend to say. At all events, seeing that we already buy much more from England than England does from us, and that we are already, in proportion to population, about the best customers that England has upon this earth, we fail to see why we should be the subject of so many homilies about our duty, in a commercial sense, to England. Such homilies would be much better directed at the United States, France, and possibly Japan. Australia, at its best, is a barren land, with no great agricultural future before it. If it is ever to be a great community, and a great section of the British Empire, it must depend largely on manufactures, and to build these up it must buy much less from Britain instead of more. And, by way of making good this loss, the Imperial Government might possibly suggest to the United States that a system whereby Britain buys almost everything from the States and sells to them almost nothing is too one-sided to last. In other words, the first demand for reciprocity should be made where the balance of trade is against the United Kingdom; not where the balance is in its favour. Also it is much more heroic to demand some semblance of bare justice from a community of 80,000,000 people than to nag at a community of 4,000,000 in the effort to extract from it far more than justice. Before Imperial Federation is possible the tariff question will require to be a great deal less nebulous than it is, and reciprocity must assume a much more reciprocal aspect.

THE PROBLEM OF COLOURED RACES.

The British Empire is, in the main, an empire of coloured races, and it is becoming more so rather than less as new annexations are effected, and as white men are driven out of South Africa to make room for Chinese coolies. Whether the coloured races add strength to the Empire or weaken it will not be known till the day of Britain's disaster comes to pass. While British prestige stands high the coloured races seem reasonably loyal. When the light of that prestige flickers low they may be still loyal, or it may be that Britain will find that it has to contend against three-fourths of its own subjects as well as against enemies outside. Meanwhile the coloured races of the Empire bring troubles to some of the British Colonies which Britain, because they are not its personal and individual troubles, persistently refuses to recognise. In Australia no question stands more definitely in the way of any form of Imperial Federation, and no one points more definitely towards actual secession. Australia is a country with very much desert or semi-desert, and very little good country. It is a white man's land in the sense that there is no part of its habitable area in which a white man cannot work and retain his health. It has a small but steadily increasing population, and it has a vague impression that even the white man has some rights—among them the right to have a place for his children to live in. It is far from Europe and close to Asia, and if its ports were fully opened it could get twenty black immigrants for one white. But it does not want any such black influx, for reasons which England would fully understand if England were not too cold and too remote to be itself in any danger of a huge coloured labour invasion. Being itself in no danger, England refuses to recognise anything, and in reply to the Commonwealth's proposal to openly and honestly draw a colour line as regards immigration, the Imperial Government replied that it could not sanction any legislation which made distinctions between the subjects of our common sovereign, and said something to the effect that the right of every British subject to travel freely throughout the Empire ought to be sacred. The stupendous hypocrisy of this almost struck Australia dumb. Every theoretical right which the native of India possesses, and the acknowledgment of which would be a danger to the United Kingdom itself, has been trodden under foot. He has been conquered. He has no voice in the government of his own country. He has no voice in the management of the Empire, though he constitutes nearly three-fourths of its population. He has no vote and no Parliament, and the alleged rule that taxation and representation are inseparable has gone overboard in his case, because if it did not go overboard British supremacy would be destroyed. But the right to travel freely throughout the Empire does not endanger or inconvenience the Englishman in England, but only the Englishman out of England, and this latter does not count. Therefore the Hindu's sacred claim to infest Australia is greatly present in the minds of British statesmen, and the coloured man really appears, in the British political view of things, to have far more rights in Australia than he has in his own country.

A BLACK PARLIAMENT.

Before there is any hope of including Australia, Tasmania and New Zealand in any scheme for the closer union of the Empire, it will be necessary to

explain much more clearly where our coloured fellow-subject is to come in. At present he is partially excluded from the Commonwealth by the circuitous pretence of an Education Test, which is supposed to apply to all immigrants alike. But the barrier is a very frail one, and wholly insufficient. Because every white Australian adult who is sane and not a criminal has a vote, it is necessary, under the hypocritical plea that no colour distinctions are to be drawn between British subjects in Australia (however great these distinctions may be in India), to give the coloured man a vote if he chooses to put himself on the electoral roll, and Australia does not want to end by having a Black Parliament to run its affairs. It has no desire to be dotted over with black men's towns that smell like Lahore or give forth a perfume like that of the Cashmere Gate of Delhi. It has no demand for plague, cholera, small-pox and the other concomitants of cooliedom. It doesn't want to see its white workmen driven out of one occupation after another as the Asiatic comes in, or forced to hold their own by getting down to the Asiatic level, and there is no visible reason even in the name of theoretical justice and humanity, why it should submit to these evils. The British Empire in Asia, taken as a whole, is only about as thickly peopled as Switzerland, about one-third as thickly peopled as England or Belgium, and not one-fourth as thickly peopled as Saxony. There is far more fertile land lying absolutely unused in Ceylon and Burmah than there is in Australia, where fertile land is lamentably scarce. Therefore the Hindu knocks at Australia's door, not as a man driven by necessity, but as a miserable incompetent who has made a failure of his own country and desires to come and help to make a failure of ours. True he has the claim that he is a fellow-subject, but we are not responsible for his being one, and many of us would rather he were not. And we have the assurance of British precedent that he is a miserably inferior fellow-subject, not good enough to have a vote, or to enjoy self-government, or to hold any high military command in his own country not even good enough, except in very rare cases, to sit down at meat with an Englishman. If we are wrong, some of us at all events are willing to make amends by subscribing funds to promote an emigration of Beloochese and other cold-weather tribes to the waste places of Ireland and the north of Scotland, and to help in furnishing Chinese coolies to work the lower-grade tin mines of Cornwall. The rights of our own black aboriginals we fully recognise, but beyond that we have no inclination to go. We have tried many kinds of alien aboriginals, and found them all wanting. Also we have found them all about equally aggressive, bumptious and dangerously criminal as soon as they had grasped the astounding fact that they were in a land where all British subjects, so soon as they had gained admission, were equal in practice as well as in theory. And even if we have still a few fertile empty spaces in the Commonwealth that the Hindu or the Chinese British subject would gladly occupy, our view is that when a newly married white couple, whose children have hardly begun to arrive, only occupy four rooms in their twelve-roomed mansion, it does not follow as a matter of course that they should give the other eight rooms in perpetuity to negroes or Mongols.

A WHITE FEDERATION.

If there is ever to be a genuine union of the Empire, it is difficult to see that it can be based on anything less than a new Imperial Parliament (probably a Parliament of one House), elected on a wide franchise by the white people of the Empire, with representation according to population. Anything else looks like an unstable makeshift, but such a Parliament could be based on the white populations only; in any other conditions it would be a Parliament with three or four black, brown and yellow members to one white one, with Chinamen on the Ministerial benches, and a Babu leading the Opposition, and a discontented third party led by a Zulu or a Pathan. Already 99 per cent. of the coloured races of the Empire are disqualified, in a more or less surreptitious manner, from all Parliamentary influences. Any real Imperial Federation must bring about the necessity of drawing the colour line openly instead of secretly, and telling the coloured man plainly about his unfitness to govern, instead of merely leaving him to infer, by circumstances, that he is one of the unfit. And along with this necessity would go the other necessity of allowing the white regions of the Empire to exclude the extraneous black, brown, or yellow fellow-subject. The strength of the Empire must lie *always* in its white people; even if the black man is loyal, it is the white man's prestige that, in the last resort, keeps him so. But unless those portions of the Empire which are suitable for white settlement are reserved for white settlement for the rearing of a sturdy race of white workers, not a mere handful of languid white masters giving orders to a multitude of black servants—the British Empire can never hope, in the day when it has its back to the wall, to count reliable bayonets against Russia, the United States, or even Germany. Britain exports much of its sturdy white manhood to the United States, where the children of British emigrants learn to be Britain's rivals, and their grandchildren its possible enemies, while it fills the Transvaal (eminently suited for the growth of a white race) with Chinese, and urges Australia to give up its little strip of fertile country to the Hindu. So far as concerns population, the Empire is not growing very fast, save by the annexation of new hordes of blacks; and unless Imperial Federation is to be a scheme for drawing together, strengthening, and fostering the white races, it is difficult to see where its value comes in.

THE HOUSE OF PEERS.

It seems almost necessary to recognise that the British House of Peers would not fit in anywhere as

part of a really Imperial Parliament. The Colonies have no faith in a legislative body whose sole qualification is that it is a House of Eldest Sons. They could never be adequately represented in it, which, even if they had some measure of faith in the existing Eldest Sons, would be an insuperable obstacle. Moreover, the idea of a peerage, hereditary or otherwise, is repugnant to all colonial ideas. If the present British Parliament is willing to become a mere local legislature, as the Federation Parliaments of Canada and Australia would be, and to hand over all questions of tariffs, defence, and foreign and colonial policy to a new and purely elective legislature of one House, created on a white man suffrage, there might be some living force in the Imperial Federation idea.

THE IMPERIAL TARIFF.

If the British House of Peers is one serious obstacle in the way of Imperial unity, the British Free Trade ideal is an even greater one. All recent utterances on the subject of closer union have been based, more or less, on theories of reciprocity or trade preference, and on schemes for fostering the internal trade and industries of the Empire. But Britain can grant no preference to the Colonies if, at the same time, it admits the goods of all foreign countries free. And even colonies which might be willing to admit British goods free are not prepared to admit freely the goods of all Britain's foreign friends and enemies. Furthermore, even the Colonies which might be willing to admit freely the goods of their white fellow-subjects, who work under something like the same conditions as ourselves, are certainly not willing to admit freely the goods of the coloured fellow-subjects who are willing to herd like flies in a hovel with a mud floor, and who regard eightpence per day as a wage far above the average. All the Imperial unity in the world would not be worth having if the price was free competition with the Asiatic either in Australia or out of it. All the Imperial unity there is ever likely to be in the world would not be worth having if it involved sinking our white workers to the Asiatic level, or even halfway or one-quarter of the way towards that level. Even apart from this question of the cheap sons of Shem, the Colonies, as a rule, have little sympathy with Britain's Free Trade ideal. The United Kingdom built up its industries under a most rigid system of Protection until it had almost a monopoly of such manufactures, such machinery, such steam power, such shipping, and such wealth as the world then possessed. Then Britain repented of Protection —when it believed that Protection had done its full work and that the country's position was unassailable. The Colonies are to-day where Britain was, perhaps, one hundred and fifty years ago, and when Protection raises them to the position which Britain held, say, sixty years ago, they may also be willing to repent, just as Britain did, and, like Britain, with a sole eye to their own interests. But meanwhile, though they might be willing to become part of a highly-protected Zollverein of white British communities, no idea of free competition with the whole world, and least of all with the cheap coloured man, be he fellow-subject or alien, enters into the question.

THE BRITISH STANDPOINT.

Finally, there is, in the path of Imperial unity, an intangible difficulty which may prove more serious than many of the really visible obstacles. In a general way the people of the United Kingdom appear to regard Imperial Federation as the establishment of a system in which the supremacy of the United Kingdom, and especially of England as the "predominant partner" thereof, will remain unchallenged as a matter of course. England is to increase its power over the Colonies, but the idea of the Colonies exercising any power over England is another matter. Yet, unless it is proposed that England should get away in a corner and Imperially federate by itself, there is no permanent guarantee of this supremacy. There might, in the flux of parties and the effluxion of time, come a day when a mainly Colonial Ministry would guide the destinies of the Empire. The Colonial vote might turn the scale against any further expansion of the Empire by the absorption of African swamps and millions of useless and unruly black idolaters. It might go further and turn the scale in favour of the abandonment of many of the white men's graves that are already annexed. It might be of sufficient influence to start a new inquiry into the why and wherefore of Britain's vastly expensive yet miserably small and unready army, and that might end in the decision that the root of the disease is the system which makes military commands so largely the perquisite of the British aristocracy.

Certainly when, under Imperial Federation, the Colonies had to carry a larger share of the burden of defence, they would want to inquire into the nature of the defences, to audit the accounts, to share in the emoluments and dignities, and to know how far the naval defence forces are intended for the sole protection of the British Isles in an hour of extremity, and how far the outlying portions of the Empire might then expect to be left to their fate. And, in the course of very many years, Imperial Federation might even mean the shifting of the political centre of the Empire from London to Montreal, for Canada has possibilities in the way of population that the United Kingdom does not possess, and the tendency of the political centre to move with the population centre is not easy to resist. All these are considerations to be faced, and it would be interesting to know how far the Imperial Federation party in the United Kingdom realises their existence. It might be possible to devise some slipshod and temporary scheme of union that would, for the moment, pass most of the difficulties by, but there is not one of them that looks capable of permanent evasion. The Federation of a piebald Empire on piebald principles is a problem compared to which the mating of a camel and a leopard to produce a giraffe as their offspring is a mere trifle.

THE LATE M. LESSAR

CHARACTER SKETCH.

THE LATE M. PAUL LESSAR: RUSSIAN AMBASSADOR AT PEKIN.

LAST month Russia sustained no great defeat by land or by sea. But in the death of Paul Lessar, her Ambassador at Pekin, she sustained a loss less easy to repair than the destruction of a fleet or the loss of a pitched battle. For the supreme need of Russia is the supremely capable man. Of men and women of sorts she has a greater quantity than any other white-skinned state. But of capable men, honest, fearless, foreseeing, resolute, of these she has indeed great lack. Hence the immensity of the blow which smote her unawares when, in the lull following the defeat of her armies at Mukden, Paul Lessar died at his post at Pekin on April 21st. For M. Lessar was not only one of the ablest men in the Russian service. He was still young—only fifty-four, a mere child in a service where Ambassadors serve till long past their three-score years and ten—he was absolutely incorruptible, and he had a mind of singular detachment and force.

THE BEST OF RUSSIAN DIPLOMATS.

He was far and away the best representative of Russian diplomacy at its highest standard of excellence that I have ever met. An honester man never lived, or one whose word could be more implicitly relied upon. Only once in a friendship of twenty years did I ever receive from him a statement which was subsequently disproved by the event. It was a small affair that occurred many years ago. He had told me in answer to a question that Russia had made a certain concession with regard to some trumpery dispute then going on with Japan. Next day the alleged concession was officially denied. "What does this mean?" I asked. "My stupidity," replied M. Lessar. "The fact was that we had no information on the subject at the Embassy. But the *Times* correspondent had announced it as a fact, and as he never admits anything that he can help to Russia's credit and sends everything he can to damage her, I assumed wrongly, as you see, that he had justification for reporting the concession." Why do I recall this triviality at such a time? Only in order to illustrate how sincere, how intelligent, how accurate, and how conscientious in all his communications was M. Lessar, seeing that in twenty years' intimacy I can recall no other time in which he misled me, even by mistake. In this he was true to the best principles of his profession. Lord Dufferin told me once that in the whole of his diplomatic career he never had such absolute confidence in the veracity and sincerity of those with whom he had to do as he had when he was dealing with M. de Giers, who succeeded Prince Gortschakoff at the Russian Foreign Office. And what Lord Dufferin found in M. de Giers I found in M. Lessar.

HIS ONLY DEFECT.

M. Lessar had only one defect. But it was a great one—one which, alas, has wrecked what would otherwise have been one of the greatest of careers. He suffered from wretched health. But for his indomitable will he would have been dead years ago. He ruined his originally strong constitution by the recklessness with which he would spend whole days in the saddle when scouring the steppes of Central Asia. He was merciless to his body. He was the sparest of eaters, the slightest of sleepers. His energy was demonic, his endurance almost superhuman. He recked nothing of the blazing sun of Turkestan by day, or of the malaria at night. He rode, he surveyed, he calculated, he discussed, he wore out all his assistants, and then at last his body broke under him before he was thirty-five, and all the rest of his life he was a more or less chronic invalid. It is nearly twenty years since that he went over to Paris to be "hanged" by the then popular treatment for the cure of locomotor ataxy. He lay for months on his back in a small bedroom up Baker Street way, unable to move. His friends marvelled at his inexhaustible patience, his cheerful philosophy. Against both death and the doctors the slight, spare man seemed triumphant. Again and again we used to hear that all hope was abandoned, recovery was impossible. But with unfailing regularity of irregularity M. Lessar would reappear with his well-known limp, and take his place once more in the work of the world. "Only his will keeps him going, his physique has gone long since," exclaimed a friend of his; "he is a modern miracle." When last I saw him he had just rallied from one of the worst of his periodical prostrations. He could with difficulty hobble across the room. His digestion had gone so utterly that they suspected cancer in the stomach. This time he felt the hand of death upon him. "But I shall not die," he exclaimed, "till I have secured the evacuation of Manchuria." Alas, that evacuation has been brought by other means, for it was not given to him to avert a calamity which he foresaw all too well.

HOW WE FIRST MET.

I first met M. Lessar in 1885, when he was sent over from St. Petersburg to straighten out the complications which had arisen over the Penjdeh incident on the Afghan frontier. At that time the great British public was in one of its periodical frenzies about Russia's misdeeds. The Penjdeh incident had a curious resemblance to that of the Dogger Bank; only at Penjdeh the Afghans had been deliberately incited by our Commissioners to seize a debatable position—so, at least, I was told, first by

the Tsar Alexander III., and secondly by Sir Robert Morier, then British Ambassador at St. Petersburg—and the Russians had promptly fallen upon them and cleared them out. Hence hubbub of the usual insensate character, Mr. Gladstone himself succumbing to the craze; Mr. Chamberlain, strange to say, being the only supporter in the Cabinet for the policy of peace and of common-sense which I was then upholding in the *Pall Mall Gazette.* M. de Staal was the most delightful of old gentlemen, but for fighting purposes he was of little use to an editor on whom fell the brunt of the battle. M. Lessar's arrival was one of those great reinforcements which changed the aspect of everything. He could speak very little English. But he knew his facts. He had been over every inch of the ground in dispute. He never lost his head, or left you in the lurch for a fact or for an argument. He shrugged his shoulders now and then over what seemed to him the almost inconceivable stupidity of those with whom we were contending. But on the whole he was cheery and good-humoured, and in the end he pulled things through. But for him we should probably have been involved in one of the most idiotic wars, one of the first consequences of which would have embroiled us with the Afghans, whose territory we were threatened to go to war to defend. As it was, he succeeded in securing the signature of the Anglo-Russian Protocol of September 10th, 1885, which has secured unbroken peace along the frontier ever since.

HIS EARLY CAREER.

M. Lessar was not originally destined for diplomacy. He was educated in St. Petersburg to be an engineer. It was as an engineer that he was sent out to Central Asia in 1878 in the train of General Skobeleff to see what could be done in railway building in the newly annexed territories. He was to the end a great enthusiast for railways. He supported vigorously the policy of railway extension which has enabled Russia to concentrate whatever army she pleases at the gates of Herat. His favourite day dream was the construction of a through continental railway across Afghanistan, by which, he used to say, "you will get your letters in Bombay a week after they leave London." His memorandum on the subject is familiar at the Russian Foreign Office. But at St. Petersburg they thought it more prudent not to broach the question of bridging the Afghan buffer state. It was as railway engineer that he was attached to General Komaroff in 1880, and after the annihilation of the Turcomans at Geok Tepe in 1881, he surveyed the route for the Transcaspian Railway along the Persian border; it was subsequently carried to Merv and Tashkend. He saw enough of war in the fighting that preceded Geok Tepe to disgust him with warfare. "It is no use," he would say, "trying to civilise war. I have been in several campaigns. They all begin in the same way, with the most honest and sincere expressions of a determination to wage war on the most chivalrous and correct principles. This state of mind lasts for a few weeks. It gradually disappears, and by the time you have been fighting six months you forget all about chivalry, humanity, and everything else. Man becomes savage, a beast of prey and of slaughter. It is always so. The veneer of 'civilised warfare' wears off very soon, and the heart ceases to feel." So he used to console me when I was abusing the "methods of barbarism" employed by our generals in South Africa. His first political appointment was that of Agent to the Governor-General of the Transcaspian provinces, with a special mission to study the question of the boundary of Afghanistan; and in the course of one of the many adventurous rides he undertook, to gain a personal knowledge of the country, he crossed the Afghan border and penetrated up to within a few miles of Herat.

ON THE AFGHAN FRONTIER.

After the signature of the Anglo-Russian Protocol of 1885, which laid down the principles on which the Afghan frontier had to be delimited on the spot, M. Lessar was selected by his Government to join the Commission, with Count Kuhlberg as the chief Russian representative and Sir West Ridgeway as the chief British Commissioner. Here again his industry and his knowledge made him indispensable. Many years afterwards he referred to this Commission as an instance of the way in which he had always got on with the English. He said:—

"Looking at my record from the very first, I have always got on well, and have never had disagreeable frictions with the English. Of course, there have been oppositions of policy, but, so far as I am personally concerned with the negotiations, they have gone smoothly. Of this I will give as an instance what happened when the Anglo-Russian Commission was delimiting the frontier of Afghanistan. The frontier was to be settled by a Joint Commission, composed of soldiers on either side. I was attached to the Commission as a representative of the Foreign Office, and had no *locus standi* upon it. When I attended, Sir West Ridgeway objected to my being there, and said—what was perfectly true—that I had no right to say a word in the matter. Nevertheless, our officers were so stupid that it was found necessary to call me in, and not only was I not silenced, but I even took a leading part in the settlement of the questions. Two years afterwards I read in the Blue Book a despatch from Sir West Ridgeway to Lord Salisbury, in which he stated that, although I had no right to be present, I had, with his consent, approved by Lord Salisbury, been allowed to share in the discussions, and had even taken a leading part in the negotiations; and he had assented to this because he found that things went better so. I do not insist upon small things, and personal things; they are of no importance; but when it is a question of principle, it is much better to carry out a clear principle than to

make stupid compromises which will not work. For instance, on the Afghan frontier, when once it was decided to draw the line, it was much better to put all the Saraks Turcomans on one side and the other. So I insisted upon this. The other idea was to run a dividing line between them as a compromise. I got my way, and the result is that for seventeen years there has been profound peace along the frontier."

RESIDENT IN BOKHARA.

When the work of delimitation was over, M. Lessar became the most important official in Central Asia. As Resident in Bokhara he governed the Khanate on the understanding that he had to be practically invisible. As he told me, "When I was Resident in Bokhara, it was the accepted principle that we had never to stand between the Ameer and his subjects. Everything was done in his name, and so far as possible his old independent position of absolute power remained unimpaired in the eyes of his subjects."

He contributed largely to the successful solution of the question of the Russian and British spheres of influence in the Pamirs, embodied in the Agreement signed in London in March, 1895.

COUNCILLOR IN LONDON.

He had been already very frequently sent to England on confidential missions, and in that year he was formally appointed Councillor of the Russian Embassy in London. He had previously held the post of Russian Consul at Liverpool. His appointments were largely dictated by his health. He lived, as it were, dodging death. After 1895, however, he seemed to enjoy better health, although he was still far from robust.

It was during his Councillorship at the Embassy that I saw the most of him. We used to lunch together once a month, and no conversations were ever more prized than those I used to hold with M. Lessar. There was about him a certain detachment of mind, philosophic rather than diplomatic, and an almost childlike frankness of judgment on men and affairs. He was grave rather than genial, occasionally vehement, but always keen, intelligent and well-informed.

HIS MELANCHOLY PHILOSOPHY.

It was, perhaps, not exactly to be wondered at that this constant invalid, who had lost his health in laying the foundations of an empire amid the ruins of ancient civilisations, should have been somewhat of a pessimist. "Progress!" he would sometimes exclaim; "where do you see any signs of it? When I read the stories of the ancients, and follow the campaigns of the Cæsars and Alexanders, everything reminds me that mankind has not changed. We are just the same race—as foolish, as cruel, as false as we were two thousand years ago. We are swayed by the same motives now as then. Nations are as selfish as they ever were. There is constant motion, as of a tide that ebbs and flows; but progress?—no, I do not see it."

Speaking of selfishness in nations, he maintained that France was the only nation which had deliberately sacrificed herself to the promotion of great ideas. When England gets a great idea her first thought is how to keep it for herself. When the same idea occurs to a Frenchman, its very grandeur impels him to preach the gospel to all nations. Hence the contrast between our revolution and hers. England established liberty for herself alone. France no sooner donned the tricolour than she became the propagandist of the Republic throughout Europe. Her magnificent sacrifice entailed a century of exhaustion, the penalty imposed upon unselfishness when practised by nations.

Of the events in South Africa which preceded the Raid, M. Lessar took the universal view of the intelligent foreigner. Nothing could explain to him the hushing-up of the inquiry into the Raid and the whitewashing of Rhodes but the necessity of whitewashing Chamberlain. Like all Russian diplomatists of the old school, he despised the influence of the Stock Exchange upon politics, and was inclined to exaggerate rather than to minimise the extent to which the Rothschilds influenced the foreign policy of the Liberals.

THE PEACE RESCRIPT.

When the Tsar's famous Rescript came out, no one was so much surprised as M. Lessar. His first instinct was to regard it as a newspaper hoax. His second was to marvel how it would be possible to escape without discredit from a situation which seemed to him created in a moment of enthusiasm by a young man new to the throne. But when he found that the Russian Government was in for it, he manfully did his best to promote its success. He was present at St. James's Hall when the Peace Crusade was proclaimed, which saved the project from what seemed at the time to be an inevitable *fiasco*, and throughout the next six months I was constantly indebted to him for many kindly cautions and useful hints. As might have been expected, he was sceptical as to any good result following. "All that diplomacy and arbitration courts can do," he said, "is sometimes, if they are very lucky, to postpone for a little the inevitable war which sooner or later will break out." He admitted that was no reason why we should not do our utmost; but when it was all done, it would come to very little. "Vanity of vanities," said this diplomatic preacher—"all is vanity."

THE NEXT WAR.

But although he regarded the human beast as irreclaimable, he was never so much alert as when he endeavoured to put a little sense into its blundering brain. "What strikes me always about English Russophobia," he used to say, "is the insanity of it. No doubt we shall fight you some time; all nations fight and always will fight, but it is absurd to fight prematurely.

If history teaches anything, it shows that nations fight with those which are their closest rivals. It is the man who is treading on your heels whom you kick, not the man who is a mile in the rear. The latter may be a worse man and a worse enemy—when he gets up to you. But till then you leave him alone. Now, Russia is economically and politically a hundred years behind England. In a century's time she may have caught you up, but the notion of an Anglo-Russian war now is a mere *bêtise.* The nations whom you will fight in the near future are Germany and the United States. They are the neck-and-neck rivals of England. Sooner or later they will strike at your supremacy on the sea, and how absurd you will look if you have broken your teeth and wasted your resources on Russia—poor Russia, who for a century to come asks for nothing but to develop her resources and make up leeway."

A MEMORABLE CONVERSATION.

Among the many talks I had with M. Lessar, one stands out specially conspicuous. It was just when the Boer War was on the verge of breaking out, and I wanted to know, from one whom I could trust to tell me the bottom truth of what was in his heart, whether there was any likelihood of foreign complications arising during the war. I put the question to him straight:—

"Do you or do you not wish to see England destroyed as a great Power? I admit we have treated you abominably. We are going to be tied up helpless for a long time by this infernal war. If Russia really desires to destroy us, she will never have a better chance. What I want to know is whether, now that our rulers have delivered the British Empire over as a sheep to the knife of the butcher, Russia would like to see our throat cut?"

I was speaking long before the dreary, dreadful months in which the United Kingdom was left defenceless, without even a cartridge in her arsenals. But I felt so certain that, as we had gone into an unjust war with a lie in our right hand, the Lord of Hosts would give us a particularly bad time before the war was over. And He did.

ENGLAND AND RUSSIA.

M. Lessar paused for a while before he replied. Then he said gravely:—

"No. I do not wish England to be destroyed. She has been, and no doubt will continue to be, as disagreeable as she possibly can be to Russia; and many a time, in our irritation at the wanton way in which she opposes us from sheer *schadenfreude,* we could wish her humiliated. But destroyed! No; that is another matter. I do not think it is Russia's interest that England should be destroyed."

"Then," I said, "don't you think you might help us to avert the war? A timely reminder of the possibility of other outstanding questions coming up for settlement might recall our infatuated idiots to a sense of their responsibilities."

M. Lessar shook his head.

"No," he said, "it would be too dangerous. Besides, what interest have we in saving your people from this war? England is not going to be any stronger as the result of this adventure."

My friend spoke with a slight cynical smile. But he spoke the truth. For three years at least England was effaced from international politics. Afterwards her resources would be permanently impaired, and a millstone hung round her neck into the bargain.

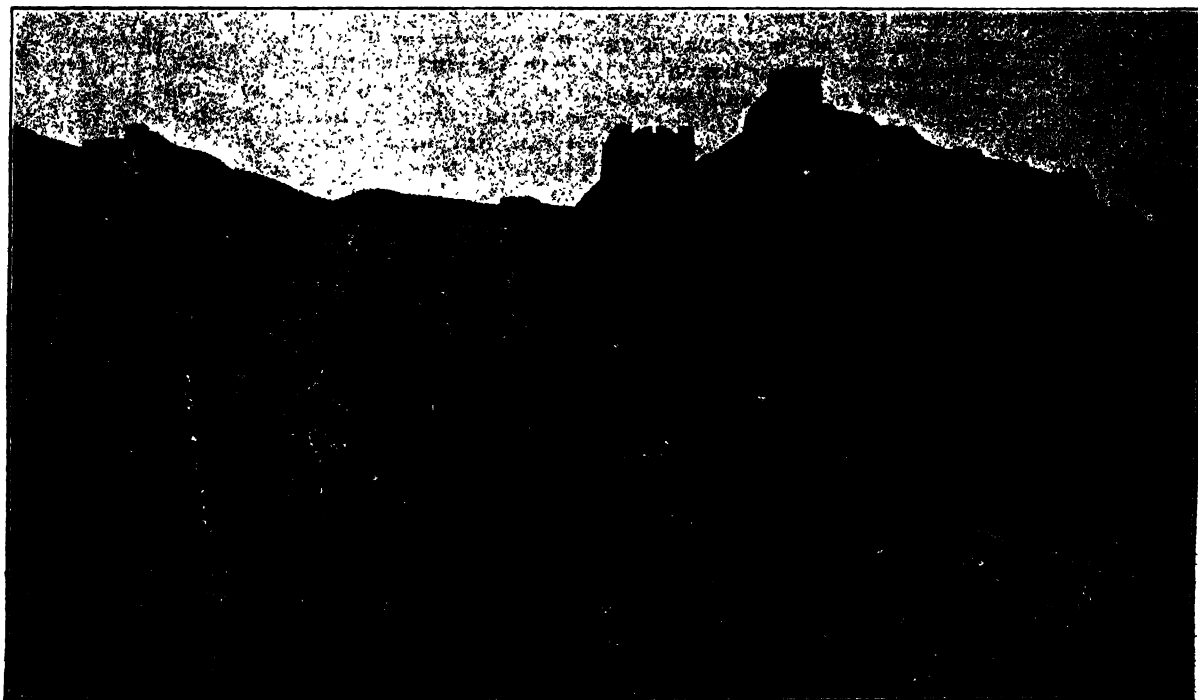
"But you said you did not wish England destroyed," I remonstrated.

A FAMOUS POLITICAL PARABLE.

"Destroyed! Certainly not. But if she voluntarily wishes to diminish her fighting value, it is not for Russia to complain. We have no responsibility for the war; we can profit by its results with a clear conscience. But let me tell you a story which will, I think, explain the Russian point of view better than anything else. When Xinovieff was Russian Minister at Teheran, Skobeleff captured Geok Tepe and destroyed the power of the Tekke Turkomans. By this operation the Russian frontier became conterminous with that of Persia. The Shah and his Ministers were much alarmed, and M. Xinovieff waited upon the Grand Vizier to endeavour to point out to him how unfounded were the fears of the Persians.

"M. Xinovieff had composed an eloquent little speech, in which he pointed out the absurdity of the alarms of the Persians. Russia was Persia's very good friend and ally. As for these Tekke Turkomans, they had been for ages the most pestilent crew of marauders, slavedealers, and brigands. Never before had Persia enjoyed such peace on her northern frontier as since Skobeleff's campaign. Formerly, every year one or more expeditions had to be despatched across the frontier, to reclaim captives or to inflict vengeance on the raiders. Now all was peace. There were no more raids, therefore no more expeditions. The peaceful Persian peasant slept in peace, and the Persian treasury was relieved of a heavy annual expenditure. Why, then, should the Grand Vizier not rejoice over the fortunate turn taken by circumstances which had brought about such excellent results for Persia?

"The Grand Vizier listened with profound attention. When M. Xinovieff ceased, he replied: 'What your Excellency says are the words of truth and wisdom. The frontier is at peace. The Tekkes no longer trouble us, and Russia is our very good friend and neighbour.' He paused for a moment, then he continued: 'But tell me, your Excellency, if you had to choose between having in your Divan a very bad-tempered cat or a very good-tempered tiger, which would your Excellency prefer?'"



"And the moral of this ingenious parable applied to the present situation ——?"

THE BAD-TEMPERED CAT.

"Is this," said M. Lessar. "England is our bad-tempered cat, Germany is our good-tempered tiger. You may scratch and swear as you please, you can

The Emperor's Summer Palace in Pekin, destroyed by the allied forces of England and France in 1860.

The Great Wall of China at Pekin.

never be anything but a nuisance to Russia. With Germany it is different. Germany's conduct to Russia in all matters is perfect. She will at any time go out of her way to oblige us. She will not abandon her own interests to serve us; but those of her friends and allies she will sacrifice with enthusiasm to avoid crossing us. In all our enterprises, Near East and Far East, or anywhere else, we can count upon German support as confidently as we can count upon English opposition. But Germany, if she should ever quarrel with Russia, can strike at our heart. Therefore——"

"Therefore?" I repeated.

THE GOOD-NATURED TIGER.

"Therefore, as nations have to adjust their calculations according to their vital needs, not according to the sentimental moods of their peoples, Russia, while rejoicing in all the good turns Germany does her, and resenting all the bad turns England tries to do to her, can never forget that she is never in real danger from England, while Germany always can strike at the heart. Hence we ask ourselves not whether the annihilation of England would gratify our resentment at her meddlesome insolence, but whether, if England disappeared, Germany would not be even more formidable than she is to-day. England counts for nothing as a military power. You will send one hundred thousand men to South Africa. What of that? One hundred thousand men are neither here nor there in the real war which we have always to think about. Your importance as an international counterweight to Germany lies in your navy. You may not use it for our benefit. But the mere fact of its existence as a force not thrown into either scale makes for peace and tends to moderate German ambitions. If your fleet went to the bottom, there would disappear one of the few restraints on war, and Russia cannot see with indifference such a disaster."

THE KAISER AND ENGLAND.

From which it will be seen that M. Lessar was no great believer in the German Alliance. As the war went on he often discussed with me, and always with increasing wonder, what price the Kaiser was to receive for his support of England during the war. I suggested Samoa and a few other trifles. "Pshaw," he said, "these are nothing! No nation has ever rendered another greater service than did the Kaiser when he stood between you and European intervention on behalf of the Boers. I do not say that any Power would have proposed to go to war. But diplomatic action of a very awkward kind has more than once been mooted, and always it was quashed by the absolute refusal of the Kaiser to listen to any such policies. And this was all the more wonderful when you consider how unpopular the war was in Germany."

I often recalled that remark in later years when the *Spectator* and the *National Review* were blazing away in hot fury against the "shameless subserviency" to Germany shown by our Government in Venezuela and the Asiatic railway concession. The Kaiser, like the Devil who buys a sinner's soul, got cheated out of his bargain at the last moment. But it always seemed to me rather hard on the Devil.

Of the Kaiser M. Lessar had not much of an opinion. "The German Emperor," he said, "has a new policy every three months. One day he comes to England, then he approaches Russia; next day he is making advances to Italy, and at present he is coquetting with France. When you make love in turn to everyone, your favours are not held in repute by any. He is so changeable."

COUNT WALDERSEE IN PEKIN.

Like all other Russians, M. Lessar attributed the beginning of all the troubles in the Far East to the seizure of Kiao Chau, and he commented with some archness upon the fiasco of sending out Count Waldersee to command the international forces at Pekin. He said: "Count Waldersee was not recalled until he had become a laughing-stock. He was sent out with the idea that there was to be a great military expedition, which he was to be at the head of. Instead of that, they could not get the Chinese to fight, though they did the best they could to provoke them. They did their best and their worst in order to get some pretence of battle, but it was no use. One by one, each of the Powers refused to allow their troops to be ordered about by Count Von Waldersee. England was the most faithful to him, but at the last even England refused. The culminating point was reached when he declared an expedition against the Chinese inland capital, of which the other governments had heard nothing, and against which they promptly protested. Thereupon there was nothing to be done but to bring him back again. It was folly sending him out. Waldersee had announced the expedition to Shangfoo, relying upon what he had been told in Berlin, as to the certainty that England would support whatever Germany wished. Germany had never consulted England at all, hence Lord Cranbrook's declaration in the House of Commons, which probably led to remonstrance and explanations from Berlin."

M. LESSAR'S POLICY IN CHINA.

When M. Lessar was appointed in the spring of 1901 to be Russian Ambassador at Pekin, I had a long conversation with him, which it is worth while putting on record as a sincere expression by a supremely intelligent Russian diplomatist of his views of the Chinese situation before taking up his post at the Legation. M. Lessar's appointment had been immediately preceded by the Boxer rising and the international expedition to Pekin.

"Well," I said, "can you, without indiscretion, tell me what is to be your policy in Pekin?"

"With the greatest pleasure," said M. Lessar. "My policy is to do nothing; to leave the Chinese

alone, and carefully to avoid repeating any of the blunders that brought about the recent intervention."

"Would you mind explaining this a little more in detail? It will be so long before I see you again."

THE MISSIONARY QUESTION.

"Certainly," said M. Lessar. "All our recent troubles had their origin in two things—the attempt to scramble for China, and the attempt to convert the Chinese. Let me deal with the latter question first. I am, of course, only expressing my own opinion. But if you ask me for my own views upon the missionary question, I would say at once, when a man becomes a missionary he should cease to belong to any nationality. Jesus Christ should be his only Consul, the Kingdom of Heaven his only country; and if he should have the misfortune to be slain, then he will become a blessed martyr, and his blood will become the seed of the Church. If this principle be carried out, it is possible Christianity might make great progress in China, progress which I don't expect so long as the present system continues, in which men become missionaries as a kind of business, and women go into it as a kind of excitement and from a love of travel, knowing that if they get into trouble there is always the Consul and the gunboat."

I protested against this very low estimate of the motives which prompted missionary endeavour, but M. Lessar insisted that he was right, and went on to expound an even lower theory as to the nature of Chinese converts.

"The fact is," he said, "it is all the rascals who become Christians. When a man has got into trouble, when he has stolen some of his neighbour's goods, or has done some other villainy, and the place seems likely to be too hot to hold him, he becomes a Christian and acquires the protection given to converts. It has happened so everywhere. I have seen it myself so often at the Persian frontier. When a Persian Mahometan in the Caucasus has committed a crime and is in danger of being handed back to the Persian Government and punished, he immediately becomes an Orthodox Greek Christian. He changes his name from Mahomet to Ivan, and being a Christian we refuse to hand him over to the Mussulmans for punishment. Hence we have a most undesirable colony of rapscallions who have all become Christians in order that they may become criminals with impunity. It is the same kind of thing that makes trouble in China. The Chinese are most tolerant on matters of religious opinion, but when they find the profession of Christianity used as a cloak to screen criminals and to confer upon them exceptional privileges and protection, they object. Hence the trouble."

THE CAUSE OF THE BOXER RISING.

The missionaries alone would not have brought about the disorders. It was the attempt of the European Powers to annex Chinese provinces that brought about the Boxer rising. "In politics," he said, "let us admit, if you like, that there are no questions of right or wrong, and that everything is a matter of expediency; but our recent action seems to me very cowardly. When the Japanese war seemed to prove that China was weak, every Power went to seize what she could get. For Russians, perhaps, there was more excuse, for the railway to Port Arthur was a necessity in order to enable us to bring the Trans-continental line to an ice-free port. But all the Powers were the same. Everyone looked about to see what he could steal, and it was this policy which brought about the Boxer insurrection. The Western Devils seemed to be bent upon breaking up the old unity of the Empire. Their concessionaires were going everywhere; their ports were passing under foreign flags. Hence the Boxers. It was a natural, national movement, directed against the exploitation and aggression of the foreigners."

IN PRAISE OF THE EMPRESS.

"Well," I said, "I hope you won't be too hard upon the Empress."

"But," he said, "I have the greatest admiration for the Empress. I think she is a very wonderful woman, who has done nothing but what she ought to have done. She could not help herself. When the so-called Reformers began their scheme, the first article was to kill the Empress, so the Empress promptly killed them. It was kill or be killed. She could do nothing else, and she came out on top. Then when the Boxer movement began, it was directed against the intrusion of the foreigner. She again had no alternative but to succumb or to place herself at the head of it, and use the nationalist movement against the Foreign Devils. This she did. The Powers thought that they could easily punish her, and they despatched their expeditions, but as the result proves they did nothing but create great misery and increase the irritation of the Chinese against the foreigner. As for the Empress, there have been many remarkable women among the Empresses of China, but as a nation they hold women in such contempt that this woman, who for forty years has maintained herself in power, must be an extraordinary person. She may be corrupt, as they say, and sensual; but with these things I have nothing to do. She is there, and there is no other power to compare with hers. We have to take things as we find them, and to make the best of them, instead of trying to reform them in our ways. What is the use of talking about our undertaking to reform China when we find so much difficulty in reforming the abuses which exist in our own country? As for the reform of Kang-yu-Wei, it was preposterous. They brought out reforms by the dozen, and edicts which upset in a day institutions which had existed for 3,000 years. It was absurd. No, I repeat," said M. Lessar, "the duty of the Powers is to interfere as little as possible, to leave the Chinese as much alone as possible to go their own way, and to allow the healing

processes of time and nature to bring about a better state of things."

HIS REASONS AGAINST PARTITION.

"But," I objected, "don't you think this is now recognised by our Government?"

"No," said M. Lessar decidedly. "They are still all for the partition of China. They call it decentralisation. But it is the same thing, and it is simpler to call it partition. I am very much opposed to this, and naturally so, for as Russia has a long frontier conterminous with China, it is much more convenient for us to deal with the central Government than with fifteen independent governors. The other Powers may not agree, but whether there is a central Government or not, they may prefer to deal direct with the viceroys, which would only mean that there would be fifteen Foreign Ministers in China instead of one; but in the end it would mean partition, each Power obtaining possession or control of one or more provinces of China. Some of these provinces contain seventy millions of people. They are quite empires. But I am against all that. The great thing to be done in China is to do nothing, to allow the natural forces to assert themselves, and to let the people settle down as quietly as possible in their own ways, without endeavouring artificially either to break them up or hold them together. There are 400,000,000 people in China, and despite the shocks of the Japanese war and the expedition to Pekin, they are all subject to the central Government.

SUPPORT THE PRESTIGE OF THE GOVERNMENT.

"That central Government depends for its existence upon prestige; it is very extraordinary, but there is no denying the fact that the Chinese have succeeded in combining almost absolute local independence with not less absolute power of control wielded by the central Government. Every viceroy is practically king in his own province, but he is a king subject to the liability at any moment to be recalled to Pekin and beheaded. No matter how great their authority in their own locality may be, and some of them are very independent and powerful, nevertheless a message from the capital would bring the strongest of them submissively to the block."

"If they refuse?" I asked.

"But they never do refuse," said M. Lessar. "It seems to them to be a kind of supreme law against which there can be no revolt."

"If, however," I said, "someone were to revolt?"

"Then," said he, "the Central Government would send a small expedition, which would meet with no resistance. There may be rebellions against viceroys, but there is no case of a rebellion of the viceroy against the Central Government. What the Powers ought to do is to think much more of the prestige of the Chinese Government and less of their own, for the Central Government lives upon prestige, and if they destroy its prestige they take the ground from under its feet. You should either do one thing or the other. If you annex the country, you can do as you please; but if you don't annex the country, you ought to do everything you can to support the prestige of the Government which you leave with the responsibility of rule."

BASIS OF AN ANGLO-RUSSIAN UNDERSTANDING.

I asked him if he saw any possibility of an Anglo-Russian understanding in Chinese policy.

"No difficulty at all about it," he said, "if you will drop the idea of partition and unite with us in maintaining the integrity of China as defined by the Treaty of Tientsin. Only," he said, "by carrying out the same principle as has already been accepted, namely, that by which we undertook not to ask for any railway concessions in the Yang-tse-Kiang valley, and England to ask for none in Manchuria. Before that understanding was arrived at, the English and Russians always applied for concessions in the parts which would make the greatest inconvenience to the other Governments. They were not *bonâ fide* concessionaires. They only applied for concessions from the Chinese Government for the purpose of trading with them on the Stock Exchange or of using them as counters in the diplomatic game. Since we concluded that agreement, nothing has been done of that kind, and the same principle might be extended."

THE TREATY OF TIENTSIN.

"How are our relations governed at the present moment?" I asked.

"The relations between England and Russia in China," said M. Lessar, "are governed by the treaties of Tientsin, which are practically identical. The Treaty of Tientsin opens China and all the provinces of China, whether leased or not, so long as they are not annexed by any other Power, to the goods of foreign nations on similar terms—that is to say, at all the Treaty ports in the Chinese Empire foreigners can import goods subject to the 5 per cent. tariff. This is an open door which can only be closed in any portion of the Empire when that portion is definitely annexed in law as well as in fact. Hence the door is open to foreign goods, both in the German sphere of influence in Shansi and in Manchuria, equally with any other port of the Chinese Empire. The Treaty of Tientsin is general, and relates to all the Powers. Our obligations to England are confined to two agreements—first, that concerning our mutual refusal to ask for railway concessions in Manchuria and the Yang-tse-Kiang; secondly, England has a right to the railway from Pekin to Neuchwang; but we have a right derived from the Chinese Government to construct a parallel railway running direct to Pekin from our Manchurian main line. That is all. We have no common policy in relation to missionaries. We have no missionaries ourselves, and therefore have no voice in discussing missionary questions."

MANCHURIA.

"Now," said I, "the first thing you will have to turn to is the Manchurian question."

"No," said he, "not the first thing, but the second. The great thing to do is to do nothing, to keep quiet, study the questions, and to pick up the threads of business. Then, no doubt, I shall have to take up the Manchurian question, because we want to get out of Manchuria. It is very disagreeable to us to remain there."

"But," I said, "you will remain there, as England remains in Egypt."

"No," he said, "because for England to remain in Egypt is very different from what it is for us to remain in Manchuria. You have created some kind of an Egyptian army, and you send out English officers, all of whom get paid very high salaries from the Egyptian Treasury. It entails no loss upon you. Why should it not continue for ever, so far as you are concerned? But with us in Manchuria it is different. Manchuria is a huge province, which we do not want to govern, which we want to hand back to the Chinese as speedily as possible. Our only business in Manchuria is to see that the country which our railway traverses is tranquil, and that the railway itself is not interfered with. We have a right to garrison the line, but the sooner we can re-establish the Chinese authorities the better for us, and so I should have thought the better for England, which does not like to see us there.

HOW ENGLAND PREVENTED EVACUATION.

"Why you should have incited the Chinese to reject the Convention altogether, because of your objection to some clause or clauses, I cannot imagine. There is the clause, for instance, giving the Russians the exclusive right of concessions in Manchuria, which seems to be one to which you might fairly take exception, and which might be settled by a compromise. No doubt it may be alleged to be against the Treaty of Tientsin, but that is a matter for discussion. England also, herself, has not always been so careful to observe the Treaty of Tientsin, but it is a matter for discussion, and if it were thought necessary to modify that clause it could be done without destroying the Convention, for all that you do by preventing the Chinese from signing the Convention is to compel us to continue in occupation of Manchuria as at present, a solution which you deprecate and which we regard as most undesirable."

LI HUNG CHANG.

That was in 1901. M. Lessar went out to Pekin, and carried out the policy which he laid down above. One of the incidents of his Embassy was the sudden death of Li Hung Chang on the day after his interview with M. Lessar. M. Lessar was mightily amused at the notion that he or any other Foreign Devil could so upset the nerves of Li Hung Chang as to shorten his life. "They despise us too much," he said, "to take anything we say to heart." Li Hung Chang died because he was a very old man, and the immediate cause of death was an enormous dinner, an indefinite number of courses by which he brought about the end.

The efforts which M. Lessar made to arrange for the evacuation of Manchuria were thwarted by the opposition which the *Times* and the Jingoes generally offered to every Convention proposed for the settlement of the future relations between Russia and China in Manchuria. As the signature of a Convention must precede evacuation, the British Russophobists, who rendered the signature of any and every Convention impossible, were the great obstacle in the way of evacuation. M. Lessar's health broke down. He had a prolonged leave of absence, and his indomitable will to live enabled him to leave his bed and hobble about on two sticks in order to return to Pekin.

MY LAST INTERVIEW.

I had my last talk with him in December, 1902, when he spent a few days in London on his way to St. Petersburg. Familiar as I had been with his previous illnesses, I was appalled at the ravages which disease had made in his emaciated frame. "They say it is cancer one day, the kidneys the next," said M. Lessar. "All that I know is that I am near my death, and that I shall shorten the short time left to me by going back to my post. Pekin is the vilest place in the world for an invalid. You can get no fresh milk. All their food disagrees with me. It will finish me. But no matter."

"Nay, nay," I exclaimed, "it matters much. Better let Pekin go hang! Your life is worth more than a dozen Manchurias. Why commit suicide in this fashion?"

WHY HE WENT BACK TO DIE.

"It is not for Manchuria I must go back; it is to get rid of Manchuria. That last service I hope to render Russia before I die. I could not rest in peace if I felt I had failed to do what I can to save Russia from the suicidal folly of retaining Manchuria. Arrangements there must be, of course, before the evacuation, but I regard its evacuation as a matter of life and death for Russia. That must be secured at all costs."

"Why so urgent? Are you afraid of war?"

"It is not war so much I fear as the attempt to extend our frontier so as to include a vast territory peopled by millions of Chinese whom we have neither the administrators to govern, the soldiers to control, nor the money to spare for their government."

"The day on which Russia extends the frontier to include any large number of Chinamen as Russian subjects will be fatal to Russian rule in Siberia. Even as it is we are hard put to it to keep the Chinese of the Siberian lands. If we annexed Manchuria, attempts to stem the flood of Chinese immi[illegible] must be abandoned. Every Chinese settler claim to have been originally a Russian sub[illegible] They would crowd in every year and crowd us ou[illegible]

I asked whether he thought the Government at St. Petersburg shared his views?

"I am returning there to find out," he said. "I shall not return to Pekin if they do not agree to the evacuation of Manchuria. M. Plançon is now negotiating the Convention of Evacuation, and my one object, alike at St Petersburg and Pekin, is to facilitate and expedite the evacuation of Manchuria. The sooner we can put the Chinese back again the better, taking due precaution for the protection of our railway and the interests that have sprung up during our occupation."

"How do you think the land lies? Who are the chief advocates of holding on?"

"M. Witte is strong for evacuation. So is Count Lamsdorff. So, I believe, is the Tsar. Against us we have the Army, with Kuropatkin at its head. He is believed to be in favour of retaining everything now in our occupation. But it is madness, suicidal madness, as I shall have no difficulty in proving at St Petersburg."

HOW EVACUATION WAS THWARTED.

While M. Lessar was hastening back to carry out this policy, fortified with the approval of the Tsar and his Ministers—for Kuropatkin waived his opposition until he had visited the Far East, and when he came back he was more keen about evacuation even than M. Lessar—the action of the *Times* and the Jingo press rendered his mission of peace abortive. The publication of the proposed Convention with China providing for the evacuation of Manchuria was hailed with a howl of execration.

The inconsiderate heedlessness of a noisy section of our people was characteristically manifested by the angry demand of the *Standard* for protest "and something more," on the publication of a more or less garbled account of the first draft of the conditions on which Russia proposed to evacuate Manchuria. The situation in Russian Manchuria, it cannot be too frequently insisted upon, was very similar to that which we occupy in Egypt, with two important differences. Russia had a treaty right to occupy with military force the line of railway which she constructed from the Amur to the Yellow Sea. She had also a right to hold Port Arthur and Talienwan. The second great difference was that, whereas in England no important statesman, in office or out of it, wishes to evacuate Egypt, the most influential statesmen in Russia were keenly desirous of evacuating Manchuria.

NO CONVENTION, NO EVACUATION.

M. Lessar was much more anxious to prevent the annexation of Manchuria than ever Mr Gladstone was to prevent the annexation of Egypt. In order to carry out the evacuation it was absolutely necessary for M. Lessar, M. Witte, and the others to be able to prove that it was accompanied by conditions which would safeguard Russian interests, and which would prevent foreign political intriguers rendering the safe working of the railway dangerous, if not impossible. A similar necessity would lie upon an English Government which proposed to evacuate Egypt.

Under these circumstances M. Plançon, the Chargé d'Affaires, was instructed in the absence of M. Lessar to submit to the Chinese Government certain conditions which were not final, but which afforded a reasonable basis for negotiations. These conditions stipulated for the maintenance of the Chinese Administration and for the maintenance of the *status quo* as to treaty ports, and the appointment of Consuls. As a case of plague had been brought by a British ship into Newchang, they asked that the Russians should control the Sanitary Commission at that port, and they proposed that its customs revenue should be paid into the Russo-Chinese Bank pending its transmission to Pekin. There were some other trivial conditions of no importance. Before any authentic text of the Russian proposals reached this country the usual hubbub arose. It was declared that if the Russian proposals were agreed to, Russia would have virtually annexed Manchuria.

RUSSIA'S DILEMMA.

In Japan, in the United States, and in London, foolish or interested men set themselves to inflame public indignation against Russia, and encourage the Chinese to reject the Russian proposals. The only result of this delirious outbreak of ignorant prejudice was to baffle the party of evacuation, and to play into the hands of the party of annexation. The talk about there being no difference between the Russian conditions and annexation was either foolish or knavish. Until Manchuria is annexed not "virtually" but in fact the Treaty of Tientsin secures to all the Powers the same right of trade at the same minimum duty which they possess in all the other Chinese provinces, whereas if they drove Russia into annexation Russia would have been free to exact what duties she pleased, or even to exclude foreign trade altogether from the country.

MANCHURIA EVACUATED AFTER ALL.

When M. Lessar arrived he found the situation almost hopeless. The Japanese saw their opportunity and used it. The Chinese Government, under the incitement of those who hated Russia, proved intractable. Still the work of evacuation was begun. More soldiers were sent home than ought to have left Manchuria, even if the whole policy of evacuation had been carried out. But the same forces which governed our situation in South Africa were sufficiently potent in the Far East to render it practically impossible for M. Lessar frankly to carry out his policy. A satisfactory arrangement with China was an indispensable preliminary to evacuation. Japan and her British allies could always induce the Chinese to raise difficulties. The Party of Expansion in Russia was not less keen to seize every pretext to postpone evacuation, or rather the frank public acceptance of

evacuation. For when the war broke out it was discovered for the first time that the Russians had evacuated the country so thoroughly that the total number of troops in Manchuria was not more than 50,000 men, whereas it was always understood that the Russians, when evacuation was complete, would need a force of at least 75,000 men to garrison Port Arthur and to protect the railway.

THE OUTLOOK IN CHINA.

After he arrived at Pekin, I had only one letter from M. Lessar. He was no exception to the rule that Russians, from the Tsar downwards, are the laziest letter-writers in Europe. Writing on February 8th, 1902, M. Lessar said:—

The Court has returned, everything is becoming settled. For how long? Unfortunately it depends on the Europeans, and in consequence the prospect is very gloomy. We have peace for a few years. I think that can be taken for certain, because the Chinese understand that nothing can be done presently, and want time to prepare themselves, but certainly not because they are converted to the European civilisation. How could such an idea be reconciled with the feverish haste to re-organise their army and navy? But with the ordinary intelligent self-conceit the white man, especially the missionary, believes it, and in some inconceivable way arrives at the conclusion that this supposed conversion is an invitation to repeat the old errors. Fortunately the military reorganisation of China will not be more formidable than it was after the Japanese war.

M. LESSAR AND THE JAPANESE.

I heard nothing from M. Lessar these last two trying years. There can hardly be imagined a more tragic position than that which he occupied. No one knew better than he the fatuous folly of the policy of dawdling delay. No one regarded even the peaceful annexation of Manchuria with greater horror—unless, indeed, it was the Tsar, who was at St. Petersburg while M. Lessar was in Pekin. He was a dying man, who had gone to his post solely with a desperate resolve to save Russia from imminent disaster. And he failed. He felt he was failing. But still he persevered. It was a marvel to me that he survived the outbreak of the war. But M. Lessar was game to the last. It was no surprise to him that the Japanese declared war. Before they had covered their rear by the Anglo-Japanese Alliance, which precipitated the war, M. Lessar foresaw that they would seize the first chance of attacking Russia. In July, 1901, I asked him, before he had set foot in his embassy, what he thought about Japan. He replied:—

"Japan is dangerous. The Japanese are now so swelled-headed that they believe themselves the greatest naval and military Power in the world. At one time we had some security from a Japanese attack in our confidence that they would never make war unless they were assured of the active support of England. Now they are so conceited, they do not think they need the alliance of any European Power in order to make war upon Russia or any other Power. They are quite as vain as were the Chinese. The only security we have against attack is the fact that they cannot borrow money under 7 per cent. No one can make war nowadays on a 7 per cent loan. The late ministerial crisis in Japan was due to the refusal of the Marquis Ito to go to war. He could not carry out the wishes of the war party, as he had no money in the treasury, so he fell, and so long as the Japanese have no money they will not go to war, but if they had money they might go to war to-morrow. They are a very dangerous element, and their excessive vanity must always be taken into account."

M. Lessar, like everyone else, did not believe the Japanese estimate of Japan was justified. He probably saw occasion to modify that estimate before he died.

He lived long enough to see the Pacific Fleet destroyed, Port Arthur taken, and the flower of the Russian Army driven out of the capital of Manchuria. Then the end came. An operation which had to be performed upon his leg proved the last blow to a constitution worn to a shadow in the service of Russia. He never rallied, and the telegram announcing his death on the eve of Easter was to me the saddest news I have had this year—saddest and most mournful. For I loved him well, and all these twenty years during which we had fought side by side no dispute had ever ruffled the surface of our friendship.

First Impressions of the Theatre.—VII.

(13.)—"HAMLET" AT THE ADELPHI. (14.)—MR. BARRIE'S NEW PLAYS. (15.)—EURIPIDES' "TROJAN WOMEN."

THE Shakespeare Festival found me confined to bed with an imprisoning, rather than painful, attack of bronchitis. Hence, because I was compelled to remain within doors, I was most unfortunately without the charmed circle. Never for years has there been such a boom in Shakespeare. Everywhere Shakespeare is being played, and everywhere to crowded houses. The only Shakespeare play I saw last month was Mr. H. B. Irving's "Hamlet." It did not carry me off my feet. The play was cut so as to make the last act hardly intelligible. Hamlet was more hysterical than poetical. The Satyr King was a much better figure of a man than the Hyperion whom he poisoned. The royal guard in Denmark surely did not always wear sheepskins, as if they were Esquimaux, in the interior of the palace. Ophelia was very beautiful and very mad, but there was a sweet graciousness about her madness which was in soothing contrast to the almost maniacal laughter of Hamlet. The ghost was more like a ghost than the phantom at His Majesty's, and Polonius was so sane and sweet and sensible that it seemed a sin to kill him. But, in the name of all that's reasonable and decent, why was Hamlet's face lit up when he was dying with a ghastly, glimmering, "greenery yallery" glare as if he had been an illuminated fountain at Earl's Court? It was the most unreal and revolting of all the stage illusions I have yet witnessed.

HOOLIGANS AT THE "SCHOOL OF MANNERS."

But I must admit that, so far as my observation has gone, I have much more fault to find with the audience than with the players. For the most part the playgoer is a well-behaved citizen. But there is a minority of playgoers who are the most selfish, the most inexcusable of misdemeanants. It is inconceivable to me how any decent human being can have the indecency and the inhumanity to disturb the whole audience, disconcert the players, and spoil the first scene in the opening of the play by coming in late. Neither can I understand why managers should not combine to enforce the rule enforced when prayers are on in churches, and compel all those who are not in their places before the curtain rises to remain outside until it falls. The same rule should be enforced upon all those men—only a handful at the most—who cannot or will not remain in their places between the acts. They also return at present after the curtain has risen, disturbing two whole rows at least, and bringing down upon their heads the maledictions of their neighbours. Of ladies who wear monstrous hats, which they beg not to be asked to remove, enough has been said. They are as anti-social in their small way as pickpockets, and ought to be removed as such. Finally, what conceivable excuse can there be for the sudden discovery in the last scenes of the last act, it may be of a most piteous tragedy, for a handful of impatient men and women in all parts of the theatre rising to their feet, and preparing their garments for the approaching exit? It would not involve five minutes' delay if they sat to the end like the rest of their neighbours. But no. Nothing must satisfy these ill-conditioned rascals of both sexes but that they must array themselves in cloak or shawl or comforter, doing their toilette not only in face of the whole house, but by so doing depriving those who are behind of the view of the stage. A plague on such selfish vulgarians, say I! If they only knew what bad form it is, classing them in the eyes of their neighbours with those much more innocent offenders who drop their aitches, eat with their knives, or cheat at cards, they would soon desist. I have heard a good deal of the theatre as a school of manners. Judging by the many ill-mannerly, unfeeling, ill-behaved people whose behaviour is an insult to the actors and a disgusting nuisance to the immense majority of the audience, the number of scholars who are hopelessly unfit to pass an elementary examination in the first standard seems to me considerable. But enough of these well-dressed hooligans and Yahoos of the theatre.

THE DAUGHTER MATERNAL.

"Alice Sit-by the-Fire," Mr. Barrie's new play, is a very amusing satirical comedy, the light artillery of which is turned alternately upon the unrealities of life as it is represented on the stage, and the self-confidence of our daughters, who, on the strength of having seen five plays and a *matinée*, are quite competent in their own sweet conceit, if not of teaching their grandmothers how to suck eggs, at least of initiating their mothers into all the mysteries of life. It was, perhaps, part of the intention of the author that the satire should also be levelled at himself, for the unreality which he scoffs at in others he gives a front seat in his own comedy. The leading part, taken by Miss Ellen Terry, is that of a gay, kittenish, skittish, but innocent matron, who gives the title to the piece by swearing off flirtation, and vowing henceforth that she will be Alice Sit-by-the-fire—having attained to the wallflower stage of the dowager and the chaperon.

No one who hears her vow believes it. No one who sees Miss Ellen Terry would for a moment be capable of such a gigantic overdraft upon his credulity or imagination as to believe that the winsome, life-full creature will ever sit by the fire and mope until she's dead, and then we will have no fire to sit by. Alice may sit by the fire for half an hour, or even for half a day, but before we know where we are she will be up and away, having plenty of fun in diverting herself and amusing her new friends by the old round of innocent flirtations. Flirtations the censorious call them. But the husband enjoys them as much as the wife. And why, because flirtation has got a bad name, so appreciable and valuable an element should be permanently withdrawn from the joy of the life of the world, in order that Alice may sit by the fire for the rest of her days, passes the art of man to understand. But we all know that she won't do it. It is no more in her to do it than it is to take the veil and enter a convent. So that unreality does not matter so much.

SATIRISING SATIRE.

It is different with the other unreality, which disfigures an otherwise charming and most diverting play. Alice has a daughter, who, wise with the lore of life acquired at five plays and a *matinée*, takes it into her silly head that her mother is engaged in a compromising, if not a guilty intrigue with a young man who is one of her mother's "boys." The semi-maternal intimacy the daughter misunderstands, and, inspired by her reminiscences of the stage, she decides at any cost to rescue her mother from her dangerous infatuation. In endeavouring to save her mother from a position which is only compromising in her own silly imagination, she succeeds in landing herself in a position which is really compromising, from which it needs all the tact and cleverness of her mother to rescue her. All this is very funny and very well done. But the false note comes in when Alice, the mother, prevents her husband telling their child that she has made a stupid mistake in order that the child may have the exquisite happiness of continuing to live under the delusion that she, like a stage heroine, has rescued her mother from adultery and saved her father from the break up of his home. That note rings false. No decent mother, certainly not so motherly and loveable a woman as Alice, could have allowed her daughter to grow up in the firm conviction that but for her intervention she would have betrayed her husband and committed adultery with his friend. For that, in plain English, is what in the play Alice compels her husband to acquiesce in, as the daughter's future conception of the characters of his wife and her husband. It is carrying the notion of sacrifice to give a child a good time much too far. But perhaps Mr. Barrie in this also is sacrificing himself on the altar of his own satire.

A VEILED POLITICAL SKIT.

"Alice Sit-by-the-Fire" was preceded by a very amusing and highly suggestive pathetical-satirical skit upon the political situation, so cleverly veiled that even the author hardly saw how pat it was until it was pointed out to him. The piece, which is almost entirely a monologue and a pantomime, represents the present political position in this country under the form of a parable written from the point of view of an ardent Tariff Reformer. Pantaloon is a veteran who is filled with a nervous dread lest he may lose his laugh, and may be dismissed by Joe into the humiliating obscurity of private life. The thought fills him with sickening horror. To retain his position as second funnyman to Joe the tyrannical clown, he has conceived the idea of compelling his daughter the Columbine to marry Joe. Columbine, however, has her own notions on the subject, and she elopes with Harlequin. At this point the subtle political sting of the parable is felt. Pantaloon, of course, is Mr. Balfour. Joe is the redoubtable J. C. Columbine is the British Electorate and Harlequin is the Liberal party. The second part of the little play shows us Mr. Balfour, his match-making efforts having failed owing to Columbine's elopement, brooding over the disgrace of having been dismissed by Joe. Pantaloon is now only one of the public, and it is too much for him. As he is soliloquising over his former glories, when he and Joe kept the House in a roar, the insolent Joey arrives, sausages and all. Here, indeed, Mr. Barrie's subtle wit became almost malignant enough to satisfy the most irate Tariff Reformer who "has done with Arthur." Poor old Pantaloon, with pathetic and childish delight, imagines that Joey has come to take him back to the front Bench—I mean to his old place on the stage. "Wot are you talking about?" bawls the insolent Joey as he brutally refuses to allow one who is not in the profession to taste his sausage; "you are only one of the public now." And then he tells him that, being a good-hearted sort of fellow, he has come to offer him employment as sandwich-man who is wanted to advertise the new Pantaloon whom he has taken on in Mr. Balfour's stead. It is a cruel blow and one which may yet be in store for the Prime Minister—if Tariff Reform had a chance. But it has not, for in the final scene Columbine and Harlequin come back with a charming little Joey of their own. They make it up with Pantaloon, and the curtain falls upon the romp of the triumphant Free Traders, Mr. Balfour having now been finally weaned from all clinging to the cruel and perfidious Joey.

EURIPIDES AS PRO-BOER.

If it was all laughing at Mr. Barrie's theatre, it was all tears at the Court Theatre, where was admirably performed Mr. Murray's poetical version of Euripides' prophetic tragedy of the Boer War. The "Trojan Women" is over two thousand years old. It represents

the suffering and the humiliation which the women of Troy suffered at the hands of their Greek captors when Troy fell, an event which, if it ever happened, occurred three thousand years ago. Euripides wrote the play in the midst of a Jingo war which his countrymen were waging to their own shame and undoing. But, as Mr Gilbert Murray must have felt when he was writing his beautiful English version, Euripides had thrown into deathless verse a prophetic vision of the realities of war, with special reference to the war which we waged five years ago in Africa. The "Trojan Women" is simply Emily Hobhouse's "Brunt of the War" done into poetry. The play is a dramatisation of the tragedy of the Concentration Camps. What the Greeks did to Hecuba and Andromache and Cassandra was done to many women of the veldt, only our men did not accord them even the position of a servile wife. And as for Astyanax the child of Hector, whose death forms the culminating agony of the play, there are 20,000 such children done to death by Britain lying in South African soil to-day. Polyxena, the princess slain at the tomb of Achilles, had as her counterparts five thousand strong in the women of the Republics, whom we unpitying slew by pestilence and famine and heartbreak, as an unconsidered corollary of the denudation of the country ordered in the interest of Great Britain.

AT THE REAL THEATRE OF WAR.

Last year at this time I was in the midst of similar women to those whom I saw on the stage at the Court Theatre. They did not wear the picturesque garments of the Trojan women, but they felt, they acted, they spoke just like them. They had been through it all. When Hecuba wailed that she was

A woman that hath no home,
Weeping alone for her dead;
A low and bruised head,
And the [illegible] thereof [illegible],

there was something familiar in her plaint. Such Hecubas may be found by the thousand in the Transvaal and the Orange Free State, which, like ancient Troy, saw

Fire in the deep thereof,
Fire in the height above,
And the crested Walls of War.

Andromache's passion of agony as her son, her dearly loved Astyanax, was torn from her side to be flung to death from the battlements sounded but as an unreal echo of the inarticulate groan of the women whose children perished by scores in the murder camps of England's war. But the Greeks were more merciful. To Hector's son they gave at least the sacred rites of honoured sepulture. The children of our victims were huddled together and buried in graves which no man knows.

THE TRAGEDY ACTED ON THE VELDT.

Of course I know that I shall be accused of thrusting the Boer War into everything. It is my King Charles's head. But if when I go to the theatre I find the mirror held up to the most stirring events in the life of the nation in this fashion, how can I help but be impressed by the fidelity with which the old classic poet portrayed the very emotions, described the very crimes of our time? If anyone doubts the appositeness of the parallel between the play and our recent war, let him read first Miss Hobhouse's "Brunt of the War," then read Mr Murray's version of the "Trojan Women," and then read the "Brunt of the War" over again. And as he hears the cry—

Forth to the women, go
The crown of war, the crown of woe,

he will admit that war, whether waged by Argive spears or British denuding columns, is ever the same. Andromache, when her child is taken, cries:—

O ye have found an anguish that outstrips
All tortures of the East, ye gentle Greeks!
Why will ye slay this innocent that seeks
No wrong?

The Dutch women of South Africa felt the same "last dead deep of misery":—

And children still in the Gate
Crowd and cry,
A multitude desolate,
Voices that float and wait
As the tears run dry.

To most of those who sat by my side in the theatre I suppose the "Trojan Women" was mere play-acting. To me it was the revival of terribly real reminiscences of orphans who still crowd and cry in desolation of our making, of widows orphaned of their little ones, and of the unrecorded graves of the myriad dead. Nor was unfamiliar to me the one sad but proud consolation of Cassandra as to the revelation which war had brought of the heroic valour of the vanquished.

"But we—what pride,
What praise of men were sweeter?—fighting died
To save our people.
And Hector's woe,
What is it? He is gone, and all men know
His glory, and how true a heart he bore.
It is the gift the Greek hath brought! Of yore
Men saw him not, nor knew him.
Would ye be wise, ye Cities, fly from war!
Yet if war come, there is a crown in death
For her that striveth well and perisheth
Unstained: to die in evil were the stain!
Therefore, O mother, pity not thy slain,
Nor Troy, nor me, the bride."

What a terrible old pro-Boer was Euripides!

Interviews on Topics of the Month.

XI.--MR. W. E. GEIL: ROUND THE WORLD AFTER MISSIONARIES.

Mr. W. E. Geil.

MAY is the month when the Missionary Societies assemble in Exeter Hall to report the progress they have made in Christianising the heathen. This year they would have done well to summon to their aid a certain redoubtable Yankee, of Doylestown, Pennsylvania, Mr. W. E. Geil by name, who is now in this country. For Mr. Geil, who is a man of much American humour and no little mother wit, has just returned from an all-the-world inspection of the mission work now carried on in all parts of the mission field. He has put in three years in the work of inspection, he has travelled with the latest up-to-date equipment of camera, typewriter, and fowling-pieces. He has been everywhere and seen everything, and his verdict on missions and missionaries is well worth having--especially in Exeter Hall, where such Daniels come to judgment are rare.

Whether Exeter Hall calls upon him or not, the British public is hearing a good deal of Mr. Geil—to its own advantage. For Mr. Geil is a man of gifts, a speaker who can hold great audiences, a traveller who has seen things, who, having a great deal to say, knows how to say it. When he called at our office, as world-inspectors, whether of missionaries or of massacres, have a pleasant habit of doing, I naturally seized the opportunity of obtaining the net sum of his impressions.

"How did you start in?" I asked.

"Got the idea at the island of Patmos," he replied. "Seen my book on the island? Marshall Brothers published it. Had quite a success that book. When I was in the tracks of St. John the Divine an American friend threw out the idea that it was about time someone took a run round the world to see how near ready the human race was getting for His coming. So after a while I just turned to and undertook the contract."

"Where did you go, and what have you seen, and what do you think of it so far as you've got?"

"I've been pretty nearly everywhere. I started in Australia, where, by the bye, although the fact is somewhat carefully hidden up, I had a great time in the simultaneous mission in the early days before and with Dr. Torrey. Then I went through the South Sea Islands and visited Korea and Japan. After that I journeyed way down across China—by the bye, have you seen my 'Yankee on the Yangtse'? Hodder and Stoughton published that for me last year; came out in Burmah. Then I travelled across India. Now I am just back from a journey across the heart of Central Africa. Yes, sir, I have been among the pigmies of the great primeval forests. I have traversed Congoland from frontier to frontier——"

"Oh, you have been there!" I interrupted. "And what do you think of that vampire State?"

"There are two sides to that, as to everything else," said Mr. Geil diplomatically. "Some things as bad as you can imagine, others as good. But I was not inspecting Empires; it was the missionaries I was after."

"Well, on the whole, do you think the heathen would be better if they were left alone without any missionaries to worry them, destroying their ancestral faiths, without really giving them a firm grip of a better creed?"

"No, sir," replied Mr. Geil with emphasis. "On the whole, I do not think that, and in every particular I think just the opposite of that. You may believe me or not, but I tell you, as the net result of my observations near and far, that the missionary cause is about the best investment in which the Church has put its stock at this moment."

"Humph," I replied. "All missions?"

"Pretty nearly all, Romans as well. I'm a broad-minded man, and I don't deny good where I can see it. If I might say a word, though, I think the Mormon missions might be spared—although they are mighty cute, the Mormons."

"Guess that's so," I replied. "An indigenous American religion had need be cute. You came across them in your travels?"

"Yes. I've seen all sorts and conditions of missionaries. And I tell you what, my friend, they are some of the best, the noblest fellows living, these missionaries. You talk! Go and see them, as I have done. Share their homes, see their labours. You ought to be ashamed of yourselves, the way you talk, some of you who sit at home and don't do a cent's worth of work for your fellow men."

"Oh, but our home heathen, Mr. Geil? Ought not missions, like charity, to begin at home?"

"I've heard that many times," he replied; "chiefly in the mouths of those who have not yet made a beginning. It's not the men who are really hard at

work for the home heathen who grudge the pittance spent in foreign missions. Try the people who talk like that for a subscription for some home mission work, and you'll see how sincere is their regard for the home heathen."

"That's so, I admit. But you really and truly believe that foreign missions are not a failure?"

"That's so," said Mr. Geil. "They are an amazing success, considering all things, and where they have not yet achieved success they are deserving it mighty well, I tell you. Why, I've found the pick of the human race, consecrated men and women, university graduates chock full of the best culture of the Western world, working like slaves on the pittance of day labourers under a blazing sun in slums that stink like cesspools, carrying their lives in their hands, and what is their reward? To be lampooned by the drunken profligates whose vices they oppose, to be maligned by the selfish merchants whose one thought about the heathen is how to make money out of them, and to be libelled by travellers to whom they have given hospitality. I tell you, my friend," said Mr. Geil, "I'm about sick of that kind of cant. It is because, take them all round, the missionaries are good men doing good work, that they are abused by bad men who are doing evil work, and the better you make the missionary and the better his work, the more fiercely he will be assailed by those whose wickedness he assails."

"Then on the whole you are content?"

"More than content in one sense; less than content in another. Content with the work that is being done; discontented with the miserable apathy and indifference of the professing Christian world to the glorious opportunity that lies before it at this time."

"And what are you going to do about it?"

"I propose to spend this year conducting a mission for missions up and down the country. I have had some wonderful meetings already in the North of England. In Newcastle one hundred young men came out as volunteers for the mission field after three meetings. In Sunderland it was just the same. I find everywhere a marvellous readiness on the part of our young people to say, 'Here am I, send me.'"

"Are you going to send them, then?"

"I am not a Missionary Society. I am only an American traveller, who testifies to such things as he has seen for himself. But I hear that steps are being taken by all the Missionary Societies to take advantage of this newly awakened zeal, and to send forth these labourers into the vineyard. And I think," said Mr. Geil, "that it was about time."

And off the tall, dark man stalked to resume his mission for missions in the North of England. After he departed he sent me his books. His "Patmos" is most interesting and admirably illustrated—a curious combination of genuine enthusiasm about the sacred legends of the Isle of the Apocalypse with a dry humour reminding me of Mark Twain's "Innocents Abroad." His "Yankee on the Yangtse" is a typewritten, dictated, instantaneous photograph of China as it is to be seen to-day, by a rapid traveller rushing with secretary and camera and typewriter from north to south. His new book on his picnics with the pigmies of Central Africa will appear shortly. Judging by its predecessors, it will be a very vivacious and readable production.

XII.—WHY NOT HALF THE COST OF SCHOOL PREMISES?

An Interview with Mr. Alfred E. Hayes.

MR. ALFRED HAYES is an ardent social reformer, a keen educationalist, and a holder of the London County Council Travelling Scholarship in Denmark for 1903–4. I was glad to have an opportunity of discussing with him some of the results of his year's study of Danish education.

"Could you tell me briefly," I said, "for the benefit of the readers of the REVIEW, how we might most profitably imitate our Danish neighbours?"

"*Briefly*," was the reply, "I m afraid I could not. The field is too large to be covered in a short interview. Educational matters are highly controversial, and I don't care to state my conclusions without giving my premises. But there are certain things that I think might be opportunely said just now. The educational problem of the hour is not, I think, 'Passive Resistance' to educational rates, but the London Voluntary Schools Crisis and the 'Revolt of East Ham.' We are face to face with an enormous prospective increase in our educational expenditure. Every step ahead means a vast increase in the burden of the already overtaxed citizen. We are committed to the badly needed reorganisation of our Secondary Education, involving the building and furnishing of thousands of new schools and a large increase in the number of teachers, for whom the demand already exceeds the supply. We are talking of reviving the Apprenticeship System, and even of Compulsory Continuation Schools. We are building up our 'educational ladder' by an enormous and costly extension of 'Free Scholarships.' We are confronted with the necessity for rebuilding, at heavy cost, hundreds of elementary schools now condemned, or soon to be condemned. And this not in London alone, but all over the country. Finally, the question of 'Free Meals' for school children has passed, to my immense satisfaction, into the region of practical politics; and for these free meals we must have central dining-halls,

kitchens and kitchen-staffs, caretakers, etc. I say nothing about an army of medical inspectors, smaller classes, larger salaries, or more adequate pensions for teachers, though these are all important matters.

"Truly the financial prospect is appalling! And yet in every one of the directions named immediate action seems absolutely necessary in the interests of the nation. But there is always the paramount question of cost. The 'equalisation of rates' agitation will, if successful, do much to relieve the grossly unfair burdens of the poorer districts; but, after all, the increased expenditure which faces us must be met from the pockets of the people. And it is just here that I think I see how, by taking a leaf out of Copenhagen's book, we may effect savings amounting to many millions sterling, and at the same time make our compulsory system less oppressive to the very poor, more psychologically rational, and less uselessly cruel to the helpless victims of our educational Juggernaut."

"That's a very large order, Mr. Hayes. Do you think you can meet it?"

"Yes," Mr. Hayes replied, with the emphasis of conviction. "The most revolutionary part of my plan is at this very moment in the smoothest possible working order in Copenhagen. I have always been oppressed," he continued, "by the problem of the rights of the child. One of the points I specially wished to study in Denmark was what the Danes did for that harassed and pathetic figure—the unbookish child. In June last I was sitting in the dining-hall of the famous People's High School at Askov, in Jutland, talking over these things with the distinguished Principal, the veteran Herr Schroeder. He said to me, very earnestly, 'Yes, Grundtvig taught us to respect the Rights of Youth. We need someone now to teach us the Rights of the Child—its right to be a child, and to live. Go you to England and preach this.' I told him, naming Morris and others, that we had had our prophets crying in the wilderness, not altogether in vain, I hoped.

"We must restore to the child some of the stolen hours of sunshine and fresh air, of the happy, careless freedom which is his right, remembering that these things are as vital as free meals and free schools. We must give him a chance to know the full joy of life, and cease demanding that he shall, if poor, spend half his day in school and the rest in a barber's shop, or cramming for a 'scholarship.'"

"Well, what do you suggest?"

"The Copenhagen plan, but modified severely. In Copenhagen I found the municipality in charge of the primary education of the city, and acting, as here, through a 'School Commission,' or Committee. The whole work of administration is carried on most efficiently and economically by a director, two vice-directors, and a few clerks. There are many large and excellent schools, the more recent admirably planned and splendidly fitted in the most up-to-date manner. *Each of these schools is used for two different sets of scholars each day.* Thus, a school which with us would accommodate 1,000 scholars, would in Copenhagen accommodate 2,000. One set of scholars attends in the forenoon from eight to one, and the other set in the afternoon from one to six. There is a 'free-quarter' or fifteen minutes' recess twice during the five hours' session. The schools meet every day but Sunday, the usual hours for a teacher on the permanent staff being thirty-six per week, though some work forty-two, while other younger teachers take a certain varying number of 'hours,' or lessons. With one exception, the schools are mixed, but boys and girls are taught in separate classes. The whole school, morning and afternoon, is under the supervision of one head-master, called an inspector, assisted by a 'vice-inspector,' usually a lady. The head-master is required to give at least six hours' personal instruction per week.

"Now I cannot approve the Copenhagen plan in its entirety. I think five hours' study, with only two short breaks, too great a strain upon the child, and the hours of the teachers far too long. Our teachers would never consent to work six or seven hours a day for six days a week. Yet the plan seems to answer very well over there. Many teachers do extra work in their spare time, and certainly the children show fewer signs of fatigue than ours do at the end of the school day. When I asked why the schools were used in two shifts, I was told, to my surprise, not that it was more economical, but that it enabled the children to add to the family income, where required, and gave the girls a chance to help their mothers with the housework and the babies.

"I propose, then, that we should adopt this plan broadly, but modify its details considerably. Our ordinary school hours are from nine to twelve in the forenoon, and from two to half-past four in the afternoon, with fifteen minutes' recess in each half-day. The school days are five, making up a working week of 27½ hours, of which about one hour and forty minutes is usually devoted to religious instruction.

"I suggest that we should work our schools in two shifts from nine to one in the mornings and from one to five in the afternoons, and open them six days a week instead of five. I would have a break of ten minutes every hour. No child can study with profit for longer stretches. This would give us a working week of twenty-four hours. We could then deal rationally with our school sports, our poor scholar-toilers, etc. This plan would at once double the number of school-places actually existing; set free enough school buildings to provide technical schools, dining-halls, workshops, etc., and halve all future expenditure on buildings, furniture, and much of the apparatus employed. Incidentally, also, it would go far to solve the 'religious' difficulty. But my chief concern is for the child, and then for the over-burdened ratepayer. Let me hope that these suggestions will be fully discussed. I am prepared for much hostile criticism, and shall welcome it."

XIII.—EMPIRE DAY AND THE LEAGUE OF THE EMPIRE.

If the time when anyone asks "What is Empire Day?" has not already passed, it is passing swiftly. Every year Empire Day, May 24th, the birthday of the late Sovereign, becomes more and more of an imperial institution.

This year, mainly owing to the efforts of Lord Meath and of the League of the Empire, Empire Day will be celebrated through Canada, Australia, South Africa and New Zealand, while the circle of Crown Colonies is almost, if not quite complete.

The League of the Empire is the most practical existing organisation for drawing more closely together the scattered parts of the British Empire; but it attempts to do this entirely by strengthening those bonds on which, after all, the unity of the Empire entirely depends—the bonds of sentiment. It adopts the most practical plan of addressing its efforts to the children of the Empire, and teaching them to think imperially in the best sense of the word. For its objects are, in brief, affiliating schools of corresponding grade in different parts of the Empire. A school in one Colony is "linked" with a similar school in another Colony or in England, whichever is preferred, for interchange of descriptive letters, photographs, interesting objects for school collections and museums, and articles for school magazines. This, the main branch of the League's work, has prospered exceedingly, and grows continually in extent.

To find out, however, the progress of the movement towards an intercolonial celebration of Empire Day, I called upon Mrs. Ord Marshall, at the Caxton Hall, Westminster.

"We have gladly furthered Lord Meath's efforts for the establishment of Empire Day," said Mrs. Ord Marshall.

"Empire Day," she went on, after showing me the literature, "will be much more widely celebrated both in the Colonies and at home than it was last year. Since last Empire Day Australia has decided to keep it, and very few Crown Colonies now remain to come in. We have received from the South Australian branch of the League a proposal for an interchange of Empire Day essays between schools there and schools in other parts of the Empire. The subject they suggest is 'Empire Day, its foundation, purpose and modes of celebration,' and now Lord Meath has presented us with two silver challenge cups, value £10 10s. each, which will be open to competition every Empire Day by secondary and primary schools throughout the Empire. In conjunction with the secondary schools silver challenge cup, to be held by the school, a personal prize of £5 5s., to be held by the prize winner, is offered to all secondary schools throughout the Empire, for an Empire Day essay of not more than two thousand words. The subject, which will be one of Imperial importance, will be announced not less than six months before next May 24th. Also, in conjunction with Lord Meath's primary schools silver challenge cup, a prize of £3 3s., to be held by the prize-winner, is offered by the League of the Empire, for competition in all primary schools throughout the Empire. In this case, however, the essay is to be not more than one thousand words."

"Will you tell me what arrangements have been made for Empire Day celebration this year?"

"Very much the same as last year—that is, in schools a special lesson on Imperial history and geography in the morning, especially dealing with England's relations to her various dependencies and Colonies, and in the afternoon there will be a good many lectures in different parts of the country. From Sheffield University College we have been asked for a lecturer for the morning of May 24th, and to different schools we are supplying both lecturers and also sets of slides. But this year schools celebrating Empire Day sing 'The Song of Australia':—

> There is a land where summer skies
> Are gleaming with a thousand dyes,

as well as the Canadian National Anthem, 'The Maple Leaf for Ever,' and, by special permission, Mr. Rudyard Kipling's 'Recessional.'"

"About how many schools will be celebrating Empire Day in England this year, and what form does the celebration generally take?"

"A very large number. Some of the Education Committees are in favour of the movement, and many school managers. The exact returns cannot be given till nearer the time. The celebration usually popular is a half holiday with sports or special entertainments, the school addresses having been given in the morning. This year the League has a section in the Colonial and Indian Exhibition at the Crystal Palace, and we are hoping to arrange some lecture or entertainment there for London members."

"I should immensely like to know," I said, "how many designs have been received by you from children all about the Empire for the cover of the *Federal Magazine* you are going to bring out?"

"We have had a great many designs," said Mrs. Ord Marshall, "and some most beautiful ones, while none are really bad. Mr. Walter Crane is going to be one of the judges of the designs, which must all be done in black and white, and should symbolise the idea of intercolonial unity with the Mother Country."

And Mrs. Ord Marshall showed me a number of designs sent—some of them from children in most remote dependencies of the Empire, all symbolising—some very quaintly, others most beautifully—the child's idea of the Empire. One, in particular, from Natal, representing Britannia and her Colonies, was quite beautiful, both in execution and idea. By next year it may be confidently hoped that the few and small missing links of inter-Imperial celebration of Empire Day will have been forged.

LEADING ARTICLES IN THE REVIEWS.

THE LIBERATION OF THE RUSSIAN CHURCH.

MASTERLY PLEA BY M. WITTE.

THE *Contemporary Review* for May publishes an historico religious document of the very first order of political and religious importance It is nothing less than a translation of the preamble of a memorial addressed to the Tsar by M Witte, President of the Council of Ministers, in favour of the Liberation of the Greek Orthodox Church from the despotic control of the State, and of the restoration of spiritual and ecclesiastical freedom to the Russian Church No State document of more transcendent importance has been published for many a long year Here is the real deadly malady of Russia In a great religious Revival alone do I see any hope for her salvation And one condition of such a Revival is Freedom Freedom not only for the Nonconforming sects, but especially Freedom for the Greek Orthodox Church, which for two centuries has been degraded from being the spiritual bride of Christ into the position of the strumpet of Cæsar

THE DAWN OF RELIGIOUS LIBERTY.

M Witte begins as follows —

After two centuries of a policy of religious repression Russia is now entering upon a path of broad tolerance The impulse to this step has been given not only by a feeling that religious oppression is inconsistent with the spirit of the Orthodox Church, but also by such proof of its futility as a long experience has afforded Not only official reports, but also, and more particularly, the private communications of persons closely connected with missionary work, make it certain that oppression contributes to the growth of dissent and by no means to its enfeeblement It is evident that even under conditions of entire external freedom, not to speak of State protection the internal life of the Church is fettered by heavy chains which must also be removed Their effects are distinctly observable in the religious life of our time

THE PARALYSIS OF THE RUSSIAN CHURCH

The result of this reduction of the Church to be the mere serf of the State is paralysis M Witte says —

Both the ecclesiastical and the secular Press remark with equal emphasis upon the prevailing lukewarmness of the inner life of the Church upon the alienation of the flock, particularly of the educated classes of society, from its spiritual guides, the absence in sermons of a living word, the lack of pastoral activity on the part of the clergy, who, in the majority of instances, confine themselves to the conduct of divine service and the fulfilment of ritual observances, the entire collapse of the ecclesiastical parish community with its educational and benevolent institutions; the red tapeism in the conduct of diocesan or consistorial business, and the narrowly bureaucratic character of the institutions grouped about the Synod It was from Dostoyeffsky that we first heard that word of evil omen "The Russian Church is suffering from paralysis"

THE EVIL GENIUS OF RUSSIA

How comes it that the Russian Church is practically dead? M Witte replies that Peter the Great killed it This "Transformer of Russia," as he calls him, meaning thereby the Revolutionist, destroyed the ancient canonical system of the Orthodox Church in which the faithful elected their clergy, and the Church was ruled by councils in which both laity and clergy were represented, and substituted in its stead the bureaucratic rule of the Holy Synod. M. Witte dwells at length upon the pernicious influence of these changes —

These efforts to subject to police prescription the facts and phenomena of spiritual life, which lie altogether outside its competence, undoubtedly brought into the ecclesiastical sphere the mortifying breath of dry bureaucratism The chief aim of the ecclesiastical reforms of Peter I was to reduce the Church to the level of a mere Government institution pursuing purely political ends And, as a matter of fact, the government of the Church speedily became merely one of the numerous wheels of the complicated government machine On the soil of an ecclesiastical government robbed by bureaucratism of all personal elements, the dry scholastic life shunning school arose spontaneously This policy of coercing the mind of the Church, though it may have been attended for the moment by a certain measure of political gain, subsequently inflicted a terrible loss. Hence that decline in ecclesiastical life with which we now have to deal

THE PRIEST A MERE POLICE SPY.

It is almost incredible to what lengths Peter went in subordinating the spiritual to the temporal powers. M Witte says —

He imposed upon the clergy police and detective work that was entirely inconsistent with the clerical office The priest was obliged to see that the number of persons subject to taxation was properly indicated, and in addition to report without delay all matters revealed to him in confession that tended to the injury of the State Thus, transformed from a spiritual guide into an agent of police supervision, the pastor entirely lost the confidence of his flock and all moral union with them

RESTORE THE LIFE OF THE PARISH—

In order to rid the Russian Church of this nightmare it is necessary, M Witte urges, to begin with the parish

The unfavourable turn taken by the career of the Church in the eighteenth century revealed itself, perhaps, with the greatest clearness in the decline of the parish, that primary cell of ecclesiastical life This change is the more noticeable as social existence within the Church in the old Russian parish was distinguished by great vitality The Russian parish formerly constituted a living and active unit The community itself built its church and elected its priest and the remainder of the church staff Of this living and active unit there now remains nothing but the name In order to secure a revival of parish life it is necessary to give back to the ecclesiastical community the right, of which it has been deprived of participating in the management of the financial affairs of the Church, and the right of electing, or at any rate of taking part in the election of members of the clerical staff

AND SUMMON A NATIONAL CHURCH COUNCIL

M Witte puts forward various minor suggestions, such as a reform of theological seminaries, and concludes as follows —

For more than two hundred years we have not heard the voice of the Russian Church is it not time now to listen to it? Is it not high time to discuss what it has to say in regard to the

present structure of Church life, which has become established against her will and in opposition to the traditions bequeathed to her by a sacred antiquity? In a national council, where it will be necessary to arrange for the representation of both the clergy and the laity, those changes in the structure of ecclesiastical life must be discussed which are necessary in order to place the Church on the level on which she ought to stand, and to secure for her all needful freedom of action. In view of the present unmistakable symptoms of internal vacillation both in society and in the masses of the people, it would be dangerous to wait any longer.

Will the Tsar have the courage to say to this Lazarus of a Church, laid in swaddling clothes for two centuries in the tomb of the State, "Loose her and let her go free!" It may be that the fate of Russia and of his dynasty hangs upon the answer to that question.

WHY NOT A PHOTOGRAPHIC EXCHANGE?

AN OFFER TO OUR READERS.

SIR MARTIN CONWAY has a very sensible article on Photograph Collecting in the *Grand Magazine*. He says:—

The output of photographers at the present day is enormous, and for the most part the prints made in any one year have become scattered and, as a rule, destroyed in the course of the following decade. The result is that records of priceless value are being lost almost as rapidly as they are made.

The nation officially collects the national portraits; possibly there may be some people who make a hobby of the collection of photographs of the prominent people of their day, but if anyone were to start now and attempt to make a complete collection of the prominent people of the Victorian age he would find the problem an exceedingly difficult one.

I do not ever remember to have seen a collection of photographs chronologically illustrative of a man's life. And yet how interesting such a collection would be! The first thing it should contain would be a series of photographs of the collector himself from his earliest years, each dated, and each in its proper place amongst such contemporary photographs of his friends, the places he lived in, the places he visited, as naturally come into the possession of every one of us. But the last thing that an individual keeps is a photograph of himself.

But the most merciless waste is in the collection of photographs of Art. The field is one of boundless dimensions:—

There is no doubt whatever but that the annual destruction of photographs, of real importance to the future historian and student of art, is very great indeed. This destruction is entirely due to the fact that though multitudes of people buy photographs, very few as yet buy and arrange them systematically, and therefore a numerical organisation for photograph collectors does not exist.

What is wanted is that photograph collecting should become an organised trade like postage stamp collecting.

If once these two steps could be taken in England—a proper system of publication on the one hand and an organisation of the second-hand trade on the other—the number of photograph collectors would rapidly increase, and the preservation of records of existing objects of beauty and interest would be efficiently carried out.

This seems to be a capital idea. The question is whether the public is ripe for it. I wish to test it. Next month I shall set apart a page of this REVIEW for the purpose of allowing my readers, who may have photographs they want to exchange or to sell, to announce their requirements. Those who wish to take advantage of this are requested to state the size and condition of their photographs. Those who wish to see the photographs before they part with them can send them to this office for inspection if they do not wish to deal direct.

"THE DECAY OF THE PARTY MAN."

A LOUD growl over the inefficiency of Parliament is emitted by a business man calling himself "Independent" in the May *Magazine of Commerce*. He says:—

Nothing is more significant than the decay of the party man. He is a shadow of his former self, and bids fair to become as one crying in the wilderness. There is a feeling abroad, for the existence of which we cannot be too thankful. The present generation of voters—and especially of commercial voters—possesses an enquiring disposition. Much superior in intellectual calibre to the average lower middle class and working man section of the electorate, it is not so easy (as politicians must realise if they do not wish to invite defeat) to woo the business man of to-day with the ingenious shibboleth or polished phrase. He wants to know; and he is becoming daily more inclined to approach the various nostrums submitted to him by the leaders of either side with the impartial air of a very disinterested buyer. The voter is, in effect, beginning to find himself—to realise his value—and he is less and less liable to be influenced by considerations of that somewhat dubious quality, party loyalty. . . In effect, we have experienced a political earthquake, and we have not yet sorted ourselves out.

He asks with much indignation:—

How much longer is legislation that is non-contentious to wait upon fiscal policy, Home Rule for Ireland, and Church questions? How much longer is the House of Commons to remain an ineffective debating society? Why should the time of the country be wasted in order that politicians may make reputations for repute?

He makes the ironical suggestion that M.P.'s should label themselves, irrespective of party, as "workers" or "talkers," and that the workers should meet apart to do the real business of the country, while the talkers are left to exercise their talking powers. He concludes:—

The feeling is growing amongst men who are prominent in business circles that politics are rapidly becoming disreputable. This is a bad thing, but if an endeavour is not made to remove the irrealities which have been recently displayed in ineffective debate, the sentiment will spread.

"MY FIRST TIME IN PRINT."

IN the *Grand Magazine* for May the following authors state where and when they first saw themselves in print:—

Author	Year	Age	Subject	Publication
Miss Braddon	1857		'Rest'	*Beverley Recorder*
Marie Corelli			Poem "Rosalind"	*The Theatre*
Anthony Hope	18		Novel, 'A Man of Mark'	—
Thomas Hardy	1865		How I Built Myself a House	*Chambers' Jl*
Stanley Weyman	1876		Paper on University Scouts	*Chambers' Jl*
Rudyard Kipling	1881		Poem, "A Legend of Devon	*Un Ser College Chronicle*
Israel Zangwill	—	12	Versified Riddle	*Young Folks Budget*
W W Jacob	—	14	Anecdote of a Monkey	*Young Folks Budget*
Jerome K. Jerome	1881		Story, "Jack's Wife"	*The Lamp*
Mrs H Ward	1869	18	A Westmoreland Story	*Churchman's Magazine*
Hall Caine		17	Blank verse poem	Privately printed Magazine

SOME QUESTIONS FOR THE NEXT HAGUE CONFERENCE.

BY PROFESSOR T. E. HOLLAND.

PROFESSOR HOLLAND sends to the *Fortnightly Review* the text of the paper which he read before the British Academy on April 12th, on "Neutral Duties in a Maritime War as Illustrated by Recent Events":—

Among the pious wishes (*vœux*) recorded in the final act of the Hague Conference of 1889, was one to the following effect "The Conference desires that the question of the rights and the duties of neutrals may be entered on the programme of a Conference to be called at an early date"

On the programme of that Conference Professor Holland would inscribe the following questions.—

ABSTENTION

1 Are subsidised liners within the prohibition of the sale to a belligerent by a Neutral Government of ships of war?

PREVENTION

2 Is a Neutral Government bound to interfere with the use of its territory for the maintenance of belligerent communications by wireless telegraphy?

3 To prevent the exit of even partially equipped war ships?

4 To prevent, with more care than has hitherto been customary, the exportation of supplies, especially of coal, to belligerent fleets at sea?

5 By what specific precautions must a neutral prevent abuse of the "Asylum" afforded by its ports to belligerent ships of war? with especial reference to the bringing in of prizes, duration of stay, consequences of over prolonged stay, the simultaneous presence of vessels of mutually hostile nationalities, repairs and approvisionment during stay, and, in particular, renewal of stocks of coal

ACQUIESCENCE

How is this duty to be construed with reference to—

6 Interruption of safe navigation over territorial waters and the High Seas respectively?

7 The distance from the scene of operations at which the right of visit may be properly exercised?

8 The protection from the exercise of this right afforded by the presence of neutral convoy?

9 The time and place at which so called "volunteer" fleets and subsidised liners may exchange the mercantile for a naval character

10 Immunity for mail ships, or their mail bags?

11 The requirement of actual warning to blockade runners, and the application to blockade of the doctrine of "Continuous Voyages"

12 The distinction between "absolute" and "conditional" contraband, with special reference to food and coal?

13 The doctrine of "Continuous Voyages" with reference to contraband?

14 The cases, if any, in which a neutral prize may lawfully be sunk at sea, instead of being brought in for adjudication?

15 The due constitution of Prize Courts?

16 The legitimacy of a rule condemning the ship herself when more than a certain proportion of her cargo is of a contraband character?

DRUNKENNESS AND ALCOHOLISM.—Dr W. C. Sullivan, in the *Economic Review*, calls attention to the fact that excessive drunkenness is comparatively innocent compared with alcoholism. Convivial drunkenness prevails most among miners, who are comparatively free from alcoholism, and alcohol-engendered diseases. It is the constant habit of nip, nip, nipping that poisons the drinker. Heavy drinking after work is done, however regrettable as a proof of a low standard of manners, is not of very great account in the causation of the worst evils of intemperance.

THE ONE CAPABLE RUSSIAN MINISTER.

PRINCE KHILKOFF, THE AMERICAN.

MR JULIUS PRICE, war correspondent, contributes to the *Fortnightly Review* a very interesting account of the way in which the Siberian railway is worked, and the man who has achieved such unexpected results by the single line of rail:—

One could not help being deeply impressed by the unflagging zeal, and one might almost add enthusiasm, were not such a word so foreign to the Russian temperament, of the railway officials all along the line. It was a remarkable antithesis to the indifference and conceit of the military authorities. No description of all this wonderful organisation would be complete without some reference, however brief, to the remarkable career of the man who engineered the entire formation of the Trans-Siberian railway. Under the high-sounding cognomen of Prince Khilkoff, which is his title by right of heritage, and "Imperial Minister of Railways and Transportation," one would hardly recognise the whilom "John Mikale" who many years ago under this assumed name emigrated from Russia to the United States without a penny in the world, and started earning his living in Philadelphia as attendant of a bolt making machine at a dollar a day. After a few years in the machine-shop, where his remarkable talents soon attracted attention, and learning much of the practical side of engineering, a knowledge which was to stand him in such good stead later on, he worked his way up by dint of indomitable energy successively from brakeman on a freight train to the position of locomotive engineer on the Pennsylvania railway. Shortly afterwards a breakdown on the line gave him the opportunity of his life. His remarkable skill in averting what might have been a very serious accident attracted the attention of one of the passengers, who happened to be no less a personage than the Minister of Railways of one of the South American Republics, the result being that the young engineer went off to South America as superintendent of a new railway in Venezuela, and ended eventually by becoming the manager of the line. This almost continuous run of luck would have probably turned the brain of many men, but John Mikale was not of that sort. To return to his native land and make a position for himself amongst his own countrymen had always been his ambition, so he decided at last to throw up his fine position in South America and returned to Russia still under his assumed name, though by this time he was probably more American than Russian. By good fortune, as it soon turned out, he managed to get an insignificant berth in a small country station, and here he might have vegetated indefinitely had not his wonderful luck again helped him. This unimportant little place on the line had always been the centre of a serious dislocation of the traffic—no one could exactly explain why. He asked for and obtained permission to try and remedy it, succeeded instantly, and from that moment became not only a marked but also a made man in Russia, where such initiative genius is rare. From this moment there was no looking back for John Mikale. Having once attracted the attention of his superiors, that of the Emperor followed as a matter of course; he was promoted to the headquarters at St Petersburg, from thence to the staff. The general managership of the line followed, and was succeeded by honours and appointments sufficient to satisfy the most ambitious of men, not the least being the restoration to him by the Emperor of the title and estates which he had voluntarily renounced when as a mere youth he had emigrated to America.

A PICTORIAL sixpenny magazine devoted to the green isle is *Ireland*, published at 94, Middle Abbey Street, Dublin. The April number contains an article on the Royal Hospital for Incurables at Donnybrook, a topographical account of Wexford and its Vicinity, by Mr. J. B. Cullen, a paper on Technical Instruction in Belfast, by Mr. T. C. Forth, and other articles relating to Ireland.

TRADES UNIONS AND THEIR STATUS.

An Alternative Proposal

Mr. W. H. Beveridge, in the April number of the *Economic Review*, writing on Trade Union Law, puts forward an alternative proposal as adequate for the legal protection of Trades Union action. He says:—

The proposal now made goes to the heart of the difficulty, and meets the judicial failure to recognise trade unionism with open reversal. It simply creates a new statutory justification for interference with the liberty of individual trading, the justification being that the defendant is a registered trade union acting in furtherance of a trade dispute.

Without any desire to anticipate the skill of the draughtsman, the following clauses may be suggested as adequate to protect all desirable Trade Union action:—

1. It shall be lawful for any person or persons acting on behalf of a registered trade union in direct furtherance of a trade dispute to attend in parties of not more than two together at or near a house or place where a person resides or works or carries on his business or happens to be (i.) for the purpose of peacefully communicating or obtaining information, (ii.) for the purpose of peacefully persuading any person to work or to abstain from working.

2. No act done by or on behalf of a registered trade union in direct furtherance of a trade dispute shall be actionable by reason only of the same involving (i.) the procuring or the attempt to procure any member of such union to commit a breach of any contract of service or employment, unless such breach be a crime within s. 3 of the Conspiracy and Protection of Property Act, 1875; or (ii.) the interfering or the attempt to interfere with any person whomsoever in the free disposal of his custom, capital or labour, or otherwise, in the conduct of his business; or (iii.) the doing of any of these things by combined action or in pursuance of a combination.

These proposals, though giving trade unionists much that they have not, though withholding a good deal that they demand, are not put forward as a compromise. This is an irreducible minimum which trade unions might grudgingly accept from a lukewarm Government; it is suggested as all they need ask for from a friendly one. Anything beyond amounts to claiming irresponsibility for unlimited wrongs, such as would open the door to persecution and organised violence. Anything less will hardly preserve to trade unions their essential functions. The reform suggested simply allows trade unionists to employ, defensively or offensively, that powerful but entirely peaceable force of concerted action which is part of the accepted order in our great industries.

HOW TO DEAL WITH THE UNEMPLOYED.

The *Quarterly* reviewer who treats of this subject is alarmed that permanent legislation is now contemplated upon the basis of an experiment (Mr. Long's scheme) which has had only some three months' trial. The whole article is against Mr. Alden's suggestions, and inclines to the view that relief works and other means for finding work are apt to do more harm than good, especially by getting men into the habit of having work found for them instead of hunting about to find it themselves. The *Quarterly* reviewer's methods of grappling with the unemployed problem would be (1) a renewed recognition of the importance of family life, because it is in the family that the unemployable is chiefly manufactured; (2) better State education; (3) apprenticing boys leaving school to trades; (4) improving the conditions of a soldier's training, the soldier, the reviewer says, at present frequently becoming an "unemployable"; (5) emigration, co-operative small holdings, co-operation and profit-sharing, and other measures to prevent excessive immigration into towns, and reduce dependent classes; (6) the reduction of municipal expenditure, "which is fettering the expansion of trade, and permanently impairing the prosperity of the country. Employment is reduced by it, and the cost of living greatly increased."

The problem is how to counteract the tendency to a pauper class:—

The conclusion is that it can be done by "preventive and prophylactic" methods only. If we recognise the existence of social science, the problem of the future is how best to spread it among the people. "The education of the benevolent public will be one of the most important factors." The millionaire who would found a chair of social science at one of the universities might do more to cure poverty than by giving all his property for the relief of the poor.

We constantly talk of "labour colonies," and point to Germany, while Germany points to us, and speaks of our workhouses and the desirability of restricting public relief to such institutions. The German colony has produced a new kind of tramp, the Kolonie-bummler, a class to which 75 per cent. of the colonists belong; and, as the *Quarterly* reviewer says, "we do not want to add the 'Koloniebummler' to our tramps and vagrants."

WHAT IT IS TO BE CHAIRMAN OF THE L.C.C.

A writer in the May *World's Work* describes what he calls "the greatest municipal post in the world," that occupied by Mr. Edwin A. Cornwall, the honorary post of Chairman of the L.C.C. Around Spring Gardens no one is hanging about; no one is superfluous or ornamental. Mr. Cornwall, it is not surprising to find, almost lives at the L.C.C. Hall in Spring Gardens:—

He has to watch the general proceedings of the Council and its committees, and he is *ex officio* a member of every committee and sub-committee of the Council. On an average there are fifty meetings a week of committees and sub-committees. Besides his purely official duties, the Chairman is obliged to devote much time to ceremonial functions. By virtue of his office he receives a very large number of invitations, and he is also required to take the chair at all the big public ceremonies with which the Council is concerned. Then, too, the number of foreign visitors who come to study the Council's work is considerable, and the Chairman receives them and arranges for their wants being satisfied. Much of his time every day is occupied in attending to correspondence, and in granting interviews to members of the Council and others who require to see him on important matters, particularly the chief officials, who find it desirable to consult the Chairman.

Five thousand acres of parks, gardens and open spaces; 40 acres of slums cleared to be rebuilt; new buildings being erected or actually erected for 43,000 persons; a death rate in the Council's buildings of only 11.8 per 1,000, as against 15.2 for all London (1903); 100 miles of tramway, carrying, south of the Thames alone, 133,000,000 passengers in 1903, mostly at halfpenny fares and in electric cars; a fire brigade unequalled in the world—these are only a few of the matters after which the L.C.C. and Mr. Cornwall, as its Chairman, have to see.

A PRACTICAL PROGRAMME OF SOCIAL REFORM.

By Sir John Gorst, M.P.

In the *Fortnightly Review* for May Sir John Gorst sets forth with downright plain speaking his utter disgust with both parties, and his disappointment with the Labour Party. Years ago I suggested that the true solution of the present crisis would be to make John Redmond Prime Minister, and let him make Sir John Gorst his right-hand man. Sir John Gorst is evidently in more sympathy with the Irish Nationalists than any other party. They have got a leader and a cause.

GO TO THE IRISH, THOU LABOUR M.P.

Go to the ant, thou sluggard, says the old Book. Go to the Irish Party, thou sluggard Labour Party, says Sir John Gorst, learn their ways and be wise. When the question of underfed school children came before the House, few of the Labour members took the trouble to attend, and the debate was a fiasco. Immediately afterwards the question came up of Irish fisheries, and instantly the scene changed. The enthusiasm, the discipline, the leadership of the Nationalists

produced upon the House of Commons the impression that the whole Irish people took a much greater interest in Irish fish than the mass of the workers of the United Kingdom in the condition of their children.

As for the regular parties, both sides readily make the most extravagant promises, and neither side makes any effort to perform them.

WHAT MIGHT BE DONE.

The House is the House of the rich; they care more about motor cars than about the starving poor:—

But one thing is certain. The condition of the people can be speedily and effectively improved by measures well within the power of the people themselves, and the rulers and Parliament which they create. Other nations have entered upon the path of progress, and are already far in advance of us. It is high time for us to follow an example which we ought to have set, and do something to remove the reproach of letting preventable misery and injustice exist amongst a third of our people.

But for them a leader is necessary. Why should not an awakened democracy rally round Sir John Gorst? The idea is not set forth by Sir John. It is latent, and left to be inferred. It is not a bad idea either. For Sir John Gorst is a man of experience and of courage. He knows his own mind, and he can explain what he wants.

GO TO THE GERMANS, THOU JOHN BULL!

As Sir John would have the Labour party go to the Irish Nationalists to learn a much needed lesson, so he would have slow witted John Bull go to the Germans. The first article in his programme would be to

make public provision for insurance against sickness, accident, and old age. In our country the first is entirely voluntary; the insurance societies are under no public control, nor is their solvency guaranteed. The prudent insure; the unthrifty do not, but rely on charity or the Poor Law. It is clearly to the interest of the State that the sick should be cured as speedily and as efficiently as possible.

Even without putting any additional burden on the tax payer, a great deal could be done to remedy this chaos, which produces extravagance and inefficiency. If hospitals and workhouse infirmaries were co-ordinated, and thus placed on some logical basis of relationship, more satisfactory results would be achieved. Accidents are partially provided against by the Employers Liability Act, of which the imperfection is admitted by everybody, but for the amendment of which no Parliamentary time can be spared. Old-age pensions are a monument of the pledges and broken promises of political parties.

THE FEEDING OF SCHOOL CHILDREN.

Sir John Gorst would go to France and Belgium for suggestions as to feeding scholars:—

In one most important section of the population, the children of the poor, Governments could, with great ease, and at little cost, put an entire stop to destitution and suffering. The right to relief of a destitute starving child, forced by society to go to school and learn lessons, has never received proper attention. If a starving horse or ass were treated in the same way as hundreds of starving children are daily treated by public authority in our public elementary schools, the offender would be taken up and punished by the Criminal Law.

THE SLAUGHTER OF THE INNOCENTS.

He would act upon the recommendation of the Berlin Conference, and legislate against allowing women to earn their living a month before and a considerable time after childbirth. He does not say, although he might have borrowed a hint from Denmark, how he would insure the mother against starvation during that period. He would facilitate the supply of milk, and train girls in the art and science of motherhood.

THE UNEMPLOYED—LABOUR COLONIES.

In dealing with the unemployed, he would again go to the foreigner for hints:—

In Germany there are colonies for the physically or mentally deficient and for the unemployed, besides experimental farms under the designation *Heimatkolonen*, where unskilled labourers are taught agricultural work, fruit farming, building, and other useful occupations. They have not all of them proved an unqualified success, owing to the percentage of criminals and vagrants who find their way into these refuges. But perfection cannot be attained all at once, and when a better system of classification has been introduced, it may be anticipated that a great advance will be made in Germany towards a solution of the unemployed difficulty. In France, Switzerland, Holland, and Belgium there are many institutions of a similar character.

LABOUR REGISTRIES.

He would add to his Labour Colony, his Labour Registry. Such Registries, he says,

secure that such labour as is being offered shall be made to go as far as possible, and they put an end to the anachronism of good workmen having to tramp in search of work in these days of telegraphs and telephones. In different parts of Germany there are public labour bureaux managed jointly by employers and workmen, besides numerous relief stations and other institutions. These are in telephonic or telegraphic communication with each other, thus enabling a man in search of work to ascertain without delay the locality where there is a prospect of his finding it. Some labour registries have been instituted here by private effort and latterly by municipal bodies. But the Central Government has established no clearing house to bring local effort into co-ordination.

All this may be true, but it is in vain to look to Parliament. It is a rich man's Club. The Labour Party is weak, disorganised, and without a leader. Here is Sir John Gorst's chance. I commend the idea to Mr. J. R. Macdonald, Mr. Keir Hardie and Mr. John Burns.

GUILTLESS CRIMINALS.

MR THOMAS HOLMES, the police court missionary, treats in the *Ethological Journal* of Obscure Causes of Crime. He refers to the so-called "criminal tendencies," or, as he would style them, strange impulses which appear at an early age, and result in the conviction of children of ten or eleven years of age. Sometimes parents' recognisances are taken, sometimes the birch is tried, sometimes the boy is sent to an industrial school. But the latter requires a certificate of mental fitness and physical soundness. Where these are lacking the children are left to gravitate into crime and prison life. The doctors frequently send a list of persons not insane, but not fit for prison discipline:—

Their number is by no means small, and a piteous problem they present. Not fit for prison, yet always doing something against the law; not mad enough for the asylum, yet not sane; no homes of their own, yet not caring for the workhouse; what a horrible case is theirs. They are bewildered themselves, and are a puzzle to the community, which has to pay for the cruel neglect of years gone by. Such persons tend to steal food, and to commit offences against decency, for they feel the pangs of hunger, and the temptations of sexual desire, the same, if not more so, as normal persons.

IRRESISTIBLE IMPULSES.

Typical instances of uncontrollable impulse are given:—

One young man of fair position and education, whose father is sufficiently prosperous to enable him to engage a solicitor for the defence, steals false teeth and nothing else. A gentleman's son, with an allowance of £2 weekly, has been charged nine times with stealing watches. A civil servant of good prospects, and in fair position, was detected three times in three weeks in picking pockets of poor women. His character and position were so good that he was remanded for a week on bail; while on remand he repeated his offence. A decent woman of my acquaintance has been charged thirty times with stealing boots. I have pleaded with all of these and found the story of one to be the story of all, namely, that an uncontrollable impulse comes upon them which they cannot resist and, though aware of the consequences, they yield to these impulses with a feeling of gratification and joy.

THE THREE CRISES IN A WOMAN'S LIFE.

Mr Holmes next refers many crimes to sexual causes, in themselves quite innocent: puberty, pregnancy, and the change of life. Many girls, from twelve to twenty, "are not thieves, though they have stolen, but owing to physical reasons a state of mind exists which makes them incapable of sound judgment and self-control for a time." To herd them with the vicious and criminal is to ruin them. Mr. Holmes wisely says:—

A fatherly doctor, a wise, motherly matron, plenty of fresh air, good food, healthy physical exercise will do a great deal, but cast-iron discipline, too much religion and too much of the "wash tub," coupled with locks, bolts, and bars, will but send them back to ordinary life unfitted to fulfil its duties and to resist its temptations.

HABITUAL INEBRIATES.

Mr. Holmes speaks plain words about the women known as habitual inebriates:—

Sexual causes make the bulk of these women what they are, not drink. Drink is but an incident. Vicious beyond conception, driven by abnormal passions into the wilderness of sin, they seek their prey by night. The public-house is their hunting ground, their prey the half-drunken men.

In olden times such were said to be "possessed of unclean spirits." I think the ancients were nearer the truth than we are. All these women do not hail from the slums. Some have received good education, others have been well to do, others have husbands in good positions. But as far as my experience shows, in all of them the spirit of lust has been made incarnate. This kind of possession leads to crime, as well as vice and disorder. Given this abnormal passion, the individual is dominated by instincts, and is to a large extent an irresponsible being.

THE CARE OF THE INSANE.

SOME SUGGESTIONS FOR IMPROVED METHODS.

AN article on this subject in the *Quarterly Review* recalls the fact that in England and Wales the care of the insane belongs to the Sovereign, just as it did nearly six hundred years ago, and suggests that it is time this Plantagenet regulation was altered, the nominal care of the insane taken from the Lord Chancellor and united under one responsible Minister all the work of the departments dealing with public health and lunacy:—

The management of inebriates now under the Home Office, the general hygiene of the country, with the investigation and arrest of epidemics, and the supervision control of the Medical Officers of Health, now under the Local Government Board, might well be joined to the supervision of the insane. All these have closer mutual relations than any one of them has with the department with which it is now connected. Combined, they would furnish an adequate basis for a separate department and a special minister. Many improvements in asylum work would then be possible, at which we have been unable to glance. The time for such a rearrangement is not yet, but may be less distant than it appears.

Several other reforms are suggested, especially one of which there is some prospect: that patients "verging towards insanity but not yet over the line" should be treated on the Scotch lines—

by which a person with incipient insanity, if fraught with no danger to himself or others, can be received for treatment for six months on a simple medical certificate that there is a prospect of recovery.

The fact should be realised that in England there are many cases of early and slight insanity in which the law must be broken, not to save pain to the friends, but, on the highest medical advice, to save the patient's mind from becoming permanently deranged. This course necessarily involves some risk.

The reviewer also suggests that:—

The arrangements for the care of the insane need improvement in other ways, of which there is little present prospect. Every medical superintendent of an asylum is also its general manager; and this work, involving a vast amount of writing, keeping accounts, and the like, largely diminishes the time that he is able to give to the patients. It would be well if the two branches of work were separated, so that the most experienced medical officer could give his undivided attention to his patients.

PORTRAIT PAINTING seems a never-failing topic of interest in women's magazines. In the *Lady's Realm* for May Mr Hugh Stokes devotes an article to the art of Mr Hugh de T. Glazebrook, and says that "beauty, birth and brains" are represented by his sitters. In the May number of the *Woman at Home* Ignota writes on Modern French Portrait-Painters. Both articles are illustrated by portraits of beautiful women and others belonging to the great world.

EARTHQUAKES AND THE SCIENCE OF THEIR VIBRATIONS.

In the *Edinburgh Review* there is a paper on "Earthquakes and the New Seismology," the science of earth vibrations, or, as it is sometimes explained, the science of wave transmission through the earth. Seismology is thus closely allied to acoustics, the science of air vibrations, and to optics, the science of ether vibrations: —

For the ground under our feet, the rocky crust of our planet, is an elastic solid capable of propagating wave motion at measurable rates, and according to determinate laws. Its manner of doing so is, nevertheless, of baffling intricacy.

Sound waves are longitudinal, light waves transversal, but both kinds of undulation can be generated in the earth. There is no wonder, then, that "seismograms present to the eye mere coils and folds of enwreathed lines, baffling uninitiated attempts at decipherment." In Japan, by the bye, there are 968 stations for registering all kinds of "quakes, and Professor John Milne, a first class seismic expert, was employed for twenty years by the Japanese Government.

The first intelligence of an underground shock reaches the surface by means of elastic waves of compression analogous to the undulations of sound; waves of distortion, similar to those of light, start in their company but arrive a little later. To this initial diversity are superadded complexities indefinable in number and amount, due to irregularities in the transmitting strata. The heterogeneity of their composition is apparent on the most casual inspection. The waves of an earthquake are not then recorded by our instruments just in their original shapes. At every breach in the continuity of the rock they traverse they are variously shattered and transformed. Their periods of vibration, no less than their rate of travel, undergo change recognised as actual, while admitted to be incalculable; some, turned aside by total reflection, must be lost to observation; others Professor Milne finds reason to suspect reach us as echoes, which succeed and prolong the primary effects of a concussion.

Seismograms are now widely obtained, although in the reading of them there is still much to learn. On two subjects they throw special light—the primary cause of earthquakes and the condition of the earth's interior. Apparently they do not extend below thirty miles, though this is difficult to verify; and it seems impossible to deny a certain connection between earthquakes and volcanic eruptions. The whole article is best summed up in the following highly interesting paragraph:

Earthquakes are a sign of planetary vitality. They would seem to be characteristic of the terrestrial phase of development. Effete globes like the moon can scarcely be subject to the stresses to which they are due; nor can they be very suitably constituted for the propagation of elastic waves. Inchoate worlds, such as Jupiter and Saturn, are still less likely to be the scenes of reverberating concussion. Their materials have not yet acquired the necessary cohesion. They are pasty, or fluid, if not partially vaporous. On the earth the seismic epoch presumably opened when exterior solidification having commenced, the geological ages began to run. It will last so long as peaks crumble and rivers carry sediment, as long as the areal distribution of loads fluctuates and strains evoke forces adequate for their catastrophic relief. Our globe is, by its elasticity, kept habitable. The separation of sea from dry land is thus and no otherwise maintained; the alternation of elevation and subsidence manifest the continual activity of this reserve of energy. The dimensions of the globe we inhabit depend upon the balance of pressure and expansiveness. Relaxation or enhancement of either instantly occasions a bending inward or an arching outward of the crust. Just by these sensitive reactions the planet shows itself to be alive, and seismic thrillings are the breaths it draws.

INFANT SCHOOL OR NURSERY?

Miss Kate Bathurst, late Inspector under the Board of Education, makes an urgent plea in the *Nineteenth Century* for national nurseries. She calculates that last year some half million children under five years of age were attending school regularly, and she draws a pitiful picture of the baby's plight who is condemned to be drilled in the rudiments at an age when he is still unfit for it. Miss Bathurst's opinion is that little children require nurses rather than teachers, and lady doctors rather than inspectors. By placing the infant schools entirely in the hands of men inspectors, she complains that the whole atmosphere has been made into a forcing house for the schools for older scholars. She would revolutionise the infant schools. She says: —

The centre of my "nursery" should be the play room. The floor should be of blocked wood capable of being cleaned by some dry process. The space in the centre should be left clear. Round the walls Kindergarten desks could be placed, and above these in tiers should be a series of hammock beds, hammocks being less likely to harbour vermin than any other type of bed. These could be arranged like the berths of a steamer or the luggage racks in a train, and by allowing the iron framework to fold back they might be laid flat against the wall when not in use. A flap of netting should be attached to each hammock to fold over the child and fasten against the wall, thus preventing all danger of falling out. One corner of the room could have a zinc floor and a miniature sea-shore with sand, etc.

All books (except picture books) should be banished, and blackboards should only be used for purposes of amusement. All children should remain in the nursery, where they would enjoy play, occupations and sleep, in an atmosphere of freedom, till six years old. At six I would admit each child for an hour per day into the neighbouring school (I assume that my nursery is attached or near one).

At seven, two hours' instruction; at eight, three hours might be given. At nine the child should join the regular school for full time. "In each case these children would return to the playroom and be occupied under supervision during the remainder of the day." For the nursery she would require women who had a knowledge of infants. She suggests that ladies of leisure should place their services at the disposal of the head teacher of a local infant school and help her by giving lessons or playing games. Might not, she asks, the helpers of the Happy Evenings Association go and amuse the little ones during the day?

THE STORED-UP ENERGY OF ELECTRONS.—A writer in the *Theosophical Review* says:—"An ounce of matter contains the energy of four million tons. If a man consumes 3lbs. of food and drink per day the energy contained within it, if it could all be utilised, would be equal to that given out by the explosion of 200 millions of tons of gunpowder. This would form a hill of gunpowder 2,000 feet in height and two miles around the base."

PREFERENCE: THE CANADIAN AND AUSTRALIAN VIEWS.

THE *Quarterly Review* contains one of the best and most moderate articles that have appeared on this question. The part dealing with Canada is by a Canadian; that dealing with Australia by an Australian resident.

I.—THE CANADIAN VIEW.

After remarking that the fate of resolutions in favour of a general scheme of preference in the Canadian Parliament argues no great zeal for Mr. Chamberlain's scheme, the writer thus sums up his conclusions:—

(1) That all the resolutions in favour of general preferential trade, save that of 1892, have been rejected by Parliament; (2) that all the men who proposed them [illegible] Parliament; (3) that the party which [illegible] has been defeated at three general elections, in 1896, 1900, and 1904; (4) that at the recent general election (November, 1904) the question of preferential trade [illegible] conspicuous place in platform [illegible]; (5) that the ministers who concede that they are like their opponents [illegible] in favour of the policy have yet [illegible] step till the general election [illegible] British Government [illegible] practical kind.

The writer does not for a moment believe that a new conference—all the others having failed—is the way to arrive at finality.

A new conference [illegible] will [illegible] fettered by [illegible] experience [illegible] and both.

Canada is a country committed since 1855 to a policy of increasing Protection.

As regards the present [illegible] tions [illegible] (1) [illegible] (2) [illegible] (3) [illegible] scheme [illegible] or [illegible] the policy [illegible] Canadian [illegible]

II.—THE AUSTRALIAN VIEW.

Coming to Australia the writer in the *Quarterly* asserts that "the great mass of the people of the Commonwealth are utterly apathetic."

No public meeting has [illegible] tialism, except in Melbourne [illegible] Manufacturers [illegible] Mr. Chamberlain [illegible] that his proposal [illegible] people, it has not [illegible] assurance [illegible] in Australia [illegible] discussed [illegible]

He thus sums up the complex state of Australian feeling:—

1. The vast majority of [illegible] regards Preferentialism [illegible]

2. The movement [illegible] manufacturers, who [illegible] against foreign goods [illegible] their own products but will not [illegible] duties on British goods [illegible] compete with native industries.

3. Till such time as Preferentialism has been adopted in the United Kingdom as an Imperial policy, the Commonwealth will take no steps towards preferential treatment of British goods.

4. If Preferentialism is adopted in the Mother land, the majority of the Australian people will, in all probability, be in favour of concluding some arrangement for reciprocal preferential trade relations within the Empire.

5. Even then, it is doubtful whether a majority could be found for any practical proposal, the obstacle being the division, apparently irreconcilable, between the Protectionist and Free Trade supporters which the adoption of the principle would call forth. A union of the opponents of Preferentialism with either of these supporting wings would probably be strong enough to wreck any measure embodying reciprocal preferential proposals.

ANOTHER AFGHAN WAR?

WHAT LORD KITCHENER DESIRES.

A WRITER, concealing his identity behind the *nom de plume* of "Anglo-Indian," writes in the *North American Review* for April an article which he has headed "The Call of Lord Kitchener." The writer thinks that Lord Kitchener has come to the conclusion that we must again invade Afghanistan, and take up positions at Kandahar and Kabul.

If [illegible] Lord Kitchener [illegible] the Afghan [illegible] the Amir and his people [illegible] Afghanistan [illegible] Chaman [illegible] Kandahar [illegible] Kabul and Mazar-i-Sharif [illegible] India. In the [illegible]

Of course the first thing would be an increase of military expenditure, which already amounts to one-fourth of the revenue of India. It was fourteen millions in 1900, sixteen millions in 1902, and over nineteen millions in 1904. It is impossible to campaign in Afghanistan on a large scale without railways, and with railways the independence of Afghanistan as understood by the Afghans would disappear. It is no place for Indian troops. At present Lord Kitchener is deterred by financial and political considerations from forcing railways into Afghanistan, but says "Anglo-Indian":—

It will [illegible] always [illegible] Lord Kitchener [illegible] Kabul [illegible] Peshawar. He will have [illegible] Afghanistan [illegible] Great Britain [illegible]

The writer is quite clear that it would be the British taxpayer who would have to pay. He objects to partition, though that would certainly follow as the inevitable corollary from an advance on Kandahar and Kabul. But he maintains:—

There are only two alternatives. The first is to hold our present frontier strengthened by the [illegible] of India, and [illegible] the Persian Gulf is a British lake, leaving the crumbling kingdoms [illegible] to their fate. The [illegible] is to defend the [illegible] minimum of territory which is required for the purpose of buffer in Afghanistan and in Persia.

AN IMPERIAL ZEMSKI SOBOR.

SIR FREDERICK POLLOCK'S SCHEME.

THE organ of the Royal Colonial Institute for May publishes the valuable paper read by Sir Frederick Pollock on Imperial Organisation. The gist of it was to recommend the constitution of a kind of Imperial Zemski Sobor for the British Empire, the outcome of more than three years' consideration and of active discussion extending over about a year and a half, in which about fifty persons, well acquainted with the conduct of public affairs—Parliamentary, departmental, and executive—took part.—

We had to look for some plan which would avoid elaborate legislation and formal change in the Constitution. We must, it seemed, be content with a council of advice which would have only what was called "persuasive" authority. A permanent secretary's office was required, and it must not be dependent on any existing department, but immediately under the President of the Imperial Council or Committee. They suggested a standing Imperial Commission to serve as a general intelligence department for matters outside the technical function of the Admiralty, the War Office, and the Committee of Imperial Defence. Such a Committee, which might be called the Imperial Committee, would be marked from the outset as being a dignified and important body not attached to any particular department, but concerned with the affairs of the Empire as a whole. Its province would be questions involving matters of Imperial interest not confined to one Colony or dependency, and not capable of being disposed of by the action of the Colonial Office or any other single department of State. For dealing with such questions [illegible] the ancient function of the King [illegible] appropriate [illegible] Imperial Committee, the nucleus of it existed already in the Conference of Premiers which met in 1902, and we expected [illegible] The Premiers of the Dominion of the Commonwealth and of New Zealand were already Privy Councillors [illegible] Premiers of the federated South Africa [illegible] matter of course. [illegible] Imperial Committee would naturally be the Prime Minister or some prominent member of the Government [illegible] whole. How was the Committee to exist for any practical purpose when the Premiers were not here? In the first place every member of an Imperial Committee would be entitled to communicate directly with the Prime Minister, as well as with his colleagues, and much useful communication could take place by letter or cable without any formal meeting at all.

As to the second part of the scheme, an Imperial Secretariat and Intelligence Department, it was expected that if an Imperial Committee was to have a continuous existence and the means of profiting by its own experience it must have some one to keep its records. These records would be confidential for the most part, and for this reason alone the secretary must be a person of considerable standing and well acquainted with public business. Under the ultimate direction of the Imperial Committee, it would be the secretary's province to organise inquiry and receive and arrange information for its use. The permanent secretary would perhaps not find himself so idle as might be thought at first sight, even if he confined himself to salving and digesting useful knowledge out of overlooked and forgotten publications. The best living information ought to be at the service of the Imperial Committee through its secretariat; and this could be most effectively done, without ostentation and with very little expense, by the constitution of a permanent Imperial Commission whose members would represent all branches of knowledge and research, outside the art of war, most likely to be profitable in Imperial affairs. The honorary title of Imperial Commissioner would be conferred on those selected persons on the recommendation of the Prime Minister. When the Commission was once in existence it might be well for it to hold occasional meetings to make its existence visible, and those meetings might usefully recommend other qualified persons. Every Imperial Commissioner would have access to the secretariat, and would be able to impart any special knowledge of his own, with the assurance that it was in safe hands and would not be neglected. He conceived that the business of an Imperial Commission would in ordinary course be mostly done by expert committees dealing with special subjects.

In conclusion, Sir Frederick Pollock mentioned various examples of work upon which the Committee might be at once engaged, viz., the question of a single final Court of Appeal for the Empire, copyright law, and "inter-State" commerce.

In the discussion of the paper which followed, the chairman, Sir George Clarke, the Hon. B. R. Wise, K.C., Dr. Parkin, Sir Hartley Williams, Mr. Geoffrey Drage, and Dr. Hillier took part.

THE STOOL AS PROPRIETOR.

SIR W. BRANDFORD GRIFFITH contributes to the *Journal of the African Society* a very interesting and illustrated paper on native stools on the Gold Coast. He says:—

[illegible] on the Gold Coast is the [illegible] to which the land is attached, and [illegible] the question is not [illegible] chief, but whether it is [illegible]

The stool can only be procured from the Chief or Sub-Chief. Having been procured, the elders of the family place on it the person who represents the head of the family.

[illegible] the stool would have [illegible], the blood of the victim [illegible] sheep has to suffice. [illegible] with anything, but when [illegible] the actual [illegible] and slaves. [illegible] District a stool worth [illegible] execution for about £50 [illegible] attached to it, and the [illegible] of the stool lines [illegible]

One wonders if Africans are similarly impressed by our similar use of the words "throne" and "crown." That property should belong to the stool is, after all, not less intrinsically absurd than that lands should lapse to the Crown.

IN the *[illegible]* is a paper which will interest some readers very much on the expenses of American college students. There is also a paper, prettily illustrated, on "Off the Tourist Route"—not very much off, but amid [illegible] France, and over the German frontier in the Black Forest and other parts.

SALVATION BY REFERENDUM.

A SHORT CUT TO THE PROMISED LAND.

THIS might almost have been the heading of O. K. Hewes' paper in the April *Arena* on "Direct Legislation in Switzerland." For if the magic of the referendum can accomplish such blissful changes in the life of a State, then surely all democracies will begin to clamour for this simple, social "plan of salvation." Says the writer:—

What are the results of the referendum? Professor Parsons, Dean of the College of Liberal Arts of Ruskin University, says: "Fifty years ago Switzerland was more under the heels of class-rule than we are to-day. Political turmoil, rioting, civil war, monopoly, aristocracy and oppression—that was the history of a large portion of the Swiss until within a few decades. To-day the country is the freest and most peaceful in the world. What has wrought the change? Simply union and the referendum—union for strength, the referendum for justice."

The Press has been elevated; the provision for public education has been maintained so well that now Switzerland pays more per capita for education than any other country of Europe. Through the referendum, monopoly has been overthrown and the railways have become public property, the telegraph, the telephone, the postal business and the express service under public ownership have become the best in existence. The mail is delivered everywhere. If you receive money by postal order, the carrier puts the cash in your hand.

Sir F. O. Adams, English Minister to Berne, says: "Apparently there is no conflict in the testimony." Experience has completely silenced the objection that the system is cumbersome or too expensive in time and money. There has been no flood of hasty legislation.

ECONOMY OF USE.

Rarity of use is another recommendation of this political panacea:—

The referendum has seldom been used. The mere possession of the *right* to veto or approve legislation is generally enough to protect public interests. In the twenty years the people of the whole nation voted on twenty-nine questions only, ten of which were constitutional amendments. Sixteen of the laws and amendments were rejected and thirteen were approved. Every one of the questions received remarkably lengthy consideration and calm discussion, the like of which is yet unknown in the United States. In the cantons the record is similar.

ABOLITION OF PARTIZANSHIP.

A yet more beneficent result is the abolition of partizanship:—

Direct-legislation has destroyed the senseless partisanism that now curses America. In the sense in which we use the term, there are no political parties in Switzerland. . . . . The three parties, so-called, are natural divisions of thinking men. . . . . The members of the Federal Council, which is the national executive, enjoy practically life-tenure, being re-elected again and again, because of the lack of partisanism. The Swiss are able to distinguish between men and measures. Knowing that experience is especially valuable in public service, and not being at the mercy of their office-holders, they keep them in service year after year, though often disapproving of their work. Garfield said: "All free governments are party governments." The experience of Switzerland contradicts this popular theory.

If the introduction of the referendum into Great Britain would bring all these blessings in its train, besides overriding the House of Lords, who would not vote for it?

THE *Sunday Strand* contains a paper on "Seventeen Hundred Years of Red Cross Work in Japan," by Jessie Ackermann, which gives a very good account of the part Japanese women have played in the present war.

FOR A WEEKLY DAY OF REST IN FRANCE?

No question has caused so much controversy in France as that of the weekly day of rest. Henri Dagan, in the first April number of the *Nouvelle Revue*, says that when we consider the extraordinary agitation which the proposal has aroused, and the obstacles and the opposition on every side, we feel stupefied by the immense difficulties to be overcome.

The agitation for Sunday rest in France began, he says, about 1889, after an International Congress founded by Jules Simon and Léon Say, but he limits his observations to what has been done to advance the movement in 1904. As the question is to come before the Senate shortly, he gives the text of a measure voted by the Chamber of Deputies in 1902. This Bill seems to satisfy no one. It is followed by another document expressing the proposals of the Conseil Supérieur du Travail after long deliberation and discussion in November, 1904. The writer thinks that any arrangement which may be come to between employers and workers without legislative sanction will remain a dead letter.

LEGAL INTERVENTION.

Paul Leroy-Beaulieu is opposed to State interference in individual and family life, except in the case of the young. The Catholics are not agreed as to the amount of legal regulation which shall be permitted. M. Albert de Mun says:—

If the day of rest is not fixed in advance, who will fix it? The employer, apparently. But who will guarantee that the choice of the employer will be agreeable to the workers? Shall it be fixed by the workers? Who will then assure the obedience of the employer to their will? Shall it be an arrangement between the employer and the workers? This method seems inadequate.

Industrial legislation has for its object the establishment of certain common laws imposed by considerations of the general social order. The weekly day of rest is surely one of these, and one is surprised to see the resolute defenders of legal intervention in the question of contracts take up a hostile attitude in so essential a question as this of the regulation of the weekly day of rest.

But another consideration makes the legal settlement of the day of rest necessary. Inspection is a necessary corollary of industrial legislation, and how can inspectors see that the weekly day of rest is respected if the day is not common to all?

Miss A. J. Home contributes to the *Quiver* a description of the Sunday Rest Movement in France, noting specially the efforts of the Ligue Populaire, the League of Buyers, and the Protestant Society for the Observance of the Lord's Day, which last aims at avoiding the danger of a mere holiday taking the place of a true holy-day.

THE *Journal of the Royal United Service Institution* for April contains the gold medal prize essay of Lieutenant-Colonel Telfer-Smollett on the Conjoint Practice of the Navy and Army in Embarkation and Disembarkation for War. It is a very clear, lucid and succinct survey of experience up to date. He recommends that soldiers should be trained to row in time of peace, in order that the seamen may be free for their proper work. The number is enlivened with a coloured picture of the uniforms and colours of the Irish Stuart Infantry in the service of France, 1693 to 1791.

THE LIÈGE EXHIBITION.

IN the *Nouvelle Revue* of April 1st Jules Gleize has an article on France and Belgium, *àpropos* of the Liège Exhibition.

The Exhibition at Liège will coincide, the writer says, with the celebration of a national festival dear to all Belgians, for it is just seventy-five years since the independence of Belgium was proclaimed, and the Belgians have certainly not forgotten that their emancipation was provoked by the French July Revolution, and that, so far from being content with proclaiming with enthusiasm the principle of nationalities, France came to their aid and ran the serious risk of offending the Powers of the Holy Alliance. Never during the last three quarters of a century have the relations between France and Belgium been other than most cordial.

Liège is a powerful and magnificent industrial city, with a population of 180,000. Nowhere is it possible for the observer to discern so easily as at Liège how great has been the struggle between the feudal ages and the modern spirit.

The Exhibition covers an enormous area on the banks of the Meuse and the Ourthe. It is surrounded by green park. Old Liège will occupy the spot between the Ourthe and the Meuse, and will form a citadel, giving access to the industrial section. The Fine Arts are in the Jardin d'Acclimatation, and adjoin the pavilions of the French Colonies. The French Section occupies as much space as all the other foreign sections together.

Since the first International Exhibition at the Crystal Palace, in 1851, railways and the telegraph have transformed the world, and have overcome the obstacles of distance. Electricity has followed, and has revolutionised industry. Lastly, there has been a moral transformation in international relations, and the nations are gradually learning the wisdom of the principle of arbitration. But as war begins to cease the industrial struggle becomes more and more keen. Thus foreign exhibitions are to the industries of France as so many battlefields where victories must be won and the French *clientèle* be retained.

THE GENTLE ART OF BRIBING LEGISLATORS.

RUDOLPH BLANKENBURG pursues in the April *Arena* his exposure of the "Masters and Rulers of the Freemen of Pennsylvania." He writes on "law-makers who shame the republic." He photographs the free passes given by railroad companies to legislators in flat contravention of express enactment. The following paragraph shows how railways are developing that fine art of pecuniary persuasion which the unlearned call by a shorter and grosser name:—

> The morals of but few States, in their law-making bodies, have been as much debased as those of our own, through the baneful influence and corrupt practices of our transportation companies. In former years it was an almost open barter and sale, and purchasable legislators at Harrisburg, when laws affecting railroads were under scrutiny, would ask each other whether the 'yellow envelope' had been distributed. This envelope contained the valuation of the recipient's conscience 'in cash,' and was the argument used to obtain his vote for or against the measure. To-day, with advancing civilisation, more refined methods are in vogue.
>
> Heavy campaign contributions (sometimes to both political parties), the placing of friends or relatives in office, the release of an inconvenient mortgage, letting men of influence in on 'the ground floor,' the present of a course of study at the University for the aspiring son of an impecunious legislator, a game of poker in which the agent or promotor deliberately loses to the crooked law-maker enough money to secure his vote, betting against a certainty with the same end in view; the purchase of a fifty-cent vase, 'is a rare specimen," for hundreds of dollars from an impressionable legislator, are a few of the methods used at this time.

The Liège Exhibition: Palace of Fine Arts and other buildings facing the Meuse.

On the south side of the Meuse several handsome buildings have been erected. The Palace of Fine Arts, seen in the centre, is to be a permanent building.

GUILDS OF PLAY FOR LONDON'S CHILDREN.

AN APPEAL NOT TO BE IGNORED.

IT is now just seven years since an appeal was made in the REVIEW OF REVIEWS to set going a Guild of Play for the West Ham Slum children. The result was £30, with which white frocks, shoes, stockings, and "petal" caps were bought for 300 children, who were thus transformed into happy May-Day Revellers, and went through the old English games and May-pole plaiting and singing for which they had prepared once a week all through the winter. Happy hours these, snatched from lives grey and cheerless—too often sordid, sometimes tragic. Thus started, the West Ham Guild has continued its work—or its play—for all these years, and has become the proud mother of three more flourishing Guilds in the neighbouring districts. No bad interest this, I venture to think, for £30.

Surely, then, for one day in the year the slum children shall hold high revel - the hard, dry rod shall blossom forth. They shall change their grimy rags and the old shoes that let the water in with a squelch for clean white frocks, good shoes and stockings and bonny blue and white "petal" caps. And so the little Cinderellas of an hour dance and sing in the joy of their hearts before the astonished eyes of their fathers and mothers, who come in numbers to the revels. The parents look on this picture and on that -so often *that*, so seldom *this*. Might it perhaps be oftener *this* if—if the public-house at the corner were not quite so handy? To their eyes the children take on a new dignity. Who knows what springs of feeling and humanity stir and move as they watch the children for once freely, sweetly, innocently amusing themselves with a joy which is their birthright?

Perhaps next Saturday night, after *his* revels, when, according to his kind and state, he greatly desires to offer sacrifices, father's hand will not be quite so heavy as usual, as a dim recollection of her late innocent joy crosses his muddled mind as she shrinks from him there in the corner. "I allus gits into the corner when father's drunk," explained one of the mites, "and then I only gits hit on the legs." "And what does he hit you with?" I enquired, examining heavy bruises on the little thin legs as I dressed the tiny Cinderella. "Oh, the poker," she replied simply.

One night I awoke some half hour after midnight hearing the steady, low whimpering of a little child a child evidently tired out and weary. I could hear the pattering of the little feet as they strove to keep up with the shuffling walk of a half-drunken man who poured out a continuous flow of scolding abuse, while the child cried softly to itself. It had probably been singing in public houses for pennies and pints of beer until midnight, when the houses would close. It was pitch dark, and these two were the only wayfarers in the street. I can never forget the soft crying of that child—the crying of utter fatigue and hopelessness. I supposed there was no mother to shield it at the place it would call *home*. Months passed, and again, in the depth of a dark winter's night, I awoke to hear the same drunken shuffling step, the scolding voice, the pattering of the little feet, and the low, helpless crying. I flew out of bed and opened the window, but it was too late. They had passed out of reach. The darkness had swallowed them up.

It is to gather these, and such as these, together, to find them out, help them, befriend them, and show them another side of life that Guilds of Play are instituted. Those for whom I appeal now are the children of the Catholic schools of Johnson Street, Shadwell, and Great Peter Street, Westminster, drawn from the poorest and most wretched districts, and some of the slummiest of slums. The ragged crowd are ready for the transformation scene. I appeal to kindly hearts to make the rod blossom.

The children's revels, consisting of old English games, plaiting the Maypole, the crowning of the May Queen, national songs and dances will take place at the Caxton Hall, Westminster, at 8 p.m., on June 7th.

I shall gladly receive subscriptions for this object, as well as gifts of old white petticoats (to be cut down to size), black stockings, and white rubber shoes ALICE ABADAM.

97, Central Hill, Upper Norwood.

The Question of Questions.

IN the *American Historical Review* Professor Goldwin Smith closes his Presidential address at the American Historical Association by saying: -

> Let us treat the subject as we may, scientifically, philosophically, or in any other method, what can we make of the history of man? Is the race the creation of a directing Providence, or a production of blind Nature on this planet, fortuitous in its course and in its end? We have, preceding the birth of man, eons, it may be almost said, of abortion; eons of animal races which destroyed each other or perished on the primeval globe; a glacial era; man at length brought into existence, but remaining, perhaps for countless generations, a savage, and afterward a barbarian; wild tribal conflicts and cataclysms of barbarian conquest. Then comes the dawn of civilisation, which even now has spread over only a portion of the race, and even for that portion has been retarded and marred by wars, revolutions, persecutions, crimes and aberrations of every kind, besides plagues, earthquakes, and other calamities of nature. Through all this mankind, or, at least, the leading members of the race, have been struggling onward to social, moral, perhaps spiritual life. Are things tending to a result answerable to the long preparation, the immense effort, and the boundless suffering which the preparation and the effort have involved? Or will the end of all be the physical catastrophe which science tells us must close the existence of the material scene?

IN the *Magazine of Commerce* Mr. Owen Thomas gives a glowing account of the development of Rhodesia, "the enormous progress" made within recent years, the "wonderful resources" of the Colony in gold and other mines and in agriculture. There are now 2,000 miles of railway open. The line to the Victoria Falls is expected to bring a large number of tourists to see this wonder of the world and so to advertise the marvellous potencies of the region.

IN DEFENCE OF FRENCH DISESTABLISHMENT.

BY A ROMAN CATHOLIC.

THAT "A Roman Catholic Contributor" should publish in the Anglican *Church Quarterly* a plea for the policy of the French Government in separating Church and State, and support it by a heavy indictment of the Papal policy, is an unexpected combination of circumstances which demands general attention. French Republicans, says the writer, are far from desiring to denounce the Concordat. Until a few months ago the majority of Republicans favoured its continuance.

WHO KILLED THE CONCORDAT?

The change is due to the action of the Pope. Says the writer:—

If, therefore, Republicans are now practically unanimous in supporting the separation of Church and State, it is because they see that no other course is possible. It is idle to discuss the desirability or undesirability of maintaining the Concordat, when the Concordat has for all practical purposes ceased to exist. It is difficult to maintain an agreement when one party to it has not only broken it but explicitly declared his intention of refusing to be bound by its provisions. The relations of Church and State in France have come to a complete deadlock. For instance, the Pope has arbitrarily refused to confirm any Government nominations to vacant bishoprics. It is not a question of objection to particular individuals; although the Concordat gives the Government the right to appoint the bishops, the present Pope has demanded through Cardinal Merry del Val that he shall be consulted before any nomination is made, and shall have at least an equal voice with the Government in the appointment. Indeed, one Papal utterance seemed to allow the Government no more than a right of proposing names for the Pope to accept or reject at will. This is a distinct breach of the Concordat, which gives the Pope at most the power to refuse confirmation on definite canonical grounds; it is, moreover, a policy which, if persisted in, would in time leave France without any bishops; there are already twelve vacant sees. Again, the incident of the Bishops of Laval and Dijon, which was the immediate cause of the final rupture, was a clear breach of the agreement between France and the Pope. The contention that the Pope is not bound by the Organic Articles is quite untenable.

"CATHOLIC ANTI-CLERICALISM."

The only alternative to separation is to revise the Concordat according to the wishes of the Vatican, and the writer declares that the French electors would never consent to such a surrender. Anti-clericalism is not antagonism to Catholicism; rather has it been the traditional spirit of French Catholicism. The Gallican Articles of 1682 denied that the Pope had any authority in civil and temporal affairs. But this authority the Pope now claims. "The government of the Church has been converted from a constitutional monarchy ruling according to the canons into an absolute theocratic despotism." The writer quotes a saying that "if the Church of England is a headless trunk, the Roman Catholic Church is a trunkless head."

And it appears, according to this unsparing writer, that the trunkless head refuses to allow the brain to act:—

At the present moment there are among French Catholics an unusually large proportion of men of ability and of more than ordinary intellectual capacity; such men as Duchesne, Loisy, Laberthonnière, Blondel, Morin, Lagrange, Houtin, Fonsegrive—to mention only some of them—are known outside their own country, and some of them have world-wide reputations; but, whatever services they may have rendered to philosophy, learning, and criticism, they can now render none to Catholicism, for Rome has forbidden them every new apologetic, every method by which the Catholic faith might be justified to the modern mind, even the recognition of facts as regards the history of the Church and the Bible.

IN PRAISE OF THE GOVERNMENT BILL.

The writer goes on to pronounce the Government Bill as "on the whole fair and reasonable under the circumstances." Its vital constructive principle is thus described:—

The Government Bill, as Rome sees quite clearly, gives great powers to the laity if the laity only know how to use them. The Bill does not recognise the clergy as such at all; it recognises only local associations of Roman Catholics, Protestants, or Jews as the case may be, of which the clergy will be individual members, but no more. Each association may of course elect the parish priest as its president, but it is with the association itself as a corporate body that the State or the Commune will treat; it is to the association that the Church will be leased; the association will be civilly responsible if the priest delivers inflammatory political speeches from the pulpit, with the result that the association will probably take good care that he does nothing of the sort. Herein is the wisdom of the measure. This system of organisation is the only possible check on the autocratic power of Rome.

The writer declares that "there is only one hope for the French Church—a revival of the old traditional spirit of French Catholicism, and the assertion of a true Catholic anti-Clericalism."

What "the First Six Centuries" Believed.

THE Rev. John Freeland, writing in the *Dublin Review*, evidently enjoys himself in pushing the current Anglican appeal to the first six Christian centuries as the common standard of faith very much further than ordinary Anglicans wish to go. By all means appeal to that standard, rejoins the Romanist, and you will find accepted and practised in that ancient period many things which you Anglicans have for three centuries combined to reject—namely, the worship of saints and belief in their intercessory power: the veneration of relics and a belief in their miraculous power; use of the sign of the cross and veneration of it; special honour to Mary as the Mother of God, altars, masses, vestments, holy water, and the Real Presence of the Body and the Blood in the Eucharist. The writer pictures the alarm which would ensue were Anglican Bishops to-day to use the language on these subjects employed by doctors of the Church in the first six centuries.

THE feature of *C. B. Fry's Magazine* for May is an article by Mr. C. B. Fry on "The Knack of Jumping," or rather the very interesting photographs accompanying it, of athletes in all sorts of positions in the act of making twenty-two feet and even over twenty-three feet jumps. High jumping Mr. Fry regards as a "matter of pure spring, combined with a kind of gymnastic adroitness in managing the limbs and body in the air so that every part of them, as it successively tops the bar, tops it clear." Much apparently depends on careful body leverage in the air. The "Outdoor Man" this month is Mr. Balfour.

HOW I REALISE OUR LIFE IN CHRIST.

By Mrs. Annie Besant.

In the *Theosophical Review* for April Mrs. Annie Besant publishes a very remarkable sermon upon the "Perfect Man." It is an expression of her latest conception of the Christ life in man.

CHRIST THE PERFECT MAN.

Mrs. Besant opens her discourse by declaring that:—

The name of Christ, used for the Perfect Man, throughout Christendom is the name of a *state*, more than the name of a *man*; "Christ in you, the hope of glory," is the Christian teacher's thought. Men, in the long course of evolution, reach the Christ-state, for all accomplish in time the centuried pilgrimage, and He with whom the name is specially connected in western lands is one of the "Sons of God" who have reached the final goal of humanity. The world has ever carried the connotation of a state; it is "the anointed." Each must reach the state: "Look within thee; thou art Buddha." "Till the Christ be formed in you."

The great religions bestow on this Perfect Man different names, but, whatever the name, the same idea is beneath it; He is Mithra, Osiris, Krishna, Buddha, Christ—but He ever symbolises the Man made perfect. He does not belong to a single religion, a single nation, a single human family; He is not stifled in the wrappings of a single creed; everywhere He is the most noble, the most perfect ideal. Every religion proclaims Him; all creeds have in Him their justification; He is the ideal towards which every belief strives, and each religion fulfils effectively its mission according to the clearness with which it illumines, and the precision with which it teaches the road whereby He may be reached.

THE FOUR STAGES OF THE CHRIST LIFE.

There are, she declares, "as is well known to all students," four degrees of development between the thoroughly good man and the triumphant Master. Each has its own initiation:—

The first of the great initiations is the birth of the Christ, of the Buddha, in the human consciousness, the transcending of the I-consciousness, the falling away of limitations. The change experienced is the awakening of consciousness in the spiritual world, in the world where consciousness identifies itself with the life, and ceases to identify itself with the forms in which the life may at the moment be imprisoned.

When it is experienced, "the initiate knows the full meaning of the oft-spoken phrase the 'unity of humanity,' and feels what it is to live in all that lives and moves, and this consciousness is accompanied with an immense joy."

THE BAPTISM OF THE CHRIST.

The second stage is one in which—

he has to expand his consciousness by daily practice, until its normal state is that which he temporarily experienced at his first Initiation. To this end he will endeavour in his every-day life to identify his consciousness with the consciousness of those with whom he comes into contact day by day; he will strive to feel as they feel, to think as they think, to rejoice as they rejoice, to suffer as they suffer.

The second Portal of Initiation is symbolised in the Christian Scriptures at the Baptism of the Christ. Every saviour of men must be baptised in the waters of the world's sorrows. Then a new flood of divine life is poured out upon him.

TRANSFIGURATION.

The third Portal is before him, which admits him to another stage of his progress, and he has a brief moment of peace, of glory, of illumination, symbolised in Christian writings by the Transfiguration. It is a pause in his life, a brief cessation of his active service, a journey to the Mountain whereon broods the peace of heaven, and there—side by side with some who have recognised his evolving divinity—that divinity shines forth for a moment in its transcendent beauty. During this lull in the combat, he sees his future; a series of pictures unrolls before his eyes; he beholds the sufferings which lie before him, the solitude of Gethsemane, the agony of Calvary.

GETHSEMANE AND CALVARY.

The last stage is that in which in solitude of heart he must be cut off from all external support from man or God in order that within our spirit he may find what is needed. Human sympathies fail him:—

And when, in the critical moment of his need, he looks around for comfort and sees his friends wrapt in indifferent slumber, it seems to him that all human ties are broken, that all human love is a mockery, all human faith a betrayal.

When this darkness of human desertion is overpast, then, despite the shrinking of the human nature from the cup, comes the deeper darkness of the hour when a gulf seems to open between the Father and the Son, between the life embodied and the life infinite. The Father, who was yet realised in Gethsemane when all human friends were slumbering, is veiled in the passion of the Cross. It is the bitterest of all the ordeals of the Initiate, when even the consciousness of the life of sonship is lost, and the hour of the hoped-for triumph becomes that of the deepest ignominy.

Then from the heart that feels itself deserted even by the Father rings out the cry: "My God! my God! why hast *Thou* forsaken me?"

SALVATION BY THE CROSS.

Why this last proof, this last ordeal, this most cruel of all illusions? Illusion, for the dying Christ is nearest of all to the divine Heart.

Because the Son must know himself to be one with the Father he seeks, must find God not only within him but as his innermost Self; only when he knows that the eternal is himself and he the eternal, is he beyond the possibility of the sense of separation. Then, and then only, can he perfectly help his race, and become a conscious part of the uplifting energy.

The thought that inspired him in the violence of the combat, that sustained his strength, that softened the pangs of loss, was the knowledge that not one being, however feeble, however degraded, however ignorant, however sinful, who is not a little nearer to the light when a Son of the Highest has finished his course. How the speed of evolution will be quickened as more and more of these sons rise triumphant and enter into conscious life eternal. How swiftly will turn the wheel which lifts man into divinity as more and more men become consciously divine. Herein lies the stimulus for each of us who, in our noblest moments, have felt the attraction of the life poured out for the love of men.

Mrs. Besant is accused of being a Hindu in London. It is not surprising that she is suspected of being a Christian in Benares. In reality she is, as she always was, the woman with the open mind.

In the *Scottish Geographical Magazine* Mr. D. W. Freshfield objects to the popular notion that Tibet is remote and inaccessible, and to its being considered a desert. In 1792, he says, the Chinese marched through Tibet into Nepal, subduing the Nepalese. The frontier may be repellent, but the valley of the Brahmaputra is the real Tibet, a region well inhabited and well cultivated.

THE ORIGIN OF THE WELSH BIBLE.

THE world-wide attention which is now directed to the Welsh Revival, and consequently to Welsh religion in general, invests with special interest an article in the *Church Quarterly* on the Translators of the Welsh Bible. The "three illustrious scholars and patriots" whose combined labours gave the Welsh their Bible were Richard Davies, Bishop of St. David's, William Salesbury, the scholar-squire of Llanrwst, and William Morgan, Bishop of St. Asaph. Davies was born in 1501, the son of the rector of Gyffin, who, though a Catholic priest, was married; studied at Oxford; married in 1550, and settled down as parish priest at Burnham; fled to Geneva when Mary came to the throne; returned on Elizabeth's accession, and was by her made Bishop, in 1560, of St. Asaph's, and next year of St. David's. In 1563 an Act was passed commanding the five Welsh Bishops to arrange for the translation into Welsh of the Scriptures and Liturgy in four years. Bishop Davies undertook the task, and called to his aid Salesbury, an Oxford friend, who had formed the idea of reviving the Welsh language, had published "the first book ever issued in the vernacular," a work entitled "The Welshman's Common sense," and had also published "Llitha Ban," a book which comprised translations of the Epistles and Gospel. This last was "the first recorded appearance in print of any considerable portion of the Holy Scriptures in the Welsh tongue." Salesbury took in hand the version of the New Testament, Davies of the Prayer Book. Before the close of 1567 both these tasks were complete, and were given to the world. This achievement saved the Welsh language from sinking into disuse, and established for future generations the highest standard of the language. Services in Welsh were introduced in all the parishes. Salesbury's work has been charged by some critics with being pedantic, rugged, and surfeited with English words and expressions. But it is remarkable for the wealth of its vocabulary, and the translator had often to coin for himself his theological terms. The two scholars were proceeding with a joint translation of the Old Testament, when they quarrelled hopelessly over the etymology of one word (the word is not recorded) and parted company. Much progress had, however, been made, and the manuscripts were, the reviewer thinks, open to the use of Morgan, who, in 1588, seven years after Davies' death, published a complete and revised translation of the whole Bible and Apocrypha. "The final version of 1620" was the work of Bishop Richard Parry and his brother-in-law, Dr. John Davies, of Mallwyd. The reviewer awards the chief glory of the work to Bishop Davies and Salesbury, and by implication to Salesbury, who, sole and unaided, performed the decisive and difficult task of the first translation. It is interesting that the family whence this first translator sprung was "made in Germany," deducing name and origin from Salzburg.

ARE MUSIC AND RELIGION RIVALS?

MR. J. W. SLAUGHTER, of Clark University, contends, in the *International Journal of Ethics*, that they are. The reversion of the Papal mind from modern to mediæval music is taken as a confirmation of the popular verdict that modern music has for religious uses too much individuality and concrete self-sufficiency. The frequent confusion and intermixture, as well as the essential differences of music and religion, are traced by the writer to their close kinship, "as both find their psychological origin in that part of human nature which we denominate the mystical." The need or inclination for a state of mind which becomes a source of satisfaction, and therefore an object of realisation in itself, is probably the common source of both artistic and religious mysticism. Music is "that form of art in which the conditions are so arranged as to place the emotional attitude at its best, with a minimum of the thinking process." It is then "the most mystical of all the arts because its limitations are the least." Religious mysticism goes farther than this and requires assent to a body of doctrine: is not content with the mere ideal: insists that the ideal is also actual. It is this extra claim which, the writer considers, handicaps religion in its rivalry with music. Both appeal to the same mystical craving. But religion demands in addition something which the modern mind does not so readily concede.

THE PROSPECT OF A RELIGIOUS REVIVAL.

The writer's account of the present-day paradox is suggestive. He says:—

> Besides trusts and rapid transit, the nineteenth century is notable for achievements in two great directions, science and music. It may not occur to us, perhaps on account of our lack of perspective, that this is a paradox of the most pronounced kind. It presents a double ideal, of extreme rationalism in the case of its thinking, of extreme mysticism in the case of its art . . .
>
> Our rationalism and our dissatisfaction with it furnish the prime condition for a revival in religion, as the past well shows, and the question arises why history does not repeat itself in our day.

But the writer thinks there is little probability of a religious revival:

> Rationalistic investigation makes belief at the best a difficult matter, and the necessary element of faith is lacking. Why? Because music, the great modern art, can satisfy the mystical need, and indulge the cosmic emotion without asking assent to anything or putting the slightest strain upon purely thinking processes.
>
> Music and religion are rivals for the same claim in human nature, and so long as music occupies its present place in the general consciousness, we can look for no widespread revival in religion.

Meantime, despite the writer's theories, "a widespread revival in religion," looked for, or not looked for, is actually in process.

THE *Sunday Magazine* contains a paper by Emily Baker on Oliver Cromwell, very sympathetically written, more from the personal than the historical point of view. Miss Sarah Tytler's Recollections of a Literary Life are continued.

THE FIRST QUAKER DESCENT ON AMERICA.

A MIRACULOUS VOYAGE.

IN all the romance of religious pioneers there has rarely been a more wonderful story than that told by Dr. C. F. Holder, in the April *Arena*, of "The Quaker and the Puritan" in colonial history. The two first Quaker missionaries to set foot on American soil were Mary Fisher and Anne Austin, who returned from Barbados by way of Boston in 1655. In Boston they were imprisoned for five weeks, and then shipped back to England. Eight men and women arriving by the *Speedwell* a little later, and being found to be Quakers, were kept nearly two months in jail, and then sent back to England. These returned missionaries at once began planning how to gain a landing in America. But no shipmaster could be found courageous enough to take so dangerous a cargo. Then help came unexpectedly. A small shipbuilder near Holderness, Robert Fowler by name, became a Friend, and was impressed with the conviction that a half-finished craft of his was to accomplish some great spiritual work. He finished it, launched it—"little more than a smack"—came up with it to London, and there "happened" to come across the Friends who were on the look-out for a vessel to carry the missionaries oversea.

SHIP AND SKIPPER UNFIT.

The coincidence was taken to be providential, though the vessel was entirely inadequate for the purpose, and to add to their difficulties, Robert Fowler was but a coastwise sailor, knowing nothing about navigation.

The drawbacks in ship and skipper were daunting enough. But worse was to follow:—

At the last moment the crew selected was impressed and carried off to the British Fleet, then ready to sail against the King of Sweden.

Nevertheless, the *Woodhouse*, as the wee craft was called, set sail, with eleven Quakers on board, on April 1st, 1657. A cynic might have declared All-fool's Day, the right time for such a voyage to begin: for "the crew consisted of two men and three boys, none of whom had any knowledge of the ocean."

NAVIGATION BY PRAYER MEETING!

Yet with this equipment the *Woodhouse*—in its way more memorable than the *Mayflower*, which sailed thirty-seven years before—set out with the first contingent of Friends destined to effect a permanent landing on American soil. So came the invaluable contribution of Quaker life to the composite history of the future United States. This is Dr. Holder's account of the miraculous voyage:—

Knowing nothing of navigation, the captain looked to his spiritual-minded passengers for guidance, and we have the singular spectacle of a vessel being sailed across the Atlantic, the helmsman each day taking his orders from the ministers, who daily held a silent Quaker meeting for this purpose. During this period one or more of the Friends would invariably receive an impression as to the course to pursue, which at the close of the meeting was conveyed to the captain, who laid the course until the following day. Early in the voyage they were threatened by a foreign fleet, which attempted their capture, Humphrey Norton announcing in advance that they would meet with this danger; but he calmed the alarm of the captain by saying, "Thus saith the Lord, ye shall be carried away as in a mist." This was literally true; a fleet soon appeared and chased them, but the wind suddenly changed, and in a fog the *Woodhouse* escaped.

One of the ministers then received word: "Cut through and steer your straightest course and mind nothing but me." This they did, holding a meeting each day and having such good fortune that but three meetings were omitted during the long voyage on account of storms. Every day the course was laid according to the results of the meeting of that day, and never did absolute faith find a greater reward, as on May 29th one of the ministers at the meeting of that day felt a conviction that "there was a lion in the way," and on the following day they sighted land, and at the meeting word came to Christopher Holder that they were on the road to Rhode Island. A short time later a boat came off and verified the communication.

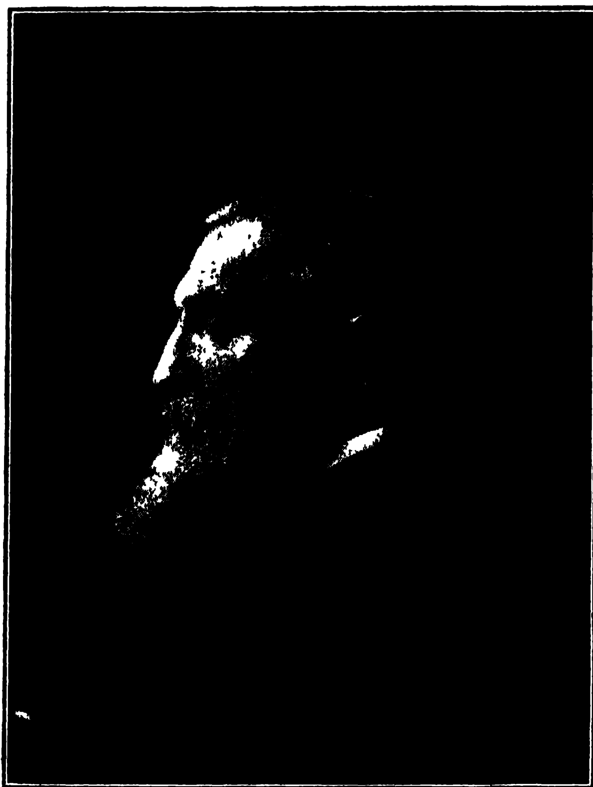
The *Woodhouse*, despite this remarkable method of navigating without knowledge of latitude or longitude, had sailed into Long Island Sound, and a few days after, two months from England, landed all the ministers at New Amsterdam, with the exception of Christopher Holder and John Copeland, who, notwithstanding the decree of banishment, determined to go to Boston.

The record of the persecutions they underwent at the hands of the intolerant Puritan is graphically presented, until the day when Shattuck, a one-time victim, arrived as King Charles II.'s messenger before the persecuting Governor Endicott, and brought the royal edict of religious liberty.

The reading of this sketch suggests how little of the real making of history is generally known. How many of our readers knew that the important share of the Society of Friends in the making of America was thus marvellously inaugurated?

BRER TERRAPIN IN HIS NATIVE LAND.

IT has long been recognised that the stories of Brer Rabbit and his fellow-fauna represent folk-lore native to the African soil, which has undergone the requisite modifications in the American environment. An illustration of this is afforded in the *Journal of the African Society*. It contains animal stories from Calabar, contributed by Mr. Henry Cobham, a native Assistant-Inspector of the South Nigerian Police. The first we reproduce, which appears with the local alterations in Uncle Remus as "Mr. Terrapin shows his Strength":—



Once upon a time Tortoise, Elephant and Hippopotamus were great friends. One day, as the Tortoise was walking with the Elephant, he told him that although he himself was so small compared with the Elephant, yet he could pull the latter right into a river. When the Elephant heard this, he laughed him to scorn and told him that was impossible. The Tortoise, having obtained his permission, tied a rope around the Elephant's body, and told him to stand where he was. He himself then walked to a river with the other end of the rope in his hand. When he got to the river he greeted his friend the Hippopotamus, saying he could pull him out of the river. The Hippopotamus also laughed at him most sarcastically, and at once told him to try it. Tortoise, therefore, passed the rope round the body of the Hippopotamus, and told him to plunge into the river, and to start pulling at once. The Hippopotamus jumped into the water accordingly, and began to pull in earnest. At the same time the Elephant began to pull very furiously until both were quite tired. Tired and exceedingly surprised, they walked slowly towards each other to see whether it really was the Tortoise that was pulling them. When they found that it was they themselves pulling one another they were very angry, and swore that they would kill the Tortoise wherever they saw him.

AUGUSTE RODIN.

FROM an article by Mr. W. B. Northrop, in the May *World's Work*, I take the following extract: –

Few artists have lived so much in their work as Rodin. He rises early—about six A.M.—and, after a light breakfast, immediately starts work. It might be said that even before this his labours begin; for at the breakfast table he usually has some statue or other on which he is working. Placed on the table before him he often has some piece of antique sculpture which, even while eating, he contemplates. The verandah of his house has been covered in with glass in the form of a species of conservatory, and in the place ordinarily occupied by flowers are pieces of ancient sculpture.

One of Rodin's most treasured pieces of ancient art is a small wooden pigeon. This he admires immensely; and he has even been known to take it to bed with him.

Photograph by] [*E. H. Mills.*

M. Auguste Rodin.

Always in Rodin's pocket one will find a piece of modelling of some kind: a small head: a small hand: a leg: an arm: part of a trunk. He studies these things on the train, in the restaurants. Even at dinner parties, when conversation has tired him, he has been seen to take out one of his "little pieces" as he calls them, and study it secretly.

Rodin's studio at Meudon is truly remarkable. Besides containing many pieces of great sculpture, there are hundreds of tiny little figures and fragments of human and animal anatomy. They are ranged in glass cases, and seem to be numberless. Every form of muscular contraction has been shown. It is true that many of Rodin's figures have been criticised as obscene and lewd in design—but he excuses all on the ground of "Nature."

"You see all these things in nature," says Rodin by way of answer, not apology, to his critics, "and whatever is shown by nature is justified by art." On these lines he works.

AFTER-DINNER STORIES.

THE after-dinner oratory of America as described by Mr. Daniel Crilly in the *Nineteenth Century* will be gratefully remembered by many readers. The writer describes the American after-dinner speech as a phase of intellectual effort that has no counterpart elsewhere. It must have all the choice qualities of Sheridan's dialogue, it must be a gem in prose, it must sparkle and effervesce like champagne, it must appear to be as spontaneous as the waters of a mountain spring. By way of illustrating the unexpected juxtaposition of incongruous ideas, the writer selects several stories from a *Mayflower* celebration. Quite apart from the context, some of the stories may be quoted. A lady was distributing tracts in the streets of London:—

She handed one to a cabman; he glanced at it, handed it back, touched his hat, and politely said: "Thank you, lady, I am a married man" (laughter). She looked nervously at the title, which was, "Abide with me" (laughter) and hurriedly departed. Under this inspiration we agree with the proverb of the Eastern sage: "To be constant in love to one is good; to be constant to many is great" (laughter).

Here is another of a school where the Eton system of flogging prevailed:—

On a Saturday morning the delinquents were called up to be flogged. One of the boys inquired, "What am I to be punished for, sir?" "I don't know, but your name is down on the list, and I shall have to go through with it;" and the flogging was administered. The boy made such a fuss that the master looked over the list on his return to his rooms, to see whether he had made a mistake, and found that he had whipped the confirmation class (laughter).

Another story is of a Liberal meeting in Scotland where the proceedings were being opened by prayer:—

The reverend gentleman prayed fervently that "the Liberals might hang a' thegither." He was interrupted by a loud and irreverent "Amen" from the back of the hall. "Not, O Lord," went on the clergyman, "in the sense in which that profane scoffer would have you to understand, but that they may hang thegither in accord and concord" "I dinna care so much what kind of a cord it is," struck in a voice, "sae lang as it is a strong cord" (laughter).

Here is an aphorism with an unexpected illustration: –

Fortunately for them, and perhaps for the world, opinions differed enough to give them a chance "You can't always tell," said a man, at the end of a discussion, "what one's neighbours think of him." "I came mighty near knowing once," said a citizen, with a reminiscent look, 'but the jury disagreed."

Here is a New Englander's gibe at New York. He said:—

If a hard fate had not compelled the New Yorkers to be stock-dealers and millionaires at the same time, they might, amongst other things, have been "manipulating their shares, with the aid of plough-handles, watering their stock at the nearest brook, and might have been on speaking terms with the Ten Commandments, and have indulged a hope of some day going to heaven, and—possibly to Boston."

Will not Mr. Crilly's readers be grateful?

Macmillan's Magazine contains an article-sketch on the kauri-gum diggers of the extreme north of New Zealand; also a paper on "The Coming of Spring," and one on "Western Influence on Japanese Character."

THE PREPOSTEROUS EXTRAVAGANCES OF AMERICAN WOMEN.

THIS is really the theme of, at any rate, the first part of the third of Mr. Cleveland Moffett's series of papers in *Success* on "The Shameful Misuse of Wealth." His estimate, in the March number of *Success*, of what some New York women spend on dress having called forth some indignant protests, Mr. Moffett went over and re-verified his facts, only to find that if he had erred at all he had done so on the side of under-statement. Throughout this article dollars are translated into pounds, on the basis of five to a pound sterling.

For instance, he said that New York women spent up to £1,200 on a sable coat, fondly imagining that this was a high price. Now, however, he finds that it is only a very moderate one—very low indeed for a coat of fine sable. At a leading New York furrier's "a short coat of rather light skins, moderate quality," was priced at £2,000. On Mr. Moffett humbly inquiring what a good coat would cost, this magnate of fashion replied that the real Imperial sable, "very dark, with silver lights playing through the soft fur," came to £110 a skin, or £2 a square inch. A moderately long sable coat, say 30 inches, would thus come to £6,600, and a coat reaching to the ankles to £8,800!

"And you sell coats at such prices?" was the amazed question.

"We sell this kind of sable as fast as we can get it."

And the writer, who had been attacked for stating £6,000 "as the maximum yearly sum that a few New York women spend on dress, *including everything*," felt himself more than justified when he found that merely a fur coat, boa and muff may come to nearly £10,000!

Again, he had said that a New York woman would spend up to £160 or £200 on a special ball or dinner dress:—

Well, I have from an expert the details of a certain wedding dress on which the lace alone, Devonshire Honiton, cost £300. And a friend of mine saw at Madame Rouff's, in Cannes, a "robe" of embroidered linen handspun and hand woven with threads so fine that they had to be handled in a damp cellar lest they snap in dry sunlight; over this was a solid mass of hand embroidery patterned by a *prix de Rome* artist with insets of *point d'aiguille* lace, and this "robe" alone sold for forty thousand francs (£1,600) *before the dressmaker began her work!*

This same arbitress of fashion, Madame Rouff, considered £660 delivered in New York for an American bride's trousseau lingerie (no household linen, of course) was mean to a degree a trousseau only fit for a schoolgirl. "You should see what we sell the great ladies of Russia! Why, there wasn't a single monogram designed to order for that bride, not one embroidered letter that cost over five francs!"

As regards extravagance, the writer does not know whether or not Russian women outvie Americans; but, as will be admitted, the latter do exceedingly well. Witness the following summary of items of expenditure, submitted to and confabulated over by several New York dressmakers and milliners on Fifth Avenue, who all, moreover, consider this summary *considerably too low*:—

ESTIMATE OF THE AMOUNT SPENT ON DRESS PER YEAR BY MANY RICH AMERICAN WOMEN.

Furs and fur accessories	£1,000
Dinner gowns	1,000
Ball and opera gowns	1,600
Opera cloaks, evening and carriage wraps	500
Afternoon visiting and luncheon *toilettes*	600
Morning gowns, shirt-waists, and informal frocks	600
Automobile furs and costumes	400
Negligees	160
Lingerie	300
Hats and veils	240
Riding habits, boots, gloves, etc.	150
Shoes and slippers, £160; hosiery, £100	260
Fans, laces, small jewels, etc.	500
Gloves, £90; cleaners' bills, £200; handkerchiefs, £120	410
Annual total	£7,720

On the whole, Mr. Moffett sees no reason to modify his estimate that six thousand New York women spend a total of over £8,000,000 a year on dress:—

And that leaves Chicago, Boston, Philadelphia, and the rest of the country out of consideration. There are certainly ten thousand rich women in America who could save for the poor at least £6,000,000 a year by simply reducing their annual dress allowance to £600. And after all a woman *could manage* to dress on £600 a year!

Against this, the average amount spent on clothes by an ordinary tenement family of six or seven persons is not quite £10 a year.

The writer takes the sensible view that women dress not so much to please men as to please themselves and for general admiration. If it were simply to attract men, as a method of husband-hunting, why should the most lavish dressing be done by married women?

I stopped once at a quiet New York hotel, and in the dining-room happened to sit near a married couple who nearly always ate alone. And I noticed that every evening the lady wore a new gown. After about a week I began to watch for the reappearance of gowns I had already seen, but she still appeared in new ones, each more elaborate, one would say, than the others. This actually continued for about six weeks, when I left the hotel. I am sure I saw that lady in at least thirty gowns—costly gowns, imported gowns, velvet gowns, embroidered gowns, lace gowns, and all for hum-drum dinners with a commonplace husband.

His practical suggestion is as follows:—

Why might not American women adopt some such simple and effective plan in connection with their dress allowance, so much for a ball gown, so much for miserable mothers, this for an opera clock and this for shivering children? Why not? Fashion can regulate benevolence as well as the width of sleeves. It is merely for women to get it into their system exactly as they give ten cents to a waiter or twenty-five cents to a Pullman porter. Nothing compels them to do it, *but they do it.* And ten per cent. on dress would mean £800,000 a year from rich New York women alone, £800,000 a year for the poor. And the rich women would scarcely feel it.

Charity that costs nothing, in fact. Whereas for the charity that costs something one has to go to the tenements. The following story is too good to be missed:—An American teacher had a class of seven

slum children, from the poorest tenements, and on the day before Christmas they came forward shyly, one by one, and gave her the following articles :—

A faded carnation (picked from a garbage can).
A picture cut from a Quaker Oats box.
A stick of dirty candy.
A broken cigarette box.
A small round pebble from the sea-shore.
A silver ticket that comes on muslin.
A little pink pill-box.

Another point of Mr. Moffett is that the excessive extravagance and ostentatious display, not only in dress but in entertainments, such as the Bradley-Martin and the Hyde balls, contrasting with the terrible poverty of the tenements, embitter public feeling to a dangerous extent. At the Bradley-Martin ball Thirty-third Street was barred to all but invited guests—to the justifiable indignation of the public :—

One indignant individual who insisted on his right to pass the lines was arrested and brought before a magistrate. The magistrate promptly released him, with this comment : "Such things lead to class distinctions that have ever been abhorrent to the American people, and that argue no good for the future of the nation."

Of the immense amount of money spent most goes to people already rich—big dressmakers. decorators, and trusts of various kinds ; and in a few hours of all these thousands of pounds nothing remained but some faded flowers, scraps of food and rumpled costumes. These rich people's follies reported in the papers are exaggerated and made more foolish still. But, Mr. Moffett contends, people would pardon Mrs. F—— G—— for taking her fluffy poodle into supper and feeding him on truffles, champagne and ices ; they would overlook the Louis XVI. buttons of Mr. Bradley-Martin's coat, and Mrs. Bradley-Martin's jewels, if only these *richissimes* remembered at the same time out of their superabundance to give something to or to do something for the poor. Certain it is, he thinks, that America is waking up more and more to the problem of wasted wealth and poverty, and that the day of vulgar ostentation has reached its meridian.

OUR NEGLECTED MONUMENTS.

WORK FOR THE NEW MINISTRY.

THERE is an admirable article on the subject of the preservation of historical monuments in the *Quarterly Review.* In this matter we, in Britain, are "scandalously behind our neighbours on the Continent. The Reviewer describes the legislation on the subject in France, Italy and Austria.

AN ANCIENT MONUMENTS COMMISSION.

The suggestion is made that the Government ought to take immediate action.

The Historical Manuscripts Commission has done invaluable work in examining and describing the contents of British muniment chests, both public and private. Here is a precedent that might well be followed in regard to monuments in general. The appointment of a royal commission, with a view to the preparation of an inventory of all monuments of artistic or historical importance throughout the British Isles, is probably the most effective practical step which Government could take, while, at the same time, it is the easiest.

FAILING GOVERNMENT ACTION ?

The new Cabinet will, it is to be hoped, act upon this hint. In the meantime—

Apart, however, from the question of any general Monument Act of a sweeping kind, much may be done by permissive legislation, opening the way to local action in favour of preservation. What is evidently required is some permanent agency representing the popular mind at its best and always kept in working order. In every place there must be at least one man who will make it an affair of conscience to interest his fellow citizens in the past history of their district, to open their eyes that they may read this history in stones, and realise the importance of the preservation of the record. Care should, above all, be taken to bring up the young to take delight in the memorials of old time.

SOME RECENT VANDALISM.

The article opens with a description of the destruction, actual or proposed, of interesting historical monuments at Berwick, Penrith, Newcastle and Croydon. In each of these cases—

the very first articles of the French Historical Monuments Act of 1887 would have rendered the proposed and partly accomplished acts of destruction illegal. In Germany, Italy, Austria, Belgium, Holland, and almost every other European country they would have figured on inventories kept by state-appointed commissions, and enjoyed the supervision of a general or provincial inspector of monuments.

AN EXAMPLE FROM AUSTRIA.

The action of Austria affords an example which we might follow with advantage :—

The Austrian Commission has for its function "to excite the interest of the public in the study and maintenance of monuments, and to assist the efforts in this direction of learned societies and of experts, so that the different races of the Empire may take pride in preserving the memorials of their past." There are twenty members, chosen for five years from among known experts in art, archæology, or history ; and the service is an honorary one. The Commissioners are supplied with eyes and hands by the ubiquity and watchfulness of their "conservators," a hundred and forty-six in number, distributed through a hundred and sixty-seven districts, into which the Empire has, for this purpose, been divided. Three hundred and forty-eight "correspondents" complete the network of agencies, through the meshes of which few monuments should be able to slip. It is the duty of these conservators to keep in touch with local societies and individuals, and to influence public opinion everywhere in favour of safeguarding the memorials of the past. They draw up inventories of the treasures of their districts, and report in all questions of restoration and upkeep ; and one of their functions is to study all projects for new railways, roads, and other public works, in view of any injury that these may threaten to public monuments.

A CHANCE FOR LORD AVEBURY.

Why cannot this kind of thing be done in Great Britain ?

When we compare this ample machinery with what is done in our own country, we find here only certain shy and tentative efforts at arrangements which on the Continent are in full working order.

At present there are now in all only forty-one monuments in Great Britain under the protection of the law. So far as any expenditure is concerned, those Acts have in Britain become almost a dead letter; and, since the death in 1900 of the Inspector of Ancient Monuments, General Pitt-Rivers, no successor has been appointed to the post.

ALL SORTS AND CONDITIONS OF WOMEN.

THE *Fortnightly Review* this month is largely a woman's number.

THE CURSE OF AMERICAN WOMEN.

Lucas Malet, in a paper on the Threatened Re-subjection of Women, discourses at large upon President Roosevelt's summons to the modern woman to return to her ancient *rôle* of the breeder of babes and the maker of beds. She does not say much that has any particular edge or point, excepting her diatribe against the pernicious influence of American women upon English Society. The American woman, Lucas Malet admits, may be tolerable in the United States—it is a new country, but in the old world the American woman is a moral pestilence. One of the features of our Society nowadays is—

a certain foolish contingent, whose aspirations are exclusively worldly, who ape the clothes and pastimes of their betters on insufficient incomes, regard marriage as the gateway to cheap intrigue, and waste their time at ladies' clubs with much the same detrimental consequences to family and household as is the case with women of the people who waste theirs in the public-house. They are given over to that most deadly of all delusions, the Worship of Appearances, with the result that nothing is really genuine about them from their enthusiasms to the material of their underskirts. They are infected by a greed of notoriety, of publicity, of gadding. They must catch the eye and be talked of. But all this is expensive, especially in the case of persons of no intrinsic importance. Somebody has to pay the bill. It is idle to pretend it is always the husband who pays it. These are hard sayings. I can only regret that they are not unmerited. In respect of this contingent there is incontestably great need of reform; and one could wish President Roosevelt's utterances might not only be read, but be very thoroughly digested, by them. And in all seriousness, I would submit that for the worship of the false God of Appearances, not to mention other delinquencies of the foolish contingent aforesaid, our American invaders, themselves mostly women, must be held responsible. Is it not they, to begin with, who in their republican simplicity have reduced our many and complex needs to two only, possession of wealth and opportunity of amusement? The American woman is a somewhat glittering creature. Usually she is wholesome, intelligent, and, to decline upon the vernacular, "perfectly straight," as well. Invariably she is very alert, very articulate, very self-confident. Her commercial instinct is strong, and in all her dealings she has a remarkable eye to the main chance. These may be qualities of eminent value in the evolution of the social system of a young country. In her natural environment and under the stimulus of the American climate, a climate which makes for the development of nervous energy rather than for that of sex—she doubtless is, as she rather loudly claims to be, the very blossom and crown of things feminine. But here, in the old world, not only are surrounding conditions very different, but we women are made of slower, heavier, yet more passionate and dangerously inflammable stuff. Light without heat appears to be common enough in her case. In ours it is practically unknown. And so it is not possible for us to go the lengths she does in certain directions, take dress and flirtation as examples, without definite and highly undesirable results. It follows that, notwithstanding her brightness and, as a rule, her virtue, the influence of the American woman not only in England but on the Continent, has been extremely harmful. It has made for frivolity, for extravagance, for selfishness. It has tended towards the decay of fine manners, towards lack of reverence and reticence, and an increasing impatience of restraint. It has brought us the interviewer, that enemy of the dignities of private life. It has taught us to spell Society with a capital letter. It has also taught us the art of self-advertisement in all its branches. It has gone far to indoctrinate us with the hardly grace-begetting belief that everything in life really worth having can be bought for hard cash; and that it is the primary duty a self-respecting woman owes herself to be in a position to buy it.

THE TRANSFORMATION OF THE JAPANESE WOMAN.

Ethel McKenna writes charmingly upon "The True Chrysanthemum," sketching the process of evolution through which the Japanese woman is being subjected:—

Some thousand and more years ago her position was almost on an equality with that of man, and she played an important *rôle* in the making of Japanese history. Around the person of Jingo Kogo, the great Empress conqueror of Korea, hang many legends.

Her husband disbelieved in her, but after his death she achieved great conquests.—

It is curious to note that the glory of Jingo's achievements have not been allowed to remain a glory to her sex. Legend, the vehicle of Buddhist priests, ascribes her wonderful career to the influence of her unborn son, who so distinguished himself in life as to be accorded the position of the War Spirit in the Walhalla of the Japanese Gods.

As the penalty of conquering Korea Chinese ideas about women invaded Japan, and a period of subjection set in:—

"The only qualities that befit a woman," says the great Japanese moralist, Kaibara, in the oft-quoted *Onna Daigaku*, "are gentle obedience, chastity, mercy and quietness."

To-day Kaibara stands on the eve of supersession. Another prophet has arisen, and the "New Great Learning of Woman," by Fukuzawa, strikes at the root of the ancient sage's theories. The new woman of Japan is to be her husband's equal.

To-day the woman question in Japan is going through the same phases as we have witnessed during the past fifty years in Europe and America, modified to some extent by the traditions of the race. Women, well taught and trained, are finding independence.

Before the new laws did so much to improve the condition of woman a wife could be divorced on the flimsiest of pretexts. And she never quite recovered from the stigma. Too much freedom in conversation was, however, sufficient; she could be dismissed for "loquacity," or for jealousy. No wonder Kaibara gave her recommendations on this point. Disobedience to father-in-law or mother-in-law was a well-established reason. Bad disease or larceny, like adultery or failure to produce an heir, were also accepted as grounds for a husband obtaining a divorce. But to-day the divorce laws of Japan are very similar to those of many European countries.

"The five worst maladies that afflict the female mind," to return to the words of the old moralist, "are indocility, discontent, slander, jealousy and silliness. Without any doubt these five maladies infest seven or eight out of every ten women, and it is from these that arises the inferiority of women to men. The worst of them all, and the parent of the other four, is silliness." And he recommends as a cure "self-inspection and self-reproach." Those who are intent on the re-making of Japan are finding another treatment. They are discarding the old national proverb, "Never trust a woman, even if she has borne you seven children," and are putting the sharpest of weapons into her hand. She is being emancipated and she is being educated.

THE SPORTSWOMAN.

Mr. F. G. Aflalo writes, on the whole, sympathetically, but not uncritically, upon women in the field of sport. He would bar them altogether from shooting. Shooting entails cruelty, especially when the shooter is a bad shot, which most women are. He objects to women even as spectators. They waste time, develop picnics, and are a general nuisance. He does not

think they should take to football, wrestling, or boxing. Everything else he would leave them free to adopt, although he has grave fears as to their achievements as yachtswomen.

Shooting excepted—and the exception is adventured without the faintest hope of its meeting with the acquiescence of the ladies themselves—woman should be made free of every sport and game. Save for some little regrettable results of physical overstrain, the golfing, cycling, athletic mothers of the coming race are more robust in body, yet not less vigorous in mind, than their grandmothers, who, with downcast eyes and abiding simper, shook crispy ringlets over eternal fancy work, studied the globes, and, like the almond-eyed, henna-stained women of the Orient, hid from the stranger and spoke only when they were spoken to.

With a very little tuition, however, in the rules of the game, a woman may be a far more desirable angling comrade than a man, for she comes out to catch fish, and her face is not concealed behind a whisky flask whenever you want a hand with the landing-net.

Sports open to women must be held to include hunting, hawking, fishing, hockey, golf, croquet, lawn tennis, horse-riding and driving, swimming, skating, cycling, boating, fencing, and archery.

The tendency to debase sport to the level of a picnic, which was noticed in the case of shooting, and which is noticeable even in modern otter-hunting, has no place in fox-hunting. Nor is there any foundation for the charge so freely brought against hunting women by those of their sex whose tastes or lack of means prevent them from following their lead. The easy golf links formerly laid out for women are nowadays for the most part obsolete, and their championship meetings are played under the hardest conditions.

In lawn tennis, badminton and croquet they are to all intents and purposes the equals of the men. Rowing, sculling and punting, if not overdone, are physically ideal exercise, and a jaunt up the Thames any fine Sunday in summer will show how prominent a part the sisters take in the lock-to-lock progress, while the brothers as often as not recline splendidly in the bottom of the boat as ballast.

AMBASSADORIAL PRIVILEGES.

THESE are recalled by Mr. Harold Macfarlane in the *World's Work* for May. The American ambassador, when he enters No. 1, Carlton House Terrace, is on American, not British, soil:—

The privileges that an ambassador enjoys when on duty are manifold; at home he may be untitled and a comparative nobody, but in the capital he is accredited to he enjoys all the prerogatives of an Emperor or a President.

That an ambassador is exempt from taxes goes without saying, for he is exempt from all cash payments in the sense that the same cannot be enforced by law. That he pays his bills and his rates which, unlike taxes, are applied for, is simply an act of grace on the part of an ambassador and his suite.

But so punctilious are ambassadors nowadays about paying their bills that this immunity is sometimes forgotten:—

An ambassador may engage with impunity in treasonable plots against the ruling monarch or government of the country to which he is accredited, a privilege that was indulged in more than once in the reign of Queen Elizabeth. He can, moreover, smuggle as many things as he likes into the country without the Customs authorities being able to stop him. But he must not keep a monarch waiting either on his doorstep or elsewhere.

He may, however, turn his back on a King when leaving the royal presence, and when bidding adieu to a Queen he may retire sideways, like a crab, and need not back out, like inferior mortals.

BURIED TREASURES AT THE NATIONAL GALLERY.

TURNERS IN TIN BOXES.

THE May number of the *Pall Mall Magazine* opens with an article by Mr. E. T. Cook, on the Buried Turners at the National Gallery.

THE OIL PAINTINGS.

In no particular do the conditions of Turner's will appear to have been respected. They were, says Mr. Cook, that the pictures should be kept together in a room or rooms to be added to the National Gallery and called "Turner's Gallery." This was to be built within ten years, otherwise the pictures were to go elsewhere.

It is fifty years since Turner's oil paintings came into the possession of the nation, but no attempt has ever been made to display them adequately. In the first place, the collection has been broken up and dispersed through the three kingdoms, and groups or series of pictures which ought to have been kept together have been scattered promiscuously in various galleries, while those which have been hung in the National Gallery are overcrowded or skied.

THE WATER-COLOURS.

But this is not all. The treatment meted out to Turner's water-colours is even more deplorable. Mr. Cook thus states the broad facts of the case:—

The total number of drawings, studies, and sketches by Turner's hand which came into possession of the nation was over 19,000. The total number of pieces, exhibited in any way, at the National Gallery is, however, only 1,156. In addition to these, there are seven collections in provincial galleries, and a few pieces are on "permanent loan" at the South Kensington Museum. The total number of pieces anywhere exhibited is about 1,700.

And what of the bulk of this vast collection of delicate drawings? Why, it lies buried in eleven tin boxes, not only inaccessible to the public, but taking serious harm from dirt and mildew! Mr. Cook pleads eloquently for the proper recognition and utilisation of these buried treasures, and concludes with a few suggestions which it is hoped the Trustees will take to heart.

In the first place, the present tin boxes should be abolished. All the more valuable sketches and drawings should be framed, and then enclosed in cabinets with sliding grooves. . . .

Large numbers of the pencil drawings should be distributed among art schools, for use as drawing copies and lessons in composition.

The remainder of the sketches and the drawings would remain at the National Gallery, arranged decently and in order, and made accessible to students. From time to time there might be temporary exhibitions, such as the authorities of the British Museum arrange out of their drawings and engravings.

A TURNER MUSEUM.

If it be finally decided that no more room is by the nation worth providing, then I suggest that a Turner House, or a Turner Museum, should elsewhere be established by private zeal, and that the Trustees of the National Gallery should be authorised to transfer thereto any pictures, drawings, sketches, or memorials of the artist for which the nation is unwilling to find proper accommodation.

BACK TO THE GOTHS.

A PLEA FOR A GOTHIC RELIGION.

MR. H. W. GARROD, Fellow of Merton College, Oxford, amuses himself in the April number of the *Hibbert Journal* in expounding to his readers the reasons why he thinks we should all boldly declare ourselves no longer Christians, but Goths. He maintains that the faith by which we live at present is neither Christian nor Hellenic, but something as different and distinct as Gothic architecture is distinct from that of the ancient Greek. He says:—

What is wanted to-day is that we should frankly accept this moral conquest of the Northern races, live openly under the government of their ideals, identify ourselves with these ideals, and develop them. As it is, we dissimulate. I would say, then: "Let us not be ashamed to acknowledge that by which we really live. Let us have done with pretence. Let us cease to call ourselves Christians when we do not follow Christ."

The best and most effective lives that are lived by men to-day are dominated by certain moral principles which come neither from Greece nor Palestine, but are a product of the ideals of the people of Northern Europe. The ideals of the Goths are our ideals, and these ideals are not the ideals of Christianity:—

The ideal of Christianity is what we may call holiness. The ideal of Hellenism may be said to be understanding or intelligence, under which word I would include a delighted co-operative energy of both senses and intellect.

The ideals of the Goths, he maintains, are the ideals of chivalry and honour, which recognise only one unpardonable sin, which is that of not being a gentleman, by which he means a man dominated by the spirit of chivalry and honour. Chivalry and honour, he says, are the cardinal virtues of Gothic morality, the peculiar property and creation of the Northern races. Mr. Garrod frankly avows that it is to the motions in the blood of old Adam that European society owes, and has always owed, its salvation. The great unarmed irresistible body of healthy human instinct ever cries, "Give us the world and the flesh, or we will smash every window in your palace of painted superstition." Mr. Garrod says:—

For I am convinced that the ideal which all healthy nations and all healthy individual men (if they could impartially analyse their ideals) set before themselves, is not the spiritual man, but what I may call the best kind of natural man. The morality of the North accepted with its lips the spiritual man, but in its life it soon began to make, in all directions, a return upon the natural man. Chivalry and honour I take to be the two main directions in which it essayed, at first perhaps unconsciously, this regress upon the natural man.

He is such a devotee of these two principles, and also of the world and the flesh, that he is willing to raise the devil to secure them. His exact words are as follows:—

Chivalry and honour are two great principles which it is to the interest of mankind to keep always alive at whatever cost. Though I should see these two principles, employing as their instruments lust and bloodshed, destroy a whole nation of men, I could none the less say, "Let us go forward; that is the price we must expect to pay for these two precious things."

He says that if we take away chivalry and honour from religion we have nothing left, nothing at least excepting the love of woman, which he says is the source of the deepest thoughts about God and the universe which the ordinary man ever comes to entertain. He asserts that there is at the present day a widespread dissatisfaction with the moral ideals of Christianity, and the human race will find no satisfaction for its deepest aspirations, either in Christianity or in Hellenism, but only in the ideals of the Goths.

The following passage, in which he denounces the ideal of duty, affords a good sample of the ideas of Mr. Garrod:—

I will maintain that there have been more crimes done in this world in the name of duty than good deeds. It resembles, in this respect, liberty. "O duty, how they have played with thy name!" The more we make the sense of honour take the place of the sense of duty, the truer and braver men do we become. As far as my own feeling goes, the very word "duty" sends a chill to the heart. The word "honour," on the other hand, seems to quicken the pulse every time it is spoken. It belongs to the world of romance, desire, enterprise, and limitless possibility.

The wonder is not that Mr. Garrod should have aired his pretty conceits, but that so grave an editor as the editor of the *Hibbert Journal* should have given his ideas a place in his magazine.

THE LIMITS OF NON-RESISTANCE.

AYLMER MAUDE, whose record adds significance to his words, contributes to the *Humane Review* a paper on the right and wrong of non-resistance. He objects to the non-resistant anarchists, that they impute malice and revenge as the primary motives of all who make, uphold, or invoke the law, one Chicago lawyer declaring that "all prosecutions are malicious, and all judgments are meted out in anger and hatred." He also objects that they confuse "violence" and "force." He distinguishes:—

I have known mental force used malevolently and harmfully, and I have known physical force used benevolently and beneficently. The real essential contrast lies between action which is helpful and action which is harmful, or between intention that is benevolent and intention that is malevolent. The pretence that all force that is physical is bad, is, one would have thought, an absurdity too gross to impose on any intelligent being.

Indefiniteness or absence of law does not, he argues, conduce to peace:—

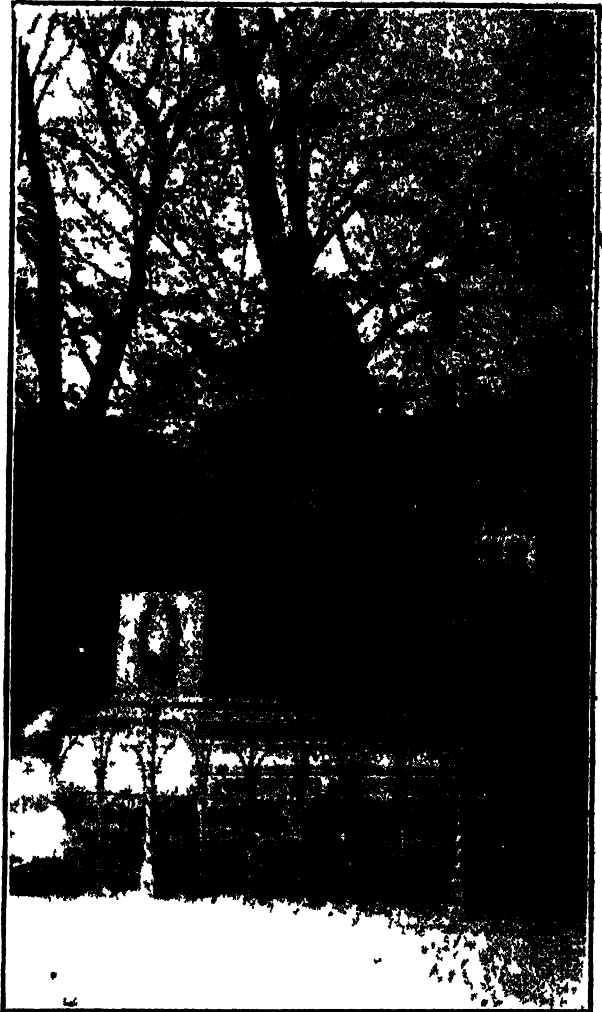
We know from the results of the so-called "Tolstoy Colonies" attempted in Russia, in England, and in America, that by abandoning the *definiteness* of ordinary social, business, and legal life, people—even good people—create more friction and discord than is common in ordinary life. . . . Anarchy (which is indefiniteness) is not an ideal. Definiteness in human relations renders peaceful co-operation possible. Indefiniteness renders strife and contention possible. Yet there are men among us to-day to whom the past seems one prolonged, gigantic, and meaningless blunder.

What we have to do is not to reverse but to continue the progress which has gone on since the dawn of human history. The writer shrewdly concludes:—

Every thinker finds it necessary to add *some* words to explain or define the injunction, "Resist not evil." Tolstoy makes it mean resist not evil *by physical force used to restrain any human being;* I would say, resist not evil *by evil.* Our guide in life cannot be a rigid, external rule, but must be a vital principle, leaving scope for man's reason and conscience to be constantly exercised on the complex problems life sets before us.

THE UGLY DUCKLING OF DENMARK.

BY PROFESSOR GEORGE BRANDES.



THERE is a charming paper on Hans Christian Andersen by Professor George Brandes in the May *Contemporary Review*. In the "Ugly Duckling" Andersen wrote his own life story. Dr Brandes says:—

The supreme work of art among Andersen's fairy tales is and remains the "Ugly Duckling," the little story, only a few pages long, which he wrote when nearly forty years old, and in which everything that can justly be called his "Life's Story" is explained in transfigured, imperishable form.

Andersen was from the first (and until his death) the poor, long suffering, and ever and anon humiliated lad who had only been able to make his way with the help of people's good will, and who, all through his youth and early manhood, was obliged to rely on benefactors and patrons and to toil on painfully under protection. His whole behaviour bore the impress of it, even after he had become world renowned and world experienced, and, especially abroad, where he was worshipped, had learnt how to assert himself as "the great man."

"The Ugly Duckling" is certainly one of those pearls of the world's literature that will never depreciate in value, because it is the quintessence of all its author's being, even of the ambition which was the fundamental trait of his character, of the melancholy that determined his temperament, of the martyrdom which, in his own eyes, his poetic career became, even of the triumph which, in the humility of his heart, he saw in recognition and admiration, but above all of his gift of observation, his playful wit, the frolicsome, triumphant humour with which he revenged himself on sluggish stupidity and malice, for their want of due appreciation and understanding.

Andersen was singularly, almost absurdly, sensitive—in this resembling Lord Rosebery—to the opinions expressed about him by other people.

The Monument to Hans Christian Andersen.

Hans Christian Andersen.

But here is a delightful story of how the Ugly Duckling, after he had become a Swan, avenged his wrongs:

It had been one of the mortifications of his younger days that the Dean of the Diocese, who, in his day, had confirmed him and had treated him badly, had put the affront upon him of placing him, as a poor boy, down in the bottom of the church, among the curate's poor candidates, although he properly belonged up above, among the Dean's own. He chanced to hear that this man now held a post in the island of Fohr. "So I asked the King," said Andersen, "if I might for once have one of the royal carriages, with coachman and footman in red livery, the same as the royal family themselves used, placed at my disposal to pay a visit. The King smiled and said, 'With pleasure,' so I drove out in the royal carriage, with panached horses, and coachman and footman, to pay a visit to my old diocesan Dean; the carriage waited outside while I was in the house. That was my revenge." It seems to me that we have Andersen's whole self, his romantic bent, his old humiliations, and his vehement, half childish greed of honour, in this little story.

THE SIMPLON TUNNEL.

FROM an article by Leon Monnet, in the *Engineering Magazine*, the following facts are taken relating to the world's greatest tunnel and the immense labour of constructing it. Napoleon's road over the Simplon, nearly a hundred years ago, cost £700,000; the seven years' work (nearly) of making the Simplon Tunnel will cost about £3,200,000. "The construction of such a tunnel offered special difficulties which could not have been overcome twenty-five years ago.

The mountain is 1·2 miles high above the tunnel in some places, and at such a great depth the heat becomes excessive. The workmen had to support a temperature of 95 to 104 deg. F., while it was only 84 deg. at Mt. Cenis and 86 at St. Gothard. Special [illegible] water sprays were employed [illegible] of the tunnel.

The drilling of the tunnel began on August 1st, 1898, and should have been finished about May 1st, 1904, but delay was caused by the springs of hot water, unexpectedly met with, which flooded the tunnel. The two gangs of workmen did not meet in the middle of the tunnel because on the Swiss side the work advanced more quickly, since the flow of the water was less than on the Italian side, only ten gallons per second instead of two hundred. The rock temperature sometimes reached 13[illegible] F., and to lower this temperature and ventilate the tunnel powerful fans sent from fifty to sixty million cubic feet of cold air per twenty-four hours along the tunnel. It should be readily realised that during the five years of work in the tunnel there was no stopping except to verify the alignment, the gangs of men working in eight-hour or sometimes in six-hour shifts. Sometimes half a ton of dynamite a day was used for blasting the rock, which was often so hard that while the tunnel was passing through the granite the shops had to re-temper and re-sharpen up to 13,000 mine chisels every twenty-four hours. Progress was also delayed by some very soft rock being reached, by cold springs being encountered, and by various other causes. With one thing and another the cost works out at £1,000 per yard. The next longest tunnel, the St. Gothard, is 9·25 miles as compared with the 12·9 of the Simplon, and its construction took nine years. Its cost per yard, however, was only £140.

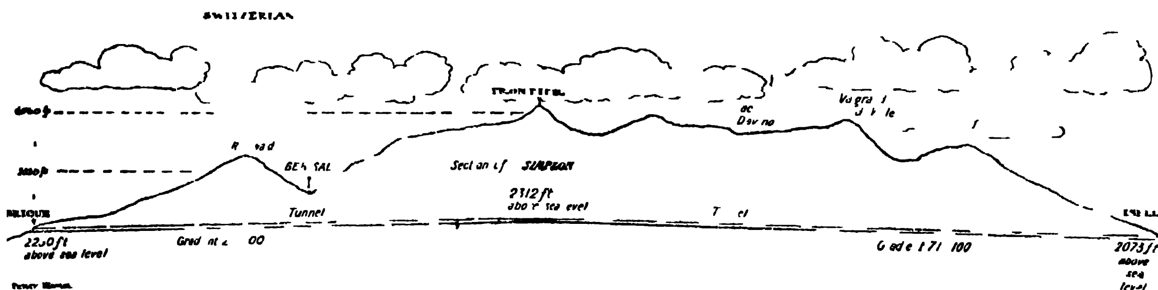
THE LONDON OF THE FUTURE.

MR. FRANCIS GRIBBLE, in the *Grand Magazine*, describes "London as It Will be."

1. Streets are being widened. The Strand will be 80 feet wide at its narrowest part. Piccadilly is to be widened to 80 feet. So will other great thoroughfares.

2. The Embankment is to be pushed westward from Parliament House to Chelsea, the Albert Embankment eastward, till London becomes a city of spacious quays, like Paris.

3. The permanent buildings to be erected presently in Aldwych and Kingsway are worthy of the dignity of this great improvement. There will be theatres among them—theatres somewhat like the new Gaiety—and there will be a fitting memorial to Gladstone, which Mr. Hamo Thornycroft is now designing. It will be a boulevard site, too, with trees, arrangements having already been made that planes and acacias shall be planted and cared for by the County Council.



4. The Council contemplates providing house room for nearly one hundred thousand persons, and it provides proper accommodation at low rents. At Millbank there is already a complete colony of artisan dwellings. There will be numbers of such blocks in the London of the future, and there will also be numbers of cottage estates—estates for 6,000 persons at Norbury, for 8,000 at Tooting, for 9,000 at Hammersmith, and for 42,000 at Tottenham.

5. Trams electrified, with motor omnibus connections, will run faster, oftener, and further than now; they will cross the bridges and run along the Embankment.

6. The Underground will be electrified; there will be an immense extension of the service of the Twopenny Tube. From Hampstead, from Highgate, from Finsbury, from quite a number of places.

7. The steamboats will make the river a public highway.

8. Shallow tramways will run at thirty miles an hour under the most crowded streets. An experimental line is now under construction from Theobald's Road to the Strand.

Sectional view showing how the 12¼-mile tunnel pierces the Simplon Range.

THE SCHILLER CENTENARY.

THE NATIONAL POET.

SCHILLER died on May 9th, 1805. Dr. Wolf von Schierbrand, in the *North American Review* for April, takes this fact as a peg on which to hang an interesting and sympathetic appreciation of Schiller, whom he regards as pre-eminently the national German poet, the favourite poet of German youth and German women. The popular notion that Goethe holds the first place among German poets is, he maintains, disproved by the fact that millions more of Schiller's works have been sold than of those of any other German writer. Schiller's dramas are always on the stage, and quotations from Schiller are found on every German tongue. Dr. von Schierbrand maintains that:—

> Goethe has never been "popular" in Germany; there but a few of his works have been [illegible]. He has always been, and he remains to-day, the poet of the select few, and not only Heine but such second-rate stars as Uhland, Theodor Körner, Kleist, Hauff have been, during nearly all this time, successfully vying with him for the prize of popularity. If ever a poet could be termed "national," in the [illegible] sense of that word, it is Schiller.

Schiller was the poet who, until the German Empire was unified, inspirited the whole of the German nation:—

> The Schiller conception of the world—his notion of country, home and family, of love, honour and duty, his belief in the brotherhood of man, the oneness of the universe, and the inherent goodness of the human heart, his idea of Divine government therein—within a decade of the poet's death became part and parcel of the German soul.

After the war Schiller was dethroned, and nearly every young German deemed himself a Bismarck, a disciple of Nietzsche. During the last fifteen years this false god has been dethroned.

> Once more the German people, high and low, recognise in him the poet who most admirably expresses the German soul at its best, the national consciousness at its best.

ABJECT PENURY HIS PORTION.

It is somewhat sad to remember that although the German nation has almost deified Schiller since his death, he spent his life in extreme poverty:—

> When the Körners offered him an asylum in Dresden for a time, in 1785, he was almost at starvation point; this was the time when he wrote his magnificent "Song to Joy," as well as his "Don Carlos." When Goethe secured for him a professor's chair of history in Jena, the salary was 200 thalers (about 145 dollars) a year. In those days and until his death apples and strong coffee had become his inexpensive passion. The apples he usually kept in a drawer of his writing desk, and their odour, he claimed, furnished him inspiration. When he wrote his last, and perhaps most finished, drama, "William Tell," a year before the end came, he was so overworked and badly nourished that at night he kept himself from falling asleep at his work by munching apples and steeping his bare feet in cold water. When he wrote his "Fiesco," while a fugitive at Mannheim, he lived joyously on a diet of potatoes—potatoes baked, boiled, fried; potatoes of which he had bought a cart load from a peasant, and which with their bulk took up about half the floor space in his garret. No wonder his health broke down! Even Chatterton affords no more pathetic spectacle. Abject penury was Schiller's portion through life.

Nevertheless, as Dr. von Schierbrand exultantly declares:—

> The year 1905 sees, then, Schiller among the few generally recognised great poets of the world. His message in the main still rings true to our ears and to our hearts.

A FRENCH APPRECIATION.

On the occasion of the centenary commemoration of the death of Schiller, C. A. S. de Gleichen, a descendant of the poet, contributes an article on Schiller to *La Revue* of April 15th.

Madame de Staël's judgment of Schiller, says the writer, has never been equalled or surpassed by any biographer of the poet. She wrote:—

> Schiller was a man of rare genius and perfect good faith. No career is more beautiful than the literary career when it is followed as Schiller followed it. He was admirable for his virtues as well as his talents. His conscience was his muse. His writings were himself, they expressed his soul, and he did not conceive it possible to change a single expression if the inner thought which had inspired it had not changed. He lived, he spoke, he acted as if the wicked did not exist, and when he depicted them in his works it was with more exaggeration than if he had really known them.

A CITIZEN OF FRANCE.

The writer recalls the interesting mark of sympathy accorded to Schiller by the revolutionary government at Paris in nominating him a French citizen. The document was wrongly addressed, and did not reach the author of "The Robbers" till October, 1793! He acknowledged it as a document from the dead, for Danton and Clavière signed it, a letter accompanying it bore the signature of Roland, and Custine had charge of it during his first German campaign; and all were dead before the document reached its destination.

"DON CARLOS."

A second article on Schiller appears in the April *Deutsche Rundschau*. Herr Alfred Gercke gives a history of "Don Carlos," the origin of the drama, its problems, changes, criticisms, etc. It is a very long and difficult drama, but it seems to have suffered alteration and cutting down. The plan of a play on "Don Carlos" was conceived in 1782, and during the first half of the following year Schiller devoted himself to the writing of it at Bauerbach; after an interval of nearly a year, the work was resumed at Mannheim and gradually completed in Saxony, so that it was the summer of 1787 when the play was quite finished. The writer says Schiller's "Don Carlos" was never really finished, and he ought to have re-written it. But the first three acts being in the hands of the public, Schiller attempted to adapt the second half of the play to what he had already published, and in the interval Schiller himself seems to have undergone considerable change in his ideas. It was the critical moment of his life when he had to decide whether he was born to be a poet or not. The first scenes of "Don Carlos" are described as having been written with his heart's blood; in no other drama have the heroes so much soul, pulse, and nerve from the poet himself, and to them he imparted his own views and feelings.

GEORGE BERNARD SHAW.

A WHISTLER OF THE STAGE.

WE shall soon have to hire a slave to whisper in the ear of Mr. Shaw "Remember thou, too, art mortal!" A few weeks since Sloane Square was almost blocked up with carriages when the King was pleased to go to see "John Bull's Other Island," and now we have both the great quarterlies treating him quite seriously as a dramatist of genius and a serious reformer. The apotheosis of our Dramatic Whistler is bewilderingly sudden. The *Edinburgh Review* considers him

as a reformer—a voice crying in the wilderness of trivial work and mean ambition, a voice still hoarse with exhortation, still a little forced from having had to carry over the heads of a crowd.

His supreme gift as a dramatist is to produce an impression of life which seems and which is more real than reality. His plays seem to write themselves:—

Mr. Shaw contrives to make even his most serious work simmer with laughter, but the humour is evolved, not added; epigrams are not stuck on the outside of the talk like sugared almonds, and even his wit suffers, as it should suffer, when removed from the setting.

Considering the difficulty of seeing Mr. Shaw's plays on the stage, one must be grateful to his ingenuity in making them acceptable in the study.

REFORMER.

He regards romance "as the great heresy to be swept off from art and life—as the food of modern pessimism and the bane of modern self-respect," and declares that "idealism, which is only a flattering name for romance in politics and morals," is as obnoxious to him as romance in ethics or religion.

Now, perverse as such views may seem to those who never have taken the road beside a reformer, they will be recognised as inevitable by those who have.

PROBLEM POSER.

Problem has ever been at the root of his work. No drama without conflict; no conflict without something to decide. All life worthy the name is a problem; and every play that would reproduce life must be either a problem or a platitude. A people that is unconscious of having problems to solve, that has outlived its interest in the interpretation of life, is beginning to be at the end of its intellectual resources. Senile decay is as surely indicated in a nation as in a man by a dull acquiescence in the immutability of things; and the literature of a waning race is almost always diverted from the great questions of conduct before it expires in æsthetic trivialities. Hence Mr. Shaw's determination "to accept problem as the normal material of the drama," and his understanding of drama as "the presentation in parable of the conflict between man's will and his environment," are a pledge at least of vitality in his ideas, and vitality working itself out as creative philosophy is the supreme necessity to the art of the stage.

PHILOSOPHER.

Of Mr. Shaw's philosophy a good deal has been said. It is, indeed, a little too novel for the creation of popular drama. But years have already modified its novelty to himself, and, as he shortens sail, the years will bring the van of the public within more certain hail of him. The defiant assertiveness of the earlier plays has given place to tolerance.

Greater work than he has done he may yet do; but it must be conceived by a less contentious spirit and wrought in a serener air. He has done for us a deal of much needed preaching; but while it needs but the understanding of what men should not be to equip the Preacher, to the Pardoner must be discovered the deeper mystery of what they are.

A NEW WAY TO PLAY SHAKESPEARE.

AN INTERESTING EXPERIMENT.

THE April number of the *Deutsche Rundschau* is an unusually interesting number. Herr A. Brandl, who contributes an article on the Playing of Shakespeare's Plays, thinks the long pauses between many of the acts and scenes spoil the illusion and are extremely inartistic. This is notably the case in the tragedies of "King Lear" and "Hamlet," and in the King-Dramas, where the numerous pauses tend to break up the pieces into a series of tableaux. If "Hamlet" could be presented in two hours, how different would be the effect!

An interesting experiment is to be made at Weimar this month, when "Richard II." will be played with practically no intervals between the scenes. Weimar does not possess a revolving stage, but to get over the difficulty a middle curtain is to be used. Played in this way the most important scenes will come more into the light, and the minor ones can take their proper place. The writer takes each act in turn and shows how the curtain will be used between the scenes to avoid the usual pauses, while the attention of the spectator will be better concentrated on the leading action, and the scenes merely intended to arouse sympathy will fall more into the shade.

WATTS AND WHISTLER.

AN article on these two artists in the *Quarterly Review* says that while Whistler, "the pamphleteer, the journalist, the dandy, the pugnacious litigant," was always in evidence, Whistler the artist always shrank from life. He quarrelled with life, and "the root of all his quarrel with life lay in the one really deep emotion he possessed—the love of pure beauty." Watts, says the writer, "presents at almost every point the completest contrast to Whistler":—

He clung always with a genial pertinacity to what was hopeful and elevating. He was positive and generous where Whistler was negative and cynical. His easily kindled enthusiasm for what was noble silenced the critical and discriminating faculties of the intellect.

We are not, then, to look to Watts for perfection; each picture of his was a struggle to express some idea which stirred his emotions. He was bound to be experimental and tentative in his efforts to find for this the expressive symbol. And the very importance of the ideas to him, the high duty which he believed lay upon him to utter them to the world, prevented him from a curious preoccupation with the mode of their embodiment.

As to Watts's future position among the world's great artists, the reviewer finds it far more difficult to prophesy than in the case of Whistler. His verdict is not altogether favourable to Watts.

Whistler accomplished something which had never been done before, accomplished it finally and definitively. It is something palpable and evident, but it scarcely claims the very highest rank. But Watts calls up perpetually the memory of the greatest creators, of Michelangelo, of Titian, of Rubens; and, if we are perfectly frank, his work will not quite stand the test thus inevitably applied. To the present writer it seems that Watts belongs to the race of the great improvisers, the race to which Tintoretto, Blake, and El Greco belong, rather than to the race of the supreme creators, the kindred of Titian or Rubens whom he emulated.

MR. H. G. WELLS ON SOCIOLOGY.

THE distinction of the *Independent Review* for May is a very valuable paper by Mr. H. G. Wells on "The So-called Science of Sociology." He takes his start from the first year's record of the Sociological Society. He points out the unsatisfactory diversity of opinion with regard to sociology. It "is evidently one of those large vague words to which everybody attaches a meaning no one can express." But, he avers,

I believe that to go back into metaphysics, into that field Comte and Herbert Spencer so scornfully refused to enter, is the way to get round the tangle which at present condemns sociology in its totality to futility.

With this bold start, Mr. Wells goes on to run full tilt at the modern deification of science, the so-called knowledge that yields to "the illusion of exactitude." Of that illusion he pillories Comte and Herbert Spencer as eminent apostles.

"THE UNIQUENESS OF INDIVIDUALS."

Then he proceeds:—

Yet it is quite possible to hold, and there is a growing body of people who are beginning to hold, the converse view—that counting, classification, measurement, the whole fabric of mathematics, is subjective and deceitful, and that the uniqueness of individuals is the objective truth. As the number of units taken diminishes, the amount of variability increases, because individuality tells more and more. Chemistry and physics give results more in harmony with mathematical assumption than, for example, bacteriology, bacteriology than mineralogy, mineralogy than Mr. Bateson's horticultural experiments, these than the generalisations of zoology, and these than anthropology, simply because, in each case, the science is dealing with a larger, more complex unit, and with a smaller number of units, and individuality is creeping in. Could you take men by the thousand billion, you could generalise about them as you do about atoms; could you take atoms singly, you would find them as individual as your aunts and cousins. That concisely is the minority belief, the belief on which this present paper is based.

DARWIN'S NOT THE "SCIENTIFIC METHOD."

He goes on to say that the so-called scientific method really only comes up in the science of which the individuality of the units can be pretty completely ignored. Then, with characteristic boldness, Mr. Wells proceeds to state that:—

The great advances made by Darwin and his school in biology were not made, it must be remembered, by the scientific method, as it is generally conceived, at all. There was no essential difference between the establishment of his generalisations and any intelligently conducted historical research. He conducted a research into pre-documentary history. He collected information along the lines indicated by certain interrogations; and the bulk of his work was the digesting and critical analysis of that. For documents and monuments, he had fossils and anatomical structures, and germinating eggs too innocent to lie, and, so far, he was nearer simplicity. But, on the other hand, he had to correspond with breeders and travellers of various sorts, classes entirely analogous, from the point of view of evidence, to the writers of history and memoirs.

"COCKSURE SCIENCE."

He remarks that to most people the word science conveys the quality of certitude. He adds:—

So far as the movements of comets and electric trams go, there is no doubt practically cocksure science; and indisputably Comte (who saw nothing very much in Plato) and Herbert Spencer (who couldn't read Kant) believed that cocksure could be extended to every conceivable thing. The fact that Herbert Spencer called a certain doctrine Individualism reflects nothing on the non-individualising quality of his primary assumptions, and of his mental texture. He believed that everything was finally measurable; he believed that individuality (heterogeneity) was and is an evolutionary product from an original homogeneity; and the thought that it might be inextricably in the nature of things probably never entered his head. He thought that identically similar units build up and built up atoms, molecules, inorganic compounds, protoplasm, conscious protoplasm, and so on, until at last the brain reeled at the aggregation. This piling up from simplicity to incalculable confusion was really all the individuality he envisaged, and it is all the individuality science ever does seem to envisage.

WHAT SOCIOLOGY IS NOT.

Mr. Wells insists that we must all boldly face the fact that hard, positive methods are less and less successful just in proportion as we deal with larger and less numerous individuals. And consequently:—

We shall realise that all this talk of the organisation of sociology, as though presently the sociologist would be going about the world with the authority of a sanitary engineer, is and will remain nonsense. We shall regard with a less credulous charity sociology imitating zoology, and parodying physiology, and emulating the viler obscurities of the theorising biologist.

WHAT SOCIOLOGY IS.

He agrees with the Positivist that sociology stands at the extreme end of the scale from the molecular sciences. "In these latter there is an infinitude of units; in sociology, as Comte perceived, there is only one unit."

In humanity we encounter consciousness, we encounter self-will, and he reaches the conclusion:—

Sociology must be neither art simply nor science in the narrow meaning of the word at all, but knowledge rendered through personality, that is to say, in the highest sense of the term, literature.

THE SCIENCE OF UTOPIAS!

On this basis he proceeds to insist that we shall have to substitute for the classification of the social sciences an inquiry into the chief literary forms that subserve sociological purposes. One of these is history, such as Buckle's, Lecky's, Atkinson's, Gibbon's. He thus leads up to his second source:—

The history of civilisation is really the history of the appearance and reappearance, the tentatives and hesitations and alterations, the manifestations and reflections in this mind and that, of a very complex, imperfect, elusive idea, the Social Idea. It is that idea struggling to exist and realise itself in a world of egotisms, an... alisms, and brute matter. I think, in fact, that the creation of Utopias—and their exhaustive criticism—is the proper and distinctive method of sociology.

THE TRUE METHOD.

Mr. Wells has now reached his constructive principle, and asks, if sociology is the description of the ideal society and its relation to existing societies, would not this give the synthetic framework required? All the sociological literature beyond the province of history that has stood the test of time and established itself in the esteem of men is frankly Utopian. The method that he suggests is therefore as follows:—

The institutions of existing states would come into comparison with the institutions of the Ideal State, their failures and defects could be criticised most effectually in that relation, and the whole science of collective psychology, the psychology of human association, would be brought to bear upon the question of the practicability of this proposed ideal.

INCITING TO ASSASSINATION.

A SCANDALOUS ARTICLE ON THE TSARINA.

I HAVE repeatedly drawn attention to the extraordinary malignity of the attacks upon the Tsar which have appeared from time to time in the *Quarterly* and *National Reviews*. I pointed out that the natural and inevitable deduction that would be drawn by the readers of such articles was that the sooner the Tsar was murdered the better. How absolutely just was this criticism is shown by the publication of a leading article in the *Daily Express* of May 1st, based upon the latest effusion of this pseudonymous writer, which appears in the current number of the *National Review*. The worst of it is that the moral of this latest outpouring is that its readers can hardly fail to come to the conclusion that the Tsarina should also be assassinated, for she is declared to be the chief culprit. Now, much has been said that ought not to have been said about the Dowager Empress, our Queen's sister; but hitherto not all the anonymous advocates of murder have ventured to assail the Empress, who, as Princess Alice's favourite daughter, was the granddaughter of Queen Victoria.

"The Tsar," says this anonymous reviewer, "is become the one hindrance to the well-being of the people." The Tsar is weak, but he is influenced for evil by his wife.

The writer maintains that the Tsar's weakness has been aggravated by injudicious but well-meant efforts on the part of the Tsaritsa to cure it. "A soft feminine voice uttering loving words and bracing exhortations in the language of Shakespeare stimulated him to endeavours which took a wrong direction. Nicholas having dismissed his ambitious Minister, the halo of the Tsardom departed from him and he thenceforward submissively hearkened to the soft sweet voice in the boudoir: 'Show them that you are a real Monarch whose word is law.'"

Dealing with the issue of the famous manifesto, the article proceeds:—"The outer world will doubtless read the manifesto with indulgent eyes when he learns that it was the handiwork of a devoted wife, whose wishes and thoughts were shaped by a loyal seaman, Prince Putyatin, who, with the help of Shirinsky Shikhmatoff, actually wrote the manifesto by which the destinies of 140,000,000 human beings were to be decided. Prince Putyatin and Shirinsky Shikhmatoff! Who, the English reader may inquire, are they? Who, almost every Russian would ask, are these wire-pullers behind the scenes?"

The *Daily Express*, summarising the article under the suggestive title "Killing no Murder," says:—

Everyone has left him. His one strong Minister has been dismissed; the Council which drew from him the rescript, of the genesis of which the article tells an amazing story, has not been again convoked. Grand Dukes are being converted to constitutionalism by dozens. Everyone is anxious to clear himself of the odium of having supported the autocratic principle which was once the breath of his nostrils, and even the voice of the Dowager Empress is lifted, as we have already heard, in favour of the representative principle which, according to M. de Witte, carries with it automatically the downfall of the autocracy. The Tsar, in fact, is left absolutely alone, save for that boudoir council, consisting of a devoted but imprudent wife, which the writer of this article holds chiefly responsible for the mad policy at present pursued, and for the terrible end to which that policy is surely leading. A weak neurotic, continually urged to show himself the strong man in defence of rights divine and indefeasible, Nicholas II. is squandering his last few moments of grace.

The author of the article who, in his bitterness, even revives the old story of the medium Philippe, proclaims the end of the autocracy in the following terms:—

"The Boudoir Council may no longer play havoc with the nation. . . . Autocracy has heated its palace with sparks, and must now delay its name in the ashes." The Tsar's kindred and friends may still happily shape his fate. "But they have no time to lose."

The writer of the "killing no murder" article in the *Express* thus moralises over the delay of the "event"—a nice euphemism for murder. He says:—

The Cæsarian Ides of March are not yet past. With only intelligent guesswork to guide us, it is useless to speculate on the probable manner of a desolate country's emergence from her trouble. The dramatic act which we have so long expected has been so long deferred that the edge of morbid curiosity has been blunted. But something decisive must surely happen soon. And already, when we read such an article as this in the *National Review*, we can guess what a rent the envious Casca made."

It only remains to be added that the same number of the paper which contained this disgraceful article announced, on the authority of its St. Petersburg correspondent:—

An epoch-making Imperial decree conceding liberty of conscience to all Russian subjects was promulgated to-day. It constitutes the greatest social reform accomplished in Russia since the emancipation of the serfs.

Not Revolution, but Erosion.

"R. I.," writing in the *Fortnightly* from St. Petersburg, congratulates himself upon the insight which enabled him months ago to ridicule those who foretold revolutionary earthquake in Russia. What is happening is not earthquake, it is erosion:—

It is not the destruction of the autocracy, but the destruction of Russia with which we are threatened. The erosion of central authority is swiftly wearing away the whole social fabric. Though there is no visible change of oppression being torn from its throne, there is more than a chance of general chaos in which organised State and organised people will for a time cease to exist. It was from such social dissolution that the Romanoffs three centuries ago saved Russia. Its recurrence may save Russia from the Romanoffs.

The lack of dramatic masterful personalities at the head of either of the contending forces—tyranny without a tyrant pitted against rebellion without rebels—presages an unheroic peace.

Among all the Tsar's Ministers and high officials there is believed to be only one, the Governor-General of St. Petersburg, who sincerely believes that the autocracy can be permanently maintained, and that repression can maintain it; who believes, therefore, that he is engaged in a good and necessary work. The watchword of the Throne to-day is *laissez faire*, which in practice means that Ministers do nothing but shed tears and wait for events on the principle that nothing can be worse than the things that are to-day, and that the scales of justice and the sword of repression are handed over to underlings with full authority to do as they will and full absolution from responsibility.

THE *Sunday at Home* opens with a paper on Osborne, the King's gift to the nation, and its fitting up as a convalescent home for officers of the army and navy. An interesting illustrated account is given of how this has been done.

THE REVIEWS REVIEWED.

THE AUSTRALIAN REVIEW OF REVIEWS.

IN the March number of this Review just to hand Mr Henry Stead, who for the last sixteen months has been editing the Australian *Review*, announces that he is returning to this country, leaving the *Review* in most capable hands "Mr W H Judkins, who will edit it in future, has been associated with me in producing the magazine since January, 1904 Being an Australian, who has resided in New Zealand, New South Wales, and Victoria, he was naturally more competent than I to deal with purely Australasian matters, and he has been writing the major portion of the History of the Month Although having a thorough grasp of Australasian politics hitherto Mr Judkins had devoted himself chiefly to social reform"

The chief feature in the March Review is a very valuable paper on Artesian Water Supply in Australia by Mr W. Gibbons Cox It is curious that most of the water raised by artesian wells is allowed to waste A bore of 1,000,000 gallons per annum will irrigate 500 acres at a cost of 8s 6d per acre Only 4,500 acres are irrigated in Queensland by artesian water 350,000,000 gallons of water are run to waste every day over and above the 70,000,000 needed by sheep, and this quantity rightly used would irrigate 280,000 acres every year Some of the bores yield from 4,000,000 to 6,000,000 gallons a day The Elderslie bore produces 1,600,000 gallons of boiling water every day It is not quite boiling but it is only ten degrees below boiling point

In the History of the Month many interesting things are mentioned The Mormon schoolteachers have been turned back from New South Wales because they could not write fifty words in English The New South Wales Government is much abused by local Protectionists for not paying £148,000 more for some new locomotives, in order to give the order to local industries At last the Australian Colonies seem to be waking up to the need of immigration The Queensland Government has intimated that it would welcome Austrian settlers West Australia employs a lecturer who tries to recruit immigrants from the other colonies "If all the States would fall into line with progressive land laws and make settlement as easy as possible, establish a central office in London under a High Commissioner and send capable lecturers through Great Britain and also to the Continent, a great deal would be done towards peopling Australia with a white population

An immense stride is being made in telephonic communication in some parts of the Commonwealth It has been found that by applying what is termed "the condenser system" to telegraph wires, they may also be used as telephone wires The result is that the Government has already been able to bring many country towns into telephonic communication at a nominal cost, whereas under the former necessity of employing a separate wire a heavy guarantee was demanded from the residents

A small army of dentists visit the Sydney State schools, and subject each child to a dental examination, recording the results on a card, with the treatment necessary, for the information of parents If parents are too poor to get the necessary work done, the State will perform the kindly offices gratis

---

IN the *Young Woman* Miss I Brooke Alder tells what it means to be a lady doctor Hard work and essential womanhood seem to be the pre-requisites Miss Dora M Jones describes an evening in the Girls' Club at the Leysian Mission Miss Marie Hall's career is set forth as the triumph of a girl violinist.

THE AMERICAN REVIEW OF REVIEWS.

THE *American Review of Reviews* for May confirms once more the opinion frequently expressed that there is no other periodical in existence which keeps the general reader so well in touch with all the best features of American life To keep touch with the New World the Old World needs to subscribe to the *American Review of Reviews* The new number explains simply and lucidly the immense significance of the recent municipal elections in favour of immediate municipal acquisition of the tramways in Chicago There is a bright and encouraging paper as to what the City of Cleveland has done in securing the harmonious grouping of public buildings, which may be commended to our County Council and First Commissioner of Public Works A most interesting account is given as to the capital results that have followed from the conversion of vacant city lots into gardens for the instruction of school children and the relief of the unemployed —

The railroad companies in France recognised its value and began putting it into practical operation by granting to their employees the use of vacant strips of land here and there The Nord (Northern Railway) has already made 3,000 allotments, l'Est (the Eastern) 3,625, the Midi (Southern), 2,600 to its train men and track men and 650 to its station agents and clerks—these 3,250 allotments represent an area of 450 acres The Orleans Railway has set apart plots for 6,000 of its employees

There are character sketches of Judge Reagan, the last survivor of the Confederate Cabinet, and of Mr T P. Shonts, the Chairman of the Panama Canal Commission A most encouraging account is given as to the beneficent revolution wrought in three years in the City of Harrisburg by the recognition by one young man of wealth of his public duties Mr Victor S Yarros surveys the minor aspects of the labour question in an article which our Trade Unionists would do well to read, and Mr C. H. Quinn tells the very instructive story of the polishers of the Kodak Union who started a shop on their own account as the result of a strike, and no sooner got going than they repudiated the Union rules, and became as zealous for the "open shop" as the Kodak Company from whom they had seceded Among the non American articles are papers on the newspapers of Spain and Portugal and the Simplon Tunnel

---

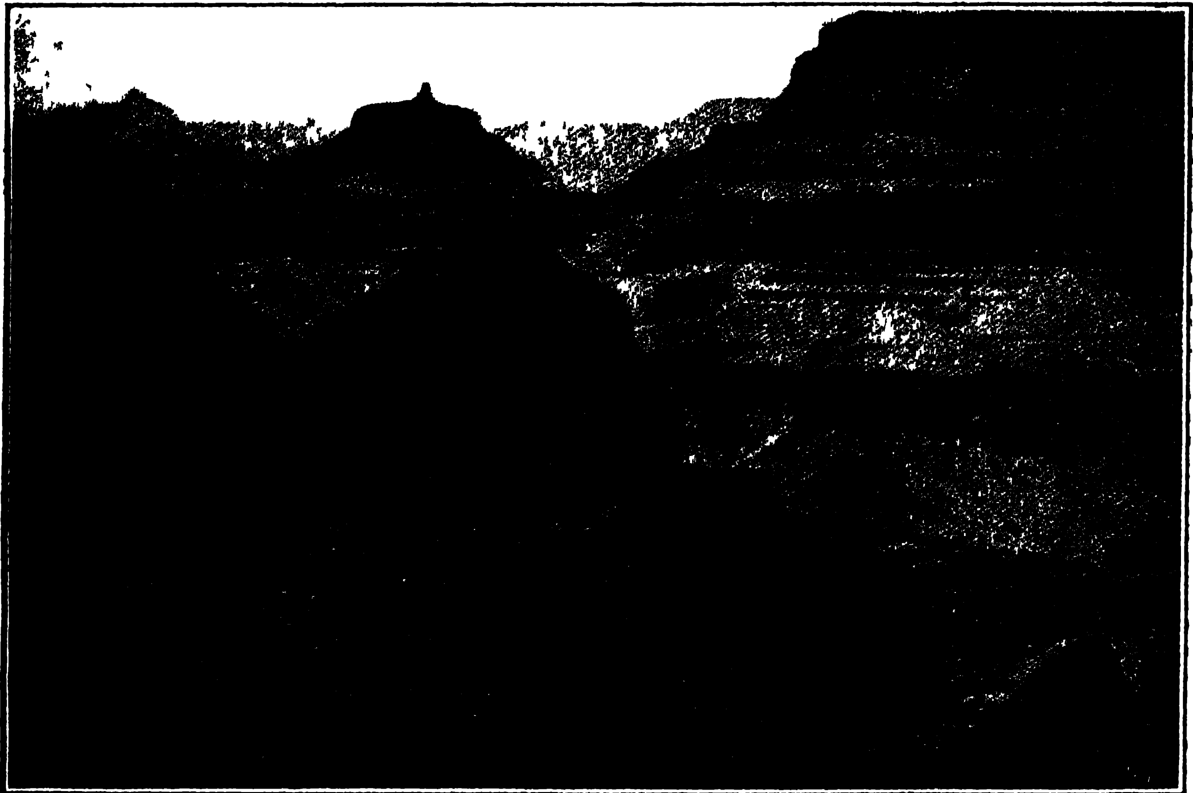
THE GRAND MAGAZINE.

No 4 is better than No 3 The *Grand* this month contains plenty of articles with ideas in them Mr Warner proposes the following cricket reforms —

The width of the stumps increased by an inch, a new ball given to the fielding side every 150 runs, the second class counties method of scoring points adopted by the first class counties and an extension of the hours of play in August

Mr G Lynch proposes that airships should not be allowed to be used in war, Mrs Lowndes contrasts French and English ideas on Love and Matrimony, Sir Alfred Turner says everything is wrong with the War Office, Mr Howard Hensman says nothing is lacking, it only needs to be left alone

There is now at the War Office the beginning of a system that will, as it grows and develops, give us the most efficient and capable Government Department this country has ever possessed. But it must be given a fair chance Constant adverse criticism makes a man nervous and unwilling to accept responsibility



There are articles on Imprisonment for Debt as it is to-day, "Money Lenders and their Victims" The articles on London as it Will Be, the collection of photographs, and My First Time in Print, are noticed elsewhere.

SCRIBNER'S MAGAZINE.

THE strong point of *Scribner's* for May is the admirable illustrations, especially those accompanying a very interesting article by Mr. Benjamin Brooks on the Grand Canyon. The eight pictures, beautifully reproduced from photographs — telephotographs, are remarkably fine. One of the best is given here by courtesy of the publishers

Mr. Edwin Child's description of the Marble Mountains of the Appalachians, with its toned pictures of the quarries, combines a vivid industrial interest with a weird Dantesque effect

Other articles are on "Breaking Trail in Canada," in the extreme backwoods, among Indian tribes, in the bitingest of biting cold, and on "Life on a Tuscan Farm," an article which will probably suggest this way of spending a holiday to those in doubt as to how to spend theirs.

Full power Telephotograph.] [*Reproduced from 'Scribner's'*

View in the Grand Canyon, California.

(*Nearest pyramid ... miles distant pyramid, nine mile*

THE ATLANTIC MONTHLY.

THOREAU'S JOURNAL is the chief distinction of the *Atlantic Monthly* for April. It is an illustration at length of the principle which he expressed by saying "The poet must be continually watching the moods of his mind, as the astronomer watches the aspects of the heavens. The poet is a man who lives at last by watching his moods. An old poet comes at last to watch his moods as narrowly as a cat does a mouse." We have accordingly Thoreau's moods described with much minuteness. He indulges in a curious plea for composing while walking. He says: "The moment my legs begin to move, my thoughts begin to flow. Only while we are in action is the circulation perfect. The writing which consists with habitual sitting is mechanical, wooden, dull to read." Mr. C J. Bullock conveys a whole armoury of ideas and facts on "the cost of the war" Mr H. Munsterberg treats somewhat mystically of the Eternal life as a timeless moral state, an Everlasting Now, to which duration or succession is unknown Mr W C Brownell subjects Henry James, the man and his works, to lengthy but appreciative criticism. Mr. C F Dole, discussing the right and the wrong of the Monroe doctrine, objects vehemently to its later and more aggressive developments

POSITIVIST REVIEW.—In the May number Mr. Swinney writes on Jeremy Bentham, Paul Descours of Schiller Mrs Fred Harrison pays a tribute to the memory of Madame Souvestre, who died at Wimbledon in March Mr Fred Harrison chortles in his joy over "the selling of Joseph" "It looks," he says, "as if empty phrases had beaten noisy fallacies" Professor Beesley utters a word of warning against adopting an anti-German attitude in Morocco.

THE NINETEENTH CENTURY AND AFTER.

THE May number has in it several good articles, four of which are noticed elsewhere.

MILITARY TRAINING FOR BOYS.

The defence of the Empire is discussed in five papers. The first, by Sir William White, on the cutting down of the naval list, is quoted elsewhere. Major-General Russell strongly controverts the dictum of Mr. Arnold White, backed by the Council of Defence, that an invasion of Great Britain is not possible. The Earl of Erroll bewails the dearth of officers, and insists on higher pay. Lieut.-Col. Pollock pleads for common sense training for recruits, by which he means the training of recruits in a sense of responsibility to others. The Earl of Meath urges universal military training for lads. He says :—

What would be the hardship of requiring our lads to perfect themselves in another branch of knowledge, that of being able to use the rifle? It would be exceedingly popular. The lads would like it; they would not attempt to run away from it; they would look upon it as a sport. Such training could be given so as not in the least to interfere with their preparation for the business of life. On the contrary, the discipline and healthy exercise would improve their health, strengthen their moral and physical fibre, and add to their professional, industrial or labour value when they attained to manhood.

The peril of militarism would be avoided, the sense of duty and responsibility would be quickened, and in time of danger the requisite army would be forthcoming.

CHURCH AND STATE IN FRANCE.

Comte de Castellane, Deputy of the Lower Alps, takes very strong ground against the projected separation of Church and State in France. A historical review leads him to declare :—

France is not merely a strip of land; it is also a moral personality holding the highest rank, and essentially Catholic. It is Catholic to such an extent that it is as impossible to separate the idea of Catholicity from France as it is to separate the idea of Mohammedanism from Turkey. To separate the Church from the State would be to disintegrate the nation, to give it over to anarchy, and enslave consciences. Separation, such as it has been conceived and proposed, will lead the nation to religious oppression, to revolution and civil war.

WHY DO WE PAINT PICTURES?

Mr. Heathcote Statham asks, "What is the *raison d'être* of pictures?" and after much interesting discussion of other answers, gives his own :—

The ultimate moral is, that although painting may be used to illustrate subjects in history or fiction or everyday life, although it may be used to point a moral lesson, these are secondary and incidental objects; that the main end is the intellectual pleasure of the spectator through an expression of the mood of mind or the imagination of the artist, using natural forms as a language; that imitation of nature, whether of human or inanimate nature, is not the end in itself, but only the means to an end; that a painter works on our minds through form and colour as a musician through sound.

OTHER ARTICLES.

Mr. Roderick Jones, Reuter's South African editor, states and amplifies the finding of the South African Commission on the black problem. Ameer Ali, late Judge of the High Court, Calcutta, who considers collision between Russia and England for the dominance of Southern Asia to be inevitable, declares that there is not a single inhabitant of India who would like to exchange British for any foreign rule. He urges the necessity of an independent, united, well-governed Afghan kingdom. Lady Napier of Magdala draws a dramatic contrast between a patch of the wild West coast of Scotland when it belonged to the Scottish natives, and now when it is laid desolate as a deer forest for the modern plutocrat.

THE INDEPENDENT REVIEW.

THE May number is exceptionally good. The pre-eminent article is that by Mr. H. G. Wells on the so-called science of sociology, which is noticed at length elsewhere. Sir Lauder Brunton's huge scheme for a League of Health also claims separate mention.

SECONDARY OR CASTE SCHOOLS?

Dr. Macnamara, M.P., subjects to trenchant criticism the Board of Education's regulations for secondary education. He contrasts them with the promise of a properly unified and graded system of education from primary through secondary to the highest schools. He says of the regulations :—

First and last they fail entirely to treat the provision of secondary education as anything but a "class" necessity. . . Their purpose is rather to set up a complete and self-contained system of general education, elementary and advanced, for the middle and professional classes, as a thing entirely apart, than to fashion a compartment of secondary education to be fitted harmoniously into the whole scheme of national education.

The low age at which pupils can be admitted, the limiting of free places in secondary schools to 25 per cent., the fixing of the minimum annual fee at £3, show that the secondary schools are meant for the professional and middle-classes alone. This is a matter which needs to be thoroughly exposed, and Dr. Macnamara is the man to do it.

ONE POINT SETTLED BY THE WAR.

Hilaire Belloc, writing on the Manchurian campaign, says that there is one doubtful point which it has settled—the debate between the lighter and heavier field-piece. The schools were evenly balanced, but—

The Manchurian campaign has given a final argument for the light gun. The Japanese gun was less of a weapon than the Russian; and it was no better handled; but it was lighter. It could more rapidly take and change cover. It could more effectually follow up the advance of infantry in the varying movements of the field. The Russian gun was destroyed at Wa-Fang-Ku; it could not come into action at Motien-ling; it was late on the Tai-tse, and so lost the battle of the Shaho. The light gun has won.

Our "Committee of Defence," or whatever it is called, has given us the heaviest gun—by far the heaviest gun—in Europe.

PROTECTIONISTS OR SOCIAL REFORMERS.

In the monthly chronique the editor insists on the need of letting the country see that Liberals are real social reformers :—

If the Conservative attitude is adopted, the Liberal Party is lost, and, what is more, Protection is passed and Social Reform is postponed for at least a generation. Extreme activity is expected of the Liberal Party in the immediate future by the younger generation, which consists almost entirely of Social Reformers or Protectionists. There is no third alternative, as will be clear in three years, if it is not clear already. The future does not lie for those who are for leaving things as they are; it lies either with the Tariff Reform League or else with a well led party of zealous, but practical, Social Reformers.

OTHER ARTICLES.

There is a rather heavy manifesto on the taxation of rural land values which "is being privately circulated among Liberal Members of Parliament as an alternative Liberal policy to the renewal of the Rates Act." Sir Edmund Verney writes crisply and, his opponents will think, somewhat viciously about the solicitude that the rich are taking in the education of Hodge. Mr. A. C. Pigou contributes a suggestive, though somewhat nebulous, paper on the optimism of Browning and Meredith.

THE NATIONAL REVIEW.

THE sensation of the May number is the paper on "The End of the Autocracy," which has been noticed on a previous page. Beside its glaring colours the rest of the papers seem tame.

A COURAGEOUS TRANSVAALER.

A writer, concealing his identity under the *nom de guerre* "Transvaaler," writes an judicious paper on political parties in the Transvaal. He remarks that the Britons and the Boers have a better chance of becoming good friends to-day than they have ever had in the last century. But the racial struggle is still going on, and when it comes to voting on this issue the choice will be between a Government that is the natural heir of the policy of the last three years and a Government which will be a reproduction of the Kruger *régime*. A division almost coincident with the racial division is that between the agricultural and mining industries. The writer declares:—

Fortunately for South Africa the theory that the proper way to treat the country is to exploit it and then to clear out from it seems to be dying a natural death. The mining magnates of Johannesburg, whatever may have been their custom in the past, no longer make a bolt for Park Lane after a brief and lurid career in the goldfields. Many of them have made up their minds to settle down in South Africa at least for a term of years and to treat it as a home.

Outside the Afrikander party he distinguishes the Progressives as the British and the responsible Government party as the non-British. The Boer organisation, Het Volk, is, he declares, a despotic unity. The writer calmly traverses the charges made by the Boers. He declares that the British Government has kept its promise of introducing "as soon as circumstances permit, representative institutions leading up to self-government." The British Government has also, he declares, not merely paid all that it promised to the Boers in compensation for their losses during the war, but has fulfilled its obligation three-fold." And the British Government has not refused the promised liberty to use the Dutch language.

THE TWO BEGGARS OF HOLLAND.

A paper headed, "Will Holland be Germanised?" by P. J. Troelstra, Leader of the Social Democratic Labour Party in the Netherlands Parliament, is a reminder of the way in which our South African policy has complicated our European influence. This writer records, though he does not share, a feeling in Holland which regards Great Britain as having designs on the Dutch colonies. Dutch writers speak of "the English Peril" and describe Great Britain as their enemy. This feeling is sedulously cultivated by German writers. At the same time Mr. Troelstra quotes at length from German authors to prove the German desire practically to annex the Netherlands. Between their dread of England on one side and Germany on the other, the poor Hollanders are between the tiger and the torrent.

TO REFORM THE ROYAL ACADEMY.

Mr. D. S. MacColl, after adverse criticisms of the Academy as it is, proposes, as a remedy, that the Academy should cease to exist as a competitive society, and take its place as a co-ordinating centre:—

The Academy should invite the co-operation of the other societies, assign them a reasonable amount of space in the galleries, and leave it to them to select their own pictures and hang them, the Academy doing the same for its own members and following. This plan would get rid of the jealousy and suspicion that arise when the work of members of one society is judged by those of another; it would bring up all the important artists of the country for annual review and comparison. But it is only a step towards the real solution, by which the Academy would cease altogether to be a competing society and would become a league of the artist societies generally.

Mr. A. C. Benson discusses the advantages and disadvantages of an Eton education. On the dark moral stain which is associated in the public mind with public schools he says:—

It may be said that the general tone is not wholly satisfactory. Occasional facts will come out which seem to testify to widespread corruption; on the other hand, one is comforted by finding that a large number of boys go through a public school entirely unsoiled by moral evil. Yet the evil is far too lightly viewed by the boys.

With such admissions made about the prevalence of diphtheria or the bubonic plague in any public school, parents would not allow their boys to remain there a day longer. Yet well-meaning teachers can speak of a much more deadly peril than either of these diseases in this mild way!

OTHER ARTICLES.

Dr. Dillon's description of religious persecution in Russia appears somewhat picturesquely on the very day in which the Tsar's edict of religious liberty is given to the world. Mr. Arnold White writes on new gunnery, and declares that the business of the whole ship's company is, directly or indirectly, gunnery, gunnery, gunnery. Gunnery should then be transferred from a specialised lieutenant to the captain of the ship. The Australian correspondent discusses the problem of White Australia, and sees no choice save the alternatives of introducing into the northern and tropical regions white labourers from the southern regions of Europe, or coloured labour.

THE CENTURY.

THE *Century* for May opens with a well-illustrated paper on the "Prix de Rome" in Paris and its conditions, with reproductions of some works that have won it. There are some interesting slightly hazy portraits of a group of British authors, including Mr. Bernard Shaw, Mr. Edmund Gosse, Mrs. Humphry Ward, and Mr. Chesterton. Mr. Richard Whiteing deals with two more of the Châteaux of Touraine this time, Loches and Langeais. The pictures in colour are good, but the text does only bare justice to an excellent subject. Dr. Anita McGee praises the Japanese army medical organisation, and says America may well take pattern from it. There is an illustration also of a recently discovered inland white bear in British Columbia. The number is a very good one, very well got up.

THE GIRL'S REALM.

IN the *Girls Realm* for May Mr. Richard Le Gallienne and Ethel Beaugard write on four girl poets: Julia Cooley, Enid Welsford, Antonine Coullet, and France Darget.

Julia Cooley's "Poems of a Child" were published when their author was only eleven. She is a Chicago child, and her volume is described by Mr. Le Gallienne as something more than a curiosity of literature.

Enid Welsford's book of poems was published a short time ago. Antonine Coullet and France Darget, brief sketches of whom are given by Ethel Beaugard, are French children. France Darget's first volume appeared when the girl was thirteen, and a second volume was published two years later. Antonine Coullet's collected poems were issued to the world when the child was ten. A sonnet of hers is quoted in the article.

THE CONTEMPORARY REVIEW.

THE best and far the most important article in the *Contemporary Review* is stowed away as a kind of appendix to a pseudonymous paper on Church Reform in Russia. This is M. Witte's "Plea for Church Reform," a memorial recently presented to the Tsar by M. Witte, the president of the Council of Ministers. I quote from it elsewhere. It is a miracle of bad sub-editing to bury it in this fashion while giving the first place to Mr. Lloyd Morgan's weighty but anything but popular discourse on the interpretation of nature.

MAKING GOD IN OUR IMAGE ONCE MORE.

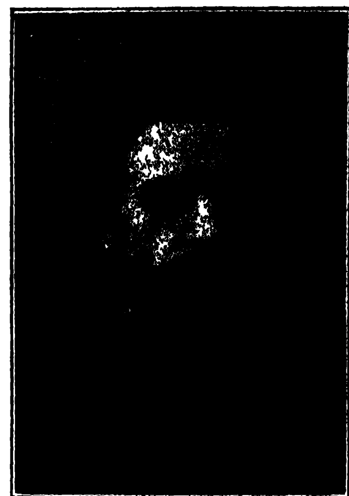
Mr. Lloyd Morgan's paper is a very thoughtful attempt to suggest that even when the extreme hypothesis of the naturalistic school is accepted man can still create God in his own image and assume a purpose behind phenomena from his own consciousness of will. This is how Mr. Lloyd Morgan states it:—

Naturalism, however, proclaims that I am just a little bit of nature, differentiated from the rest; that I am a minute cluster of phenomena in relation with the total remainder of phenomena; that I am a tiny and somewhat complex configuration under the influence of the major configuration of the universe. So be it. I accept (once more I repeat it in an article of naturalistic belief) this oneness with nature—this postulate of the scientific reason that I am, physically, of the same order of being as the solar system and the universe at large. But if this be so, why should I suppose that the causal agency which as purpose underlies my own private and peculiar configuration is of a different order of being from that of which nature at large is a manifestation? Just in so far as I *am* one with nature and therefore in physical relationship with other manifestations in terms of matter and energy, is the purpose of my being one with the purpose which underlies the manifestations of nature, and am I in spiritual relationship with a wider and richer purpose which is thus manifested.

A somewhat similar paper by Professor Armitage is entitled "The Scientists and Common Sense."

THE DISHONESTY OF JAPANESE TRADERS.

Mr. J. H. Longford says that while the Chinese are the honestest traders in the world,



the Japanese traders as a class have, according to the universal verdict of those who deal with them, to this day the unsavoury reputation of absolute unreliability in the fulfilment of any obligation, of having failed to acquire in their commercial transactions even the most elementary principles of common honesty. Neither wealth, self-interest, nor patriotism has even modified their inherited and deeply ingrained incapacity for grasping the primary tenets of commercial integrity. Whether as buyers or sellers, they are equally distrusted by their foreign competitors. No foreign bank in Japan accepts their bills, no Japanese bank, unless it is protected by the most abundant collateral security. Not a bale of imported goods would be delivered to them without previous payment of the full price. The most formal contracts are unblushingly repudiated, or at best their execution postponed when their prompt fulfilment involves a loss of even contemptible insignificance.

Mr. Longford explains the cause of this scoundrelism, attributing it to the monopolising of foreign trade when the ports were opened by all the worst rascals in the country; but whatever be the cause, the evil ought to be dealt with by the Japanese Government as soon as the war is over.

A NEW RELIGIOUS MOVEMENT IN RUSSIA.

The Count de Soissons describes a new school that has founded in St. Petersburg a journal called the *Novyj Put*—the new road. It is Christian on the lines of Solovieff, the mystic who died two years ago:—

One of the articles of their creed appears to be the universal Christian Church, not as it now exists, but as the ideal of the future, the aim and end of the whole Christian evolution. They draw a distinction between the true Christianity still to come and historical Christianity which, according to them, has never yet realised the ideal taught by Christ, but has only found the way to it. There are in the *Novyj Put* considerable differences with regard to dogma.

Vladimir Solovieff.

NATIONAL CHARACTERISTICS.

There is a short but very fine article by Baron von Wrangell entitled "Four Nations: A Sketch." The author, a true cosmopolitan, thus sums up the most conspicuous feature of the character of the four nations:—

It seems to me that practical idealism takes with the *German* chiefly the form of devotion to *truth*. In the *Russian* it is a readiness to sacrifice everything to his inward *feeling*. In the *Anglo-Saxon* it is the staking of the whole person for a concrete, palpable, and distinctly fixed *purpose*. In the *Frenchman* it is a general *idea* which carries him away to great deeds.

HOW CHINA WILL BE JAPANNED.

Mr. Thomas H. Reid is hopeful as to the influence Japan will exercise over China:—

What she owes to China Japan will return an hundredfold, tested and refined and improved by the acceptance from the civilisation of the West of all that may be engrafted with advantage on to the requirements of the East. Not through the lower classes will Japan seek to aid China to work out her own regeneration. Her influence will be directed upon the *literati* and official classes, the Court, the Viceroys and Governors, the mandarins of all kinds of "buttons" and degrees, as well as the mercantile and industrial classes, bringing about a replica of the reformation in Japan herself. She will teach the Chinese self-respect and patriotism, and with these there may come the desire to purge her territory of foreign intruders.

But beyond this there need be no fear of aggression for many generations to come, if at all. She is the energising force, moral and practical, which is to awaken China out of the lethargy that has held her spellbound for ages. Japan will bring the Eastern races into line with the Western, and it lies with the nations of the West to help and direct, instead of seeking to retard, her efforts to consummate her great task. Germany, not Japan, is the menace of the East.

OTHER ARTICLES.

Canon Cheyne airily waves Dr. Emil Reich off the scene, as if he were a shallow sciolist who has still the A B C of Biblical criticism to learn. Professor Vambéry takes up the cudgels for the Magyars, whose treatment of the Hungarians was rudely impugned last month. Mr. John Rae reminds us how badly British shipping fared under Protection.

MR. A. KINNEAR, who wrote the article in the *Contemporary Review* for March on "Parliamentary Reporting," from which we quoted on p. 279 in our March issue, asks us to correct a statement which he made (and we quoted) inadvertently. The *Glasgow Herald* is not one of the papers whose Parliamentary Staff is assisted by the reports of the Press Agencies.

THE FORTNIGHTLY REVIEW.

THE May *Fortnightly* is a capital number, especially interesting to women, and to men who take an interest in women. With this number begins the first part of the new serial—a translation of "Nostalgia," by Grazia Deledda, and "L. W." begins a *causerie* on current Continental literature, which is too condensed to be of much use.

FRANCE, GERMANY, AND MOROCCO.

Sir Rowland Blennerhassett renews his familiar anti-German warnings. The Kaiser wants Mogador, he is scared by the growth of the Social Democrats. If confronted by the choice between war and a German Republic he would choose the former. Therefore let England stand shoulder to shoulder with France, even at a risk of war with Germany. M. Francis Charmes states the French point of view moderately and with the wisdom of age.

OUIDA ON THE YELLOW PERIL.

Watchman, what of the night? Ouida answers. In the East the horizon is red with war. She devotes four pages to the setting forth of the inconceivable imbecility of those who, with India under their feet, rejoice at the triumph of Japan. Ouida says :—

The applause with which Europe greets the genius of Japan for war seems to me extraordinarily short-sighted, and even amazingly blind. There are talents and qualities in the yellow people which are almost magical in their power, almost infernal in their ingenuity, almost incredible in their heroism; but there are also others which for the white peoples will be so much poison in their blood and brain. The East has always been a toxine to the West.

ON THINGS THEATRICAL.

There is nothing particularly noteworthy in the reprints of recent addresses by Mr. H. B. Irving on "The Calling of an Actor," and Sir Squire Bancroft's somewhat senile gossipings, to which the title has been affixed, "Dramatic Thoughts: Retrospective—Anticipative." Sir Squire Bancroft is against the Municipal theatres, "to which a large proportion of warped but powerful Nonconformists would object to contribute. The breeches pocket of the Puritan taxpayer would be a bad lock to pick." He looks (1) to a millionaire who would endow an English theatre for national purposes; (2) to a prosperous manager engaging leading members of his company by the year, granting them a share in the profits, and entrusting them week by week with a share in the management, and (3) to the formation of an Actors' Commonwealth, to act as a Council under an autocratic chief.

THE IRISH UNIVERSITY QUESTION.

Mr. Stephen Gwynn pleads for a settlement within the four corners of the constitution of Trinity College, as against the alternative creation of a rival university :—

Suppose the Board willing to establish and endow a Catholic divinity school—the endowment being naturally proportioned to its number of students—and to establish also a duplicate chair of philosophy, what technical objection would remain from a Catholic point of view? Further, if Catholics and Protestants held Trinity jointly, as a national university, the Queen's Colleges might easily be transformed on the same principle into serviceable institutions.

Mr. Gwynn admits that his scheme "postulates desire on both sides to arrive at a compromise; and even on a sanguine estimate it cannot be said that there is on either the trace of a very on-coming disposition."

THE DREAM OF M. SANTOS-DUMONT.

Major Baden-Powell tells M. Santos-Dumont that he thinks a great deal too much of himself, that there is nothing new in his dreams, and that, as for his promised cruise over Europe, Major Baden-Powell will believe it when he sees it. The one feature upon which the Brazilian insisted has nothing new about it. The Major says :—

The artificial heating of the gas is an old idea. I published such a design myself many years ago (v. *Journal of the Royal United Service Inst.*, June, 1883). But the system has many practical objections, chiefly owing to the difficulty of *rapidly* altering the temperature of the large bulk of gas, especially in cooling it, so that I now do not think it will answer in practice.

THE FUTURE OF THE BRITISH PRESS.

Mr. Edward Dicey gossips about Journalism Old and New, admonishes the *Times* for its new methods of pushing business, and concludes with the following prophecies :—

First, that we shall never see again a new daily paper started at any price above one penny. Secondly, that the proportion of halfpenny to penny dailies will continue to increase. Thirdly, that all our daily papers, whatever their price may be, will tend to conform more to the system inaugurated by the cheap Press, that of catering for the masses instead of the classes; for the public which prefers "leaderettes" to leaders, and which likes its news given in short paragraphs made easy of comprehension by being arranged so that he who runs may read, through well-devised headings. I hold this change in the Press of England to be due to natural causes.

OTHER ARTICLES.

Mr. E. A. Wodehouse writes a depreciatory valuation of Mr. Stephen Phillips. The articles on Russia, Women, and Sir John Gorst on Social Reform, and Professor Holland on "The Duties of Neutrals," are noticed elsewhere.

THE ARENA.

THE most notable papers in the April *Arena*—on the results of the Referendum, the first Quaker descent on America, and the fine art of bribing legislators—have been separately noticed. Citizens of Glasgow will be proud to read Clara B. Colby's story of their civic record, in which she speaks of "the Second City" as "a city run according to the Golden Rule." There she found "municipal ownership in full flower," and first saw a "Cabman's Rest." Mr. W. R. Brown presses for similar municipal ownership in American cities. A very interesting selection from the work of Ryan Walker, "a cartoonist of social protest," is illustrated with a sketch of the man by Mr. B. O. Flower. Dr. Maxey discusses the Alabama Arbitration Treaty. Kate O'Hale argues that facility for divorce is a forward step. The frontispiece is a portrait of Emerson. Full-page portraits of some of the writers are given.

MY attention is called to a Cingalese quarterly magazine, the *Christian Review*, published at Jaffna, Ceylon, which aims at being, in a very small way, a Ceylon *Review of Reviews* with strongly religious tendencies. Its most generally interesting article is on the Religious Census of Ceylon, held in 1901, from which it appears how strong is the hold of Buddhism, and also Hinduism and Mohammedanism, and how small is the hold, and that chiefly in Colombo, of Christianity. Christianity in Ceylon, says the Editor, "is an exotic, and still in the glass-house." It is only in Colombo town that Christianity is numerically stronger than Buddhism, and even there it is but very little ahead.

THE COUNTRY CALENDAR.

THE *Country Calendar* is the latest and most beautiful of all the illustrated monthly periodicals issued in the United States. It is of an unusual shape, which gives facilities for the most effective printing of the admirable illustrations which illuminate every page. It is published at a shilling, or three dollars per annum. It is issued by the American *Review of Reviews* Book Company, and is printed on Whitlock presses, whose makers, with pardonable pride, point to the first number of the *Country Calendar* as a piece of magazine press-work unequalled by any other publication in the world. The distinctively American art of attractive and artistic advertising has never been carried to greater perfection, and as if to mark the distinction for the first time, the pages are numbered consecutively throughout as a quiet assertion of the fact that all the pages in the magazine are interesting reading, whether they are filled with advertisements or other matter. The *Country Calendar* opens with the following annoucement :—

Over America there is sweeping a great wave of interest in country living, in the wholesome work and play between the brown earth and the blue sky. The man who must work in the city is making his home in the fields, where there is a garden and a cow, where his children breathe the fresh air and grow up in friendship with birds and trees and flowers. It is this country home that holds the strongest interest and affection of the family. The man who must work in the country is coming into his own. For him a new freedom has been won by science, with its labour-saving methods, its electric travel, its better agriculture, and the material prosperity that results. A revived consciousness of the worth and dignity of his calling is working to make the farmer's lot what it should be.

Reproduced from the "Country Calendar."]

A pair of young Golden Eagles, well fledged, sixty-two days old.

The *Country Calendar* is brought into the world to interpret the fresh achievements of science bearing usefully on the problems and enthusiasms of country-loving folk. It hopes to aid them in making and managing their homes, and to bring the message of those who, by their experience or insight, can add beauty and profit to rural pursuits.

President Cleveland has the place of honour with a paper on The Mission of Sport and Outdoor Life. Then comes a paper by Ivo Burroughs, "In May." One of the longest and most remarkable papers is Mr. W. L. Finley's description of how he photographed the young golden eaglets in their eyrie at Mission Ridge, California. Mr. R. W. Woolley describes at length the life of Mr. Whitelaw Reid, the new American Ambassador, as a country gentleman. The New Style of Yacht Race deals with the Transatlantic yacht race for the Kaiser's Cup. Among other features of the magazine are sections devoted to the following departments: Garden and Orchard. Trees and Shrubs. Stock and Poultry. The Country House. Stable and Kennel. The Country Beautiful and the Automobile.

THE MONTHLY REVIEW.

PERHAPS the most striking paper in the May number is a comprehensive growl by "B. B. B." under the heading of "The Major Complains." The writer takes as his definition of criticism "The Higher Grumbling," and his grumbling is very high and wide, extending over dress, sport, theatre, literature and politics.

Irish Education is discussed by "An Irishman," who thinks that Irish educational needs require the attention of a special Parliamentary Secretary, responsible to the House and to the country for maintaining the whole educational machinery in fit working order and for introducing the necessary reforms. He would reintroduce the Equivalent Grant, which would meet all the additional funds now required to improve primary and secondary schools.

The "people of Little Egypt," as the gipsies were frequently called, are the subject of a preliminary study by David MacRitchie. He shows that they were in the early days treated with great respect as pilgrims with special privileges of self-government and with special right of levying tribute on the towns they visited. How this impression as to their pilgrimage arose he defers for future investigation.

Mr. Michael MacDonagh, under the head of "The Hunt for the Political Secret," assembles many well-known stories of the devices employed by journalists to extract State secrets. Walter Savage Landor is the subject of an exhaustive and discriminating appreciation by Walter Sichel. Taking "Free Meals for Underfed Children" as his text, Mr. F. H. Barrow preaches a suggestive sermon on the social problem in general. Mr. E. A. Greathed chats pleasantly on some aspects of the automobile. Mr. Somervell's "Music as a Factor in National Life," and M. A. R. Tuker's "Workshop of Roman Christianity" claim mention elsewhere.

THE *Westminster* for May is hardly up to the average. There is one useful paper on "The Present Legal Position of Women in the United Kingdom," by "Ignota," which is worth noting for reference. The sketch of "Turgot" is concluded.

THE WORLD'S WORK.

THE May number of this magazine has a great deal of interesting reading. One or two articles claim separate notice.

THE COST OF KEEPING A SMALL MOTOR.

Mr. Henry Norman, in an article of great practical utility, gives the following estimate of the cost of five years use of a small car, costing £155, and running 5,000 miles a year:—

	£	s.	d.
Depreciation	20	0	0
Petrol	12	10	0
Tyres	20	0	0
Supplies and Sundries	7	0	0
Replacements and Repairs	10	0	0
Inland Revenue Licence	2	2	0
Registration	1	0	0
Driving Licence	0	10	0
Insurance	5	0	0
	£75	2	0

Actual experience has proved that the cost of a comparatively small horse-power motor [illegible] works out at from 1½d to 3d a mile, generally about 2 [illegible]. Against this cost Mr. Norman sets the fact that if a motorist has formerly had to keep a horse and carriage, he must have spent on them at least £[illegible] a year. His final conclusion is that, what with one thing and another, you can keep a small car for 25s. a week [illegible] a year.

A holiday suggestion [illegible] is that of motor boating by [illegible] Rhone, and [illegible] canals through France to the Riviera, some [illegible] as to draught of boat [illegible] given.

[illegible]

Miss Beatrice Grimshaw describes a colony of a colony—that is, the South Sea Island of Rarotonga, in the Cook Islands, some [illegible] miles from Auckland, a group recently annexed by [illegible] Rarotonga is a very lovely, volcanic [illegible] tropical island, inhabited by some 7000 [illegible] white people and about 2000 [illegible] natives [illegible] monthly [illegible] from Auckland, which [illegible] chief products, copra, or dried cocoanut, and [illegible]. There is a local Resident Commissioner, Colonel Gudgeon. The place, to a real traveller, would be delightful to visit.

[illegible] white planters to the island [illegible] lands are [illegible] more active, [illegible] most colonial planting [illegible] being extremely simple [illegible] ninety-nine years [illegible] ing and planting [illegible] palm does not bear [illegible] nine years' time [illegible] profit per annum for [illegible] a small plantation [illegible] income of £500 a year to the planter [illegible] his grandchildren. Certainly [illegible] £500 spent in clearing, and the [illegible] £75 [illegible] expenses during the years of waiting [illegible] bananas among the cocoanuts [illegible] and are very profitable as [illegible] Cook Islands [illegible] from destructive hurricanes, and the climate [illegible] healthy European to work out of doors at any time of the year.

WHAT TO DO WITH BEGGARS.

Other articles are on Agricultural Education in Canada, the work at Glastonbury Lake village, and an amusing paper on what to do with our beggars, by an ex-Mendicity Officer, who says among other things:—

Many beggars—especially those having good pitches near a railway station or a fashionable church—have been known to bring up their families in quite a respectable way on money given to them by the charitable. The most wealthy beggar I was ever acquainted with enjoyed—and *thoroughly* enjoyed—an average income of £300 a year. His was possibly an exceptional case, but many professional mendicants in London earn at least £3 a week, and are far from satisfied with that.

Many of the men and women who sell matches in the streets are really mendicants, although of course there are some who make an honest living in this way. You can distinguish the beggar from the genuine vendor by the scornful look the former bestows on the customer who has the temerity to take a box of matches in return for his penny.

THREE HISTORICAL REVIEWS.

THE *English Historical Review* contains notes in which Mr. W. Warde Fowler discusses Gaius Gracchus's policy of reducing the price of corn to the populace of Rome. Mr. Fowler thinks this policy scarcely deserves the general condemnation it has received, and suggests reasons for supposing that Gracchus intended, by dispersing the population over several Imperial centres, to reduce the cost of living naturally rather than artificially. Students of the Unemployed Bill now before Parliament may be interested in this endeavour to feed the population of an Imperial capital out of Government resources. [illegible] the battle of Santa Cruz, in which Spain['s] [illegible] was destroyed.

The *Scottish Historical Review* is chiefly noteworthy for Mr. R. D. Melville's sketch of the use and forms of judicial torture in England and Scotland, with twenty-[illegible] illustrations. Judicial torture was, it appears, recognised by law in Scotland, but in England, though used, it was always illegal. Mr. A. W. Ward examines the relation of James VI. to the Papacy, and shows that that king [illegible] had encouraged the Pope to anticipate his conversion. Mr. J. H. Bruce [illegible] that the prehistoric inhabitants of Scotland were [illegible], short in stature, [illegible] followed by [illegible] from the East [illegible].

The *American Historical Review* is distinguished by the proceedings of the American Historical Association at Chicago, including Professor Goldwin Smith's presidential address. In this he says that, hearing that American school histories were poisoning American minds against England, he examined a number of school histories, and found that while forty or fifty years ago the angry spirit was manifested, at the present day school histories contain little of which an Englishman could fairly complain. While disputing the possibility of a science of history, he welcomes a philosophy of history. Carlyle's philosophy of history cannot, he thinks, be taken seriously.

CHAMBERS'S JOURNAL.

IN the May number of *Chambers's Journal* Mr. W. C. Chisholm has an article on "Saghalien, the Isle of the Russian Banished," based on the investigations of Mr. Charles Hawes, who visited the island a few years ago. In size the island is nearly as large as Scotland; it is covered with primeval forests, and is so thinly populated that Mr. Hawes did not meet a single person for several days. In addition to the Russians, five different peoples inhabit the island—Ainus, Gilyaks, Orochons, Tungus and Yakuts. About five years ago Miss Eugenie de Mayer, the daughter of a Russian general, went out as a missionary to the Saghalien convicts, and her coming was hailed with delight by the worst criminals.

THE QUARTERLY REVIEW.

MANY articles from the very interesting April number are noticed elsewhere. Lord Dufferin's Life and the Lives of Canon Liddon and Bishop Creighton form the subjects of two articles. There are also appreciative literary articles on Taine and Byron, the latter by Mr. J. Churton Collins.

ON THE CONDITION OF RUSSIA.

"It is important," says the writer of this article, "to dwell on the effect of the war upon the peasants' attitude towards his Government, because herein lies the chief element of danger to the existing system" . . . "The ancient spell of blind and abject loyalty once broken, forces will be let loose the direction and impetus of which no man can estimate." Forces which, in revolutionary England and France, spent themselves in open insurrection, have no such outlet in Russia; all the peaceful means of influencing the autocracy are impossible. Bombs, revolvers and daggers take the place of mass petitions, public speeches and leading articles, and this is now admitted even [illegible] such confirmed enemies of violence as the Social Democrats.

[illegible]

[illegible]

Speaking of the student strike the writer says:—

In no country in the world has the [illegible] been seen of 50,000 students of all faculties [illegible] university lectures, thereby sacrificing [illegible] career and entering upon their professions [illegible] solely in order to express their [illegible] *régime* and their deep sympathy with the P[illegible] Armenians and German Jews, Stundists [illegible] landed proprietors and peasants, nobles and commoners, employers of labour and working men, merchants and [illegible] students and professors, academicians and doctors, lawyers and men of letters, are all at one. There is hardly a class that has not joined in the insistent demand that the nation should be allowed to govern itself.

There are several other excellent articles, of which space forbids mention.

THE *Journal of the African Society* is a mine of information as to the animals, customs, laws, and religions of the native Africans. Child and sage would find it alike interesting.

THE HIBBERT JOURNAL.

THIS quarterly discusses many matters, but it is impossible to enter into them in our limited space. Professor Jones's paper on Mr. Balfour as Sophist does not deal with his later feats of intellectual gymnastics on the fiscal question, but deals with his foundations of belief.

THE EDUCATION OF A MINISTER.

The Bishop of Ripon thus briefly summarises the way in which he would train men for the Christian ministry:—

We should train men to know their own times; to extend their study beyond the narrow limits of a few centuries; to explore the facts of religious consciousness in all systems and in all ages; to understand that only as they bring their teaching into [illegible] contact with men can they expect spontaneous recognition [illegible] authority, and to make men realise that ethical demands [illegible] into spiritual experience, for final and [illegible] harmony with God can only be reached in that [illegible] inspiration, and [illegible] Christ the change[illegible] significant symbol.

THE [illegible] OF THEISM.

Mr. W. H. Mallock, in the last month's *Contemporary*, set forth what he considered to be the true method for [illegible] the Theistic position. He now warns Theists that far more harm is done to the interests of Theistic belief by the use of bad arguments in defending than by the use of bad arguments in attacking it. He urges [illegible] to concentrate their attention upon proving the following propositions:—

[illegible] though evolved from universal [illegible] autonomous [illegible] that the universal spirit, though pro[illegible] incompatible [illegible] nevertheless, [illegible]

[illegible] A MAN OF WAR?

[illegible] in an article under the [illegible] the love that perpetually strives with man [illegible] not be love unless it did strive, [illegible] just [illegible] and even cruel. He says:—

[illegible]

[illegible] writing on the Resurrection of Christ maintains that the vision theory fails to account for the facts of personal religion. Prof. W. R. Sorley writes on the Knowledge of God. [illegible] discusses on the Historical Christ, and Mr. M. [illegible] R. [illegible] discusses the Religion of Rome, Classical and Christian. Mr. H. W. [illegible] article is noticed elsewhere.

THE ART JOURNAL.

THE [illegible] part of the May number of the *Art Journal* is devoted to an article on the Chantrey Bequest, the writer grouping together [illegible] beginnings of a Chantrey Gallery as it should be. He concludes:—

It would [illegible] central sacrifice on the part of the Council [illegible] suggested by the Report, if they were [illegible] temptation to purchase from the walls of Burlington House, but for the next few years were to practise the [illegible] of acquiring only representative British works by prominent British artists not attached to the Royal Academy.

THE EDINBURGH REVIEW.

LORD SALISBURY AS COBDENITE.

THE Review opens with a survey of twenty-five years of recent history, written largely in order to show how Cobdenism triumphed over Palmerstonism in international policy. Lord Salisbury was a great Cobdenite:—

No British Minister in the nineteenth century used great power with greater moderation, and his career as a Foreign Minister may be quoted as a crowning example of the successful application of Cobden's famous doctrine of non-intervention and of its suitability to the needs of a country situated as Great Britain has been since the repeal of the Corn Laws.

Of the articles in the *Edinburgh Review* not noticed separately, perhaps the most generally interesting is the excellent literary paper on Sainte-Beuve and the Romantics. Sainte-Beuve does not cut a very glorious figure in the pages of the *Edinburgh*, any more than he does elsewhere.

The writer on the work of James McNeill Whistler concludes that:—

It is safest to dwell on the landscape side of Whistler's art, for here he has no rival. His portraits have a something which no other portraits have. But yet, if they had all disappeared and Velasquez had remained, one cannot say that the loss would have been enormous. But landscape is a modern art. And all those nocturnes (for example) are a gain not alone to art, not so much to that as to human vision. There are so few who really have the faculty of seeing!

There are also good articles on Tibet, the writer of which thinks Mr. Landor's book likely long to remain by far the most important work on Tibet, though he admits that probably no man with the Mission was quite equal to the opportunity. Carlyle or Stevenson might have been able to have done what Mr. Landor has attempted—no other modern writers.

THE FORUM.

THE *Forum* for April-June contains three special articles, and the usual number of reviews of the various departments of public life.

The first special article is by Baron Kaneko, and deals with America's Economic Future in the Far East. The gist of this article is to suggest something like an American-Japanese commercial co-operative alliance in China:—

Therefore, let the Japanese, with their advantages of racial and linguistic similarity, clear the way for the American people in their Chinese enterprise; and, on the other hand, let the Americans, with their business experience and ample capital, reinforce the Japanese in their Chinese business. It is most important—I should say necessary—for the Japanese company and the United States Corporation to form an economic alliance in their Oriental commerce, because the Americans are most anxious to extend their market in China, and they also know that they cannot do so if they disregard the importance of Japan in Chinese affairs. As the Americans are actuated by such an idea, it is equally important for the Japanese to take a similar step in order to co-operate with the Americans, thereby benefiting in their Chinese commerce through the support of America.

Mr. W. Peabody's article on "The Government of a Great City" is a discussion of municipal problems in the city of Boston, and deals chiefly with the difficulty of reconciling the strong local feeling in favour of local administration and the weighty reasons which lead to a greater extension of the real government.

Professor W. P. Trent, writing on a new edition of Defoe, maintains that he is convinced, after a considerable amount of study spent upon Defoe as a man and a writer, that however crooked his conduct, he was essentially a just and, in his own opinion, an honest man. He admits that some of Defoe's actions were execrable, and must have appeared more than questionable to his own conscience; but he says he grew slowly to be a consummate casuist.

Mr. H. W. Horwill's literary article deals with the biographies of Bishop Creighton, Sir Edward Burne-Jones and Mr. Moncure D. Conway. The article on Applied Science is, as usual, one of the most interesting of these surveys. The writer says that the works now projected and partially under way in and about New York at the present time will involve an expenditure of nearly ninety millions sterling. In Chicago the railway improvements and the freight subway involves an expenditure of forty millions. Another item of interest is the writer's remark:—

That a much greater proportion of combustible is found in the refuse from the poorer localities, while in the wealthier districts adjacent a much lower heating value is found. This may be a matter of relative wastefulness or care; but, be this as it may, the fact is fairly well established.

It would be interesting to know whether the same curious fact has been noted in English cities.

THE ENGLISH ILLUSTRATED MAGAZINE.

THE May number of the *English Illustrated Magazine* opens with an article, by Mr. Hugh Blaker, on the financial history of some of our pictures in the National Gallery. The actual prices paid for a number of Old Masters is contrasted with their probable value to-day. The portrait of Andrea del Sarto, by himself, for instance, was purchased for £270, and £6,000 is considered a moderate valuation for it to-day. This is comforting when one remembers the enormous prices which have been paid for other masterpieces in the Gallery.

An antiquarian article is devoted to the subject of the Brank or Scolds' Bridle. Mr. B. H. Cunnington describes the different types of bridles. As late as 1824 there is a record of the use of the bridle at Congleton, but it seems to have been used in Scotland before its introduction into England.

Mr. Laurence Morton gives a history of Chaldon Church, which is about six miles south of Croydon. Of special interest is the painting on the west wall discovered only in 1870. It is divided into four portions. In the upper centre of the fresco is the ladder of salvation, while the lower depicts the punishment of sin.

THE STRAND MAGAZINE.

MR. E. S. VALENTINE, writing in the May number of the *Strand Magazine*, sketches out a dream of an ideal sea-city, which he thinks England might possess as Italy has her Venice.

An engineering contractor estimates the expense of preparing the ground—making the islands, building the sea-wall, constructing the locks, and a system of drainage and water supply—to be not less than six or seven hundred thousand pounds. The strand-city is named Silverstrand.

The Art Symposium this month is a discussion of the question—Which is the Best Painting of a Child? the pictures having been selected by lady artists. Sir Joshua Reynolds' pictures of children seem to occupy the first place.

Mr. Basil Tozer contributes an interesting interview with Madame Albani on the Art of Singing; it contains much sensible advice to students.

ANGLICAN AND ROMAN QUARTERLIES.

THE *Church Quarterly Review* is distinguished this April by a Roman Catholic's defence of the French Government against the Pope in the current separation of Church and State, and by a readable narrative of the translators of the Welsh Bible. These articles are noticed elsewhere. There is a vigorous demand for the increase of the Episcopate, that every large town may be the see of a bishop. The writer suggests new bishoprics in Lancaster, Burnley, Leeds, Sheffield, Bradford, Hull, Brecon, Ipswich, Colchester, Derby, Leicester, Reading, Surrey and Middlesex. He reckons that it requires £100,000 to constitute a new bishopric. He supports Mr. Balfour's suggestion that bishoprics should be created, not by a special Act, but by a Provisional Order. There is a survey of the latest criticism of the Fourth Gospel, and of the latest theories of matter.

The *Dublin Review* for April is chiefly notable for Mr. Herbert M. Vaughan's account of the Tunisian Kairouan, and the Rev. John Freeland's appeal to the first six centuries as against the Church of England. Dr. Francis Aveling, in writing on Philosophy, remarks on the curious convergence from many points of view of modern—and especially modern English—philosophical works upon the Catholic system of Thomas Aquinas. A paper by the Rev. W. H. Kent on "The Tercentenary of Don Quixote" declares that Cervantes was not laughing chivalry out of fashion, but merely gibbeting the absurd romances of chivalry. The Rev. H. N. Birt, reviewing Mr. Charles Booth's book, says that the religious influences of London are too often not really the raising of mankind to the service of God, but are very largely merely materialism, social amelioration, and philanthropy.

THE PALL MALL MAGAZINE.

THE *Pall Mall Magazine* for May contains a number of interesting articles. In one of them, Dr. Nordenskjöld writes an account of his disappearance in the Antarctic Regions, and describes his remarkable rescue by the Argentine relief expedition. The Swedish Antarctic Expedition lasted over two years, and during a long winter, after the wreck of the *Antarctic*, the company was broken up into three parties in one and the same bay, yet each was ignorant of the whereabouts of the others, and inter-communication was therefore impossible. Most extraordinary of all is the wonderful story of their rescue on the same day.

Another fascinating travel article takes us to the Victoria Falls in Rhodesia. Mr. C. B. Fox, one of the engineers, describes the bridge which is being built over the Zambesi. He says the site of the bridge is a quarter of a mile away from the Falls, and is in such a position that it is almost impossible to view the Falls and the bridge at one and the same moment. The bridge consists of one main arch, 500 feet span, the parabola, with two short end-spans, bringing the total length to 650 feet, and the whole structure will be below the top of the gorge. The height of the bridge above water-level is 400 feet—higher than St. Paul's. Every effort is being made to preserve the beautiful spectacle.

The Real Conversation, by Mr. William Archer, is with Mr. J. Churton Collins, and the topics discussed are, oddly enough, murder cases and education problems.

Mr. Frederic Lees contributes a brief interview with Dr. Doyen on Cancer and Its Cure, in which we hear from the doctor himself the experiments which he has made, and the successes and failures he has met with.

"QUARTERLY" MORALS AND PHILOSOPHY.

IN the *International Journal of Ethics* Mr. J. Slaughter pits music against religion as psychological rivals. Mr. S. H. Mellone finds, in the decision of the House of Lords concerning the Scottish Free Church, a powerful blow struck on behalf of progress and enlightenment, because reducing fixed creeds to an absurdity. Mr. T. B. Macdonald gives an interesting account of the moral education of the young Mohammedan. Mr. A. K. Rogers finds the strength of the moral argument for immortality in the demand of love for the continued existence not of itself but of the person loved, and in the corresponding character of God. Mr. G. Bunzel draws much-needed attention to the importance of ethical education of the merchant.

Capital punishment is discussed in this review and also in the *Humane Review*, and in both condemned. In the *Humane Review* Lady Florence Dixie, as a converted sportswoman, denounces the horrors of sport. Mrs. Arthur Bell recalls the humanitarian reforms introduced by Asoka, Buddhist Emperor of India. Mr. Ernest Bell re-insists on the inhumanity of the bearing-rein. Mr. Aylmer Maude repudiates the Tolstoian extreme of non-resistance.

The *Ethological Journal* is noteworthy for Mr. Thomas Holmes' "Obscure Causes of Crime," which claims separate notice. It has an important utterance by Dr. Percy W. Ames on physical factors in human character, notably those connected with adolescence.

In the *Monist* Mr. C. S. Peirce defines "pragmatism" as the theory that a conception lies exclusively in its conceivable bearing upon the conduct of life, and that there is absolutely nothing more in it. Mr. Irving King applies the "pragmatic" interpretation to Christian dogma. He asserts that there is no better proof of the validity of thinking than that it does solve the crises which arise within experience. The belief that meets the need of any crisis is "functionally real." When the specific need is past, then the functional reality ceases and the dogma takes its place. This conception of "functional reality" may be found useful to theologians sloughing their ancient metaphysics. Mr. Godbey discusses the place of the Code of Hammurabi, which he contrasts favourably with Hebrew and Moslem laws.

Mind is chiefly occupied with controversial rejoinders. Mr. C. A. Strong denies that Mr. Moore has refuted Idealism. Mr. William James defends himself against Mr. Joseph's criticism of his Humanism. Mr. H. V. Knox traverses Mr. Bradley's contention that the absence of self-contradiction is an absolute criterion of ultimate reality. Mr. Norman Smith sets forth the naturalism of Hume, and defends it from misconceptions by Green and Kant.

The Occult Review.

THE May number contains two good ghost stories—both authentic. Miss Goodrich Freer promises to write in July on Occultism in the Nearer East. The Editor has a good word to say for astrology :—

> Those interested in seismology will do well to note the exact fulfilment of a prediction based on the eclipse of the moon on February 19th anent the recent earthquake at Lahore. The prediction occurs in "Zadkiel's Almanack," p. 68, and runs as follows : "About the 74th degree of east longitude where Saturn is on the fourth angle, a sharp shock of earthquake will soon be felt, most probably at the latter end of March and beginning of April." The 74th degree of east longitude passes through Lahore, and the recent earthquake, as will be recollected by all, occurred during the first week of April.

THE NORTH AMERICAN REVIEW.

THE *North American* for April opens with the first article of a series in which Mr. Henry James describes his impressions of New England on returning to his native country after an absence of a quarter of a century. Karl Blind prophesies after his wont concerning the Coming Crash in Russia.

Mr Willard French, writing on the Public School System in the Philippines, tells a rather good story of an answer made by a Filipino boy of twelve, when under examination, concerning an early chapter of American history. The boy asked how the first Virginian settlers obtained the seed from the Indians. The teacher said he did not know, he only knew that they did get it —

"I myself do not know," the boy said, most politely. "But I saw a picture in which Captain Smith held an Indian by the throat, with a pistol at his head, saying, 'Your money or your life!' I myself do not know that it was true. I was only thinking of—of the Philippines."

MR. ARNOLD WHITE ON GERMANY.

Mr. Arnold White, who is one of the most fervent of Germanophobists, writes an article on Germany's Aim in Foreign Politics, the gist of which is the assertion that as all roads lead to Rome, so all the schemes that the busy brains of German statesmen concoct are directed, sooner or later, and in some form or another, against the existence of Great Britain.

By way of reconciling us to so dismal a truth, Mr White tells us —

Germany is ceasing to be the land of advanced thought. Recently a book was published entitled "Is Woman a Human Being?" The question was answered in the negative, and this book was seriously and generally discussed everywhere. At a congress of scientific men held at Frankfurt, it was proposed to erect outside all the big towns large barracks for the unfortunates. The proposal was adopted. The tendency to militarise everything is universal. Even children suffer from it. Children's suicides are frequent owing to ill treatment and overwork. The great bulk of the German population is increasingly dissatisfied with the existing regime.

ROMAN CATHOLICS AND DIVORCE.

Dr Doane, the Bishop of Albany, in an article entitled "Re-marriage after Divorce," says that it is a great delusion to think the Roman Catholic Church is a stout upholder of the indissolubility of marriage. He maintains that Rome justifies and practically sanctions what amounts to divorce, although it is not called so, in the freest possible way unless both parties to the previous marriage are Roman Catholics. Rome regards —

as dissoluble the marriages of all unbaptised persons, marriages between an unbaptised person and a baptised Christian who is not a Roman Catholic, marriages between a Roman Catholic and a non Romanist, baptised or unbaptised, which have been contracted without dispensation. If this is true, and I believe it cannot be denied, it certainly follows that Rome cannot proclaim herself as the special guardian of the institution of marriage.

THE FUTURE OF RAILWAYS.

Senator F G. Newlands, in a paper entitled "Common Sense of the Railroad Question," says that three-fourths of the transport business of the country is inter state. He thinks that —

In the United States there are 200,000 miles of railroad, owned by about 2,000 corporations, and controlled by about 600 operating companies. But these operating companies have gradually come under the management of six great groups of ownership, each group dominated by a single individual, or by a few individuals. These groups are popularly known as "The Morgan," "The Gould-Rockefeller," "The Harriman," "The Vanderbilt," "The Pennsylvania," and "The Moore" groups. With two or three exceptions, these 2,000 corporations are organised under State laws.

There should be unity of ownership recognised by the law that would compel railroads engaged in inter-state commerce to incorporate under a national law. He would exempt all railroad property, including bonds and stocks, from all taxation except a tax on gross receipts, to be collected by the national authorities and distributed among the States. He thinks that such national incorporation is the only alternative to Government ownership.

THE NEW MONROE DOCTRINE.

Two Venezuelans write upon President Roosevelt's recent pronouncement on the Monroe Doctrine. One of them, formerly Under Secretary of State in Venezuela, says —

By virtue of the new meaning of the Monroe Doctrine, the United States intends to unite the whole New World under the Stars and Stripes. Will the European Powers stand by and regard this new state of affairs with equanimity? If not, the complications resulting from unwillingness on the part of Europe to connive at the wholesale swallowing up of the American continent by the Eagle must involve a universal war, which can only have one issue—*i.e.*, the entire dismemberment of South America at the hands of Great Britain, Germany, and France, and, furthermore, the safety and independence of the United States itself may be threatened. In the event of this most undesirable result occurring, the blame will lie solely at the door of this distorted view of the Monroe Doctrine, which has already been violated by the appropriation of the Philippines.

THE COSMOPOLITAN.

THE *Cosmopolitan* for April has no article of great importance. A series of papers is begun dealing with the great sieges of history, those of Acre and Constantinople beginning. There is a short and powerful allegorical sketch by Maxim Gorky called "Confronting Life," and a criticism—on the whole, favourable—of the French mother.

Much the most interesting paper for English readers, and one with good illustrations, is Mr Poultney Bigelow's on German Army Manœuvres. The German conception of an army is essentially that it must be coached in its work like a football team or rowing crew, and that this coaching must be constantly going on. The following story seems new, and throws an interesting sidelight on the Emperor William —

The German Emperor venerated his illustrious grandfather just as we venerate the heroes of our great civil war, but he knew that justice to the living demanded that his generals be sound men physically no less than mentally. So in September of 1888 he mounted these old generals and started them on a gentle trot across broken country. It was hard on those who had internal troubles, but the trot became a canter, and the canter drifted into a gallop. There were ditches on the way, and many drifted into the ditches.

When the Emperor was satisfied that he had applied his test long enough, he drew rein and gazed back over a field strewn with rotund and bald headed warriors vainly trying to climb once more into their slippery seats. That was a magnificent field day for Imperial Germany. None but a commander with immense moral courage would have been so cruel to his political intimates in order thereby to show his kindness to the nation at large. The German Emperor acted upon what he saw. Those who fell off, stayed off. At once ensued promotion of young blood, and the principle has since then been adhered to, that the man who is entrusted with the lives of his fellow-men must be a man in all senses.

LA REVUE.

IN *La Revue* of April 1st a "Friend of the Alliance" has a second article on the French Millions and the Japanese Finances. He describes the Japanese finances as very flourishing at the end of the first year of war, and repeats that it would be a mistake to grant any more sums to Russia to enable her to continue her unpopular war.

Two articles on French Home Policy have little interest outside France. G. Roussacq discusses the question of Ecclesiastical Pensions in connection with the separation of Church and State, and another writer heads his article "436 Deputies Instead of 575." The subject of the latter is the dispute between the *scrutin de liste* and the *scrutin d'arrondissement*. Figures are given showing that in some Departments France is over-represented. The *scrutin d'arrondissement* is condemned because of the inequalities it permits. The writer concludes:—"The number of deputies ought to be in proportion to the number of electors, and not in proportion to the number of inhabitants; and the proportion of deputies in each Department ought to correspond more closely to the number of inhabitants. Thus the parliamentary representation would be more equally distributed, and instead of 575 deputies the number could with advantage be reduced to 436."

In the second April number J. Novicow discusses some of the paradoxes of the friends of war. The sentiments of honour in private life consist in respecting the rights of one's neighbour, he says. The sentiments of national honour are not conceived in the same sense; indeed, they are often diametrically opposed to it. If the Germans had desired to respect the rights of Alsace-Lorraine, for instance, they would not have annexed the provinces without consulting the population. The writer combats the ideas of René Millet, who seems to think that all great emotions proceed from suffering and not from joy.

THE REVUE DES DEUX MONDES.

IN the first April number of the *Revue des Deux Mondes* Pierre Leroy-Beaulieu has an article on the Economic Condition of China. He examines the economic work already accomplished by the Western world in China, and discusses the task still before the Westerns, with the means to be adopted and the results to be expected.

The value of the exports from China, he says, rose from 143 millions of taels in 1895, to 214 millions of taels in 1902, while the value of the imports rose from 171 to 326 million taëls. But European commerce with China has become much less profitable than it was at the beginning, and with the number of competitors the margin between the purchase price in Europe and the sale price in China is now exceedingly small. Another drawback is the absolute ignorance of the Chinese language among the merchants and the representatives of the great European firms. This puts the merchant at the mercy of the *comprador* or buyer, who advises the Chinese firms he represents. Even when he is honest he is dear, for he has to be paid a commission.

The principal tasks yet to be achieved are—(1) to create or to perfect the means of transport; (2) to modify or to ameliorate the methods of production; (3) to exploit the wealth which the natives neglect, and (4) to maintain order and security so that everyone may be enabled to enjoy in peace the fruits of his own industry.

There is really no article of special interest in the second April number.

THE CORRESPONDANT.

THE French reviews are much occupied with French Colonies. In the *Correspondant* of April Francis Mury discusses the Congo Mission of M. Brazza. Twenty-five years ago M. de Brazza found the French Colony on the Congo, and now he returns it to see what his successors have done with the beaut domain which France owes to his invincible ener The task of the administration of so extensive a Colo is often a very delicate one. To succeed he ought have much experience with black populations, and it surprising that young men whose colonial knowledge merely theoretical should ever have been put in su important positions. The present inquiry will probab show up the mistaken policy of allowing inexperienced agents to fill such posts of responsibility.

In the number for April 25th there is an article "Amédée Lamy," by Amédée Britsch. Command Lamy died in Africa in 1900. He was the leader of a expedition which had for its result the extension of the domain of the French flag from Algeria to the Congo through the Sahara and the Tchad countries. So far back as 1890 he conceived the idea of penetrating Central Africa, and in 1892 he sketched out his plan and the following year attempted the enterprise, but was diverted towards the Congo. In August, 1893, he left Marseilles for the Congo, and in 1894-7 he was of the expeditionary corps in Madagascar. Finally, in 1898, he set out on the great mission, and died on the eve of its success.

THE NOUVELLE REVUE.

DR. P. HAUSER, in the *Nouvelle Revue* of April 1st and 15th, has an article on the Nineteenth Century from the Medico-Social point of view. He says all who are interested in the evolution of human society must be aware that with the transformation of the social order and the radical change in the physical and moral condition of the people in the nineteenth century, there has been a considerable increase of nervous diseases, especially during the last half of the century. He begins with mental diseases, which have increased very rapidly. Next, he turns to neurasthenia, which he says has often been confused with hysteria, or cerebral anæmia or spinal irritation. Then there are the morphia or opium habit, alcoholism, "tobaccism," tuberculosis, gout, and other evils which have flourished in the last century.

In both numbers Joseph Ribet continues his articles on the Evolution of Pan-Americanism. He deals with the Panama Congress of 1826, the annexation of Texas, the purchase of the Danish Antilles, Cuba and the Spanish-American War, etc.

THE REVUE DE PARIS.

CONTINUING his study of the Russian problem in the first April number of the *Revue de Paris*, Victor Bérard deals with Poland and Lithuania. He compares the Russian treatment of Poland with that of the Germans. He says the Tsar no sooner shows himself better disposed towards his Polish provinces than the German Protestants declare open war against the Catholic Polish element in the Duchies of Posen and Silesia. Russia may torture the Pole, but she does not despise him; nay, she does him the honour of fearing him. Russia oppresses the Pole, whereas Germany would suppress him altogether. For the Polish nation, German influence is more dangerous than Russian tyranny, for the Pole is more apt to get Germanised than Russified.

THE DUTCH REVIEWS.

IN *Vragen des Tijds* Mr. Veegens deplores the loss by death of a friend and colleague, Mr. Kerdijk, a name well known to the readers of that review and to all engaged in social work in Holland. The chief contribution to the current issue, however, is that on Army Evolution in the Democratic Sense; the gist of this is that it should be the aim of everyone to foster a love of the army and a desire to aid in the national defence, together with more fellowship between officers and men. Officers are enjoined to treat their men as they themselves would like to be treated, and the men are counselled to do their utmost to increase the general efficiency. This movement, if it may be so termed, is already well under way and promises to yield good results. The last article, on Dead and Living Latin, leads to a study of the question of teaching modern languages, and the author insists that "the three modern languages" (German, French and English) should be taught in all Dutch high schools. Living Latin is, as one may guess, to be found in French, Italian and Spanish.

In *De Gids* the article of most general interest is that on the Jujitsu, or "The Gentle Art," as the writer calls it. This system of Japanese wrestling has received so much attention of late in our own country that it is superfluous to deal with it here. It reminds me of an article on a Japanese wrestling match which appeared in *De Gids* some ten years ago; a comparison of the two systems might well be entitled "The Difference of a Decade." That wrestling match was a comic affair from a European point of view; there was a good deal of childish pantomime about it, and it corresponded exactly with what we had all thought of the Japanese and Chinese nations up to that time. The contribution on the Odyssey, and the way in which a god comes to be regarded as a hero, is learned and interesting to those who go in for deep subjects.

Elsevier opens with its usual art article, but with a variation, inasmuch as it deals with a collection instead of an artist. The Royal Art Museum in Copenhagen, and the paintings by Dutch artists to be seen there, is the theme, and we have reproductions of paintings by Rubens, Rembrandt, and other less well-known painters. The next contribution describes a journey in Brielle, where, according to the illustrations, one may see quaint houses and the like, as one would expect to see in that part of Europe. The "Mæcenas of Malabar," an alliterative title which is attractive, tells of a certain Dutch official who led a busy life in that part of South-west India during the latter half of the seventeenth century. He went to sea as a lad, then turned soldier, and afterwards became a Government Commissioner in Malabar, where he made his mark as a botanist, took part in some fighting, and generally acted somewhat after the style of Mæcenas of old.

Onze Eeuw is a very good issue. The article on Hendrik Witbooi and the recent rising in German South-West Africa will command most attention; it is really a review of several German books on the subject. Witbooi was regarded in a very unfavourable light by most people, but these books do him justice, and show him as a man of honour and true to his word. It was mainly owing to his efforts that peace reigned as long as it did out there. "Indian World-Forsakers" is a dissertation on the old subject whether or not a man can be in the world and not of it. Must he retire to a monastery in order to remain good?

THE ITALIAN REVIEWS.

THERE are obstructive Philistines in Italy as elsewhere, and *Emporium* (April) prints an appeal to the nation from Professor Corrado Ricci, the distinguished Curator of the Brera, pleading for a public protest against three threatened acts of vandalism—the cutting down of the pine-woods round Ravenna, the destruction of part of the ancient walls surrounding Lucca, and the deviation, for industrial purposes, of the waters of the famous waterfall delle Marmore at Terni. English lovers of Italy will wish him success in his crusade. The literary study of the month describes the work and aims of W. B. Yeats, while P. Molmenti contributes an instructive study of the Venetian women of the Renaissance, illustrated by an admirable series of portraits.

The death of the great Christian philosopher and writer Augusto Conti has excited much sympathetic comment in the Italian magazines. Foremost among these is the *Rassegna Nazionale*, which prints, *inter alia*, a fine commemorative poem by Luisa Anzoletti. Much speculation is still rife in Italy as to the future position of political parties now that the Papal *Non Expedit* is virtually abrogated. The well-known Senator Nobili-Vitelleschi writes emphatically in the *Rassegna* against the formation of a Catholic party which the *Civiltà Cattolica* is striving to bring about, as being an absurdity in a Catholic country. He also protests energetically, but doubtless in vain, against the Christian Democratic party labelling itself Christian, on the ground that they are thereby dragging religion into the controversial sphere of politics. A. V. Vecchi contributes a very favourable summary of the *Live Stock Journal Almanac* for 1905, expressing the hope that a similar publication may be started for Italy now that agricultural problems are rightly exciting so much attention.

The *Civiltà Cattolica* continues its zealous propaganda in favour of united Catholic action on a practical social-economic basis, and in the course of the article breaks out into an enthusiastic encomium of the late Cardinal Manning, who has not often received praise from that quarter. It attacks the Abbé Loisy for his views on the now disputed authorship of the *Magnificat*, combating the suggested authorship of St. Elizabeth.

The *Rivista Internazionale* contains, as usual, admirable contributions to the serious study of social problems. The extraordinary growth of Italian emigration to the United States is described by G. Preziosi, and various suggestions made. G. Goria points out the superiority of England in the organisation of industry, and Professor Calisse again calls the attention of his countrywomen to the need for social service in connection with the white slave traffic.

In the *Nuova Antologia* Senator A. Mosso discusses with some bitterness the proposal made—and approved by the King of Italy—to hold the next contest of the Olympian games in Rome, points out the heavy expense that will be incurred, and asserts that Italians, being very much behind other nations in athletic development, they will certainly cut a very poor figure. E. Romagnoli writes learnedly and lengthily on the development of music among the ancient Greeks, and an anonymous writer, speaking evidently with authority, describes the recent visit of the German Emperor to Tangier as a direct counter-demonstration to the Anglo-French *entente cordiale*, and as a cause of grave annoyance to Italy, who is more interested than anyone in maintaining a peaceful Mediterranean.

THE WINDSOR MAGAZINE.

THE *Windsor Magazine* for May contains a fully illustrated paper on the art of Mr. Seymour Lucas, by Wilfrid Meynell, and a paper by the late Sir Edwin Arnold on the Monsoon and the Indian. Most people will turn with interest to Mr. Grinling's article on "The Commissariat of our Railways," from which they will glean much information. The Great Northern was the pioneer of dining-cars on railways in England, when in November, 1879, they introduced on the London-Leeds service the first vehicle of the kind seen in this country. Now the Great Eastern can accommodate 111 passengers in its dining-car at one time on the Harwich Boat express, and they hold a record of 226 breakfasts provided for a "beanfeast" party. Generally catering is done on the basis of simultaneously feeding fifty or sixty persons, in the proportion of one-third first-class and the rest second and third-class. Most of the cooking is actually done on the train—a matter of some difficulty when the train is running full-speed, crossing junctions or descending steep gradients. The commissariat department, including as it does hotels, besides catering of all kinds, is likely to become an increasingly important part of a railway company's business. Where competition is keen the business is generally done by the companies themselves, and not farmed out to contractors.

HARPER'S MONTHLY MAGAZINE.

Harper's for May is a very good number indeed. A very interesting and well-written article of a type that is often the reverse is on "Queen Eleanor's Funeral March," the stations marked by her crosses, of the original twelve of which there now exist only Goddington, Northampton, and Waltham, Charing Cross, of course, being rebuilt. Some of the illustrations are by Mr. Joseph Pennell. The writer took the trouble himself to go over the stations of Queen Eleanor's Crosses, from Harby, in Lincolnshire, where she died, to London, and in December, the month in which she died, in order the better to realise "the wofulness of that dismal funeral march."

[*Reproduced from Harper's.*

Waltham Cross.

Mr. E. Walter Maunder, of Greenwich Observatory Solar Department, contributes a paper on "Magnetic Storms and the Sun," in which he says that he has thoroughly satisfied himself of the connection between sun-spots and magnetic disturbances. But, he thinks,

The sun's action in these magnetic storms is not a magnetic radiation at all, but that in some way a stream proceeding from the sun and overtaking the earth effects a release of terrestrial magnetic energy, as a spark may set free the disruptive force of a store of gunpowder.

Thus the difficulty which once seemed so serious, that we often have large sun-spots without any answering storms, is easily explained: the stream line in such a case has missed the earth. The reverse difficulty, that we sometimes have magnetic storms when there are no spots, finds its explanation in what appears to be the fact that one of these active regions may continue to emit its stream line after its sun-spot activity has ceased to be visible.

Other articles deal with the territorial expansion of the United States, which, besides its well-known acquisitions, has acquired jurisdiction over a great number of islands in various parts of the world; with the latest results of the excavations at Susa, Persia; with the ethnological paradox presented by the Leccos of the Bolivian Andes, who are of a distinct Malaysian type, and lend colour to the theory that the Americas were peopled originally from the East; and an amusing paper on Subiaco, by Mr. L. Alden. Subiaco is a town with a great Benedictine monastery, about fifty miles from Rome. It has been made the scene of the opening of one of Marion Crawford's best novels.

BLACKWOOD.

THE May number is strong in politics. The most significant article is that on Mr. Balfour and Lord Beaconsfield, which sees symptoms of an approaching change in our parliamentary system such as Lord Beaconsfield foresaw when he predicted the rapid fall of the House of Commons before the rise of the printing press and the revival of the monarchy. The writer maintains that the House of Commons is less popular than ever, far more unpopular than in the time of "Coningsby." "Musings Without Method" are wholly devoted to an almost fulsome eulogy of Lord Milner. Lord Milner, if at all sensitive to this sort of thing, must feel strangely in finding himself a man altogether after *Blackwood's* own heart. There is a strong plea for the creation of an Imperial Militia Service, such as was advocated by Mr. Seddon at the Colonial Conference of 1902. The recent naval changes draw forth a strong condemnation of what is termed "a retrograde Admiralty."

Passing from politics, there are several delightfully readable papers. Colonel Scott Moncrieff gives a very vivid account of his work with Sir James Browne in the making of the Harnai Railway, on the Indian frontier. Sir R. H. Lang enables the reader to follow his delight as explorer of archæological remains in Cyprus. There is a long paper on mountaineering of to-day, in which the Alps are dismissed as now too well-known, too populous, and too easy, and pointing to the Himalayas, the Andes, and the African snow mountains as the happy hunting ground of the modern mountaineer.

THE *Journal of the Royal Colonial Institute* for April contains three weighty papers. Sir Charles Bruce deals with the Crown Colonies and places, and urges strongly their development by the Imperial power. Mr. Hubert Reade pleads for the linking of English schools and Colonial education with a view to preparing a larger number of English youths for Colonial life. Mr. C. Cooke argues in favour of the emigration of State children. Out of the 8,372 "boarded out," he thinks 2,000 would be immediately eligible for emigration, and urges that this is not a matter for charity, but for State action, the children being wards of the State.

THE BOOKS OF THE MONTH.

ARE THERE ANY SUPERIOR RACES?*

'God hath made the world and all things therein, . . . hath made of one blood all nat'ons of men for to dwell in all the face of the earth."—ST. PAUL'S DISCOURSE AT MARS HILL.

SAYS the coloured man to the white man: "Am I not also, despite my tawny skin, a man and a brother?"

And the white man replies: "I am waiting to see whether Rojdestvensky can beat Togo before I answer that question."

Eighteen months ago the Japanese were but "yellow monkeys."

To-day they are enthusiastically acclaimed as the Seventh Great Power of the World and the Paramount Power of the Pacific.

"Cannon Parliaments settle naught," sang Lowell. But they register everything. "The pen is mightier than the sword," no doubt; but for the final attestation of its might the wielder of the pen employs the wielder of the sword to do his bidding.

The apotheosis of the Japanese was attested, not achieved, by the Battle of Mukden and the fall of Port Arthur. The Japanese were as truly great, great in public spirit, great in education, great in art, great in science, before a shot was fired. All that the war did was to rend the dense veil of prejudice that concealed their greatness from the eyes of the white-skinned world. The triumph of the Japanese had been wrought out in school and in workshop, in university and in public offices for the last thirty years. They had already arrived. Their victories in Manchuria are but as the heralds' trumpets proclaiming their advent.

WHAT JAPANESE VICTORY MEANS.

Even now the question whether Christendom is prepared to accept the teaching of the Apostle Paul depends chiefly upon the skill with which Admiral Togo and his heathen sailors maintain their claim to supremacy on the sea. If the Japanese destroy the Baltic Fleet, the man in the street, who is nominally a Christian, will reluctantly begin to admit that perhaps, after all, the Apostle was right. But three classes of men will feel that, whether Paul was right or wrong, this world-reverberating proclamation of the equality of races will play havoc with the foundations of their faith. These three are classes which have based their whole scheme of the universe on the natural, ineradicable and eternal superiority of all men who wear white skins over all their brothers whose skins are dark. They are the Anglo-Indian officials in India, the White Australian party in Australia, and the Mean Whites of the Southern States of America. They will endeavour, no doubt, to break the brunt of the dread discovery by various subterfuges. In this they will be zealously aided by the Japanese themselves. Some of the Japanese have already discovered that they are not Asiatics. A few will probably soon proclaim that they are in reality a white race—a little tanned by the sun, no doubt, but essentially white at bottom. And this attempt to sneak into the white fold like a thief will be eagerly welcomed by those inside who are willing to share their ascendency with the Japanese, if they will help to keep the other coloured races under. But all such make-believes and makeshifts will perish. The triumph of Japan sounds the death knell of the ascendency of the white race. The great Pharisees of the planet may read their doom in the thunder of the Japanese victories.

"ASIA FOR THE ASIATICS."

There is no living writer who has studied so closely and so long the question of the relation between the white European and the coloured Asiatic as Mr. Townsend—"Townsend of the *Spectator*." He has just published, with an up-to-date preface, his luminous and suggestive book on "Asia and Europe." He, at least, is under no delusions as to what is the real significance of the Japanese triumph.

In these he finds a remarkable confirmation of his judgments and forecasts. Briefly put—I accept the summary of his own *Spectator*—the Japanese victory means "Asia for the Asiatics." Mr. Townsend does not think that the West need fear that Japan will exploit the resources of China—of which she will infallibly get the control—for an attack on Europe; but he does think that European partition of the profitable regions of the East must cease. He thinks, also, that Japan will retort—when it is quite convenient for her to do so—on the exclusion which the West now enforces against her. If any Tariff Reformer thinks to terrify us with threats of desertion by our Australian Colonies, let him read what Mr. Townsend has to say about the possible future of the Australian Continent if Japan should covet it. Nothing could prevent a Japanese conquest if the British Fleet were not available for defence. Imagine Australia separated from Great Britain, and so without the Fleet at call. The Labour party passes an Act excluding the Japanese. Japan presents an ultimatum—Retreat or war. What then? And what of the Dominion of Canada, if it pursues the same policy?

JAPAN'S "SACRED DUTY."

In confirmation of this warning note are the words of the President of the Japanese House of Peers. That dignitary said:—"The sacred duty is incum-

bent upon us, as the leading State of Asiatic progress, to stretch a helping hand to China, India, Korea, to all the Asiatics who have confidence in us, and who are capable of civilisation. As their more powerful friend, we desire them all to be free from the yoke which Europe has placed upon them, and that they may thereby prove to the world that the Orient is capable of measuring swords with the Occident on any field of battle."

Seeing, then, that the Domination of the White Man is doomed, and that we whites have to learn to treat our darker-skinned fellow-mortals as brethren, we may as well make the best of it. As we must grin and bear it, M. Finot's admirable study of Race Prejudice will perhaps help us to make-believe we actually enjoy the process. M. Finot—everyone by this time knows M. Finot, the famous editor of *La Revue*, formerly *La Revue des Revues*, but now serenely assertive of its unique position as *La Revue*, the Review of Modern France.

M. FINOT.

Of course *La Revue* is not *La Revue des Deux Mondes*, any more than the Houses of Parliament are Westminster Abbey. M. Brunetière, like the Dean, presides over the Temple of the Dead. The *Deux Mondes* has a great tradition. Its bound volumes are like the sarcophagi of famous kings. The present generation salute it as the soldiers of Napoleon saluted the Pyramids, and pass on. France, although the land of the Revolution, is in many things as conservative as ancient Egypt. Literature, especially periodical literature, is one of these things. Not for the world would the self-respecting Frenchman disturb the unquestioned supremacy of M. Brunetière as custodian of the mummies of the past. They subscribe to the *Deux Mondes* from the force of traditional example; as did their fathers and their grandfathers, so do they. But for the real thing they go to the *Revue*, which the incomparable energy and genius of M. Finot has placed at the head of the procession of the living periodicals of France. There they find the vital issues of our time treated with catholic sympathy and with unfailing tact. It is the most cosmopolitan of French reviews. No other periodical has such an international circulation, such a comprehensive survey. M. Finot is a naturalised Frenchman. But he was born in the most romantic and the most unfortunate of all the Slavonic countries, and unites Polish charm with French *esprit*. There is about M. Finot a delightful element of vivacity, and of an almost boyish optimism which find expression in the utterance of perpetual paradoxes. His last book calmly challenged the insolent authority of death, and demonstrated that man could, and might, easily prolong the range of human life to one hundred and fifty years. And now, in his latest volume, he assails with equally indomitable resolution the time-honoured superstition of races. "Races!" says M. Finot; "don't name to me that fool of a word. There are no races. There is only one race—human. As for the so-called races, there is only one thing certain: if any set of people are described as a distinct race—Semitic, Teutonic, Latin, or anything else—a very brief examination will suffice to prove that it is no such thing; that indeed it is just the contrary to what it is called."

A NINETEENTH-CENTURY CRAZE.

M. Finot has written a charming book, witty, amusing, lucid, full of spirit and good humour. He begins by describing the birth of the doctrine of the inequality of races. The author of this unholy evangel was a Frenchman, one Gobineau, who seems to have been taken in hand by Wagner. After him rose up various anthropologists, who went more or less crazy concerning the index numbers of brains, the shape of skulls, and other more or less conclusive proofs of superiority or of inferiority. It is curious to read these absurd speculations as to the best method of improving the human race, by artificially breeding superior men and mercilessly massacring off those judged to be inferior.

WHAT CONSTITUTES RACE?

M. Finot laboriously examines all the distinctive characteristics alleged to constitute evidence as to the inferiority or superiority of different races, and finds them all wanting either in consistency or common sense. Dismissing these crazy theories of anthropologists, he maintains that the human race is steadily approximating to unity of type. Nowhere in human history can he find any fixed type, anything that corresponds to the popular conception of a standard race. All nations and races mix and mingle and pass away like clouds in the sky. The environment—geographical, ethnical, and social—revolutionises their fundamental characteristics. Science by its discoveries effects changes that appeared inconceivable. Railways, for instance, have done more to unify the type in a century than inter-breeding has done in a thousand years. Who can foretell what would happen if science were to discover some metal lighter than air?

The favourite Aryan doctrine is then examined and pulled to pieces. The notion everywhere accepted fifty years ago of the Aryan origin of our civilisation is now almost universally scouted. The best known, purest-blooded surviving Aryans discoverable have been found to possess all the opposing characteristics of the superior and inferior races.

IS THERE ANY SUPERIOR RACE?

M. Finot will not have it that there is any clearly defined distinction between Latin and German races save those which can be easily produced in either by subjecting them to the pressure of different circumstances. The chapter on France and the French shows how absolutely French genius can adopt and inspire those whom it attracts from other lands. France has resumed her ancient *rôle* of being the *force directrice du monde*. And this, not because France is

Aryan, Gaul, or Latin, simply because she is human, the heart and brain of all the other peoples of the world. A superior race, truly, but superior only because it is the amalgam of races, the common denominator of humanity. In his last chapter M. Finot boldly tackles the question whether there are any races congenitally doomed to inferiority. As might be expected, he denies this with vigour, and with characteristic intrepidity draws his arguments largely from the astonishing progress made by the blacks of the Southern States. In a period of fifty years, despite enormous drawbacks, they have achieved progress which cost the white races five or six hundred years. Germany, between the time of Julius Cæsar and that of Charlemagne, did not make as much progress as the negroes of the South have done since the close of the great civil war. It is very interesting to find that this penetrating mind can see the supreme demonstration of the equality of races in what, to the mean white, is the absolute demonstration of the ineradicable difference between the white man and the black.

IT IS ALL ENVIRONMENT.

It is all environment, all the effect of historic circumstances and the influence of surroundings. The fundamental qualities which distinguish men from brutes are the same in all human beings, white, yellow, or brown. The only difference is the degree of mental gymnastics which depends upon the application of these faculties to the sum of accumulated tradition. Change the environment, and in a few generations the civilised man becomes savage and the savage becomes civilised. It is education and circumstances, not the colour of the skin or the shape of the skull, that decide the destinies of men.

MR. H. G. WELLS.

So far M. Finot. It is interesting to find that the one English thinker who has speculated of late upon the future of the human race has arrived at practically the same conclusions. In his last book, "A Modern Utopia," Mr. H. G. Wells bears emphatic testimony against the superstition of races necessarily superior. The following passages occur in his chapter entitled "Race in Utopia":—

The great intellectual developments that centre upon the work of Darwin have exacerbated the realisation that life is a conflict between superior and inferior types, it has underlined the idea that specific survival races are of primary significance in the world's development, and a swarm of inferior intelligences has applied to human problems elaborated and exaggerated versions of these generalisations. (P. 327.)

Extraordinary intensifications of racial definition are going on; the vileness, the inhumanity, the incompatibility of alien races is being steadily exaggerated. The natural tendency of every human being towards a stupid conceit in himself and his kind, a stupid depreciation of all unlikeness, is traded upon by this bastard science. With the weakening of national preferences, and with the pause before reconstruction in religious belief, these new arbitrary and unsubstantial race prejudices become daily more formidable. They are shaping policies and modifying laws, and they will certainly be responsible for a large proportion of the wars, hardships, and cruelties the immediate future holds in store for our earth. No generalisations about race are too extravagant for the inflamed credulity of the present time. No attempt is ever made to distinguish differences in inherent quality—the true racial differences—from artificial differences due to culture.—(P. 329.)

THE RACE MANIA.

The depopulation of the Congo Free State by the Belgians, the horrible massacres of Chinese by European soldiery during the Pekin expedition, are condoned by race advocates as a painful but necessary part of the civilising process of the world.

The world-wide repudiation of slavery in the nineteenth century was done against a vast sullen force of ignorant pride, which, reinvigorated by the new delusions, swings back again to power.

"Science" is supposed to lend its sanction to race mania, but it is only "science" as it is understood by very illiterate people that does anything of the sort—"scientists'" science, in fact. What science has to tell about "The Races of Man" will be found compactly set forth by Dr. J. Deinher, in the book published under this title. From this book one may learn the beginnings of race charity. Save for a few isolated pools of savage humanity, there is probably no pure race in the world.—(P. 330.)

Even after we have separated out, and allowed for the differences in carriage, physique, moral prepossessions, and so forth, due to their entirely divergent cultures, there remains, no doubt, a very great difference between the average Chinaman and the average Englishman; but would that amount to a wider difference than is to be found between extreme types of Englishmen? For my own part I do not think that it would.—(P. 332.)

MR. RHODES'S VIEW OF RACE.

There is no doubt that the race mania has bitten a great number of political people. Mr. Rhodes, for instance, was dominated by the idea of race. But he was no anthropologist. He discriminated between white men and Hottentots, between the English-speaking man and Portuguese, Pigmies and such, but he did not venture into the perilous field of anthropological fantasy. For Mr. Rhodes was sane. To him "the English-speaking race" included Dutch and French-speaking men.

He defined the race chiefly by its ethical distinctions. The race that does most for justice, liberty, and peace over the widest possible areas, that, for him, was the race destined to survive; nor did he trouble himself much about the colour of its skin, the shape of its skull, or the kinkiness of its hair. But his disciple, Mr. Benjamin Kidd, assumes as a self-evident proposition that the white races are providentially destined to be the overlords of the tropics. As to that, however, we had better adjourn the discussion until Admiral Rojdestvensky and Admiral Togo have said their last word.

EMPIRE AND RACE PREDOMINANCE.

Of the way in which this idea of the innate superiority of the white race, and especially of the Anglo-Saxon race, is used or abused as the justification for every species of injustice and abomination, Mr. Wells has already reminded us. Mr. J. G. Godard, a thoughtful writer, whose previous work on "Patriotism and Ethics" was issued at a time when British patriotism was the most unethical sentiment in exist-

ence, has just published a companion volume, entitled "Racial Supremacy; being Studies in Imperialism." Mr. Godard is a root and branch man, and he wars with heart and soul against the damnable heresy which found its chief votary in Lord Rosebery, to whom we owe the fatal fallacy, "What is Empire but the Predominance of Race?" It is a showy phrase, with a falsehood at the back of it — one of those half-truths which lure Liberal Leaguers to perdition. Mr. Godard, who hates Imperialism, eagerly accepts it, and uses it to emphasise his detestation of the Empire. He says:—

> Empire is, to quote Lord Rosebery once more, "the predominance of race." Imperialism, therefore, is the spirit of rule, ascendency, or predominance, the rule of one race or people by another race or people, involving, of course, the subjection of the former to the latter.—(P. 4.)
>
> Government at the best is necessarily imperfect, because it is conducted by fallible beings; but the rule of one race or nation by another is inevitably bad, though different races may live happily together under the same régime if it is their own.—(P. 30.)

THE ETHICS OF EMPIRE.

Mr. Godard is not indisposed to admit that it is sometimes conceivably possible that one race may subdue another for its own good. Such an exercise of might can only be justified on very different motives than those which are the strength of modern imperialism.

> Only when this principle demands the subjugation of an alien race, and when in pursuance of that principle (and of no other), the work of subjugation is undertaken, the ethical justification is established.—(P. 222.)
>
> Whilst theoretically it is possible to make out a case for the subjugation of one race by another, in practice the essential condition, namely, humanitarianism, as the dominating factor, is invariably wanting; and conquest never has possessed, and probably never will possess, complete ethical justification.—(P. 227.)
>
> But the bulk of Imperialists are mainly animated by racial pride and arrogance; a feeling of satisfaction at belonging to a nation which is greater, or is thought to be greater, than other nations; satisfaction at exercising dominion, real or assumed, over a quarter of the globe; satisfaction at being able to bid defiance, and, if need be, to challenge; in short, pride of place, prestige, and power.—(P. 296.)

IS THERE AN ENGLISH RACE?

Mr. Godard, like M. Finot, comes at last to a denial of the fundamental propositions on which race domination rests. He asks:—

> What is race, that men should range themselves in hostile camps, according to their petty distinctions, and ignore the great fundamental community of interest of all human beings? We ourselves are composed of diverse elements, and not a little of our virility is due to the fact. Our very language, on which the "larger hope" of the unity of the "English-speaking race" is founded, exhibits the like characteristics; and why those whose speech is the result of a somewhat different blend should be excluded from this large hope, is not easy to understand. Defoe, who in his caustic "True-Born Englishman" unkindly describes our progenitors as "an amphibious, ill-born mob," tells us that they left a "shibboleth upon our tongue. By which with easy search you may distinguish your Roman-Saxon-Danish-Norman-English," and the satire is worth reviving.
>
> The emphasising of racial variations by so composite a people as ourselves is not without its humour, but it has its grave aspects in being distinctly antagonistic to the nobler ideal.—(P. 307.)

The worst of it is that no race, when exposed to the temptations of supreme power, seems to be better than any other race. We are all aboriginal brutes at the bottom, and nothing brings out the fundamental savage sooner than uncontrolled power over so-called inferiors. Says Herbert Spencer:—"The inhumanity which has been shown by the races classed as civilised is certainly not less, and has often been greater, than that shown by the races classed as uncivilised."

RACE REGNANT ON THE CONGO.

We need not go far afield for illustrations of this. Take, for instance, the most glaring case at the present moment, the re-establishment of slavery on a basis of legalised cannibalism for the purpose of filling the pockets of King Leopold and his Belgian fellow speculators. The shilling pamphlet by Mr. Morel, "Red Rubber," is only the latest of a long series of exposures of one of the most abominable systems of murder and torture, of rape and rapine, that has disgraced mankind. It is possible only because of the legend of race superiority. The white man stands to the black as the human being stands to the animal creation, which was given to him to slay and eat. So it comes to pass that the armed blackguardism of Black Africa is equipped and organised by the white vampire of Belgium for the purpose of earning dividends by the production of rubber, every pound of which is stained red with human blood.

THE BLACK FELLOWS OF AUSTRALIA.

But we have no need to plume ourselves with pharisaic complacency that we are not such sinners as these Belgians. The Report of Dr. Roth, who has been employed to investigate the treatment of the aborigines of West Australia, suggests a tale of horror only less horrible than that of the Congo, because it is on a small scale, and because the system is not deliberately instituted by the Government for the purpose of extorting dividends, but is incidentally established as an incident in the development of the making of dividends by private speculators. The treatment of the Australian black fellows has long been a scandal and a reproach. Whereas in New Zealand the Maori is preserved, and in South Africa the black fellow promises to multiply and increase so as to leave no room for the white colonist, the Australians stand accused before the rest of mankind as the exterminators of the aborigines. In Tasmania, in Victoria there is not a specimen left; and in the other colonies the aboriginal black fellow appears to be marked down for destruction. In West Australia water is scarce, but without water even a black fellow cannot live. When the white settler comes he seizes the well, declares that the black fellow shall want ere he wants. The thirsty aboriginal whose water has been stolen retaliates by stealing the white man's ox or his sheep, and then there is the devil to pay. Forays take place in which no mercy is shown. A whole camp will be wiped out

Dr. Roth had to inquire into and report into the second stage of oppression, the method adopted by the Colonial Government, in the name of law and order, for rendering the earlier primitive methods unnecessary.

DR. ROTH'S REPORT.

What Dr. Roth reports as existing at this hour is that in some districts there prevails a system that is the most abominable travesty of justice that man can conceive. Whenever any cattle are reported killed by black fellows, a company of policemen is mustered for a capture of a lot of black fellows. The first requirement of this police force is chains for the purpose of chaining their captives. These chains weigh from 2lb. to 5lb. Once fixed they are never removed night nor day, and cases are mentioned in which they were worn for two years :—

Chains in the northern, not the southern, portion of the State are fixed to the necks instead of to the wrists of native prisoners. . . . Children of from fourteen to sixteen years of age are neck-chained. There are no regulations as to the size, weight, mode of attachment, or length of chain connecting the necks of any two prisoners. When the prisoner is alone the chain is attached to his neck and hands, and wound round his body ; the weight prevents him running away so easily. . . . The mode of attachment of the chain round the neck is effected with handcuffs and split-links.

Sometimes the distance between one chained neck and the other is only twenty-four inches.

RACE SUPREMACY IN ACTION.

Having provided themselves with chains, the next thing is to seize a number of black fellows. It does not matter in the least whether they are innocent or guilty. The quota of seizures must be made up, chained and carried off. The captives are divided arbitrarily into accused and witnesses. But for this it might be difficult to find an excuse for carrying off women and children, although Dr. Roth does mention a case in which a fourteen-year-old-boy was sent to two years' hard labour for cattle killing. There is often no difference in the treatment of witnesses and prisoners. They are all alike, chained and driven in a slave gang through the bush at night. The women are violated by the police.

Numerous charges of immoral conduct are made against the police and their assistants in connection with the women who are herded together and driven through the bush as witnesses, and chained to the trees at night. And that there is much truth in these charges was admitted by everybody who gave evidence on the subject.

WHITE "JUSTICE."

When the miserable wretches arrive at the Court of Justice the legal proceedings are a farce. The Station Manager does not take the trouble to prosecute. Why should he? He is busy, and it is enough that the police and the magistrate should see to the punishment of the blacks. The prisoners do not know why they have been seized. The trial is a perfect farce. The "evidence" is procured on the principles described in the following statement made by a boy convicted on his own confession of cattle killing :—

I was caught by Jack Inglis and Wilson (policemen). . . . Wilson asked me if I killed cattle. I said "No." Wilson and Inglis then talked together, and they said they would shoot me. Inglis put a cartridge in his rifle, pointed it at me, and said he would burn me at a rock. It frightened me, and I then said I did kill a bullock. Many of the natives undergoing sentences of imprisonment have no idea what they are imprisoned for, but suppose that they have been gathered together merely for the purpose of making roads.

The police are allowed from 1s. 6d. to 2s. 5d. per head to ration the prisoners. As of this sum they keep a liberal allowance for themselves, the more prisoners the more profit. So works in certain districts the sacred principle of the Predominance of Race in Western Australia in this year of grace 1905.

THE SOUTH AFRICAN NATIVE AFFAIRS COMMISSION.

The latest illustration of the working of this doctrine of race supremacy is supplied by the Report of the Native Affairs Commission in South Africa. The report is saturated through and through with the conviction that the black man is of an inferior race. No one denies that most natives are as inferior to the average colonist as the average costermonger is inferior to, let us say, University graduates. But whereas no one dooms the costermonger to remain a costermonger always, South African sentiment—quite as strong among the Britons as among the Boers—is disposed to regard colour, not lack of culture, as constituting the barrier between the races. Colour cannot be eliminated, culture can be imparted. The Commission, somewhat to my surprise, has recommended the Christianising of the Kaffir. If you make a man a Christian it is difficult to see why you should refuse your Christian a vote. This, however, is undoubtedly what the Commission is aiming at. It recommends that instead of allowing the native to vote when duly qualified as an ordinary citizen in the ordinary affairs of the Colony as he does to-day at the Cape, he shall be shut off in a kind of electoral kraal of his own, and shall elect men of his own colour on the express understanding that there shall be no relation between taxation and representation, or between the numbers of the electors and the number elected.

"THE RULING RACE."

This is all very bad, but it is justified by the Commission on the ground that it is necessary to prevent any weakening of "the unchallenged supremacy and authority of the ruling race which is responsible for the country and bears the burden of its government." As if the natives did not bear at least their full share of the burden of the government of the country! What they are denied are the privileges and the perquisites of the Government. There are other reactionary proposals, but my space is exhausted. I would only say in conclusion that if any ruling race wishes to remain a ruling race, it cannot be too careful to afford the capable among the subject races opportunity of sharing its responsibilities. If there be no open door leading upwards, some day there will be a burst up from below and "the ruling race" will get its deserts.

The Review's Bookshop.

May 1st, 1905.

SOME excellent books have been published during the month, but there has been no volume of special importance. The shelves of the bookshop are tolerably well filled with new books, though they are not crowded. From Mr. Herbert Paul's political history down to Marie Corelli's wordy tirade against society, there are books of good average merit for every taste. The reader who prefers history or biography will find several volumes to interest him; the tourist and traveller and those who delight in gardens and out-door life have been well provided for; and the reader of fiction has little to complain of, however varied his tastes may be.

A HISTORY OF MODERN TIMES.

Mr. Herbert Paul is making good progress with his "History of Modern England," and we now have the third of the five volumes covering the ten years 1865 to 1875 (Macmillan. 454 pp. 8s. 6d. net). The period is that of the heyday of Liberalism. The onflowing tide reaches its flood in Mr. Gladstone's great first Administration, and begins to ebb. The ground has been already very fully covered by Mr. Morley in his "Life of Mr. Gladstone," and Mr. Paul's volume is necessarily to a considerable extent a recapitulation. Mr. Paul has many gifts which enable him to write an eminently readable history of modern times. He is a brilliant writer, trained in the school of journalism; he can pack much thought into a brief sentence; he is clear-sighted, well read, and knows how to handle his material to the best advantage. But he has his limitations; and while his history is a notable addition to contemporary literature, it by no means covers the whole field. Politics, religion and literature do not constitute the whole life of a people, least of all of the English people of the Victorian era. Mr. Paul is a disciple of Macaulay; but we look in vain for anything like the illuminating survey of all phases of English life to be found in the famous third chapter of Macaulay's History.

WOMEN OF THE RENAISSANCE.

It is a real pleasure to read and call attention to so excellent a piece of work as Edith Sichel's study of "Catharine de Medici and the French Reformation" (Constable. 320 pp. Illus. 15s. net). The writer says, "There is, perhaps, nobody so hard to realise as the woman of the Renaissance..... The woman of the sixteenth century, robust, naive, intellectual, pursuing interests and activities like our own, with widely different thoughts and aspirations, is almost impossible to reconstruct." This, no doubt, is true, but you will read with the greater appreciation Miss Sichel's vivid and absorbingly interesting character sketches of Catharine, Diane de Poitiers, her rival, Jeanne de Navarre, and the other great personalities of that epoch. Miss Sichel takes a more lenient, I do not say favourable, view of Catharine than is usual. She does this, not so much by apologising for her misdeeds, as by showing that she was certainly accused of some wrong-doing without any show of justice or proof. She also makes abundantly clear the unhappiness of Catharine's private and public life. It is an admirable piece of historical biography, and I can confidently recommend it to any reader caring for either biography or history, for it belongs to both categories.

THE AUTHOR OF "JOHN INGLESANT."

Two biographies published during the month record the Lives of two remarkable men, both leaders of thought in the Church of England. Beyond the fact that in each case the Lives are written and edited by their wives, there is as little resemblance between the books as there was between the men. Admirers of "John Inglesant" will turn with interest and expectation to the "Life, Letters, and Literary Remains of J. H. Shorthouse" (2 vols. Macmillan. 419 pp., and 424 pp. 17s. net). Little was known of Mr. Shorthouse during his lifetime. Now that the veil has been lifted, and the details of his quiet, retired, and uneventful life disclosed, we see that there was very little indeed to know. The biography is a brief one, and would have been improved had it been even shorter. Many of the letters printed are quite trivial, a few are interesting, none are remarkable. The second volume is devoted to a collection of Mr. Shorthouse's literary remains—his early essays upon many subjects written from time to time for the Friends' Essay Society of Birmingham, some later essays gathered from magazines and periodicals, four short stories, and three early poems.

A BRILLIANT PREACHER.

Dr. Momerie was a very different type of man. A Broad Churchman, a brilliant preacher, impatient of time-honoured conventions and beliefs, he lived his life in the busy, everyday world. His "Life and Work" (Blackwood. 266 pp. 12s. 6d. net), by his wife, is a well-written and most interesting account of a strenuous life prematurely cut short. His persistent adherence to his own views brought him much opposition and opprobrium, clouding the splendid opening of a fine career. His connection with the Foundling Hospital and with King's College is related at length, and we have the full account of his removal from the College in consequence of his views on inspiration. Apart from its theological interest, the book is of value as an excellent biographical portrait of a man of mark in his day and generation.

SOME PLEASANT STORIES.

Among the novels of the month there are several that can be commended as pleasant and agreeable reading for a holiday afternoon. Mrs. Alfred Cock's "A Country Diary" (George Allen. 6s.) is a charmingly written tale, in which a peculiarly delicate love story is skilfully blended with a delightful record of the pleasures of country life in a secluded Surrey village. The form is that of an irregularly written diary recording the changes of the seasons and the everyday incidents of village life. Mrs. Cock has achieved a distinct success in a field which has hitherto been but slightly explored by writers of fiction. A new story by the author of "Mrs. Wiggs of the Cabbage Patch" is sure of a warm welcome from the numerous admirers of that cheerful lady. But in "Sandy" (Hodder. 6s.), Mrs. Rice turns her back upon the cabbage patch and its denizens, and tells us of the adventures of an Irish stowaway in America. It is a charmingly sentimental tale, and is very pleasant reading. But, alas, we are not introduced to any characters as unique as the inimitable Mrs. Wiggs. Another pleasant, though rather original, love story is Francis Forbes Robertson's "The Taming of the Brute" (Methuen. 6s.). The "brute" is a scion of an old

Welsh family, and his tamer, the pretty Mistress Cecilie, performs her task effectually. The scene of the tale is laid some time back. One book of short stories appeared last month, some of which have certainly distinct literary merit—"Tales of Rye Town" (Constable. 6s.), by Maud Stepney Rawson. These stories of the old Cinque Port, now more a townlet than a town, have a finish and style of their own, which, with the distinct local colour with which they are saturated, make them well worth the reading.

HISTORICAL FICTION.

For vivid pictures of the Middle Ages no writer can compete with Mr. Maurice Hewlett. His command of small detail is unrivalled, and the figures of his tales stand out with a distinctness that few writers attain. In his latest volume he has brought together four tales of the youth of the world under the title of "Fond Adventures" (Macmillan. 6s.). Love-making in mediæval times was rather a dangerous occupation, and Mr. Hewlett's lovers have anything but a quiet time of it. These tales take you back to the pilgrims-way to Canterbury at the time of Jack Cade's rising, to southern France during the crusade against the Albigenses, to Florence and Milan when murder was the recognised occupation of a gentleman. Adventures as extraordinary as anything conceived by Mr. Hewlett are recorded by Mr. E. A. Vizetelly in his Life of Armand Guerny de Maubreuil, known as the Wild Marquis (Chatto. 6s.). It is another case of truth being stranger than fiction, though in this case, in spite of Mr. Vizetelly's efforts, there is a large admixture of fiction in the tale. Maubreuil was an astonishing adventurer, and his exploits, including his robbery of the Queen of Westphalia's diamonds, and his intention of kidnapping Napoleon on his way to Elba, make a thrilling narrative. Another historical tale, good in its way but somewhat spoiled by its excessive length, is Mr. Charles Lowe's "A Lindsay's Love" (Laurie. 6s.). It is a story of Paris during the Franco-German War, with much about the siege, Court life at the Tuileries, and Louis Napoleon. A more vivid and realistic tale is Mr. Abraham Cahan's "The White Terror and the Red" (Hodder. 6s.). It is a novel of revolutionary Russia, and describes with much power the assassination of Alexander II., and the anti-Jewish risings that took place after that event. Mr. Cahan claims to have had personal knowledge of what he writes, and his novel certainly reads like the description of an eye-witness.

SOME GOOD NOVELS.

For those who care for novels of a more sombre cast there is, first and foremost, the translation of Gustav Frennsen's German novel, "Jorn Uhl" (Constable. 6s.). When first published it created a literary sensation in Germany, and though it will naturally not make so strong an appeal to an English reader, it is a remarkable and powerful story, that deserves to be widely read. It is the only novel of the month that you cannot afford to omit from your list of books to read. As an intimate and realistic picture of German peasant life it is unrivalled, and the story of the simple career of Jörn Uhl, the Holstein peasant, and his struggles with life's enigmas makes a deep and lasting impression upon the mind of the reader. It is not altogether an easy book to read, the opening portions especially being long drawn out. The magnificent description of a battery in action at the battle of Gravelotte will take its place among the classic descriptions of actual war. Then there is Mr. Vincent Brown's "The Disciple's Wife" (Duckworth. 6s.), certainly one of the best novels of the month. His "Magdalen's Husband" made some sensation last year, and this story is also a study of one whom the world would have called a Magdalen. There is much clever character drawing, especially in the case of Mrs. Sirgood, the mother-in-law of the wavering wife. She is a masterpiece of feminine irritatingness, irritating even to read about, yet painfully true to life. Another clever novel is "The Stigma" (Heinemann. 6s.), by Jessie L. Herbertson. The stigma is, of course, illegitimacy, and the book is a powerful, sombrely drawn study of the career of a woman who has to bear it. It is an unhappy, depressing book, but with an interest strong enough to hold the hardened novel reader. Another remarkable but depressing novel is "A New Humanity; or, The Easter Island" (Maclaren. 6s.), by Adolf Wilbrandt, translated by Dr. A. S. Rappoport. The central figure is modelled on Nietzsche, and the whole story is pervaded with his gloomy philosophy. "Marigold," by the author of "The Jewel Sowers" (Greening. 6s.), is a weird story, in which this world and the next, man and the devil and the blessed dead are mixed up in inextricable confusion.

FREE OPINIONS.

In "Free Opinions" (Constable. 350 pp. 6s.), Miss Marie Corelli tells the world her mind with characteristic freedom on certain phases of modern social life and conduct. The authoress is a bit of a scold, and her diatribes sometimes tend to bore the reader. If she would take Holy Orders and deliver her sermons from the pulpit of "God's Good Man" he might stand one a week. But 300 pages of them served up in one lot is too much.

MR. WELLS' UTOPIA.

I have noticed Mr. G. H. Wells' "Modern Utopia" month by month as it appeared in serial form, and it is only needful here to add that it is now published in an illustrated seven-and-sixpenny volume of nearly four hundred pages by Chapman and Hall. The author has prefixed a note to the reader and added an appendix. Mr. Wells tells us that he aimed throughout at a sort of shot-silk texture between philosophical discussion on the one hand and imaginative narrative on the other. He risked falling between two stools, and he would have had a larger public had he diluted his philosophy by a double dose of straightforward story.

A CRY FROM MACEDONIA.

Many books have been written on Macedonia and Turkish misrule, but few of them make so direct an appeal to the sympathy of the reader as Georgina King Lewis' "Critical Times in Turkey" (Hodder. 210 pp. 3s. 6d.). She describes the condition of the persecuted Macedonian peasants as she saw it when engaged in relieving their distress. The very simplicity of the narrative makes the appeal to the mind and heart of the reader the more powerful. It is a terrible account of the daily iniquity of Turkish rule, which, as Mr. Myers says in a prefatory note, is hard reading, for it brings tears to the eyes of the reader and sends the hot blood of indignation coursing through his veins.

CANADA AS IT IS.

A pleasanter volume to read is Mr. John Foster Fraser's "Canada as It Is." (Cassell. 298 pp. Illustrated. 6s.). Mr. Fraser is an experienced writer of books of travel, and can be trusted to provide his readers with both entertainment and instruction. He is a shrewd observer,

with a sense of humour, and a forcible, if slightly colloquial, way of recording his impressions. The Canadians he describes as a warm-hearted, self-confident people—inclined to look upon the Mother Country with pity, tinged with contempt, and to detest Uncle Sam—with all the faults of crude strength that has not had enough opportunity of measuring itself with the outer world He pokes fun at the Canadian's sensitiveness to criticism. But while pointing out shortcomings, and criticising faults, he never loses sight of the amazing virility and vitality of the country. Mr Fraser has a good deal to say about the Canadian view of preference. The Canadian manufacturer, he points out, while honestly believing that preference would be mutually advantageous, is equally convinced that British goods must not enter into too active competition with Canadian manufactures A very readable volume, written in a lively and attractive style.

TWO ENGLISH COUNTIES.

For travellers nearer home whose journeys do not extend beyond the Continent of Europe several books were published last month which will make their holidays pleasanter or recall happy memories of previous wanderings. The orthodox guide book with its dry as dust information is rapidly being superseded by such sumptuous productions as Messrs Macmillan's Highways and Byeways Series, to which the county of Derbyshire (500 pp Illustrated 6s) is the latest addition Mr J B Frith introduces his readers to the fairest and most interesting scenes of one of the most delightful counties of England He dwells principally upon the literary and historical associations of the county—the human side, as he prefers to call it The numerous sketches by Nelly Ericksen are admirably selected and executed Cheshire is described in the more perfunctory fashion of the older guide-books in the latest volume of Messrs Methuen's excellent Little Guide Series (2s 6d net, cloth, 3s 6d net, leather. Illustrated) In addition to the usual information expected in such a book there are useful chapters dealing with the famous men and with the fauna and flora of Cheshire.

FOR THE CONTINENTAL TRAVELLER.

Every visitor to Nuremburg, the most fascinating of all mediæval towns, will heartily welcome Messrs A and C Black's new "colour book" devoted to a description in picture and letterpress of that ancient city (177 pp Twenty illustrations. 7s 6d net). The coloured illustrations are excellent, and not less admirable is Mrs Bell's descriptive letterpress. She has wisely and skilfully woven into her narrative the legends and tales that add so romantic an interest to wall and tower and burg Nuremburg has had few memorials more appropriate in design and execution than this handsome volume Another "colour book" describes Norway and the Norwegians (197 pp. Seventy-five illustrations. 20s. net) The illustrations by Nico Jungman are of more than ordinary interest. A large number are devoted to reproducing the quaint costumes of the Norwegian women, which have not yet disappeared before the invasion of the tourist. This collection of pictures will be of permanent value to everyone at all familiar with Norway. The letterpress describing travel by land and fjord, art and crafts, farmhouses, wedding festivities, customs, occupations, legends and literature is no less interesting Spain, a hitherto much neglected land, has recently been the subject of many books, the precursors, no doubt, of a more general appreciation on the part of the travelling public. If you would be persuaded to visit that enchanted la[nd] you cannot do better than read Mr. Rowland Thirlmere's charming volumes "Letters From Catalonia" (2 vols. Hutchinson. 24s.). His enthusiastic admiration both of the country and its people, his glowing descriptions of scenery and places, and his general attitude of sympathetic appreciation are contagious, and should remove any lingering doubts in the mind of the intending traveller. A more popular and less eulogistic volume, consisting of a series of impressionist sketches, is Mr. Jerome Hart's "Two Argonauts in Spain." (Longmans. Illustrated. 256 pp 5s net) The writer is a Californian, and his visit was a brief one. His volume of hasty first impressions is brightly written, describes in a lively manner most of the show-towns of Spain, and contains much useful information conveyed in a readable form.

THE SUDAN TO-DAY.

For travellers further afield who wish to include the Sudan in their itinerary, Mr John Ward has compiled an absolutely indispensable book, "Our Sudan. Its Pyramids and Progress" (Murray 361 pp. 21s. net.) This is a guide book *de luxe* indeed Its seven to eight hundred photographs illustrate every phase and aspect of Sudanese life and scenery. They are a unique collection, and, together with the letterpress, constitute an authoritative and exhaustive account of the present condition of the Sudan right down to the equatorial provinces. As a pictorial record it is unsurpassed, and can have few rivals.

THE CAMERA IN THE FIELD.

The photographer turned naturalist has added a new and healthy interest to country life How wide is his field of exploration, how fascinating the results of his investigations, and how valuable an ally he has acquired in the camera is well illustrated by Mr F. C Snell's book on the "Camera in the Field" (Unwin 256 pp. Illustrated 5s) It is intended as an elementary book for the instruction of beginners, and Mr Snell has rigidly excluded all subjects that do not easily fall within the reach of the dweller in the country It is a very practical handbook, from which the reader may learn how to photograph birds and birds' nests, reptiles, animals, insects, and flowers. A glance at the numerous and excellently reproduced illustrations will convince the most sceptical of the value of the camera in the fields. Further proof is afforded by the excellent series of monthly booklets now being issued by F Warne and Son on "Wild Flowers" (8d net), illustrated by numerous photographs of the wild flowers as they may be seen in the fields, woods, and commons.

IN PRAISE OF OUTDOOR LIFE.

The foreign garden book is now being added to the numerous volumes on the delights of gardening, written by natives of this island. "Another Hardy Garden Book" (Macmillan 243 pp Illustrated. 7s 6d. net), by Helena R. Ely, is a well-written description of an American garden by a lady who regards gardening as peculiarly a woman's vocation. There is much practical advice as to how to tend a garden, and what to grow in it, combined with a running narrative of actual experience in planting and tending The book is written primarily for Americans, but there is much in the volume of value to any amateur gardener. The photographs of flowers deserve a special word of praise. "A Suffolk Lady" breaks new ground in a book on gardening at [t]he Antipodes, under the title of "My New Zealand

Garden" (Stock. 114 pp. 3s. 6d. net). The book is pleasant reading, though the writer is evidently more skilful as a gardener than as an author. Her garden was apparently situated in the temperate North Island. Some of the illustrations are charming, and there is a good deal of information about native birds and the infinite variety of native ferns and plants. If women are about to appropriate gardening as their own peculiar sphere, man still monopolises fishing. Those addicted to this outdoor pastime will be glad to read a timely second edition of Mr. Philip Green's "What I Have Seen While Fishing, and How I Have Caught My Fish" (Unwin. 348 pp. Illustrated. 7s. 6d. net). Mr. Green having been twenty-seven years President of the Anglers' Association, his notes will be extremely valuable to others of his fraternity. One part deals with pollack salmon and trout fishing in Ireland; another with spring salmon fishing in Scotland; the third with fishing in England, mostly along the Thames. The style is clear and simple.

DISEASE AND HEREDITY.

Dr. Reid's "The Principles of Heredity" (Chapman and Hall. 359 pp. 12s. 6d. net) is a volume written primarily for medical men. The general reader, however, who takes an interest in scientific investigation and speculation will find several chapters of interest; as, for instance, the one in which Dr. Reid discusses the part disease has played in empire building. The book is an elaborate and detailed investigation of the evidence bearing on heredity afforded by disease. Dr. Reid claims to have established conclusively that parental acquirements are never transmitted to offspring, and that variations are rarely caused by the direct action of the environment on the germ cell. He concludes with a serious warning that owing to the improvements of medical science and the consequent survival of the unfit, tremendous problems have arisen, the solution of which cannot be long delayed without disaster to the race.

SPIRITUAL REVIVALS.

Hector Macpherson, the editor of the *Edinburgh Evening News*, is one of the doughtiest of modern Scots. His new book, "Scotland's Battles for Spiritual Independence" (Hodder. 285 pp. 3s. 6d.), is a welcome illustration of the sweet uses of adversity. Possibly nothing short of the gigantic scheme of robbery by law carried out by the Law Lords would have brought fighting Hector into line with Dr. Chalmers and the men of the Covenant. In this book he tells the story of his spiritual ancestors, who have fought and won the battle for spiritual independence from John Knox's time down to the present day. A book like this makes one hope that Lord Halsbury may some day be pilloried in history side by side with "Bluidy Claverse" as an oppressor of the Elect.

Mrs. Penn Lewis, of Leicester, has written a shilling book, in paper covers, on the Welsh Revival. It does not add much to our knowledge of that remarkable movement, but it is sympathetic and hortatory. Mr. Stead's "Revival in the West" can now be had in French at 20 cents. (publisher, Libraire H. Robert, Geneva), under the title of "Au Pays de Galles. Le Reveil Religieux."

Visitors to the Oberammergau play this summer will be glad to learn that they can obtain the authorised English version of the "School of the Cross," which will be given by the villagers in their open-air theatre, for one and sixpence (Hugo Lang and Co., 14, Church Street, Liverpool). It is a sacred drama, or mystery play, in seven acts, describing the life of David, with nine tableaux from the life of Christ.

WITTY, NONSENSICAL AND PATHETIC.

The authors of "Wisdom While you Wait" have ventured once more into the realm of humorous satire. Their subject this time is the Napolio Syndicate, and in "Change for a Halfpenny" (Rivers. 1s.) we have the vagaries of certain halfpenny London papers whose *habitat* is the "*Maily Express* office" held up to ridicule. The authors have a keen eye for the ludicrous, and have no compunctions in raising a well-merited laugh at the expense of their victims.

"Children's Answers, Witty, Nonsensical and Pathetic," is the title of a two-shilling book published by A. Treherne and Co. The collection has been made by Mr. J. H. Burn. There are a few inevitable old chestnuts, but there is a good thing on every page, and there are 250 pages. The only fault of the collection is that the "answers" are too snipperty. A few longer essays would break the monotonous titbittyness of the compilation.

A PICTORIAL HISTORY OF ART.

To the number of handy little text-books on famous painters must now be added the translation of M. Auguste Bréal's monograph on "Velasquez" (Duckworth. 235 pp. 2s. net). It is an informing little volume, both as to the life and environment of the painter and the comparative merit of his paintings. A large number of illustrations elucidate the text. I have also received an elaborate publication from Germany designed to provide an illustrated history of art from the earliest times. The first part, consisting of seventy-six large pages, containing 720 illustrations, deals with the art of antiquity and of the Middle Ages. The illustrations are well selected and admirably reproduced, and, when the second and final part is published, will constitute a most useful pictorial survey of the history of art. The text is in German and French, the publisher is Mr. B. Herder of Freiburg, in Breisgau, and the price of each part is eight shillings.

BALZAC "MAXIMES."

Students and admirers of Balzac will welcome the collection of his profoundly wise "Maximes," collected, it is not said by whom, and published by Mr. Arthur Humphreys, at 6s. net (197 pp.). The selection is certainly well done, and the selector has had the richest of fields to choose from. The French and the English translations are opposite each other, and generally the translation seems well and freely rendered, though occasionally a French scholar will pass criticisms. The greater proportion of the "Maximes" concern the difference between the two sexes, and the relation of a woman to a man. Most people will wish that a reference to the source had been put at the end of each extract. You may also care to look at the latest addition to Mr. Heinemann's "Contemporary Men of Letters," which is devoted to a study of Mr. W. B. Yeats and the "Irish Revival," by Horatio Sheaf Krans (191 pp. 1s. 6d. net). It is a concise, well-written little book. A bibliography adds to its value.

VALUABLE TEXT-BOOKS.

An authoritative hand-book has long been required on the many vexed questions of duplicate spellings, the use of capital letters and italics, which are so fruitful a source of annoyance to all concerned in preparing manuscript for the press. Mr. F. Howard Collins, in his "Author and Printer" (Frowde. 408 pp. 5s.), has now remedied this deficiency with a book that should be of invaluable assistance to authors, editors, printers, compositors and

It contains some 30,000 entries, including all those words which in general practice are spelled in more than one way, or about which there is a difference of opinion. With the help of a large number of authorities he has codified the best typographical practice of the day in regard to duplicate spellings, capitalisation, and the use of italics. Many foreign words and phrases are also included. I trust that one result of the publication of this timely volume may be the banishment of the antiquated and incorrect fashion of spelling Tsar, Czar, from the pages of all books and periodicals.

A useful book for any young man thinking of entering the profession of engineering is Mr T. Henry and Mr K. J. Hora's "Modern Electricity," a manual of theories, principles, and appliances (Hodder 355 pp 5s net). It is a thoroughly practical and profusely illustrated handbook, designed to meet any emergency with which an electrical engineer may be confronted.

Mr. Leonard Alston's "Modern Constitutions in Outline" (Longman 72 pp 2s. 6d. net) is a useful textbook to keep on your shelf for reference. All the essential points of the Constitutions adopted by countries enjoying Constitutional Government are given in a concise and handy manner. A more ambitious volume which those interested in social reform will find worth while reading is Mr A C Pigou's "Principles and Methods of Industrial Peace" (Macmillan 240 pp 3s 6d net). It may be studied advantageously in connection with Mr Knoop's book on the same subject noticed last month. Still another book that will be read with advantage by those who have the welfare of the future generations at heart is Dr McCleary's "Infantile Mortality and Infants' Milk Depôts" (King 135 pp). Dr McCleary is the Battersea Medical Officer of Health, and can speak with authority upon the extremely valuable experiment in supplying pure milk for infants now being made by that progressive borough.

BOOKS FOR BOYS

The "Blue Adventure Book" (Cassell 384 pp. Illustrated), edited by A T Quiller Couch, is a collection of tales for young people, presumably for boys, but girls would probably like the tales almost as well. It is a book of stirring recitals of actual events, battles, hunting expeditions, Alpine climbs, well told and breathlessly exciting.

"The Outdoor Handybook" (Newnes 6s), by Mr Beard, is a reprint of an American book dealing with all manner of outdoor pursuits, from spinning tops to sailing yachts. It will be interesting to see how the British boy will welcome this attempt to Americanise his pastimes. The sections describing turtle hunting and muskrat catching are not of much practical value to the British schoolboy.

HOW TO KEEP WELL

The need for a simple and effective textbook showing the nature of alcohol and the results of its use and abuse on the human organism by means of practical experiments and simple telling illustrations has now been met by a very admirable book by Mr W N Edwards, F C S, entitled "Proving Our Case" (Partridge. 194 pp Illus. 2s). It is a scientific exposition of the nature, character and source of alcohol, its action upon living tissue, and especially upon those of the higher animals, including man. The experiments are fully and excellently elucidated by diagrams and illustrations. It is a book that should have a widespread influence for good, and will, I trust and anticipate, have a very extended sale. If you wish to know at a glance what you should eat and drink in order to keep well or to recover health, you will find full and explicit instructions in Professor Boyd Laynard's "Chart of Life" (Hammond, Hammond and Co. 3s.). This is a work of unique character, that must have involved an immense amount of labour in its compilation. There are six charts in which all the diseases and ills from which mankind suffers are tabulated, as well as all the foods and drinks in common use. To discover whether any particular food, say bacon, is beneficial if you suffer from sleeplessness, all you have to do is to note the key number opposite insomnia and beneath bacon and turn up the reference in the key, where you will find full directions for your guidance. It is an extremely ingenious and simple device, and a person of my acquaintance assures me he has tested the chart with excellent results as far as his health is concerned.

POETRY OF THE MONTH.

Messrs Swan, Sonnenschein publish a very neatly-got up little edition of Edward Carpenter's "Towards Democracy" (507 pp 3s 6d net), complete in four parts, printed on thin paper, bound in leather. There must necessarily be a great deal of Edward Carpenter's philosophy with which the ordinary reader will not agree, but there are few who will not find something to interest them and something to admire in this little volume. I note also that a second edition has just been published of Ernest Crosby's "Study of Edward Carpenter, Poet and Prophet" (Fifield 51 pp 6d net), and that the same publishers have issued a volume by Mr Carpenter on "Prisons, Police, and Punishment" (153 pp 2s. net), an inquiry into the causes and treatment of crime and criminals, which should stimulate thought on the subject.

Several small volumes of poems have been published during the month, of which the best is "The Love of Heloise and Abelard" (Kegan Paul 65 pp 2s. 6d net), versified by E M Rudland. The poem contains some beautiful and melodious passages. Another volume that may be singled out for mention is a poetical drama on the subject of the "Birth of Parsival" (Longmans 110 pp. 3s 6d net), by R C Trevelyan. This, too, contains some fine and poetical stanzas. Some pretty verses will be found in a little volume, "Verses from Maoriland" (Allen. 75 pp. 2s 6d net), by Dora Wilcox. Only a few show much local colour, but they are almost always musical and often graceful.

Note.— *I shall be glad to send any of the books noticed above to any subscriber, in any part of the world, on receipt of their published price, except in the case of net books, when the amount of postage should also be sent. Subscribers who deposit the price of a book can have it sent them on approval. If they do not like it, and return it uninjured, their deposit will be returned minus postage. In the case of more expensive books we are prepared to sell them on the instalment plan to our regular subscribers. I shall also be glad to receive suggestions, criticisms, and even complaints, from my customers, and invite their co-operation in making this department of practical service to them. Any information my readers may desire as to the books and other publications, either of the current month or of earlier date, I shall endeavour to supply. All communications must be addressed to "The Keeper of the Review Bookshop" at the Office of the* REVIEW OF REVIEWS, *Mowbray House, Norfolk Street, London, W C.*

A Supplement to the "Review of Reviews."

No. 47. Issued as an integral part of the "Review of Reviews" of May, 1905.

SCOTLAND AND ART.

WHEN the hardest-headed city in the hardest-headed country in the world sets itself to encourage the "home industry" of sculpture, we may take courage. For if the shrewd Scot feels toil and cash well spent in founding a school of this high art, we seem to be moving on to the stage of culture dreamed of by Russell Lowell, at which the Western Goth shall find that "nothing pays but God": or that the higher interests are in the best and most practical sense profitable. On this and on the following page we give pictures of the new sculpture gallery just opened in Aberdeen, which, thanks to the generosity of some one hundred and sixty donors, mostly citizens of the Granite City, contains a collection of casts showing the history of sculpture from the Egyptian period, with a special court of Celtic work.

The New Sculpture Gallery in Aberdeen.

A SCHEME FOR MOTHERING THE COMMUNITY, AND FOR IMPROVING JOHN BULL, JUN.

IN the *Independent Review* Sir Lauder Brunton outlines a programme of colossal proportions for the proposed National League of Physical Education and Improvement. For its machinery he would have local councils, district councils, and national councils, and a General Executive Council. The more important members of the local councils would be school managers, parsons, doctors, schoolmasters, and, most important of all, ladies. Sir Lauder Brunton says:—

> It would, no doubt, be advantageous to have a register kept of all the women who are about to be confined; and this might be done when they apply for the services of a doctor and midwife to attend then during their confinement. After the registration, the case might be assigned to a lady in the district, who would visit the expectant mother, instruct her as to the disadvantages of continuing work right up to the time of confinement, show her what preparations she ought to make for the little stranger, and for getting her household work carried on during the period of her lying-in. In cases where the necessity of earning food might force the mother to continue work up to the very last, her circumstances might be inquired into, and some provision might be made, either from charity or from the rates, to provide food and care for some little time before and after confinement. When the baby arrived, the nurse and lady visitor would have to instruct the mother in regard to suckling, if possible, and in regard also to artificial feeding if the mother should prove unable to nurse.

The help of the legislature should, if necessary, be called in to secure that the right kind of milk was secured. Then "instruction of mothers in the feeding of children is an absolute necessity." Where mothers must go out to work, crèches, infant schools, Kindergarten, and Board Schools should take in the children.

The League should then see to the complete medical inspection of children for the requisite prescription of tasks physical and mental. "The best physical excercise for a child is certainly play." The children must also be well fed. The writer approves Dr. Macnamara's scheme of luncheon bars, with tickets, paid or not paid for, according to the circumstances of parents. The teaching of cookery should be extended, the invention and recommendation of a special stove should also be arranged for. Too early marriages are to be prevented by clubs for the girls, gymnasia, swimming baths, exercise halls, continuation classes, and for the young men rifle shooting. The encouragement of all such agencies would form an important part of the work of the League. The writer properly insists on the absolute need of women in this mothering of the community. He says:—

> It is to them we must look, perhaps even more than to the men, for the carrying out of the programme which the League proposes.
>
> The work of the League is educational; and, although a father may do much to train his boys, it is the mother who educates them, and it is on the mothers and ladies who train the mothers that our hopes for success must to a great extent rest.

ELECTRIFYING THE UNDERGROUND.

Good Words lately contained an interesting paper by H. G. Archer on "The Electrification of the Underground Railway." The writer thus describes the electrical equipment of the permanent way, both in District and in Metropolitan railways:—

It consists of two conducting rails, the bare one, running down the centre of the track being the return or negative conductor, and the protected one at the side the live or positive rail. Both are supported on vitrified porcelain insulators, which will absolutely prevent stray currents from causing electrolytic damage and disturbing telegraphic and other electrical instruments, and to provide electrical continuity are connected together by flexible strips of copper called bonds. The "live" rail throughout its length is protected by projecting boards, which should suffice to render it safe from all but wilful tampering.

The District Company's generating station in Lot's Road, Chelsea, is the largest in the world. It will not only supply energy to the underground and surface lines of the District, but also to three tube railways and any outside purchaser in want of power. From this generating station the 11,000 volt current, the highest voltage yet used commercially, will be delivered in bulk to Earl's Court, and thence radiate through sixty-four pipes embedded in concrete to the twenty-three sub-stations, where the pressure will be reduced by transformers and then converted into direct current at the line pressure of about 600 volts. Sixty trains, comprising a total of 420 cars, are being built. Each train will consist of seven cars made up of three motors, one at each end and another in the centre of the train. The lines will be equipped with electro-pneumatic automatic signals and an automatic "stop" to trains over-running signals. The latest and best equipment of power, stations, sub-stations, stopping stations and cars is promised.

The Celtic Court in the Aberdeen Sculpture Gallery.

THE utilisation of coal dust is the subject of an interesting paper in the *Magazine of Commerce*, which describes the invention of a new binder or substance for compacting anthracite coal dust into briquettes, and claims that English briquette making machinery is now

ELECTRICITY AT $\frac{4}{10}$D PER UNIT.

A propos of the project of the Electrical Power Companies to supply London, the *Magazine of Commerce* says that neither Berlin nor Boston is considered to be a manufacturing city, yet the amount of electrical energy used for power purposes in the former city per head of the population is five times, and, in the latter, four times greater than that used in the industrial part of London. London began by thinking of electric light rather than of electric power. A rosy estimate is given of the prospects of the proposed electrical supply. Of these estimates it is said:—

They are based on the actual results of electric power distribution on the large scale achieved on the Tyneside by the Newcastle-upon-Tyne Electric Supply Company. The theoretical arguments in favour of concentration are unassailable, but they are not so impressive as the data supplied by the Tyneside undertaking since electric power supply was begun in earnest—three years ago. The output has gone up by leaps and bounds, and simultaneously the cost of production has dropped step by step to the record figure of 0.41d. per unit for the total cost. The power demand is over 40,000 horse-power, or more than the total supplied in London, and the customers of the company include, besides the North Eastern Railway, practically all the principal works on the north bank of the Tyne. They have found it cheapest to buy power from the company, instead of buying coal and erecting generating stations of their own. Out of 17,000,000 units supplied during 1904 15,000,000 were for power purposes. The dividend paid for the past seven years is eight per cent. per annum. So successful has the Newcastle undertaking found the principle of concentration to be that it has recently absorbed the County of Durham Electric Power Supply Company, which holds powers of bulk supply over 250 square miles, and it intends to use its present organisation to supply both areas.

The Companies Bill restricts the maximum price for supply in bulk to 1.5d. per unit, to an ordinary eight hours a day user 1d.

AN excellent little book in French—why do we not have such books in English?—is "Pour la Paix," a collection of brief historical lectures for use in elementary and normal schools by teachers who wish to bring up their scholars as haters of war. The authors are Odette Laguerre and Madeleine Cartier. The veteran Frédéric Passy contributes a preface, and the book is published by the Librairie Générale de l'Enseignement, 1, Rue Dante, Paris, at 1 fr. 75 c.

THE REDUCTION IN JOHN BULL'S NAVY.

SIR WILLIAM H. WHITE, late Director of Naval Construction, discusses the recent reduction in our Navy List in the *Nineteenth Century* under the head "Is our Reserve of Warships Ample?" He says of the present war:—

The absolute necessity for a reserve of ships ready to fill gaps in the fighting line has been demonstrated afresh, together with the fact that vessels of earlier types, held in reserve, increase in relative value as war makes ravages in the ranks of the more recent and powerful vessels. Ships treated as obsolete or worthless at the outset may assume great importance as a war progresses. There is universal agreement that a reserve of ships is a most valuable asset in naval force, and that such a reserve should not be lightly reduced.

This principle has governed our naval policy for nearly twenty years. The alleged extensive reductions are next canvassed, but Sir William complains that it is difficult to extract definite information as to what has actually been done. He comes to the conclusion—

That there has been recently no such heroic or extensive reduction in our effective fleet as is generally supposed, that the ships struck off consist largely of vessels which for some time past have been reckoned ineffective, and that the claim that large immediate economies on repairs are due to the elimination of ships has not been realised.

But he further remarks that the scheme involves the abandonment of the principle which has maintained on distant stations for the protection of British interests a considerable number of small and lightly armed vessels of comparatively shallow draught. Nor does he think that we have any armoured and powerful protected cruisers to spare. On the list of so-called obsolete vessels, Sir William remarks:

No clear principle seems to have been followed in the classification. Sister ships receive different treatment and vessels are retained which are distinctly inferior to those assigned to the scrap-heap. Decisions may have been somewhat hastily reached, and in the first statements there were errors which have been corrected.

He pleads for reconsideration of the policy which would sweep away a very large number of protected cruisers.

A PLEA FOR AN ANGLO-FRENCH ALLIANCE.

IN the *Nineteenth Century* Mr. O. Eltzbacher discusses the balance of power in Europe. He contends that when the Continent is dominated by one Power, Great Britain is bound to lose her liberty. The preservation of the balance of power in Europe is more important to Great Britain than the Monroe doctrine is to the United States. Our safety, he argues, lies with the weaker Powers of Europe, and it is our policy to follow the maxim, "Always support the weaker Power or Powers of Europe against the stronger." He concedes that before the outbreak of the Russo-Japanese war the balance of power in Europe was "absolutely perfect." The Triple Alliance was balanced by the Dual Alliance. But now Russia for the next ten years at least will be reduced to playing a passive part in European politics, and for at least ten years the writer predicts the Triple Alliance will rule the Continent. Internal difficulties may compel Russia to reduce her army to a police force, cut down her navy, and for much longer than ten years stay at home. The balance of power has been destroyed. The collapse of Russia has put France in an awkward position. The writer proceeds:—

It is natural that France has turned towards this country, and that her people instinctively feel that their safety lies in a close understanding with Great Britain. The *entente cordiale* comes, as far as the French nation is concerned, from the heart.

For preserving the *status quo* in Europe and for preserving peace an Anglo-French understanding is good, but an Anglo-French alliance would be better. If it is the view of British statesmen that a strong France is indispensable for preserving the *status quo* in Europe, it would seem advisable and, indeed, necessary that an Anglo-French alliance should be substituted for a vague Anglo-French understanding which does not give a sufficient guarantee of mutual assistance and of national security either to Great Britain or to France. With France for an ally, our naval superiority over any conceivable combination of Powers would become so overwhelming that other nations would see the hopelessness of the contest and would probably abandon their boundless shipbuilding programmes. Thus an Anglo-French alliance would not only strengthen the British Empire in all parts of the world, but it might induce other nations to reduce their shipbuilding expenditure and enable this country to do likewise.

The writer hopes that French and British statesmen will be wise enough to follow the lead of King Edward.

LONDON DOCK CENTENARY.

How the port of the greatest city in the world has been and still is "cribbed, cabined and confined" by vested interests or by lethargy, is brought vividly to mind by Mr. Ray's recent paper in *Good Words* on the dock centenary of London. He says:—

The year 1905 is an important centenary in the history of the Port of London, for it is just a hundred years ago that the London Docks were opened for the accommodation of vessels entering the Thames, that the East India Docks were commenced under the supervision of the well-known engineers Ralph Walker and John Rennie, and that the West India Docks, the first wet docks that London possessed, were finally completed according to the original plans.

One hundred years ago the port was said to be the laughing-stock of the world, for it possessed only the same legal quays for merchandise as it did in the reign of Charles II., extending only about a quarter of a mile from London Bridge to the Tower. The port then possessed three-fifths of the trade of the entire kingdom. These legal quays were constituted the only landing places in order to prevent smuggling. Vested interests were able to crush all progressive schemes for a century or more, but in 1793 William Vaughan unfolded a plan for docks in a famous pamphlet. Gradually public opinion compelled the intervention of Parliament and the docks were begun. The total amount paid for improving the Port of London was more than one and a half millions.

THE feature of the *Badminton Magazine* for May is Mr. J. T. Bashford's article on the Sporting Homes of the Hohenzollerns, chief of whom, of course, is the Kaiser. The article, which is written with His Majesty's permission, has some very interesting illustrations. Sir Henry Seton-Karr discusses the unwritten laws of Big-game Shooting.

GERMAN AND BRITISH WORKING MAN

THE Berlin correspondent of the *World's Work and Play* replies in a recent number to Professor Ashley's work on the progress of the German working classes. He admits—

> The masses of the German people have undoubtedly advanced in wealth and well-being during the last generation. Their wages are higher, their savings have enormously increased, the working day is shorter, and social legislation has done much to ensure them against accident and the disabilities of old age.

But though the German working man's prosperity has increased—

> It will take another quarter of a century to place him on the British level. His wages are lower, his hours are longer, his life is harder, his prospects are less bright, and above all and beyond all he is crushed to the earth by the burden of militarism and by the class feelings of his race. German labour is still largely unorganised.

But such prosperity as he possesses has been secured in spite of Protection. The writer says that he knows the German coal miner; he has been in his home and spoken with his wife and children, and if there is any class of men in the world more than others deserving pity it is this. His wages vary from £41 to £60 in the year. The iron ore miner receives an average of £35 to £45 a year. These averages are based on the last three years. 2·19 per thousand of German miners are killed annually at their work, against 1·29 of British miners. The health of the German miners is growing feebler. The glassworkers in the Upper Palatinate work 110 to 112 hours, an average of over 17 hours a day, sometimes receiving as low as 12s. or 14s. a week. Compare this with the 46 to 54 hours a week of the British glassworker, with his 40s. to 55s. wages. The best paid, bottle makers, receive 21 marks a week in winter and 18 marks in summer. They work a ten hours' day. The textile worker in Bavaria has a dismal time.

> After their eleven hours' work in the factory, man and wife return to their home and begin another term of labour, sometimes stretching to six hours. They do so to keep the family from starvation. And when work at last is over, what is the rest they enjoy? From five to ten persons lie down to sleep in one room.

No wonder that there is grave unrest and discontent. Twenty-five years ago half a million German workmen voted for the Socialists. A year ago three million Socialist votes were recorded.

"BRITISH" MOTOR-CARS FOREIGN IN PARTS.

THE energy and enterprise which has brought the British motor car industry abreast, if not in advance, of the Continental, is welcomed by the *Magazine of Commerce*, but objection is taken in the May number to the number of "British" motor cars "which have foreign blood in their veins." A contemporary says:—

> The evil to which we are desirous of drawing attention is the foisting upon the British public of motor cars as British made which are merely "assembled" (I had almost written "dissembled") in this country to the serious detriment of those manufacturers who *do* manufacture motor cars in the true sense of the word—that is to say, whose cars are designed and built by themselves and are manufactured throughout of British materials. While it may be within the knowledge of many people that certain motor cars are but an assemblage of foreign-made parts, few people would venture to think, even amongst the manufacturers themselves, are aware of the extent of the evil, and the list of firms whose names are published below will we are afraid come as a rude awakening to many an ardent motorist who at present fondly imagines that he is the proud possessor of an all British car.

Relative Importance of Certain Authors.

As advertised to-day.

If advertising is the secret of successful enterprise, then, according to the American cartoonist, there is one department of British commerce which is absolutely unrivalled.

Languages -writing.

MR. CLOUDESLEY BRERETON has a fine article on the proper basis of Modern Language teaching in the April number of *School* (John Murray, 6d.). He classes the infinite variety of methods at present in use under three heads: Right; Left; Centre; *i.e.*, old-fashioned orthodox; the opposite extremists, who teach by imitation, using the foreign language only; and the medium party, which believes in training the ear and tongue, and also in the usefulness of grammar. He himself pins his faith to a left-centre course, and his article should be read in full, if one desires to profit by his experience. Use Kindergarten methods up to the age of nine, he says, but cultivate the finer literary and critical instincts of the maturer pupil.

No language teacher can afford to be without *Modern Language Teaching*. The April issue is simply crammed with valuable information, and it is impossible to do more than mention that Mr. Storr speaks about examinations; M. Barlet on the teaching of French literature. Mr. Andrews discusses fully the best methods of utilising fully the scanty time allowance. A part of Dr. Breul's pamphlet on the compulsory Greek question is given, and up-to-date information of all kinds.

It is well, perhaps, to remind our readers that holiday courses in Germany, Spain, London, Edinburgh, and several places in France are arranged; that for the London University course tickets *must* be applied for before July 15th, all communications to be addressed to the Registrar of the University Extension Board, University of London, South Kensington. "Director of Holiday Course" to be added on top left corner of envelope.

All this reminds one that often the born teacher is handicapped by lack of money. Can nothing be done? In the *Bulletin* of the "*Prof. de Langues Vivantes*" concessions from railway companies are pleaded for. These are obtainable in France in many cases, but not in England. We ourselves have been able to help only in the exchange of visits system, but as regards fares the authorities are deaf to our pleading; they will permit an apprentice a half-fare Season, but not half-fare holiday tickets for schoolboys and girls over twelve; whilst, of course, we prefer the exchangees to be over that age. There are other difficulties to be overcome, and the best plan would be to have a small British Committee which would act in conjunction with similar Committees in France and Germany. Will not our Modern Language teachers come to the aid of these young students? We call on Mr. Brereton especially.

Here is a specimen letter from a young teacher who from circumstances cannot even exchange:—

VIENNA, April 15th, 1905.

Dear Mr. Stead,—I take the liberty of asking you to be good enough to give me some advice as to how I can find a holiday engagement (July, August, September) in England. My parents, having lost their money when I was a child, cannot pay for my stay in England. Now it is my heart's desire to be there for a time. I am a Viennese, twenty years of age. I have passed the higher examinations, speak French fluently, know English grammatically, and am in possession of good testimonials. Can you advise me how to get a chance of learning to speak the beautiful English tongue? If I succeed in getting an engagement it will be the first time I have good fortune.—Yours sincerely, NATALIE M.

A French youth would be glad to give his services in return for a home during the summer holidays.

ESPERANTO.

PREPARATIONS for the great Congress at Boulogne in August are going on apace, but M. Michaux being overpowered with correspondence would very much like to centralise national queries, and Mr. C. Reeve, 40, Crofton Road, Camberwell, has consented to receive and transmit all the British demands for tickets and rooms. The tickets for admission to all the various discussions, etc., for the ten days will be 2s. 6d.; with the fully descriptive "Guide to the Congress" (which will contain portraits, plan of town, hotels, lodgings, etc., etc.) five francs. Tickets and guide will be ready, it is hoped, by the first week in July, but applications may be sent in at once, as it is desirable to form some estimate as to how many tickets and guides will be needed.

DUTY OF ESPERANTISTS.

Many applications have been received for the March number of the *British Esperantist*, 13, Arundel Street, Strand, which is now practically out of print, the most important article probably being that of Mr. Buchanan.

For the benefit of those who cannot obtain the number I briefly summarise his points. Mr. Buchanan wishes chiefly to remind isolated Esperantists of their duties. Not having the advantage of meetings, he says, they are apt to be too modest and to imagine they can do nothing. Sometimes, alas! they are hampered by want of money. Remember, however, he says, that a recruit should be on the alert to defend his flag; but tact and discrimination are needful—do not forget that the sceptic of to-day may be the enthusiast of to-morrow. Carefully acquaint yourself with every argument for and against, show your colours, but modestly, remembering that an Esperantist is first a gentleman. Neither trouble yourself because you are unlearned. The great Toplady was converted by a simple peasant, and it is patient yet fervent enthusiasm which is the great factor in success. Obtain and distribute as much propaganda literature as is possible; give copies of the *British Esperantist*, if you can afford it, or "Do You Know Esperanto?" (fifty for 3s.); the "Key to Esperanto" and Leaflets for Letters, 1s. per 100. Use Esperanto post-cards and envelopes, or buy an india-rubber stamp and impress them with, for example, "La Lingvo Internacia, Esperanto," or even write this, and always address your letter Sinjoro, Sinjorino, instead of the usual Mr. and Mrs. when you are writing to Esperantists. These last details will not cost an extra farthing. Do not forget either that ten years ago Dr. Zamenhof wrote:—"Buy and read every Esperanto book that is printed, so far as your means allow."

NEWSPAPERS.

No longer is Esperanto simply a *motif* for a joke. It is impossible in our limited space to give extracts, but the *World* says the progress of Esperanto is slow if sure. It is a pity the Pope and the Duke of Connaught could not have used it, instead of having to call in the help of a translator, Monsignor Stonor. The *Christian World* of April 15th gave a column and a half to an article by the Rev. I. Harris. The *Lancet* contained a letter asking for collaboration for new medical terms. The *Daily News* gave a large space to a letter from Manchuria originally written in Esperanto, and so on.

REVIEW OF REVIEWS, Mowbray House, Norfolk Street.

Diary for April.

PRINCIPAL EVENTS OF THE MONTH.

April 1.—University Boat Race: Oxford wins. The estimates of capital expenditure of the London County Council for the current year are published. The association of Municipal Corporations hold their annual meeting at the Guildhall. The centenary of Hans Christian Andersen's birth is celebrated in Denmark. The great bridge over the gorge at the Victoria Falls on the Zambesi River (the highest in the world) is successfully linked up. Lord Milner leaves Johannesburg on his way to Delagoa Bay. A bomb attack is made on the Commissioner of Police at Lodz. A serious conflict takes place between the Socialists and police at Warsaw.

April 3.—The substance of the German Emperor's conversations with the Sultan of Morocco are published. A serious epidemic of cerebro-spinal meningitis prevails in New York. Count Julius Andrassy's attempt to solve the Austro-Hungarian crisis fails. Arrest of Anarchists still continues in St. Petersburg. The Prince of Wales undergoes a slight operation.

April 4.—Further disorder and revolt occurs in Russia. A violent earthquake, causing loss of life, is felt in Northern India; Dharmsala is destroyed. The Duke and Duchess of Connaught pay a formal visit to the Pope. The Italian Parliament reassembles to hear the statement of the Premier, Signor Fortis. The Australian Government accept the Orient Company's amended offer of a fortnightly mail service to England for £120,000 a year.

April 5.—Canon the Hon. Edward Lyttelton is chosen headmaster of Eton College, in succession to Dr. Warre. The resignation of M. Pobiedonostzeff, Russian Procurator of the Holy Synod, is confirmed. The Trade Union and Trade Disputes Bill is considered in the Committee on Law.

April 6.—King Edward, on his journey to Marseilles, is met by President Loubet in Paris. The Viceroy telegraphs news of the damage caused by the earthquake at Lahore, Dharmsala, Umballa and Simla; at Dharmsala 470 Gurkhas are killed and many injured, 30 per cent. native population being also killed. The German Emperor receives the King of Italy on board his yacht at Naples. The Prince Regent of Norway and Sweden addresses a mixed Council at Stockholm and calls on them to enter into free and friendly relations in order to settle the difficulties between the two nations.

Photograph by] [Elliott and Fry.

Canon Lyttelton

The New Headmaster of Eton.

April 7.—M. Delcassé, in the French Chamber, makes a statement on the question of Morocco. The National Festival is celebrated with great enthusiasm in Crete. The movement increases for union with Greece. The Tsar signs an order convoking the Assembly of Bishops.

April 8.—A scheme is prepared by the London County Council for the acquisition of a site for a County Hall on the south side of Westminster Bridge. A demonstration of the unemployed is held in Trafalgar Square. The Swedish Prime Minister, M. Bostrom, resigns. A new sculpture gallery is opened at Aberdeen by Sir George Reid. Waterworks near Madrid collapse; 400 men engaged on the works are engulfed in the ruins.

April 10.—The International Cotton Congress opens at Brussels. There is fighting in Morocco; the French come to the rescue of the Sultan's troops. The new mail contract with the Orient Company is signed in Australia; the service to be resumed at once. An addition to the Nelson collection is made at Greenwich Hospital. The Salvation Army self-denial week brings in £63,268.

April 11.—The Commissioner of Lahore roughly estimates that the loss of life in the Palampur district is 3,000, and in Kangra 10,000, from the earthquake. Fresh shocks are felt at Simla. The International Cotton Spinners' Committee accepts the invitation of the Mayor of Manchester to hold their annual meeting in Manchester Town Hall in June. A barristers' congress at St. Petersburg refuses to disperse when summoned to do so by the police; they declare for a democratic constitution with universal suffrage and secret ballot. The French Senate begins the debate on the Naval Estimates. Baron d'Estournelles de Constant suggests that France and Great Britain should initiate an international reduction of naval armaments. Mr. Choate, American Ambassador, is elected an Honorary Bencher of the Middle Temple.

April 12.—A statue of the King is unveiled at Cape Town. In the French Chamber the first article of the Bill for the Separation of Church and State is carried by a large majority.

April 13.—A Parliamentary Paper is issued containing a letter from Lord Northcote on the Australian view regarding marriage with a deceased wife's sister. The Tsar publishes a rescript on the question of the peasants and the land. The Prince Regent of Norway and Sweden accepts M. Bostrom's resignation.

April 14.—Mr. Choate, the retiring American Ambassador, is entertained by the Bench and Bar of England in Lincoln's Inn Hall. Mr. Chamberlain heads a deputation to the Prime Minister from the Protectionist wing of the Unionist party.

April 15.—The Education Committee of the London County Council publish their survey of non-provided schools. Sir F. Mowatt, Sir F. Hopwood, Lieutenant-Colonel Yorke, Mr. W. H. Macnamara, and Mr. W. M. Acworth are nominated by the Government as British delegates to the International Railway Congress at Washington. M. Bulyguine announces that the members of his commission will be chosen by the Tsar, not elected. M. Van Weede is appointed Dutch Minister for Foreign Affairs. The Hungarian Chamber adjourns after censuring the Tisza Cabinet. The King and Queen arrive at Algiers on board their yacht.

April 17.—Mr. P. A. Barnett is appointed by Lord Londonderry to the newly created post of Chief Inspector of the Board for Training Teachers. An Imperial rescript to the Governor-General of Irkutsk ordains the extension of the Zemstvo system to Siberia. A Khedivial decree admits English as a judicial language in the mixed tribunals in Cairo. A collision occurs at Limoges between strikers and troops. In Italy the railway men organise a strike in antagonism to the Government's Railway Bill.

April 18.—Lord Cromer's report on Egypt is published. London County Council, by 63 votes to 21, decide to buy the Lambeth riverside site for a new County Hall. Kalaieff, the assassin of the Grand Duke Sergius, is condemned to death at Warsaw. The deaths in New York from cerebro-spinal meningitis are still increasing.

April 19.—In the French Chamber there is an important debate on Morocco and French neutrality in the Far East; M. Rouvier declares that all is being done to observe strict neutrality. The Bill making railway workers State officials passes the Italian Parliament, against the wishes of the workers. The East Ham Council decides to close all the schools, as a protest against the assumption that education is local and not a national charge. The Royal Commission reports on the

Scottish Church difficulty. He recommends Parliamentary interference.

April 20.—The Borough Council of East Ham declines to pay the Education rate, the Borough being too poor to bear it. A boy near Dunstable is killed by an unknown motor car. The Cretan Assembly opens with a speech from the High Commissioner, afterwards the Assembly proclaims the ardent desire of the Cretan people for union with Greece. M. Shipoff's Association assumes the name of the "National Progressive Party of Russia." The Italian railway strike ends. The Turks are defeated; Sana surrenders to the Arabs, who proceed to invest Menakha.

April 21.—M. Delcassé, Minister of Foreign Affairs in France, resigns. The Forth Bridge naval base is abandoned by the Government. M. Rouvier states in the French Chamber that repeated orders have been given to French agents in Indo-China to observe strict neutrality towards Russia and Japan.

April 22.—In consequence of an appeal from President Loubet and an assurance by M. Rouvier, M. Delcassé withdraws his resignation. It is discovered that the motor car which killed a boy near Dunstable is owned by Mr. Hildebrand Harmsworth. The Democratic Federation in conference condemn the "sweating system" carried on by the Salvation Army and Church Army.

April 23.—Slight earthquake shocks are felt in the Midlands.

April 24.—Visitors of all nationalities flock to Stratford-on-Avon for the Shakespeare commemoration begun to-day, which is to last three weeks. The National Union of Teachers open their Annual Conference at Llandudno; 2,000 delegates attend.

April 25.—A Parliamentary paper is published, with Letters Patent and Order in Council providing for the constitutional changes in the Transvaal Government. President Loubet inaugurates the Gambetta monument at Bordeaux. The Cretan Chamber passes a resolution abiding by its Decree of Union with Greece. The Norwegian Government, in reply to the Prince Regent's invitation, says that until separate consular service for Norway is agreed to nothing further can be done. Protests against low salaries are made at the Conference of the National Union of Teachers. Turkish troops sustain a severe defeat at the hands of the Arabs, who capture many prisoners and seven guns.

April 26.—The King and Queen arrive at Ajaccio, and visit Napoleon's house. Rear-Admiral Campbell is appointed arbitrator under the Convention with France to deal with indemnity claims of the French fishermen at Newfoundland. The Huddersfield Corporation adopt a scheme of municipal child rearing; the National Union of Teachers recommend that local educational authorities shall have power to feed hungry children.

General Booth in the Holy Land

"General Booth, who has been visiting the Holy Land, is here shown at the ruin of the traditional house of Mary and Martha at Bethany. Our photograph was supplied by Beliak's Agency.

April 27.—Dr. Yeatman-Biggs is enthroned in Worcester Cathedral. Lord Windsor opens the Building Trades Exhibition at the Agricultural Hall. Mr. Carnegie announces a gift of £2,000,000 to provide pensions for Professors in Universities and schools in America, Canada, and Newfoundland. The British Government decide to send a mission to Fez.

April 28.—Mr. Gerald Bilfour, as President of the Local Government Board, addresses an Order to the Guardians of the Poor relating to underfed children in the schools.

April 29.—The King leaves Marseilles for Paris. Lord Selborne leaves Southampton for South Africa.

April 29.—The King arrives in Paris.

April 30.—The King invests Admiral Fournier (ex-President of the North Sea Commission) with the insignia of the Order of St. Michael and St. George. The King pays an official visit to President Loubet, who in the evening entertains him at a dinner party at the Elysée; the King is everywhere received with warm cordiality. Count von Tattenbach, German special envoy to the Sultan of Morocco, leaves Tangier for Fez.

THE WAR.

April 2.—The Japanese drive the Russians out of Ai-shin-kan, thirty-three miles north-east of Kai-yuan.

April 8.—Admiral Rojdestvensky's squadron passes the port of Singapore and through the Straits to the China Sea; it anchors off the Anamba Islands.

April 11.—The P. and O. steamer *Aulia* sights the Russian fleet, forty-two in number, in lat. 8 N., long. 108.55 E.

April 14.—The Japanese declare the Pescadores Islands to be in a state of siege.

April 17.—The Japanese capture a large number of colliers off Saigon going to coal the Russian fleet.

April 20.—Great indignation is expressed by the Japanese Government, to France and Great Britain, that Admiral Rojdestvensky is allowed to use French territorial waters for his operations of coaling, etc. Coal exports are prohibited at Hong Kong.

April 21.—The Russian cruiser *Diana*, which took refuge at Saigon some time ago, is ordered to disarm.

April 22.—In consequence of direct orders from the Tsar, and pressing representations of the French authorities of Indo-China, Admiral Rojdestvensky leaves Kamranh Bay, with the Baltic Fleet, and proceeds northward. The French authorities at Saigon prevent the Russian vessels there from shipping more coal than is necessary for their voyage.

April 23.—The Russians advance south to Chang-tu and Kai-yuan, but are defeated by the Japanese, and retreat north again.

April 24.—The Russian squadron is seen fifteen miles from the Annam coast going north.

April 27.—The Russian fleet returns to Kamranh Bay, German colliers supplying coal inside the bay.

April 28.—The Russian fleet again leaves Kamranh Bay.

BY-ELECTIONS.

April 5.—The result of the polling for the vacancy in the representation of Brighton, owing to the appointment of Mr. Gerald Loder as Junior Lord of the Treasury, is announced as follows:—

Mr. E. A. Villiers (L.)	8,209
Mr. G. Loder (C.)	7,392
Liberal majority	817

A Liberal gain. In 1900 the Tory majority was 3,163.

PARLIAMENTARY.

House of Lords.

April 3.—Bills advanced.

April 4.—Second reading of Workmen's Compensation Bill ... Street Betting, third reading.

April 6.—Third reading, Service of Militiamen Bill ... The delay in Public Bills to the House; speeches by Lord Newton, Lord Lansdowne, Lord James of Hereford, and Lord Rosebery. Motion agreed to.

April 7.—Continuation Schools: second reading lost by two votes.

April 10.—Lord Bath gives details of the loss from the Indian earthquake, and explains the measures taken for relief of the sufferers.

April 11.—The proposed Colonial Conference; speeches by Lord Balfour, Lord James of Hereford, Lord Spencer, Lord Lansdowne, and Lord Rosebery.

April 13.—Contraband of War: statement by Lord Lansdowne.

House of Commons.

March 31.—Second reading of the Local Authorities (Qualification of Women) Bill carried by a majority of 150.

April 3.—Committee of Supply: Army Pay vote. Mr. Churchill moves the reduction by £1,000,000; speeches by Sir E. Grey, Mr. Arnold-Forster, and Sir H. Campbell-Bannerman ... London County Council (Tramways) Bill; speech by Mr. Burns. Division results in a tie—171 for, 171 against. The chairman gives his casting vote in favour of the Bill.

April 4.—Army pay vote: Debate continued; vote carried by a majority of forty-three ... Sir J. Leese moves a resolution against the taxation of food; speeches by Mr. Seely and Mr. W. Crooks, and Lord H. Cecil. The resolution is carried *nemine contradicente.*

April 5.—Mr. Lloyd-George asks the Prime Minister if he wished to modify his statement regarding the resolution passed *nemine contradicente* ... Army vote continued; the Government majority sinks to 31 ... Cotton growing to be encouraged in the Colonies; speeches by Sir W. Tomlinson and others.

April 6.—Army Estimates: An amendment for a reduction of the vote is negatived by a majority of 42. The House continued sitting until 9.15 on Friday morning, when the Committee stage of the Army (Annual) Bill was disposed of.

April 7.—Marriage with a Deceased Wife's Sister Bill; second reading carried by a majority of 85, and referred to the Standing Committee on Law ... Second reading Drunkenness (Ireland) Bill.

April 10.—The Budget explained by Mr Austen Chamberlain; 2d. in the lb. taken off tea.

April 11.—Mr. Long explains his relations with Sir Antony MacDonnell ... Budget resolutions; speeches by the Chancellor of the Exchequer and others ... Irish National Teachers' Pension Fund: resolution rejected by 137 votes against 113; majority, 24.

April 12.—Budget resolutions: the Income-Tax; Mr. McKenna moves its reduction to 11d.; lost by 53 votes. Home Rule and Opposition; speeches by Sir H. Campbell-Bannerman, Mr. Redmond, and Mr. Balfour.

April 13.—Supply: Irish University Education; speeches by Mr. Balfour and Mr. Dillon. ... Port of London and Docks Commission Bill; speeches by Mr. Benn, Mr. Bonar Law, and Mr. Burns. For the second reading, 123 votes against 191; majority, 68.

April 14.—Land Values (Assessment and Rating) Bill; speeches by Mr. Trevelyan, Mr. Asquith, and Sir J. Rolleston. On a division, second reading agreed to by a majority ...

April 17.—Agricultural Rates Act (1896) Continuance Bill is read a second time by 174 votes against 59.

April 18.—Mr. Gerald Balfour brings in the Government Unemployed Bill, Mr. Akers-Douglas the Aliens Bill; both read a first time ... The question of London's unfit schools is raised by Mr. Benn.

April 19.—On the motion for the Easter adjournment, Sir H. Campbell-Bannerman asks the Prime Minister to explain his views on the Fiscal question, and also for information on other subjects; Mr. Balfour replies, but does not answer the questions. The House adjourns.

SPEECHES.

April 4.—President Roosevelt, at Kentucky, on the re-union of North and South.

April 6.—Lord Crewe, at Nottingham, on the causes of the Liberal victory at Brighton.

April 7.—Mr. Gerald Balfour, at Leeds, on the opposition and Mr. Balfour ... Lord Hugh Cecil, at East Greenwich, on his determined stand against Mr. Chamberlain's scheme of protection.

April 8.—Mr. F. Greenwood, in London, on the history of the purchase by the British Government of the Khedive's shares in the Suez Canal.

April 10.—The Duke of Devonshire, in London, on the success of the cause of Free Trade ... Major Seely, in London, on the red-tape follies of the War Office.

April 12.—Mr. Chamberlain, in London, on the treaty between Japan and Great Britain, and the plan of tariff reform.

April 13.—Lord Rosebery, in London, on probable Liberal legislation.

April 14.—Mr. Winston Churchill, at Salisbury, on the sins of the Government.

April 18.—M. Jaurès, in the French Parliament, condemns the employment of troops in the disturbances at Limoges.

April 24.—Mr. Philip Snowden, at Manchester, on Monopoly and Social Misery.

April 25.—Mr. Keir Hardie, at Manchester, on the union of the Labour Party ... Earl Grey, at Toronto, on the open door to the Pacific, to which Canada does not yet contribute a single dollar.

April 28.—Mr. Brodrick, at Guildford, on the maintenance of Church Schools.

OBITUARY.

March 31.—Dowager-Duchess of Abercorn, 92.

April 1.—Mr. H. J. Pearce (war correspondent), 60.

April 3.—Monsignor Favier (head of French Mission in China), 68.

April 7.—Sir John Budd Phear, D.L., 79.

April 8.—Lord St. Helier (Sir Francis Jeune), 62 ... Dr. Strossmayer (Bishop of Diakovar), 90 ... Mr. Ewin Truman, M.R.C.S., 86.

April 9.—General Lord Chelmsford, G.C.B., 76.

April 12.—M. Paul de Laboulaye, 71.

April 13.—Mr. Henry T. Craven (dramatist), 87.

April 14.—Prince Henry of Bourbon, 53 ... Colonel Renard (Paris).

April 17.—Professor Piccini (Florence).

April 19.—Lord Stanhope, 66 ... Mr. R. A. H. Mitchell, 59.

April 20.—Mr. Orville Platt, Senator, U.S.A., 77.

April 21.—The Rev. the Earl of Chichester, 60.

April 22.—Captain W. H. O'Shea, 64.

April 24.—Mr. Gédéon Ouimet (Premier of Quebec, 1873-76), 82.

April 25.—Prince Ahmed K. E. Effendi (Constantinople) ... General Count H. Lehndorff, 76 ... Mr. D. W. Jones (Welsh Bird), 72.

April 26.—Rev. J. A. Mitchell (Secretary Congregational Union), 56 ... Mr. Martin MacDermott, 82.

April 28.—Cardinal Ajuti (Rome), 55.

April 29.—Lord Grimthorpe, 99.

Other Deaths Announced.

Dr. J. E. Dutton (in the Congo), 29.

A FOUNDLING.

THE
REVIEW OF REVIEWS

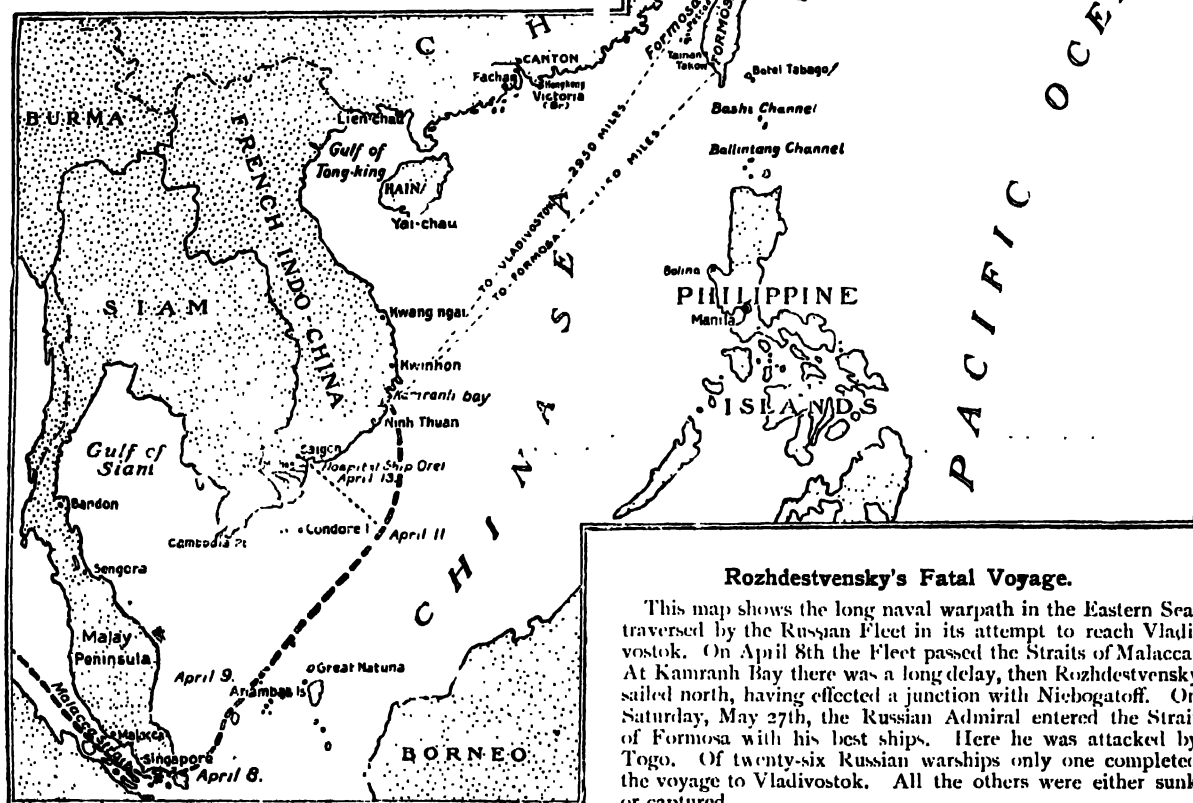
THE PROGRESS OF THE WORLD.

LONDON, June 1st, 1905.

The Overlordship of the Pacific.

The pleasant month of May closed at home amid a blaze of brilliant sunshine, illuminating the loveliest landscape in the world. For no country side is more divinely beautiful than southern England when May dissolves into June amid the golden glories of the fields and the silvern splendours of the hedgerows. The first half of the month we were parched with north-east winds which burnt like flame, the last few days we basked in the warmth and radiance of midsummer. In the Far East the order of events was reversed. During the first three weeks all lay calm and still on sea and land. But sudden as the burst of English sunshine there came at the end of the month the news of the long-expected encounter between the Russian and Japanese fleets which has decided the overlordship of the Pacific. Slowly, but steadily, the Russian Armada, under Admiral Rozhdestvensky, crept northward along the Chinese Coast, until at last, taking advantage of a fog, he dashed boldly with all his fighting ships through the Straits of Korea. It was an enterprise ominously like that of the Spanish Armada three hundred years ago, with this difference—his enemies held both coasts and, unlike our English sailors, were plentifully supplied with munitions of war. Admiral Togo lay in wait with his battleships at Masampho. His torpedo boats and submarines were distributed at the islands mid-channel.

Admiral Niebogatoff.
(A prisoner.)



Admiral Togo.
(The victor.)

Admiral Rozhdestvensky.
(A prisoner.)

The Fateful Battle.

Fighting began on Saturday, May 27th. The first news that reached Europe came from America in the shape of a report that the Russians had lost the first-class battleship the *Borodino*, the repair ship the *Kamschatka*, the most indispensable ship of the fleet, and four other warships. Then came a report that the Russian fleet had been dispersed and was being pursued. Then on Monday morning

the official report, crashing like a thunderbolt from the Far Eastern sky, announcing the practical annihilation of the Russian Fleet. At the moment of writing full details were still awaited. The Japanese, who had lain in wait for the coming of the great battleships, fought them from early morning till sundown. Their line of battle broke at five. Four of their best ships were sunk. Early in the morning they had let loose upon them in the dark a swarm of torpedo boats. That which the Russians had feared on the Dogger Bank became a dread reality in the Korean Straits. One after another the great floating castles were smitten by the deadly weapon that strikes below the belt and spares not. In vain they thrashed the foggy sea with a hail of shot and shell. On Sunday afternoon the victory was won, and all that was left was the pursuit of the battered remnant. Of the Russian Fleet only one vessel escaped. Admiral Rozhdestvensky was taken prisoner. Japan stood victor confessed, the overlord of the Pacific, no longer dependent upon the prospect of British assistance—nay, very well able to set England at defiance should our interests clash. For how much better should we have fared than the Russians if it had been a British Fleet that ventured into perilou seas swarming with torpedoes and submarines?

Rozhdestvensky's Fatal Voyage.

This map shows the long naval warpath in the Eastern Seas traversed by the Russian Fleet in its attempt to reach Vladivostok. On April 8th the Fleet passed the Straits of Malacca. At Kamranh Bay there was a long delay, then Rozhdestvensky sailed north, having effected a junction with Niebogatoff. On Saturday, May 27th, the Russian Admiral entered the Strait of Formosa with his best ships. Here he was attacked by Togo. Of twenty-six Russian warships only one completed the voyage to Vladivostok. All the others were either sunk or captured.

The Annihilation of the Russian Fleet.

The destruction of the Russian Fleet appears to have been effected with practically no loss on the part of the Japanese. Everyone anticipated that the first great naval battle would practically be an affair of the Kilkenny cats. But the Japanese not only kept their fleet intact, but came out of the battle stronger than when they went into it. For they not only lost no ships in sending the best battleships and cruisers of the enemy to the bottom, but they succeeded in capturing and bringing into Japanese ports the first-class modern battleship the *Orel*, one second-class battleship of 10,000 tons, the *Emperor Nicholas I.*, and two coast defence ships of 4,000 tons, the *Admiral Apraxine* and the *Admiral Seniavin*. The Japanese sunk the flag-ship, the *Kniaz Suvaroff*, the *Borodino* and the *Alexander the Third*, three vessels newly built with all the latest appliances in the art of war, each of which cost £1,500,000, and the second-class battleship, the *Sissoi Veliky*. The *Admiral Ushakoff*, the remaining coast defence ship, was sunk with all the three armoured cruisers and two of the protected cruisers. Besides Admiral Rozhdestvensky himself, Admiral Niebogatoff was made prisoner, with 2,000 men; 7,000 Russians are said to have gone to the bottom. Naval warfare is comparatively bloodless. If every man in the two fleets had perished, it would not have equalled the loss of either Russians or Japanese in a great land battle. When the fight was over the Russians had only one ship left afloat, the *Almaz*, which escaped to Vladivostok.

The Future of the War.

The disaster that has secured to Japan the overlordship of the Pacific is not likely to bring us any nearer the end of the war. As a Russian ambassador observed last month, "If Rozhdestvensky wins it is bad for Japan; if he loses, it is no worse for us than we are now. We stand to win if he is victorious. Japan does not come any nearer winning if he is defeated. For things will remain on the sea just as they have been since the beginning. And it is not on sea that the issue will be decided." The blow to Russia's prestige will, however, be enormous. Even if she had money to burn, it would take her three years before she could get together another first-class fighting fleet, and without a fleet she cannot hope to recover the command of the Pacific. General Linievitch appears to be licking the Russian Army into shape in the old-fashioned Russian style. Prince Khilkoff, the ablest Minister the Tsar has got, is reported to have returned from the front inclined to take a cheerful view of Russia's chances. If the Russians won the next battle—and in war it is always the unexpected that happens—the morrow of victory might see the opening of negotiations for peace. But until Russia scores some success she will do exactly as John Bull would have done under the same circumstances. Russians, like Britons, have a great belief in the virtue of hanging on like grim death, and refusing to know when they are beaten. This in a Briton is by Britons considered the supreme attribute of patriotic heroism. In Russians, of course, it is only pigheaded obstinacy. But it is hardly to be wondered at if the Russians themselves do not see it in that light.

The Big Battleship.

The result of this Trafalgar of the Twentieth Century will be to make civilians more dubious than ever of the expediency of putting so many eggs into a single basket. It is a point on which I have never been able to convince myself that the naval experts are right. They may be right on the high seas, but it is quite inconceivable they can be right in straits or near the shore. We spend £1,500,000 on one huge floating fortress. But suppose our enemy invests half that sum in building and equipping thirty or forty torpedo boats, each of which costs only £20,000. What chance would Leviathan have if the whole thirty or forty were launched against him some dark night when the fog obscured the search-light, and his attention was distracted by a swift cruiser pelting him at a distance with heavy shell? Granting that Leviathan might, with good luck, polish off a score, if only one got home— good-bye to Leviathan. And in narrow waters is it conceivable that one would not get home? The success of the Japanese will do more to convince the experts than anything else. But naval experts are very hard to convince. Is it not on record that the Admiralty passionately opposed (1) the introduction of steam into the navy; (2) the introduction of armour plating; and (3) the breech-loading cannon?

Naval Estimates.

The disappearance of the Russian navy from the sea ought surely to enable us to reduce our enormous expenditure upon our fleet. I have never grudged money for the Navy. Indeed, Mr. Shaw Lefevre, in his "Burden of Armaments," holds me responsible for the enormous increase of naval expenditure because I wrote "The Truth About the Navy" in 1884. But at that time we had fallen

Photograph by] [*Cribb, Southsea.*

Our New Submarines.

B 1, the first of the new type, note the height of her deck and the peculiar ram.

below the lowest standard of safety. In 1890 we spent £17,000,000 on our Navy. In 1904 we spent £40,327,850. One pretext for this enormous increase was always the alleged necessity of out-building the Russians. Now that the Russian navy is practically destroyed, and some of its best ships are now mounting the flag of our allies, we might surely ease up for a time. The other Powers have increased their naval estimates, but we have out-built and out-spent them all. And, as usual, no one seems to feel a bit safer to-day than when all the expenditure began.

The Kaiser and the Navy League.

"Above all, not too much zeal!" For the moment, not so fast. Such is the word of command which the Kaiser has seen fit to address to the German Navy League, whose zeal on behalf of a monster navy has quite eaten up its discretion. It is not clear precisely why the Kaiser fired off his telegram of reproof just when and as he did. But it is evident that on second thoughts he came to see he had been guilty of a little over-zeal himself. Explanations were tendered, two generals, who had resigned from the Executive Committee on reading the Kaiser's telegram, were reinstated, and at the general meeting of the Navy League, held under the ægis of the King of Wurtemburg and Prince Henry, the forward policy of more battleships, more cruisers, more torpedo-boats, more everything, was once more affirmed. The horse leech has now a third daughter—the Navy League—which is as insatiable as death; but on the whole the Kaiser would be the most ungrateful of men if he were to be other than grateful to the organisation which has made the running for his naval schemes.

Mr. Balfour on Imperial Defence.

Mr. Balfour edified the House of Commons last month by a lecture upon the problem of the Defence of the Empire—which I have published as No. 9 of "Coming Men on Coming Questions." What he said was that an invasion of England was practically impossible, even if we had no army and no organised fleet. No Power would venture upon an invasion with fewer than 70,000 men, and no Power could land 70,000 men in less than two days, during which torpedo-boats and submarines would send their transports to the bottom. Therefore does the innocent reader imagine there is to be any reduction in the military estimates? Not at all. The Army, which is not wanted to ward off an impossible invasion of Britain, is to be kept up to the present costly standard in order to be able to send 100,000 men in the first twelve months after the Russians show any disposition to push their railways into Afghanistan. It was a favourite dream of M. Lessar's this bridging of Afghanistan by a railway, which was to be the wedding-ring of the two Empires. But Mr. Balfour will none of it.

Mr. Louis Dane,

Leader of the recent British mission to Afghanistan.

Afghanistan is to be kept as an unbridged fosse between Russia and India, and the appearance of a Russian railway engineer south of the Afghan frontier is to be regarded as equivalent to a declaration of war. The net result of it is that the Indian army cannot be reduced, neither can the Home army. This is all logical enough, if you grant the premiss that Russia and England must always be preparing to go to war with each other. But it is an insane and nonsensical premiss tending to suicidal results. If we would but cultivate Russian friendship as we cultivate that of the Americans, we need no more worry about the Afghan frontier than we do about the frontier of Canada. Mr. Louis Dane's Mission has returned from Cabul, bringing with it a new treaty which, fortunately, makes no alteration in the situation.

The Last Straw.

The patience of the House of Commons broke down last month, the last straw being Mr. Balfour's attempt to evade a straight answer to a straight question asked him by Sir Henry Campbell-Bannerman. For eighteen months past Mr. Balfour has been posing with marvellous adroitness as the Jeremy Diddler and Artful Dodger of Politics. By his subtlety and finesse he has reduced politics to a game of thimblerigging, and the Opposition, like the mystified countryman, could never guess under what particular thimble the clever juggler had hidden the pea. But it happened with Mr. Balfour as it happens with all thimbleriggers. One fine day they make too glaring a deal with the nimble pea, and even the clodhopper sees it. Then, raising a terrible cry of indignation, he tries to sweep the board—with the result that he is as often as not marched off in custody. The particular pea which Mr. Balfour meant to convey from the thimble where the Opposition had seen it placed was his pledge, given at Edinburgh and confirmed explicitly by Lord Lansdowne in the House of Lords, that the Government would not submit the question of preference to a Colonial Conference until after they had received a mandate so to do at a General Election. It was understood on all hands that, amid much that was vague and nebulous, Mr. Balfour had definitely pledged himself to insist upon two General Elections before there was to be any change in the fiscal policy of this country. One, to sanction the submission of the question to the Conference; the second, to approve the decision of the Conference, whatever it might be.

Westminster Gazette.]

J'y Suis, J'y Reste.

This year—this next year—sometime—never!

Westminster Gazette.]

Mr. Balfour's Honour.

ARTHUR: "You have impugned my personal honour, and you will have to fight—my friend Lyttelton."

When is a Pledge not a Pledge?

Imagine, then, the amazement and the indignation of the Liberals and the Free Traders when Mr. Balfour, having entered into a compact with Mr. Chamberlain beforehand, calmly repudiated his pledge and announced that the Government would have no objection to the Colonial Conference which meets next year discussing the whole question of preference. With a smile that is childlike and bland he explained that, when he had given his pledge at Edinburgh, he had forgotten that a Colonial Conference would meet in the ordinary course next year, and he might have added that he then did not venture to hope that he would be in office when the Confer-

ence met. Now, however, that his party is so absolutely certain that it will be smashed to pieces at the General Election, he sees a chance of surviving till next year. Mr. Chamberlain wants an immediate Dissolution, but by offering to allow Preference to be brought forward at the Conference, which meets next year, Mr. Balfour appears to have secured Mr. Chamberlain's support. As for his pledge, circumstances alter cases, and anyhow, the promise was not made to the Opposition, but to his own followers, who are quite prepared to absolve him from any pledge if only he will stave off the dreaded Dissolution.

The Protest of the House.

When Mr. Balfour had airily expounded his abandonment of the one position to which he was believed to be irrevocably committed, the adjournment of the House was moved in order that the Leader of the Opposition might demand explanations. This Sir Henry C.-B. did with as much moderation as was compatible with the indignation of the leader of a party suddenly confronted by the discovery that it had been swindled once again. Mr. Balfour was challenged to reconcile his latest *volte face* with a long series of solemn assurances by which he had for more than a year succeeded in disarming opposition. He was arraigned on the charge of breach of faith. His personal honour was impugned, and the House waited breathless to hear how Mr. Balfour would meet so serious an imputation hurled against him by the leader of the Opposition. To its amazement and disgust Mr. Balfour said never a word, but put up Mr. Lyttelton, apparently to debate the general question. Then the Liberals, for the first time, lost patience, and the universal disgust exploded in a sudden but resolute determination not to allow Mr. Lyttelton to be heard. For fifty minutes by the clock the Colonial Secretary stood at the table trying to make himself heard, and for the first time in the lifetime of this generation a Secretary of State was refused a hearing by the House of Commons. The roar of protesting voices, articulate and inarticulate, was kept up for an hour. Mr. Balfour could have ended the hubbub in a moment if he had risen to answer Sir Henry's personal challenge. He doggedly refused to do so, insisting that the House should listen to Mr. Lyttelton. In the end Mr. Lowther, the Deputy Speaker, ordered the suspension of the debate.

Westminster Gazette]

A Broken Pledge.

JOHN BULL: "But you promised not to tie me up!"

MR. BALFOUR: "It is true I promised, but I have changed my mind. Besides, my—er—er—my promise was not made to *you*, but only to pacify some of my friends. I assure you you have no cause of complaint."

The Right and the Wrong of It.

Of course, the Liberals were in the wrong,—just as the Boers were in the wrong when they launched their ultimatum. But even the Liberal Leaguers ought now to sympathise with President Kruger, who lost patience just as the Opposition did under very similar provocation. So long as men play the game all goes well. But when Lord Milner and Mr. Chamberlain practised on the Boers the same low-down tricks that Mr. Balfour and Mr. Chamberlain are practising upon the nation to-day, human nature finds that it is being tried beyond what it is able to bear, and it explodes as we see. There was much more excuse for the Boers than there was for the Liberals. The Liberals know that time is on their side. Not all the tricks of all the thimbleriggers can prevent a Dissolution next year at the latest, and the longer it is delayed the more crushing will be the Conservative defeat. The Boers saw that time was on the side of their enemies. Every week added to the armed forces which were being massed for their destruction. They cut short the negotiations that were deliberately being spun out for their undoing by the ultimatum. It was a fatally false move, but it was natural, almost unavoidable under the circumstances. In like manner the Liberals lost patience and shouted Mr. Lyttelton down. No one can wonder at it. But although it was temper, it was strategy. It remains to be seen whether on the whole it will be justified by the events.

An Absurd Scare.

It is almost inconceivable that the Liberals should be seriously alarmed at the electioneering advantages which Mr. Chamberlain imagines he will gain from this manœuvre about the Conference. It is assumed that the Colonies will send representatives to the Conference prepared to vote for Preference and food taxes, and that then Mr.

Chamberlain will repeat his great *coup* of 1900, and go to the country with the cry "Every vote given to the Liberals is a vote given against the Colonies" It is evident the prospect of such an appeal has sent a shiver through the spine, or what serves as its substitute, in many Liberals This is very absurd. They ought to know that even if everything were unaltered the same trick cannot be played off twice upon the nation But everything has been altered, and this first of all, that the Liberals this time will not be afraid to stand to their colours No parrot cry that to be loyal to Free Trade is to be disloyal to the Empire will deter them from defending the untaxed loaf of the labouring poor In 1900 they were cowards all When Mr Chamberlain taunted them with being pro Boers they ran over each other in a mad stampede to prove that they did not deserve the accusation There was their fatal mistake The charge stuck, despite all their protests Their only chance was to have worn the pro Boer colours with pride to have attacked the war as treason to the Empire, and impeached its authors as the true enemies of England They had not the pluck to face the issue, and so Mr Chamberlain rode over them rough shod They deserved their fate But it is too nonsensical for them to imagine they will fare as badly again This time they mean to stick to their guns

Westminster Gazette.]

The New Poster

MR C How do you like that sir
MR B Excellent Ingenious and truthful—I [illegible]

C.-B and His Majority

It is now practically admitted by everybody that, whenever the Dissolution takes place, Sir Henry Campbell Bannerman will be summoned by the King to form the next Administration What is not generally realised is that C B will have behind him the largest majority that any Premier has enjoyed since 1832 If the General Election goes as the fifty odd by elections have gone since the end of the war in South Africa left the electors free to vote according to their political convictions, there will only be about 200 Unionists in the next House of Commons, and C.-B will have a majority of Liberal and Labour members of nearly 100 over the combined forces of the Unionists and the Irish Nationalists That is to say, the Unionist method of governing Ireland would be condemned on a division in the new House of Commons by a majority of 250 Of course there is many a slip 'twixt cup and lip, and the General Election may not go as the "byes" have gone But if no unforeseen contingency arises, and the votes taken in 10 per cent of the constituencies afford a fair sample of how the voting will go all over the country, then, according to the rule of three, C B will be much stronger in the next Parliament than Mr Gladstone was in the Parliament of 1880

C.-B and His Programme.

At the meeting of the Liberal Caucus at Newcastle last month C B spoke with the restraint and with the authority of one who is Premier Elect, and who is only kept out of his rightful position by the insolent usurpation of Ministers who set at defiance the will of the nation C B at one time felt tempted to formulate a new Newcastle programme. As the old one has not yet been carried out, he prudently refrained He asked

> What do Liberals mean when they clamour for programmes nowadays? Do they not see that they are fighting for the very life of Liberalism, for the life of the nation, for the life of the Empire? They are fighting for Free Trade, for religious freedom, for temperance, for the bare maintenance or rather retrieval of the ground won by centuries of struggle. Is not that programme enough in the meantime?

Those who wish to have ready to hand a compendium of the opinions of the coming Prime Minister on the coming questions of our time will find them set forth with authority in No 5 of "Coming Men on Coming Questions" It is a political pamphlet of Liberalism

in pemmican, which every Liberal candidate should have at his elbow.

The Welsh Revolt.

The Government having decided to enforce the Defaulting Authorities Act against the County Council of Merioneth, it was decided by the Welsh National Campaign Committee to accept the challenge and to withdraw all Nonconformist children from the Anglican Church Schools. The position of the Welsh is summarised in a manifesto issued by the Campaign Committee to the Welsh people asking for contributions to enable them to carry on the defensive campaign against the Government. The attitude of the Welsh County Councils is briefly stated in the following sentence:

> Our County Councils, while willingly rendering unto Cæsar the things that belong to Cæsar, in loyalty to the higher law, refuse to allow themselves to be made the tools of Cæsar in violating the rights of the Christian conscience.

The Welsh leaders maintain that in refusing to make themselves the tools of an unjust and reactionary Act, passed by a Parliament without a mandate, administered by a Government which knows it is so detested by a majority of the electors that it dare not appeal to the country, they are acting in obedience to a law higher than that which Parliament can manufacture. They are not misled by those who would invest this unjust and oppressive statute with the majesty of the law. The Education Act is devoid of all moral authority It belongs to the category of those persecuting edicts which the conscience of mankind has refused to obey, and by its refusal secured their repeal. It is a profanation of the sacred word to speak of such a measure as a law. Has not the Psalmist asked of old time, "Shall the throne of iniquity have fellowship with Thee, which frameth mischief by a law?"

The King of Spain's Visit.

The visit of the young King of Spain to London this month is the latest and the most unusual of all the Royal visits that have interested our people. The bright, handsome boy, who was King before he was born, naturally excites sympathy, and many a regret will be expressed that, being a Roman Catholic, he is not eligible as a prize in the British matrimonial market The last Spanish King who trod English ground was the husband of an English Queen, but neither he nor she did anything to cause the English to hanker after another Spanish marriage. That, however, was a long time ago, and no harm but good might come from a marriage between the Spanish and British reigning families, if difference of creed did not bar the way. Uneasy lies the head that wears a crown, and the Spanish crown is assuredly no lighter than that of other nations, and it has, besides, a most inconvenient habit of slipping off. It is to be hoped that our Royal Guest will have better luck, and that he may long be spared to guide his people in the paths of progress, prosperity, and peace.

Crisis Acute in Norway.

The crisis has become acute in Norway sooner than was anticipated. The Norwegians passed the Bill constituting a separate Consular service for Norway. The King refused his assent. The Norwegian Ministry resigned. The King refused to accept their resignation, as it was impossible to find any Norwegians who would take office to do Sweden's bidding. As there appears to be no disposition on the part of the Swedes to carry out the arrangement by which this difficulty could have been surmounted, the Norwegians will probably withdraw from the Union and start again as an independent State. The Norsemen are Republican in tendency, but a Republic at Christiania might scare the Kaiser, and it might be wiser to offer the crown to King Oscar on revised conditions. The right arrangement no doubt would be the loose federation of Denmark, Norway, and Sweden under one crowned head. Each country could go as it pleased like British self governing colonies, plus a right to have their own consuls As for foreign policy the less they have the better But in case of danger threatening,

The King of Sweden and Norway.

(Photograph by L. Szacinski.)

they could fight shoulder to shoulder probably with much heartier goodwill because they had not been connected by a chafing bond in the piping times of peace.

The Anglo-Swedish Marriage.

The sober satisfaction with which the British public hails the approaching marriage of the heir to the Swedish throne with the daughter of the Duke of Connaught will not be in the least dashed by the thought that the grandfather of the bridegroom may be only King of Sweden, and no longer King of Sweden and Norway. If, as seems probable, Norway elects to start on a fresh career of independence, it is understood that King Oscar will sensibly acquiesce in the inevitable. "Wayward sister, go in peace!" will be the last word of Sweden. It is good for us English people to marry into a kingdom capable of such patriotic renunciation. If only the troubles of Austria-Hungary could be so amicably settled! But on the Danube complications of rival races and of hostile frontiers preclude such a pacific settlement as seems imminent in Scandinavia.

Development of the Hungarian Crisis.

The deadlock in Hungary continues. Francis Joseph has not yet attained to the despair of King Oscar. He still cherishes the hope that he may be able to constitute a Ministry which will carry on the government of Hungary without those concessions which the majority demand. He has appealed to a septuagenarian ex-Minister of National Defence, Count Fejervary, to form a Ministry. The Count, who is an old personal friend of the Emperor's, is trying to do his best. But it is a difficult task. All the parliamentary under-secretaries resigned their posts in protest, and it is expected that there will be a general strike of officials should the new Premier endeavour to govern without Parliament. Hungarian officialdom, like the Welsh County Councils, declines to be used as a tool for carrying out a policy of which the nation disapproves.

Ultimatum Point in the Near East.

Roumania is usually so tranquil that the despatch of her ultimatum to the Sultan last month came like a bolt from the blue. The Roumanians, who are carrying on a perfectly legitimate and well-recognised propaganda, religious and educational, in Albania and Macedonia, among the Vlachs, their kinsmen, were suddenly attacked by the Turkish Governor of Janina, who, being incited thereto by the Greeks, banished the Roumanian teachers, and even went so far as to besiege the Roumanian Consul in his Consulate. This outrage led the Government at Bucharest to despatch an ultimatum to Constantinople threatening to break off diplomatic relations unless the Governor was dismissed and the Roumanian teachers reinstated. The Sultan, unwilling to see Roumania in active alliance with Bulgaria, gave way. The too energetic Governor is to be

The future Emperor of Austria and his Family.

Archduke Franz Ferdinand, nephew of the Emperor Francis Joseph, was married morganatically in 1900 to the Countess Sophie Chotek, who has since got the title of Princess of Hohenberg. They have three children—Sophie, born 1901, Maximilian, born 1902, and Ernest, born 1904.

removed, probably on promotion, and the demands of the Roumanian Government are to be complied with. The incident is closed. But it has left behind it the lesson that, whether because Russia is crippled or because the German Government thinks the psychological moment near at hand, Roumania must be reckoned with in future as a striking force in the Near East. It is impossible to divine how much

the Japanese victory has fevered the imagination of the Roumanians. They think they are the Japanese of the Danube, and if they do not get a chance to make their pretensions good, they seem not indisposed to make one.

Religious Liberty in France.

In its first clause the Bill separating Church and State in France guarantees liberty of conscience with complete freedom of public worship. Then, as if in mockery of this guarantee, the Bill proceeds to lay restrictions upon the exercise of that liberty: --

No political meeting may be held in a place of worship, and *any minister of religion* who attacks public officials in his sermons, or *attempts to influence the electors* or to incite to illegal acts, is punishable by fine or imprisonment.

This is monstrous. In a free Church, with guaranteed liberty of conscience and freedom of public worship, there can be no restrictions on the liberty of the minister to influence the electors. He is worth very little as a minister of religion who, when great moral issues come before the country, does not attempt to influence the electors. Under this kind of guaranteed liberty half the Nonconformist ministers in England and Wales, two-thirds of the Catholic priests in Ireland, and a considerable number of the Presbyterian ministers in Scotland would find themselves in the police-courts at next General Election. But this is not the only restriction on religious liberty. Religious processions are forbidden. No religious meetings may be held in streets, squares, or highways. The tender mercies of the wicked are cruel. The very alphabet of religious toleration has yet to be learned by many Frenchmen. Why could the Republic not honestly try the experiment of a Free Church in a Free State? It is a great mistake for the State to gag the Church in this fashion.

Church and State in Barotseland.

The problem of the relation between Church and State which perplexes the most civilised nations is not without its difficulties in the remotest recesses of Central Africa. The Chartered Company, being the State in Rhodesia, has to face and solve Church questions equally with the French Republic. The ideal of the Chartered Company is that of a voluntary parochial system, each missionary society being allotted its own tract of territory, and no poaching being allowed on each other's preserves. Recently Lewanyika, Chief of the Barotse, who by his treaty has a right to have any missionaries he liked, scandalised the Chartered Company by granting a site for a church to an American Methodist native missionary in the midst of the preserve allotted to the French Protestant missionaries. The Chartered Company protested. The native Chief, who is not a Christian, stuck to his native Ethiopian evangelists, and there seemed to be every likelihood of a sharp collision. Fortunately, the difficulty is now at an end. It seems that the Ethiopian evangelist gained the favour of the Barotse Chief by promising that he could teach the Barotse to speak English in two or three months. This was the lure which led him to insist upon planting these spiritual poachers in the midst of the French preserves. For a time all went well. The Chief showed his confidence in the new linguists by entrusting them with £636 for the purposes of buying him a cart and some barges. But when the two or three months passed and the Barotse pupils had not learned English, the Chief became uneasy, and his uneasiness was not allayed by the disappearance of the lightning linguists. Peace now reigns in the preserves of the French Protestants, but the Chief, according to the last intelligence, was still awaiting the return of the Ethiopian pastor with the cart and barges for which he handed over to him £636.

"This Year, Next Year, Sometime, Never."

The Transvaal contribution to the Imperial Exchequer of £30,000,000 was discussed last month in the House of Commons. Mr. Chamberlain tried to brazen out his mistakes, his miscalculations and his baseless assurances. Nothing has happened in South Africa as he predicted it would from first to last. It is always going to happen, but it never comes off. As Mr. Lloyd-George wittily said, with this Government it is always "This year, next year, sometime, never." What we should all do at home is to dismiss from our minds all thought of being able to touch a penny of that thirty millions. As soon as possible the money should be raised on the security of the mines, but every pound of it should be spent in the new Colonies in repairing the havoc that was wrought in the effort to break the unconquerable spirit of the Boers by burning their homes and destroying their stock. Lord Selborne has been received with the usual banquets at Pretoria and Johannesburg. He is a good man, with a better wife, but he seems to be slightly deficient in the sense of humour. Otherwise he would hardly have appealed publicly to the Rand to regard itself as "a great responsible centre of education." Nor would he have ventured to ask whether "the influence of Johannesburg is going to be good or evil." He said that all meant to make it good. Which is true, if he meant by good the only thing Johannesburg

regards as good—"good dividends." There is nothing wrong in desiring to make a good dividend, but the community which makes dividends the chief, if not the sole end of its existence is hardly likely to be a bright and shining centre of light and leading for the rest of the country.

A Farmers' International.

Trade is international, so is finance. But agriculture! Yet an American, Mr. David Lubin by name, has actually succeeded in inducing the King of Italy to summon an International Conference of Agriculture, which was opened at Rome on May 28th. Mr. Lubin, who has been working at this idea for more than twenty years, deserves great credit for his indomitable perseverance in popularising the idea of internationalism in agriculture. The aim set before the Congress at Rome by the King is as follows: -

> To create an international institution, absolutely unpolitical in its aims, which would have before it the conditions of agriculture in the different countries of the world; which would notify periodically the quantity and the quality of the crops in hand, so as to facilitate the production of such crops, and render less costly and more rapid the trade in same, and facilitate the attainment of a more favourable settlement of prices. This institution, acting in unison with the various national associations already constituted for similar purposes, would also furnish reliable information as to the demand and supply of agricultural labour in various parts of the world, so as to provide emigrants with a safe and useful guide; it would promote those agreements necessary for collective defence against diseases of plants and domestic animals which cannot be successfully fought by means of partial action; and, lastly, it would exercise a timely influence on the development of societies for rural co-operation, for agricultural insurance, and for agrarian credit.

It is another step towards the Parliament of the World. All the modern problems are world problems, no longer national but international. We want a Zemski Sobor not for Russia alone, but for the planet; and Mr. Lubin's success encourages us to hope that we may not have much longer to wait for the realisation of this dream.

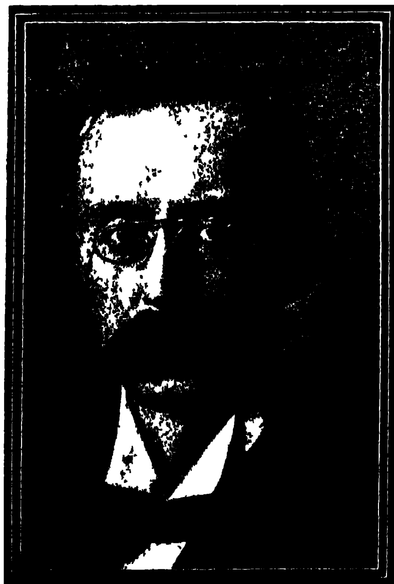
Male Chivalry in Politics.

Mr. Labouchere is the drunken helot of the male monopolists. His exploit in talking out the Woman's Suffrage Bill in the House of Commons on May 12th was so characteristic of the chivalry of the dominant sex, that he deserves to receive a leather medal. If the Bill had gone to a division it would have been carried by a large majority. Therefore, four hours of the whole sitting was given up to an obstructive debate upon the Vehicles Lights Bill, which Mr. Bigwood ought to have withdrawn, after which it was a comparatively easy matter to talk out the Woman's Suffrage Bill.

[*By permission of the proprietors of "Punch."*

The Dignity of the Franchise.

QUALIFIED VOTER: "Ah, you may pay rates an' taxes, an' you may 'ave responsebilities an' all, but when it comes to *votin'*, you must leave it to *us men!*"



There is a fine flavour of meanness about these tactics which women are at last beginning to appreciate—and resent. I should regret to see Mr. Labouchere's place vacant in the next House; but it is sometimes expedient that someone should be sacrificed for the promotion of a cause, and if the women of Northampton were to secure his defeat at the next election, it would strike a holy terror into the hearts of politicians who meet woman's demand for justice by buffoonery and insult. The General Council of the National Liberal Association, exactly a week later, formally declared by an immense majority in favour of admitting women to full citizenship. The resolution ran as follows: "That, in the opinion of this Council, the disabilities at present attaching to women by reason of sex in the matter of the Parliamentary suffrage and of election to local bodies should be removed." If Mr. Balfour is really anxious to find a decent excuse for prolonging the miserable existence of his discredited Ministry, he had better couple the enfranchisement of women to his Redistribution Bill.

The Earthquake at Kulu.

Captain Banon, who lives at the Manali Orchards, in Kulu, sends me the following vivid account of the great earthquake which devastated the Kangra Valley. He says: —

It took place about six o'clock on the morning of Tuesday, April 4th. Fortunately, being an early riser, I was already up and outside, and saw pandemonium break loose. All round the snow lay unmelted. The din was awful, it was as if the end of the world had come. My bungalow was twisting and writhing about like a live thing the clatter of stones falling out of the wall—every pane of glass smashed nearly, and several pieces of furniture—opposite me the hill rises steep and gaunt for thousands of feet in height. It was like a fortress bursting into the flame of a cannonade. Huge rocks and boulders came, weighing tons and tons, bursting out and rolling downhill, with a crash and grind that simply appalled, with great clouds of snow and dust that soon hid the hill from sight. Up this end of the valley the earthquake was comparatively mild, and the human casualties did not exceed a score. In a village a couple of miles away a huge boulder crashed down on a house, and flattened it out like a pancake, killing all the inmates, eleven in number. But the earthquake was at its worst at the capital town, Kulu or Sultanpur, twenty-five miles away. There scarce a house has been left standing, and the dead are to be numbered in hundreds. This earthquake seems to have reached from Cabul to Calcutta. It is to be hoped that in future the Indian Government will pay as much attention to seismology as the Japanese Government, since this is the second big earthquake in eight years. One thing that stands out in the Kangra earthquake is the heroic gallantry of the Gurkhas—and earthquake courage is the very highest form of courage—and the abject sickening cowardice of all the rest of the population. The educated native was the biggest offender—vakils and others. He simply abandoned his family crushed under the ruins of his house, and bolted off to the plains. The Tehsildar at Kangra was for three days imprisoned under the ruins of his house, and offering 500 rupees to anyone who would extricate him, vainlessly, till he died on the fourth day.

Dr. Dale's Successor.

Photograph by] [*E. H. Mills.*

Rev. J. H. Jowett.

The new Chairman of the Congregational Union is Mr. Jowett, of Carr's Lane Chapel, Birmingham. Mr. Jowett is one of the younger ministers who are worthily maintaining the reputation of the Independents. Jowett of Birmingham, Sylvester Horne of Whitefield's, Campbell of the City Temple, Campbell Morgan of Westminster, and Horton of Hampstead are a notable group of modern Englishmen not unworthy to be the successors of Dale, Parker, Berry and Baldwin Brown. Mr. Campbell Morgan's Bible class at Westminster Chapel on Friday night is one of the sights of London—more novel, and therefore more impressive even than the crowded Thursday congregations at the City Temple. Mr. Jowett succeeded Dr. Dale in the pulpit of Carr's Lane Chapel, in Birmingham, as Dr. Dale succeeded John Angel James, who, fifty years ago, shared with Thomas Binney, of Weighhouse Chapel, the primacy of Independency. Mr. Horton, as President of the Free Church Council, has been very busy last month in Wales. The President of the Free Church Council is a kind of Nonconformist Archbishop, who is always making visitations in a diocese which is co-extensive with England and Wales.

The Baptist World Congress.

From the 10th to the 19th of next month there will assemble in London a Congress at which all the Baptist Churches of the world will be represented, and which will meet with the most cordial welcome from all sections of English society. Five hundred delegates are coming from America and Canada, 200 from the Continent, fifty from the mission field, and a select few from Australia. The Baptists in this country will, of course, be fully represented. The Congress ought to help towards the unification of the Baptist Church throughout the world. The Baptists have always been a small but invaluable element in English Nonconformity. With the Congregationalists, the Quakers, and the Unitarians they form the historic bodyguard which Nonconformists furnished for the defence of religious liberty and civic justice. The Baptists, as is natural enough in a body whose distinctive dogma relates to the administration of a particular rite, were at one time much noted for the microscopic clearness with which they saw points of difference. Only some of the pædo-Baptists were Particular Baptists by profession, but they were all precious particular in defining the frontiers which divided them from their fellow believers. Of late years the tendency has been the other way, and the Baptists are as honourably distinguished for their liberality and charity as they were once for the rigour, severity and precision with which they said yea or nay to every theological proposition that the wit of man could formulate.

CURRENT HISTORY IN CARICATURE.

"O wad some power the giftie gie us,
To see ourselves as ithers see us."—BURNS.

THE most notable feature in the caricatures reproduced this month is the new type of Japanese evolved by the malicious imagination of the *Sydney Bulletin*. The organ of the White Australia movement has taken alarm at the probable descent of victorious Japan upon the great uninhabited Continent around which a handful of white Australians are roosting. Hence the cartoon in which Japan figures, not even as a respectable yellow monkey, but as a hideous, long-tailed, little black beast, a worthy companion picture to the *Bulletin's* familiar caricature of John Bull as Moses Cohen, the money-lender. The *Bulletin* admires Japan, envies her independence and efficiency, and would apparently much prefer to belong to a Japanese than to a British Empire but for the fatal difference of colour. That, of course, to a white Australian settles it. But what if Australians began to brown under the rays of their sun? More unlikely things have happened.

Mr. Andrew Carnegie returned last month to his native land. His gift to the Natural History Museum at South Kensington, of a model of the huge skeleton, eighty feet long, of an extinct monster unearthed in Wyoming, was seized

Life.] [New York.

The centennial celebrations of Schiller and Cervantes have evoked a plentiful supply of cartoons in Germany, but, for the most part, the pungency and point of the Schiller cartoons are only to be understood, or at least appreciated, by the sons and daughters of the Fatherland.

The absurdity of the present system of International neutrality, whereby neutrals are held to be free to provide the sinews of war, without let or hindrance, to both belligerents, and to furnish every kind of munition of war, subject only to the risk of capture, affords the satirical artists with many capital subjects for their pencils. The grievance of Japan against France for allowing the Baltic Fleet to rendezvous and refit in Indo-Chinese waters has brought to a head the wide-spread latent conviction that something will have to be done to prevent neutrals prolonging and facilitating the operations of belligerents. The whole conception of trial by ordeal of battle presupposes that outsiders refrain from helping either combatant. Scott, when describing the fight between Musgrave and the pseudo William of Deloraine in "The Lay of the Last Minstrel," tells how, when the knights entered the lists—

> Then Heralds hoarse did loud proclaim,
> In King, and Queen, and Warden's name,
> That none, while lists the strife,
> Should dare by look, or sign, or word,
> Aid to a champion afford
> On peril of his life.

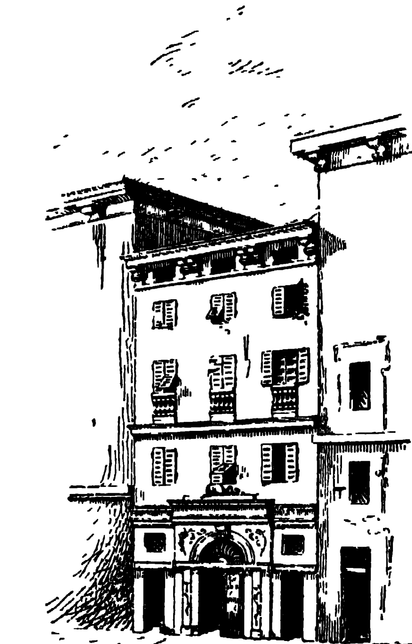
CHARACTER SKETCH.

THE CENTENARY OF JOSEPH MAZZINI.

JOSEPH MAZZINI was born in Genoa, June 22nd, 1805. It is proposed to celebrate the centenary of the Prophet-sage of the Nineteenth Century by public festivals and national demonstrations in all great centres of population in Liberal Europe. In London the promoters of the Mazzini Centenary Celebration are hoping for a Queen's Hall demonstration, with Mr. Morley in the chair. Whatever may be the success which attends their efforts, it is well to recall the memory of one of the greatest of the Apostles of our time. The following brief sketch of Mazzini is written by Mr. D. P. Davies, who has for some time past been engaged in writing a life of the great Italian patriot.—ED. REVIEW OF REVIEWS.

NEARLY half a century has passed since the principal events happened which led to the Unification of Italy, and we are now enabled to look back with a fuller knowledge and a saner judgment than those whom passion then made partisans. Of the men who made Italy three stand supreme: Mazzini, Garibaldi and Cavour. There is a fourth, Victor Emmanuel, whom some writers have acclaimed as the chief worker, but such are loyal only at the expense of their judgments. For the king was but a tool in the hands of the real makers of his kingdom, and neither initiated nor carried out a single reform. It is true he acquiesced in what his Ministries proposed, but that, after all, is the privilege and duty of potentates.

Most of the movements which have convulsed the world or its separate nations have originated with moral teachers, and the enthusiasm they evoked resulted in the transfer of ideas from the sphere of thought to that of action. The man of action has invariably received greater recognition than the calm philosopher who by his teaching made such action possible. Mazzini and Garibaldi (unlike Cavour) were rebels from childhood, and both were exiled from the country they reverenced as a mother, the one compulsorily, the other voluntarily, to escape the consequences of their Liberal views. Mazzini came of middle-class parentage, Garibaldi was a son of the people, whilst Cavour's lineage was noble. Each in his own way did his utmost to make a country of what, in Metternich's famous phrase, was "a geographical expression." In view of the centenary of Mazzini's birth this month, it will be opportune to briefly examine the merits of the three to the title severally claimed for them.



Joseph Mazzini.
(From the painting by Felix Moscheles.)

Joseph Mazzini, the Apostle of Italian Unity, was born at Genoa on June 22nd, 1805. His father was a distinguished professor of anatomy in the University of Genoa, and his mother was known for beauty of both person and character. Mazzini was something of an infant prodigy, although delicate health interrupted his earlier studies. When only thirteen years old he acquired some distinction as a writer. He was destined for the medical profession, but the study of anatomy being repugnant to him, he deserted it for the pleasanter paths of literature.

At that time there was no Italy, but only a number of petty states and dukedoms, acting at dictation from Vienna and Paris. Mazzini bitterly felt the degraded condition of his fatherland, and so deeply was he touched with the spirit of patriotism that he decided to devote his life to her liberation. Literature was therefore put aside for the sterner task of creating a country. He entered the University of Genoa, took his degree, practised as an advocate gratuitously for the poor, and in this capacity earned many laurels. Acquaintances regarded with wonder the sullen and reserved youth, who even as a child

dressed in black, in mourning for his country—a habit he persisted in until his death.

At that time the largest secret society of Europe flourished, called the Carbonari, and Mazzini naturally joined it. Suspicion, arrest and imprisonment followed, but nothing criminal could be proved against him. For the safety of the Government, however, he was banished from the larger towns of his country. His father, on inquiring the reason of his son's imprisonment, was told that "his son was a young man of talent, very fond of solitary walks by night, and habitually silent as to the subject of his meditations, and that the Government was not fond of young men of talent, the subject of whose musing was unknown to it." He was able to correspond with his friends only upon his linen sent home for washing. As a police-supervised life in the smaller towns of Italy would have been intolerable, he left for Marseilles, there to formulate the plan for the regeneration of his country, which he had brooded over in his solitary prison. Garibaldi about the same time came under the Government's ban, and was forced to find a refuge in South America, where participation in guerilla warfare proved the apprenticeship for his victorious Italian career.

POVERTY AND EXILE.

Mazzini remained in Marseilles for some time writing to his countrymen, his pamphlets being secretly smuggled into Italy inside various commodities. To be found with a Mazzinian pamphlet meant imprisonment for life or banishment, or being shot in the back as a traitor. A price was set upon his head by each Government of Italy, and his expulsion demanded by Sardinia from France. The latter readily consented, but, at the last moment, a friend, who bore him a great personal resemblance, was substituted and marched off, Mazzini remaining, dressed in the uniform of a National Guard, plotting and planning in the midst of the police who had been sent to remove him. Life became too precarious, and in a few months he was compelled to leave for Switzerland. There, too, international vengeance followed him and his expulsion was decreed by the Swiss Government. But he only shrugged his shoulders and remained, searched for in vain on every side, living sometimes with a friend, sometimes in empty houses, hunted like a traitor in place of being honoured as a patriot. Finally he came to the country which has never yet refused asylum to a human being in distress, be he an impoverished Jew or a banished patriot, arriving in London in January, 1837. Here he experienced the bitterest pangs of poverty and resorted to pawnshops and money-lenders for the means of existence. He endeavoured by writing to call the attention of the English people to the condition of his country, but being little known, his articles were not in demand, and his letters to the press were unheeded.

In June, 1844, an incident occurred which, happily for the sake of our fair name, is somewhat rare. He had for some time been directing minor revolutions in Italy, which were conspicuous for their failure. It was not to be wondered at, seeing that the English Government had for some time been opening his letters (addressed to him, of course, in a fictitious name), and transmitting copies of them to the Austrian and Italian authorities. Lord Aberdeen and Sir James Graham solemnly declared upon their honour, it reminded one of Antony's speech - that his letters had been untouched, but an enquiry in both Houses of Parliament showed that not merely had his letters been opened, but also those of several members of Parliament. Subterfuge, one of the privileges of a Cabinet Minister, on this occasion did not avail them. They, however, sought refuge in the old cries of Mazzini being an assassin, and he rightly responded that "when statesmen descend to play the part of liars and forgers, it is not to be wondered at that they should turn calumniators also." Carlyle, who had known Mazzini for some time, wrote one of his volcanic letters to the *Times*, that the practice of opening letters was near akin to picking men's pockets, and led to still viler and fataller forms of scoundrelism. But his letter is cherished for his testimony that Mazzini was a man "of genius and virtue, a man of sterling veracity, humanity and nobleness of mind." The opening of men's letters was an old feature in the annals of the Government, which was perhaps at its height when the struggle began with the American Colonies. The correspondence of the Opposition was all read by the King; and Lord Charlemont, writing to Edmund Burke, said, "To avoid the impertinence of the Post Office, I take the opportunity of sending you this letter by a private hand." "I write this letter," said a friend to George Selwyn, "to perplex Lord Grantham, who will probably open it." "I don't know," wrote Rigby to the Duke of Bedford, "who is to read this letter, whether French Ministers or English; but I am not guarded in what I write, as I choose the latter should

know, through every possible channel, the utter contempt I bear them."

THE CAMPAIGN OF '48.

The year 1848 witnessed Garibaldi's acceptance of Mazzini's invitation to return to fight for Italy, and then began that marvellous campaign which is without parallel in modern history. The year 1849 saw the short-lived Roman Republic, with Mazzini as chief Triumvir and Garibaldi as second leader of the forces. The French sought to capture the imperial city, but without success. An armistice was agreed upon, but the French treacherously broke it, and, surprising the gallant defenders, occupied Rome.

Mazzini returned to England many years older by reason only of a few months' work. The iron had entered his soul, and the hell of exile depressed him and embittered his after life. Charles Albert had proved a traitor to his country, and was compelled to abdicate after the field of Novara in favour of his son Victor Emmanuel. Then a new power came on the scene in the shape of one of the wiliest diplomatists the century had known—Count Cavour. Playing alternately with Mazzini, Garibaldi and Louis Napoleon, with an insatiable ambition, Cavour retained control of his country's destiny. For twenty years the fight was waged, until 1870 saw Italy free and Victor Emmanuel king of a united country.

But the man who had been chief in its accomplishment, who had spread broadcast those writings which electrified the youth of Italy, who had sown the seed of which Garibaldi reaped the harvest, only to be gathered in by Cavour—Mazzini—remained an exile from the country he had created. Estranged from home, from parents, from friends—even from Garibaldi—he occasionally visited the scenes he loved, but only in disguise. At one time he travelled as an old woman; another time he might be seen dressed as a Capuchin friar; yet again, when a ship was overhauled, none of the searchers suspected that the man they sought was washing crockery in the cook's galley. On one occasion, disguised as a footman, he opened the door of a house to the police who came to arrest him. Sometimes he travelled as an English gentleman, but his favourite disguise was the dress of a dean of the English Church, with his shovel hat and gaiters.

HIS FRIENDS IN ENGLAND.

During this stormy period Charles Bradlaugh rendered him leonine assistance, and on one occasion might have been seriously involved but for his customary coolness. Bradlaugh was carrying letters—since the English Post Office could no longer be trusted—and on one occasion he was returning on board an English vessel. A corporal and guard appeared at the last moment, and demanded Bradlaugh's bag. But that huge man drew a bulldog revolver and threatened to shoot the first man who moved a step. An American passenger was plucky enough to seize a chair, and, standing at Bradlaugh's back, promised to become a formidable foe. The corporal thought he had better return for further instructions, and withdrew his guard. Bradlaugh at once showed his passport to the captain (signed by Lord Palmerston), explained that he was there on affairs of State which would admit of no delay, and induced him to sail away before the corporal and his guard came back.

Returning to Italy to visit his mother's grave, Mazzini was captured, but pardoned, as he put it, "for the crime of having loved my country above all things." He had been elected to the Italian Parliament, but his Republican principles forbade his taking a vow of allegiance to a monarch, especially one whom he had no cause to love. Although personally favouring a Republic, his main point was Unity, after which the people might select their own form of constitution. It was the point for which Prim contended in Spain, and for which in 1870 he met death at the hands of assassins. Mazzini died at Pisa on March 10th, 1872, and the nation that loved him did honour to his memory, eighty thousand people following the remains of him who gave them a country. He was buried in one of the highest terraces in the Campo Santo, Genoa, where a statue was recently erected to his memory, and where also a Mazzinian Museum is to be found.

MAZZINI'S LITERARY WORK.

In spite of his refugee existence he yet found time to give the world those admirable writings which have charmed all who read them. Luminous were the essays which came from his pen, dealing with Art, Music, Victor Hugo, Lamennais, Byron, Goethe, Carlyle, Renan and Dante. In these he exhibited a philosophic and deeply thoughtful tone, with phrases finely turned. Possessing a taste for setting his moral truths in epigrammatic form, his message is attractive, and he never hurls at us those vague and nebulous sentences which are the delight of so many philosophers. Had he never been inspired with the dream of nationality, his genius as a literary critic would alone have won him world-wide recognition.

But though supreme in the study, he was not out of place in the field. So well did he organise his forces that Charles Albert offered to make him his first Minister; so carefully laid were his plans as to call forth warm eulogies from so experienced a strategist as Moltke; and, during the short-lived Roman Republic in 1849 his government was such as to lead Lord Palmerston to say that "Rome was never so well governed as under Mazzini's rule." It is true that his numerous insurrections failed, but not because of their weakness, but rather through treachery.

It is a fine tribute to his character that one class claims him as pre-eminently a religious teacher; that another regards him as supreme in the world of literature; that a third claims him as the modern genius of political philosophy; whilst a fourth ignorantly and vulgarly writes him down as a conspirator and an associate of assassins. To Carlyle he was "a man of genius and virtue, a

man of sterling veracity, humanity, and nobleness of mind." To Jowett he had "a genius beyond that of most ordinary statesmen," and he prophesied that Mazzini's fame would increase when that of contemporary statesmen had passed away. Swinburne sang him into undying fame in his "Song of Italy." Mr. George Meredith clothed him with eternal glory in his fine novel "Vittoria," and so competent a judge as Mr. John Morley has pronounced him as "probably the highest moral genius of the century." Italy intends to recognise her indebtedness to him by the issue of a National edition of his writings, and a Royal Commission appointed for the purpose have recently issued a circular asking for letters to be forwarded to the Secretary, Signor Mario Menghini, at the Bibliotica Vittorio Emmanuele, Rome.

So the man who was an outcast from the country he had created, from France and Switzerland, will receive one of the few rewards posterity can give. wield the power, call it what we will, which in every age has worked miracles and moved mountains."

And Miss Mathilde Blind contributed to a number of the *Fortnightly* the following pen-picture: "A particularly perishable, worn, and emaciated body was that of Mazzini when, as a girl, I was fortunate enough to know him in his later years. He seemed to hold life by a very frail tenure. His face, too, of wax-like pallor, was furrowed by suffering even more than years -by suffering and the continuous strain of thought. But the inspired look of the eyes—dark, glowing, luminous with spiritual fire—gave an appearance of eternal youth to the wasted countenance. The upper part of the head and brow had a dominant massiveness not unlike that of the fine bust of Julius Cæsar in the British Museum, and the aquiline curve of the nose and the firm set mouth, with close-cropped grey beard, were suggestive of unflinching energy and an iron force of will; but this effect was softened by

Victor Emmanuel I., 1820-1878.

Count Cavour, 1810-1861.

Charles Albert, King of Sardinia, 1798-1849.

As the years pass, and our knowledge of the events increases, he will be more firmly enthroned in the minds and hearts of all Liberal thinkers of the world as one of their greatest men.

PERSONAL DESCRIPTIONS.

His person has been described by the Countess Cesaresco in her "Liberation of Italy": "When he grew to manhood his appearance was striking. The black, flowing hair, the pale, olive complexion, the finely-cut features and lofty brow, the deep-set eyes, which could smile as only Italian eyes can smile, but which could also flash astral infinitudes of scorn, the fragile figure, even the long, delicate, tapering fingers, marked him for a man apart—though whether a poet or an apostle, a seer or a saint, it was not easy to decide. Yet this could be said at once: if this man concentrated all his being on a single point, he would

an expression of deep and earnest thought, and the rare smile whose subtle sweetness seemed the aroma of a nature as remarkable for tenderness as strength. . . . To have known Mazzini is to understand those mythical and historical figures who, from Buddha to Savonarola, have infused a new spirit into the outworn religious thought of their age. All the writings of Mazzini, however powerful, are but a pale reflection of his own impressive and apostolic individuality."

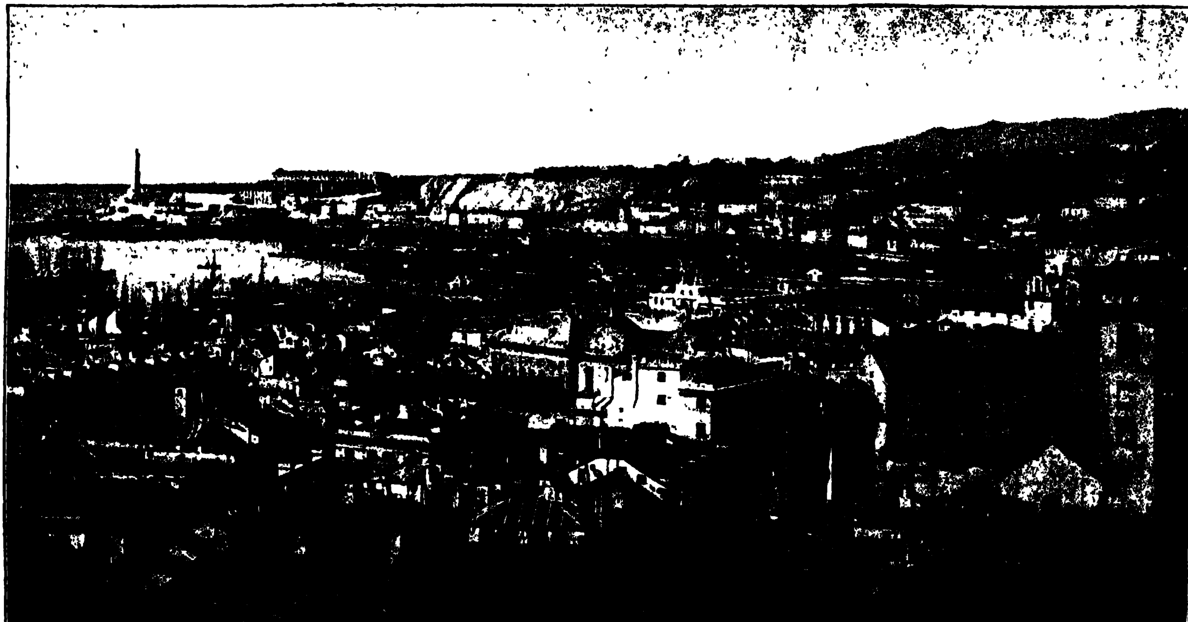
CAVOUR THE OPPORTUNIST.

To Cavour and Garibaldi it is not possible to accord such praise. Cavour, born in 1810, five years after Mazzini, took no prominent part in his country's affairs until 1850, and died eleven years later. Up to 1850 he was probably the most unpopular man in Piedmont. The Liberals distrusted him because of his conservatism, the Conservatives because of his

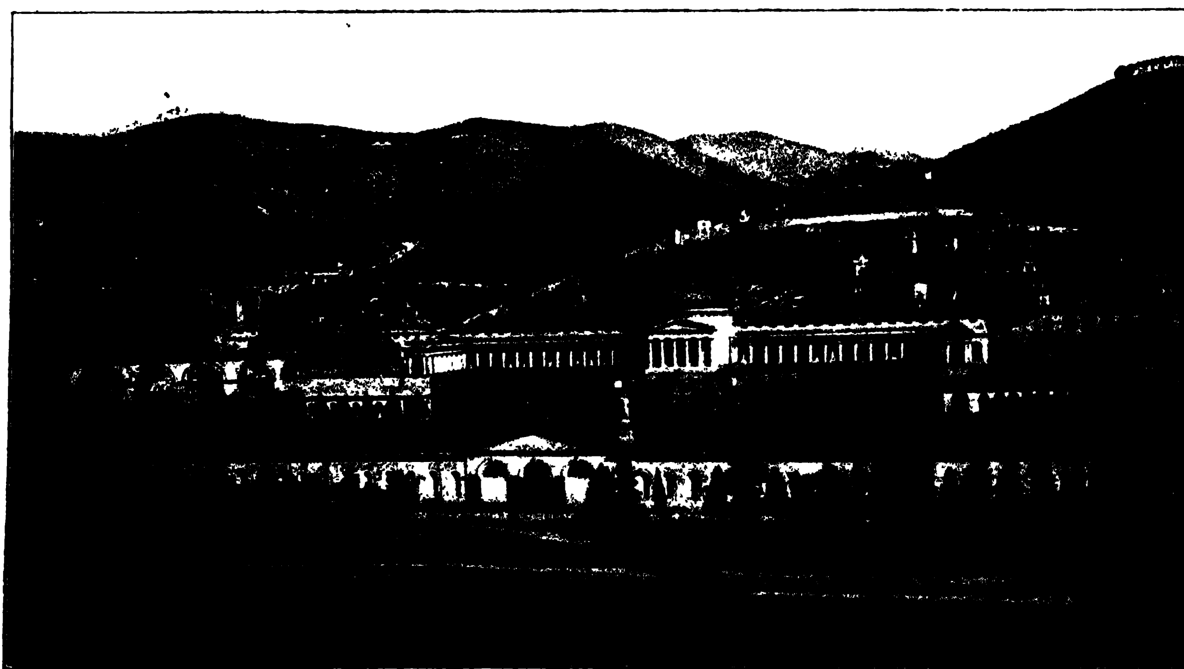
Liberalism. For the good of a charity, of which he was treasurer, he was asked to resign, and when he rose to speak at an agricultural association of which he was a member, those present left in a body. No one believed in his honesty or capacity—except himself. His father paying some of his gambling debts hoped it would moderate his belief in his own infallibility. From his earliest years he saw visions of himself as the First Minister of Italy, and he steadily set out to play for his own hand in an international game. He was cool, calculating, ambitious, unpoetic, without enthusiasm, the living personification of Vivian Grey. He was a man who must lead, or refuse to serve. *Aut Cæsar, aut nullus.* On his first admission to the Cabinet, the King foretold that one day he would turn out all the others. From the moment he took the reins of government in hand he steadily bore in mind the goal at which he aimed. No man understood better the exact moment when to adopt a cause, and, carrying it into being, reap the credit. His previous opinion mattered little, for he spoke so carefully around his subjects that few could accuse him of inconsistency. The only man he really feared was Mazzini, whom he studiously excluded from the country.

No worshipper at the shrine of truth, Cavour held that public opinion has always sanctioned in Governments the use of a different morality from that binding upon individuals. Mr. Dicey, one of his earlier apologists, referring to the cession of Nice and Savoy, says: "Cavour spoke the truth, or at least so much of the truth as the diplomatic code of morals is understood to require." But Cavour cannot be dismissed with the title of opportunist, any more than Disraeli can (although the two men had much in common), for he was something more. None can say with exactness when he determined to espouse the cause of Unity, but when the nation demanded it—when to hold back longer was to lose all, to see the credit pass to Mazzini and Garibaldi—he acquiesced as one who had ever been its chiefest advocate.

The regenerated Cavour may be dated from the time of Cobden's interview with him. This, combined with his clear personal knowledge of English institutions, led to internal reforms, to Free Trade, Savings Banks, Railways, Taxation, and a strong domestic programme, which gave a national impulse to his country. On the one side of Cavour was Mazzini, deeply imbued with a religious spirit, to whom it was necessary that the truth should be proclaimed, and on the other side stood Garibaldi, to whom there was no question the sword could not settle (and the charm of his magnetic personality gave some colour to his view). Cavour looked to French aid to oust the Austrian from Italy, Mazzini and Garibaldi looked to the patriot breasts of their own countrymen, and each died to the last distrusting the other. It is reported of Gladstone that what he most detested in Disraeli was the latter's "habitual untruthfulness," and this was the attitude of both Mazzini and Garibaldi towards Cavour.



Joseph Garibaldi, 1780-1882.



GENERAL GARIBALDI.

Garibaldi stands on a different plane. Rough beyond expression, contemning alike the priest and the politician, he early fell under Mazzini's magic sway, and was ready to do anything, so it should be for Italy. His participation in the guerilla warfare of South America had already won him fame, and in 1848, at Mazzini's invitation, he returned to Italy. He found his countrymen everywhere ready to flock to his standard, and by his dauntless bravery and his conquering sword, gained so great a hold on the people that neither Cavour nor the King dared stop his impetuous career. But Garibaldi was made of more pliant stuff than either of his two compeers. Impressionable as a child, he was throughout his career unfortunately subject to influences immediately around him. He loved display, and the handing over of Southern Italy to the King was a dramatic episode, the theatricality of which probably alone appealed to him. As with Mazzini and Cavour, we may say that but for Garibaldi Italy would not be united and free to-day.

Too many have been influenced by the career and writings of Mazzini to allow the centenary of his birth to pass unrecognised. England contains many who revere him highly, and if this brief sketch but assist in the inauguration of a fitting centenary celebration, the writer will have contributed an act of justice to a noble career and accomplished something which lies near his heart.

A View of Genoa: Mazzini's Birthplace.

Photographs by] [*Photochrom Company.*

The Campo Santo, Genoa, where Mazzini is buried.

The best biography of Mazzini in English is that published by J. M. Dent and Co. in 1902, and written by Mr. Bolton King, in their series of Temple Biographies. Messrs. Smith, Elder and Co. published in 1891 "The Life and Writings of Mazzini" in six volumes. "Joseph Mazzini; a Memoir," by Mme. Venturi, with two of his essays, was published for sixpence by Alexander and Shepheard. Walter Scott published in 1887 a selection of his essays edited by W. Clarke, and there is an interesting chapter of Personal Recollections of Mazzini in the "Fragments of an Autobiography" by Felix Moscheles. (Nisbet, 1899.)

The New Thames Steamboats.

PORTRAITS OF TWENTY-FIVE WORTHIES OF LONDON.

ON the 17th of this month the first municipal service of Thames steamboats will be inaugurated by the Prince of Wales. This boon for the people of London has been won after long and arduous conflict by the County Council. After the 17th the silent tideway of the Thames will be restored to its ancient uses as the great highway of London. It is almost inconceivable to the intelligent foreigner that the citizens of the greatest city of the world should for years have been practically deprived of the use of their river for purposes of passenger traffic, owing to the arbitrary whim and self-interested prejudice of a handful of Tory peers. We are a long-suffering people; if it were not so, poetic justice would have demanded that the so-called "moderate" reactionaries who lead the Conservatives in both Houses of Parliament should be publicly ducked in the river at the conclusion of the ceremony of the 17th.

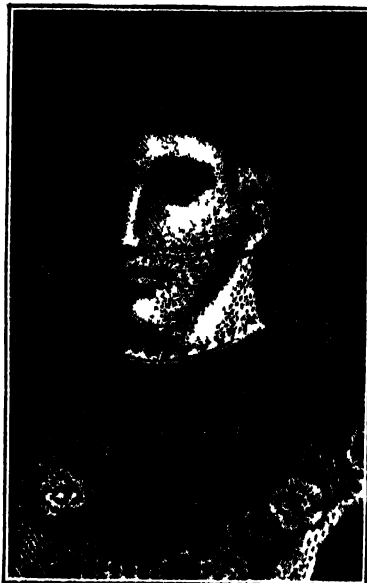
That, however, is past praying for. We take the goods which the Olympians of Spring Gardens provide us, and forget and forgive the Powers of Darkness which have so long delayed the starting of the steamboats. The new passenger service will carry working men the whole length of the course for a penny if they travel before eight o'clock in the morning. The regular rate after that hour is a penny up to three miles, twopence up to five, threepence up to eight, fourpence up to eleven, and fivepence over eleven. Return tickets are issued at twopence, threepence, fivepence, sixpence, and eightpence. It will be possible, therefore, to travel over twenty-two miles for eightpence.

King Alfred.

Born at Wantage, 849, saved Wessex from the perils of Scandinavian invasions, and made his kingdom a centre for the deliverance and union of the whole kingdom. He acquired London, which he fortified when he received the submission of the Angles and Saxons throughout Britain. Died in 901, and was buried at New Minster (Hyde Abbey) Winchester.

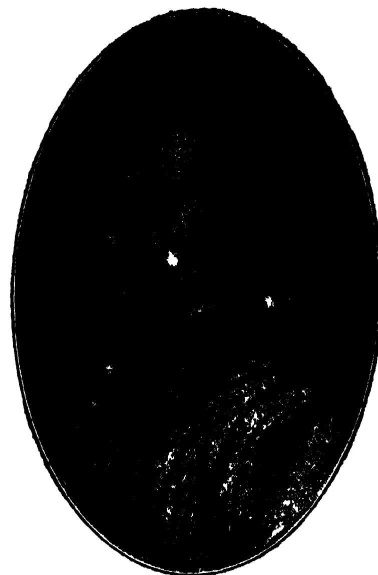
By a happy inspiration the steamers are christened in the names of personages notable in the history of London. It is the first time that many of the citizens have heard of these departed worthies. I have only been able to discover the portraits of twenty-five of them. Of five I have found no picture. I have, therefore, to omit from my picture gallery Olaf, who founded Southwark, Baynard the Norman, Earl Godwin, the famous Mayor of the Palace to King Harold; Colechurch, who built the first stone London Bridge; and Marlowe, the dramatist. The portraits of many of the others are more or less imaginative. But they help to enable us to realise more or less dimly the long bederole of worthies who—some in the dim and distant past, others in the more recent centuries—made London famous.

The most conspicuous omissions from the County Council's list of Thirty are Queen Elizabeth, the Five members who escaped by the river from Charles Stuart, Oliver Cromwell, James II., Lord Nelson, Charles Dickens, Sir Walter Besant and Mr. Whistler. When the fleet is reinforced by new vessels these omissions may be rectified.



This is one of the few serious efforts which have been made in London by Londoners to remind the public of the historical associations which cluster round the famous city. It is but a beginning and should be followed up. Every steamer will be at least an interrogation point to ingenuous youth or even to the idle, loafing adult. Who was Shakespeare? Who was Baynard? And the inability of the average parent or friend to explain who they were and what they did, will, it is to be hoped, and, indeed, confidently expected, set many a person rummaging in the Free Libraries and turning over the pages of biographical dictionaries. That will be all to the good—so much to the good that I would like to believe the County Councillor who proposed to call the steamers by mere numerals is now cowering in his backyard clothed in a garment of sackcloth, kicking himself for his excess of unimaginative stupidity.

The contrast between Paris and London in the honour which the two cities do to their worthies is very strikingly illustrated in their street nomenclature. Whole districts in Paris are dedicated to the memory of men of letters, and in them there is not a street which does not bear the name of some man who has enriched the literature of the world. We have nothing like that in London. The coming of the steamers marks the dawn of a new era. In the cabin of each steamer will be placed a memorial tablet giving in brief compass the facts and dates relating to the person after whom the steamer is named. That also is but a beginning. From that irreducible minimum of biographical information it may be possible to make every steamer an automatic professor of English history and London letters.



Edmund Ironside.

Eldest surviving son of Ethelred was in 1016 recognised as King by the City of London and one part of the nation, while the other part acknowledged Canute Edmund reigning but nine months was supposed to have been murdered by Duke Eadric and was buried at Glastonbury

Henry Fitzailwin.

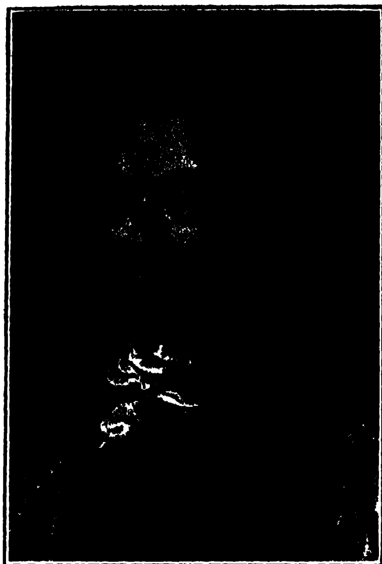
First Mayor of London, appointed probably between 1191 and 1193 Presided over a meeting of the citizens in 1212 after the great fire

Geoffrey Chaucer.

The poet Chaucer was a son of John Chaucer, a vintner of London. He resided in Aldgate and in Westminster, and was buried in Westminster Abbey He lived from 1340 to 1400

Sir Richard Whittington.

Lord Mayor of London in 1397 8 He was a mercer who acquired considerable wealth and advanced loans to three kings of England The popular legend of the cat, however, is not known to have been narrated before 1605

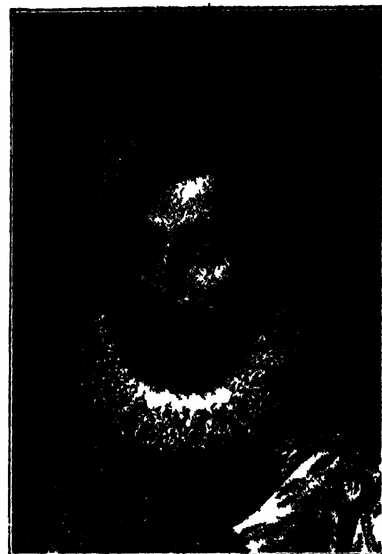


Sir Thomas More.

Lord Chancellor of England, and author, was born 1478 was indicted for high treason under Henry VIII, and executed on July 6th, 1535 A brilliant writer and a great patron of art.

William Caxton.

The first English printer, born in Kent 1422 apprenticed to a London mercer in 1438. Set up his printing press in Westminster, died 1491.

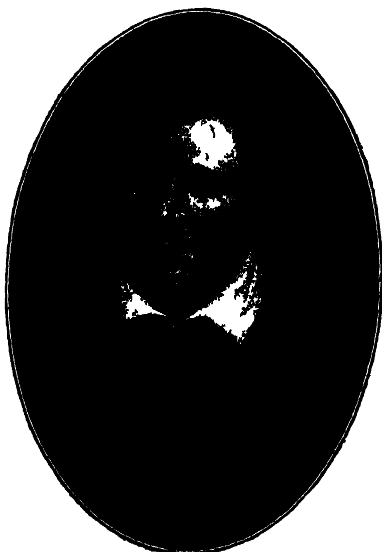


Sir Francis Drake

The great circumnavigator and Admiral of the Elizabethan period Born about 1540, he made many voyages and was knighted by Queen Elizabeth at Deptford in 1581 He defeated the Spanish Armada in 1588 took part in the expedition against Spain and Portugal in the following year He was M P for Plymouth in 15[illegible]3 and died in 15[illegible]

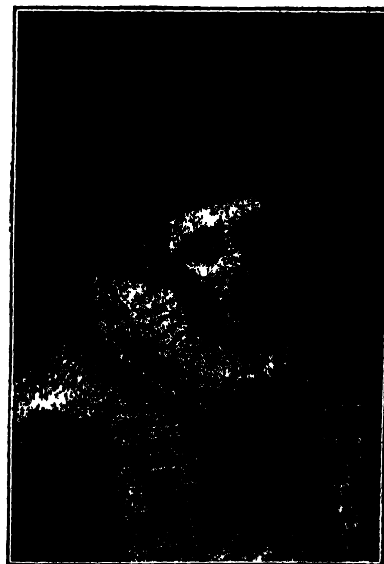
Sir Thomas Gresham

Founded the Royal Exchange London and was one of the great merchants of Lombard Street He established the first English paper mills acted as Crown financial agent and founded Gresham College for which he bequeathed his house in Bishopsgate Street Born about 151[illegible] he died 157[illegible]



Sir Walter Raleigh.

Military and naval commander explorer and courtier at the court of Queen Elizabeth Sailed to America charged by the Queen with colonisation schemes [illegible] years took a brilliant part in the expedition to Cadiz He was deprived of his offices on the accession of James I was confined in the Tower for conspiracy but after a time reprieved After the expedition to Orinoco he was again arrested and executed in Old Palace Yard, 1618 Buried in St Margaret's Westminster



William Shakespeare,

Our greatest dramatist and poet was born at Stratford on Avon, but came to London in 1586, where he became a member of the Earl of Leicester's company of actors Being summoned with famous actors of the day to perform at Court, Christmas 1594, he was ever afterwards shown special favour by Queen Elizabeth He spent the concluding years of his life mainly at Stratford but frequently visited London till 1614. He bought a house in Blackfriars Died 1616

Ben Jonson.

Dramatist and poet, born about 1573 in Westminster Was a Westminster School boy Killed a fellow actor in a duel or brawl but escaped death by benefit of clergy His Every Man in his Humour" was performed at the Globe Theatre with Shakespeare in the cast Other plays were produced by Shakespeare's company in London His friends and his patrons include many distinguished names Elected chronologer of London, 1628 buried in Westminster Abbey, 1637

Edward Alleyn.

Born 1566 Actor and founder of Dulwich College Played in London 1594-97 Acquired great wealth and landed property bought the manor of Dulwich, 1605 built and endowed the college 1613 16 personally managed its affairs 1617-22 and possibly, till his death in 1626 Married a step daughter of Philip Henslowe, whose theatrical partner he became Henslowe and Edward Alleyn built a theatre in Cripplegate

Sir Christopher Wren

Born 1632 Educated at W t i st i S l Pro ss r f Astronomy at G esh m C lk devoted much attention to mat c l a d m l subjects helped to f u d the R y l S c ty which he was pr sident S s Surveyor General to Charles II s k p p l ch for rebuilding London after the f 1666 a l appointed surveyor general u l t l t t f building the wh le its He built fift tw the London churches but is chiefly l s the architect f St Paul's Cathedral where he w buried in 1723

Henry Purcell.

P rcell th mp ser was born 1658 Was a ch t at th Chapel Royal London and when v ry y ung began to write music for th st ge W s g nist f W tminster Abbey 1680 where he w s bu d n ath his o g n in 1695 He wa a t iste f l l g nuity and gifted with h gh p w f expr s i n The Purcell S ty have published a mplete edition f his w k

Samuel Pepys.

(Secretary to the Admiralty)

The author of 'Pepys's Diary' was born 1633 his father being a London tailor Samuel went to St Paul's School He held several Government offices f which he was deprived when he was sent to the Tower charged with c mplicity in the Popish plot in 1679 Next year he was released Afterwards Secretary to the Admiralty until the revolution Lived at Clapham His famous Diary' remained in ciph r until it was published in 1825

Sir Hans Sloane.

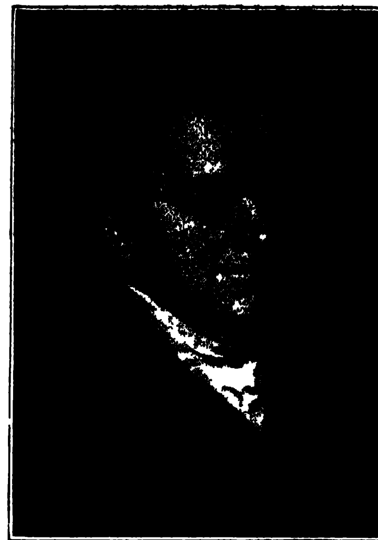
Born 1660 A distinguished member of learned societies in London and Court physician to Queen Anne and George II He purchased the manor of Chelsea 1712 where his name is perpetuated in many ways and found d the Botanic Gardens 1721 His museum was purchased by the nation and formed the nucleus of what is now the British Museum Di d 1753

Sir John Vanbrugh.

Sir J h n Vanbrugh, who was born 1664 the son of a London tailor was dramatist architect and herald Was manager of the Haymarket Theatre which he designed himself he also d signed Blenheim Palace at Woodstock and other country mansions Was one of the her lds but was dis l ked at the College f Arms because of his ridicule of its formalities His collected dramatic works appeared in 1730

John Boydell.

Studied engraving at St Martin's Lane Academy afterwards setting up as a printseller and publisher of engravings, rapidly building up an extensi business Sheriff of London 1785, and Lord May r 1790



Edward Gibbon.

The historian of the Roman Empire was born 1737 and educated at Westminster. He settled down in London 177- and was Professor in Ancient History at the Academy in succession to Goldsmith. Sat in the House of Commons first for Liskeard and later for Lymington. Published the first volume of his Decline and Fall of the Roman Empire in 1776, finished the work in 1787, and died suddenly in London 1794.

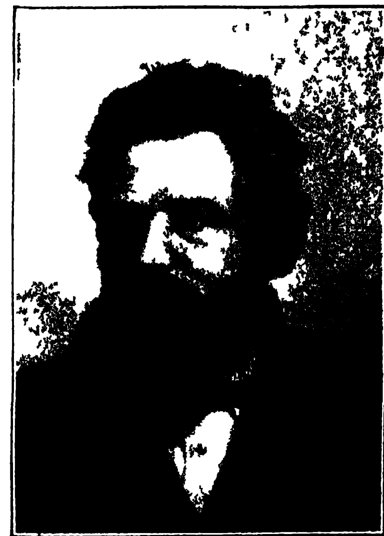
John Rennie, F.R.S.

Civil engineer, 1761 1821 entered James Watts's employ in 1784 and when he began business on his own account he made a great reputation as a constructor of canals, docks, harbours and bridges. Waterloo Bridge, London Bridge and Southwark Bridge were all designed by him as well as Plymouth Breakwater. His son, Sir John Rennie, carried on the business after the father's death completing the present London Bridge which was opened 1831.

Sir M. I. Brunel.

Sir Marc Isambard Brunel was born in Normandy 1769 and became a civil engineer. Served in French Navy emigrated to America and planned the defences of New York. Came to England 1799, where he erected saw mills improved dockyard machinery, and experimented in steam navigation. He was the engineer of the Thames Tunnel for which work he was knighted in 1841. Died 1849.

Joseph M. W. Turner.



The great landscape painter was the son of a London barber. Born in 1775, sold drawings at a very early age, and entered the Academy Schools in 1789. First exhibited at the Academy in 1790. Elected R A in 1802. Executed a large number of works, including a series of splendid pictures of Venice. His painting "Ulysses Deriding Polyphemus" is sometimes regarded as his masterpiece. Many of his works are to be seen in the National Gallery. He died in 1851 and was buried in St. Paul's Cathedral.

Thomas Carlyle.

The essayist and historian. Born 1795. Came to reside in Chelsea from 1834 onwards. Author of "Sartor Resartus," "The French Revolution," "Oliver Cromwell," and other works which are among the classics of the English language. Died 1881 and was buried at Ecclefechan, the place where he was born.

(Photograph by Elliott and Fry.)

William Morris.

Socialist, poet, artist and manufacturer. Born 1834, died 1896. Author of "The Earthly Paradise" and many other works. Studied the practical arts of dyeing and carpet weaving and published numerous illuminated manuscripts. In 1890 he started in Hammersmith the Kelmscott Press, for which he designed founts of type and ornamental borders and from which he issued 53 handsome books, including his own works and reprints of English classics.

Impressions of the Theatre.—VIII.

(16.)—SHAKESPEARE AT STRATFORD.

THE nightingales last night sang me to sleep It was eleven o clock, and the landscape lay bathed in silver moonlight I slept for two hours, and when I woke again the moon seemed even brighter than when I fell asleep, and the nightingale was still singing, though none were abroad to hear her lay

I had returned that morning from Stratford, where I heard the still sweeter strains of that nightingale of England whose music for three centuries has been audible round the world Like 'the poor bird all forlorn," the sweet singer who had made Stratford the centre of the English speaking world often tunes his melodious note to heedless ears But in this merry month of May the world draws near to hear the music of his rendering of the magic and the mystery of the world Even in London they were playing "Hamlet' and "Romeo and Juliet' and "Othello' But at Stratford they were performing, close to the sedgy marge of the silver Avon, no fewer than fifteen of his plays

STRATFORD IN MAY

It was a happy inspiration which led Mr Flower to consecrate some portion of the profits made out of his brewery to the building of a Shakespeare Memorial Theatre, wherein, year after year, the poet's birthday might be commemorated by the performance of his plays Nowhere in the whole world is there so fit a place for the Shakespearean theatre as at Stratford The little Warwickshire town, famous beyond all the cities which quarrelled for the right to boast itself the birthplace of Homer, is still, despite the motor car and Marie Corelli, very much as it was when Shakespeare was born in the house that is now a museum, and died in the house the foundations of which are reverently preserved as if they were the relics of some hallowed shrine The meadows starred with daisies and golden with cowslips, the hedges bursting into hawthorn bloom, the river winding between banks all osier fringed, the stately spire of the church soaring heavenward over the elm tree-tops the flowers, the birds, the swans with their cygnets, the lowing herds

Photograph by Frith]

Shakespeare's Birthplace Stratford-on-Avon.

and the fro[illegible]e lambs—all these are to-day as they were when Shakespeare courted Anne Hathaway in the Shottery Woods. It requires a strenuous effort of the historic imagination to reconstruct the London of Shakespeare's time. In Stratford it is always Shakespeare's time. Byron, speaking of the immortal accents of Cicero, which still echo in the ruins of the Forum, declared:—

> And still the eloquent air breathes—burns with Cicero.

The air of Stratford, with the glad song of the lark in the day and the plaintive melody of the nightingale at night, breathes and burns with Shakespeare.

A PILGRIM SHRINE OF THE RACE.

Hither have come in pious pilgrimage all the children of men, the greatest and the meanest, the richest and the poorest, drawn by the magnetism of genius, to pay homage to him whose touch of nature made the whole world kin. And now that iconoclastic scepticism has with rude hand dismantled the shrines of the saints, it is at least some consolation to have Shakespeare's Stratford left intact to serve as the gathering ground of pilgrims of the world. It is the Mecca of the English-speaking race. Here was born, here lived, here loved, here died, and here lies buried the creator of more of our familiar friends than any mortal. Within each of us lie, mostly latent, but occasionally felt, all the emotions which crave for expression, which no one ever expressed so fully and so well as the woolstapler's son who was baptised at the old stone fount still shown in the church. We owe to him not only some of the best of our friends, but he made them all the friends of our other friends.

SHAKESPEARE'S WORLD.

He created a world common to everyone. and we all know and understand each other better because he introduced us to so many common acquaintances. Hamlet and Polonius, Horatio and Ophelia, Othello and Desdemona, and Emilia and Iago, Romeo and Juliet, and Mercutio and the Old Nurse; all these are far more really realised denizens of the world in which we live than our next-door neighbours, to say nothing of our butcher and baker and candlestick maker. Nay, we really only understand most of the flesh and blood figures, in the midst of which we spend life's fitful fever, by our more intimate acquaintance with these great human types which Shakespeare created for all time. If we endeavour to explain a man or a woman's character, how often we have to borrow phrases from Shakespeare, or use his characters as the key to interpret living men. For instance, how often, how naturally, and how truly it is said that Nicholas the Second is a crowned Hamlet. About the character of Hamlet we dispute endlessly, but with all our differences of interpretation we feel that in him we have the key to unlock the secret of the indecision of the Tsar.

ITS BACKGROUND AT STRATFORD.

And although Shakespeare placed his creations in Elsinore and in Venice, in the forest of Ardennes and in Verona, distributing them impartially throughout many lands, including fairyland, it was here at Stratford that he found the raw material, here also it was that Nature supplied the scenery that is the background of all his dramas. As in the Shakespeare Theatre at Stratford you find a piece of stage scenery doing duty now for Hotspur's chamber in Warkworth Castle, and anon reappearing as Friar Laurence's cell, or the background of an English country town in the fifteenth century doing duty by turns as Shrewsbury, Verona, and Milan, so the natural scenery of Stratford reappears in all the Shakespearean plays. Ophelia drowned herself near "thy wild and stormy steep, Elsinore"; but when we read—

> There is a willow grows aslant a brook
> That shows his hoar leaves to the glassy stream,

we know that that willow first grew on Avon-side. It is growing there this day, with all the attendant paraphernalia of "crow-flowers, nettles, daisies, and long purples," as all may see who care. Oberon knew—

> . . . A bank whereon the wild thyme blows,
> Where ox-lips and the nodding violet grows,
> Quite over-canopied with luscious woodbine,
> With sweet musk-roses and with eglantine,

and he found it in a wood near Athens. Shakespeare probably saw it in some glade in the Warwickshire woods. "Where'er ye tread 'tis haunted holy ground." This is true at all times. It is specially true during Shakespeare Week, when Shakespeare's plays are performed night after night in Shakespeare's town.

'TIS FORTY YEARS SINCE.

So it came to pass that I went to Stratford last month to see the end of the Festival. Forty years before I had first made the acquaintance of Shakespeare's plays. The investment of one penny made me the somewhat curious possessor of the plays of "Hamlet" and "Othello." In our household plays were tabooed. I hardly knew what a tragedy was. I was utterly unprepared for the wholesale slaughter that heaps the stage with dead in "Hamlet." It jarred horribly, and at first I almost shrank from reading another play. But I went on through "Othello," and from that time I read two or three plays every week until I had read them all. Into what a world of wonder and of romance they introduced the sixteen-year-old errand boy on Newcastle Quay! For the whole of that year I lived in Shakespeare's world. My friends laughed at me as Shakespeare mad. "He's got Shakespeare on the brain," they said in derision—as if it were possible to have anything better on the brain than Shakespeare. I was so saturated with the plays, especially those I read first, that afterwards I could seldom bring myself to read them again. I think since I read "Othello" forty years have passed, and yet when I saw the play on the stage it was all so familiar that I felt the omission of some of the scenes with a sense of personal loss.

POPULAR IGNORANCE OF SHAKESPEARE

I have now seen seven of Shakespeare's plays on the stage: "Hamlet" (twice), "Romeo and Juliet" (twice), "King Lear," "Othello," "The Tempest," the "Taming of the Shrew" (twice), "King Henry IV.," Part I. "Hamlet" I have seen without scenery, and "Romeo and Juliet" as performed by the Elizabethan Stage Society, with what was supposed to be as near a reproduction of the appurtenances of the Elizabethan stage as is possible in our time. At Stratford I saw four plays, "Othello," "Romeo and Juliet," the first part of "King Henry," and the "Taming of the Shrew." The theatre was well filled always, on the two last performances it was crowded. But nothing impressed me so much in the whole series of performances as a remark made by a lady in the stalls, who was sitting next my wife. She was past middle age, apparently married, and well-to-do, full of restless vitality. She was following the play of "Romeo and Juliet" with considerable curiosity. As the last act began she exclaimed, with much the same surprise that I had faced the last scene in "Hamlet" forty years ago, "I do hope he's not going to kill them all!" This good lady had lived her life—she must have been over fifty—and had been courted and wedded. Yet during all the live-long years, the common round, the daily task, had never been lit up with the glow of the light of love that streams with inexhaustible radio-activity from the tale of the hapless lovers of Verona. What spiritual destitution must exist elsewhere if, here in Shakespeare's town, an English gentlewoman of fifty could be found in Shakespeare's Theatre who evidently never knew the ending of "Romeo and Juliet"! I thought of Lowell's lines:

> They whose thick atmosphere no bard
> Had shivered with the lightning of his song,
> Brutes with the memories and desires of men,

and felt more than ever disposed to do penance in sackcloth and ashes for not having done anything all these years to help Mr. Benson in his Shakespearean mission, whereby it may be said of many thousands that a people which sat in darkness saw a great light, and for the first time in their lives realised the majesty and the might of the Master's words.

WHAT WE OWE TO SHAKESPEARE.

Just before I had left London George Bernard Shaw had been explaining how very much superior he was to the Bard of Avon. So, I doubt not, the smart bantam in the back yard can complacently compare himself with the eagle who high in the empyrean gazes with undimmed eye upon the sun. Bantams no doubt have their uses, their eggs are tasty though small. But the comparison with the eagle would hardly suggest itself to any but the bantam mind. The world is brighter, richer, more romantic, more tragic, more human, more divine because Shakespeare wrote, and some of those who feel this most have never seen a stage play. Perhaps, after all, the chief value of the performance on the stage is that it advertises the excellence of the play for the study. But whether heard or read, who can estimate how even more unutterably stodgy the snub-nosed Saxon would have been than he is to-day if Shakespeare had not written? He is the literary equivalent to the Celtic element in our national life.

The Shakespeare Memorial

(Executed by Lord Ronald Gower.)

THE STAGE SHAKESPEARE.

The difference between the play acted and the play performed is considerable. The extent to which the original is cut is indicated in the Stratford sixpenny edition of the plays by printing the omitted passages in smaller type. In London I had seen "Romeo and Juliet" played in full. The contrast was considerable. Shakespeare is much more bowdlerised on the stage than in any printed edition prepared for schoolgirls. The nurse becomes almost as respectable as Mrs. Grundy. In like manner the omission of the willow song scene in "Othello" mutilates the play, and somewhat mars by mending the character of Emilia. Nor is it only in cutting that liberties are taken with the play. In the Stratford version Juliet, instead of taking the sleeping draught in bed, where she is found next morning by her nurse, dies on the floor of her chamber after first locking the door. This may or may not be an improvement from the dramatic point of view. It is

not as Shakespeare wrote it and intended it. The same thing may be said about the way in which Mr. Benson acts the death scene in "Othello." The text suggests nothing but that Othello dies after stabbing himself as he is kissing his murdered wife, falling upon the bed. Mr. Benson, after kissing Desdemona, staggers backwards into the middle of the stage and dies there. The phrase, "Look on the tragic loading of this bed," condemns Mr. Benson's version.

—AS PLAYED AT STRATFORD.

But what struck me as the most incongruous thing about the death scene in "Othello" was the way in which Iago was treated. Here was the foulest villain in the world detected, arrested, brought in a prisoner with his hands bound, the object of such natural hatred that Othello strikes him with intent to kill, and he departs doomed to suffer the worst torture, long drawn out, that imagination can conceive. Yet, instead of being held fast by his gaolers after he is ordered to be removed—another departure from the original—he is allowed calmly to saunter to the deathbed of Desdemona and then walk away, sneering, with his guards. Such a thing could not have happened in real life. There is no justification in Shakespeare for making it happen on the stage. Another thing jarred upon me in "Othello" as it was played at Stratford. Roderigo, who loved Desdemona and was made a tool of by Iago, was represented as if he were a zany, a half-witted idiot introduced for purposes of comic relief. But Roderigo in the play was not an idiot. He loved Desdemona, that is true; but that was in itself a tribute to his sanity. To see Desdemona was to love her. Roderigo loved her so passionately that he sacrificed everything he had in the forlorn hope of winning her love. In the end he was murdered by the man whom he had trusted. It seemed little short of an outrage upon the hapless lover to rig him up like a raree show and send him on the stage to draw the laughter of the groundlings.

MR. BENSON'S OTHELLO—

Mr. Benson, so far from blacking himself all over when he played the Moor, did not black himself at all. His Moor has no "sooty bosom" as had Othello in the play. He is no sallower than the ordinary Moor whom you see in Algiers—not so dark as many an Italian. Othello in his armour might have been mistaken for any South European knight. This may help to explain the ease with which Desdemona fell in love with him. It renders quite incomprehensible the conviction of her father that nothing but magic and love philtres could have overcome the natural reluctance of his daughter to wed such a creature as the Moor. Saving for his colour, Othello was the best match in the marriage market of Venice, and as he is no longer "sooty," why should she not have married him, or why should he afterwards have dreaded so much that she would forsake him? I put forward these observations not as criticisms, but as first impressions merely remarking, by way of apology, that after a forty years' acquaintance with an Othello who had a face as sooty as his bosom, it naturally gave me something of a shock to meet him with so sallow a complexion.

—AND HIS COMPANY.

The play went well. Iago was hardly villainous enough for his part. There was a look of honest Kent about him that sat ill upon the supreme villain of the world. Cassio was an admirable officer, and nothing delighted the audience more than his drunkenness. That was a performance only too familiar to everybody. In modern Stratford they don't know much about Moors, and Dukes, and Ancients, but the man who puts an enemy into his mouth to steal away his brains is next door to everybody everywhere, and Cassio was applauded by an audience of experts. The Duke of Venice was a real Doge, and his Court most admirably conducted. But the whole setting of the play, the harmonious co-operation and sympathetic and intelligent rendering of the various parts made the performance a very effective whole. The tendency of the London audience to snigger when they ought to weep was not in evidence at Stratford. Only once was there a laugh in the wrong place, and it was quite excusable. In the last scene Emilia, hearing of the trick Iago had played her about the handkerchief, rushed forward and struck her husband twice upon the breast. The gallery tittered, as well it might. Iago no more felt his wife's slap on the chest than a rhinoceros would feel a pin prick.

"HENRY THE FOURTH."

Next night we saw "Henry IV." Mr. Benson makes a charming Prince Hal. It is amazing how he can not merely make himself up, but actually speak and act as if he were five and-twenty. The first Romeo I saw was a black-haired boy of twenty, and very well he played the part. But Mr. Benson, more than twice his age, was much more like the ideal Romeo of my youthful dreams. Harry Hotspur was a little too fine both in figure and in style for the rough, brawny warden of the Northumbrian border. He was a gallant knight, charming and debonair, who said his violent speeches with plenty of spirit. But my Northumbrian Hotspur was a more truculent ruffian than the sprightly youth whom we saw at Stratford. The history went well. Some day we shall have the whole history of England mounted like this Even if we take in Marlowe's "Edward II." and Tennyson's "Becket," there are still many to write. How many parts, I wonder, would be needed for George III. or Queen Victoria? Such a series of plays acted in every public elementary school would do more to familiarise the next generation with the great outlines of their national history than any amount of tutoring in school histories. Sir John Falstaff was not my Sir John. He was not fat enough, and his eyebrows and beard seemed to be fleeces of white cotton wool. The actor was not without wit and humour of his own, and

he showed to much advantage in other pieces. The poor fat knight had his nose nearly sliced off in Shrewsbury fight, and the scar was still visible. Dame Quickly was a delightful creature, altogether too good for the tavern at Eastcheap. Bardolph was an exaggerated rogue with vinous visage; Poins a pleasant boon companion. The King pleased me not. Stage kings are difficult. The divinity that doth hedge a king does not wear well under the glare of the footlights. A king is so obviously but an ordinary mortal with a circlet on his head, and he is sometimes by no means so imposing as his courtiers. The fight between Hotspur and Harry was the best fencing match on the stage that I have seen. But so hard and heavy was the fight that Hotspur's corpse continued to pant and heave, just as if it were breathing hard, as it lay dead upon the heap of hay obligingly piled upon the stage on which the sore wounded died soft.

"ROMEO AND JULIET."

Next day we had "Romeo and Juliet" in the afternoon, and "The Taming of the Shrew" in the evening. There was an admirable Mercutio, who jested and died with equal grace, a pleasant featured laughing Benvolio, and a Tybalt fiery enough to get killed with unusual celerity. Old Capulet was excellent—it is surprising how much of the plays of Shakespeare depends upon the elderly characters. The Benson Company is capitally furnished with venerable elders, whose gravity is sustained with a fine reserve of youthful energy. The grouping in the banqueting hall, where Romeo had more than ordinary leave and licence to make love in dumb show to Juliet, was very pretty and effective. Mrs. Benson was a delightful Juliet, especially in the scene with the Nurse and the scenes with Romeo. But both when she died and when she soliloquised upon the possible consequences of taking the sleeping draught, the tragic passion was too trying—which is no doubt the fault of the play—but it was emphasised rather than softened. Romeo was passionate but pleasing; Juliet passionate but trying; at least, so it impressed a mind full of the preconceptions of the closet. The play lasted three hours and a half, but the last scene was compressed as with a hydraulic press. No sooner does Juliet die than the stage is crowded with the watch and the citizens, the Syndic, Capulet and Montague being in the front. In the original play the shock of the discovery of Romeo dead and Paris slain and Juliet two days dead but newly killed is broken to the company. On the stage they no sooner see the dead bodies than Capulet and Montague grasp each other's hands, the Syndic makes his little speech, and all is over. Better, it seems to me, to have let the curtain fall on dying Juliet than mangle the scene of reconciliation out of all possibility of vraisemblance.

"THE TAMING OF THE SHREW."

The Festival closed with the high jinks of the "Taming of the Shrew." Katharina was a much more shrewish shrew than Lily Brayton at the Adelphi; but, on the other hand, Petruchio was a much more polished ruffian than Oscar Asche. Indeed, at Stratford the Petruchio might have been Mephistopheles out for a romp. Both, however, had the law on their side, absolute power, physical strength, imperturbable good humour, and a supreme indifference to the moods and fancies of the termagant whom they had wedded for her money. The conditions of wife-taming are no longer so easy, and the play is a farcical travesty. But what a rollicking farce it is, and with what spirits Petruchio and all his serving-men enter into the romp!

There was a very pretty Bianca, a fascinating Lucentio, and a Gremio who deserved a better fate, despite his grey hairs. Grumio, he that had been Falstaff, was so amusing that whenever he moved an eyebrow the house roared with laughter so the dialogue could scarce be heard. Biondello, Lucentio's serving-man, he who had been old Kent and honest Iago, now displayed such quaint humour that I began to wonder whether every member of Mr. Benson's company could not play every part, and whether, if there were a game of general post, it would make any difference. I am sure the Nurse and Capulet could, if they were put to it, make a capital Juliet and Romeo, nor do I doubt that the youngest could play the oldest part.

AN APPRECIATIVE HOUSE.

At last, after the curtain fell, the house burst into vociferous acclamations. As a rule actors had been called before the curtain at the close of every act. On one occasion the gallery even seemed disposed to encore the piece of music played by the orchestra. On this, the last night, there was great store of bouquets and laurels to be showered upon the favourites. As usual, in this evil world, some who deserved with the best got none, while to those who had, the more was given. Mr. Benson made a graceful little speech, then others were clamoured for and responded amid riotous demonstrations of delight. The house was letting itself go, and everybody was having a very good time. One of the floral emblems passed up was a large horseshoe of white flowers inscribed "From the Stratford High School Girls, with love, to ——," the tall, fair, sprightly young actor, who had played Lucentio, Mercutio, Harry Hotspur, Cassio, Cassius, and many another heroical part, in which he had always acquitted himself like a gentleman and sometimes died like a hero. The Stratford High School Girls had attended all the performances—happy shes—and it was not difficult to imagine the delicious innocent dreams of fair romance to which that white horseshoe "With Love" gave such frank expression.

And now it is all over, the curtain rung down for the last time, and next morning a special train bore the whole pleasant company back to town.

Interviews on Topics of the Month.

XIV.—THE SHAKESPEARE FESTIVAL: MR. F. R. BENSON.

It was a glorious morning in mid-May when I interviewed Mr. Benson in his punt on the Avon. It was the last day of the Shakespeare Festival. In the afternoon Mr. Benson was to play Romeo, in the evening Petruchio in "The Taming of the Shrew," and after that there was to be speechmaking, farewells, and the general winding-up of the three weeks' celebration. The previous night he had been playing Prince Hal in "Henry IV.," and after the play was over had kept it up till midnight, the centre and soul of the official reception given by the Committee on the stage. And now here was the indefatigable actor spending midday in teaching my daughter Pearl how to punt, while Mrs. Benson, my wife, and myself lolled in delicious idleness amid the cushions. A water rat swam swiftly across the river, diving suddenly as the punt approached. In the distance, around the castellated building which sheltered the theatre, the crowd was gathering, waiting patiently for hours to make sure of seats in pit or gallery. The daisy-spangled meadows coming down to the sedgy margin of the placid river—what a background for an interview with the man who has devoted nearly twenty of the best years of his life to interpreting Shakespeare to the countrymen of Shakespeare, who but for Mr. Benson would have had but scant opportunity of seeing Shakespeare on the stage.

Photograph by] *[Ellis and Walery.*

Mr. F. R. Benson as Hamlet.

"I don't like to talk about it," said Mr. Benson. "I used to prate a great deal when I was young and foolish. I long since discovered that this was a mistake."

And he turned to explaining the mystery of handling the punt pole to his latest apprentice, whose parents enjoyed the zigzag of the beginner, speculating languidly on the chances of drowning if the punt upset. After all, it was a novel sensation to be floating hither and thither with Romeo and Juliet in a boat on Shakespeare's river. Last night he had been Prince Hal; in a few hours he would be Romeo; but now he was a charming and delightful instructor of the art and mystery of punting, ready to talk about everything, from ghosts to newspapers; but the interview dragged as we laughed and jested and capped each other's stories under the gladsome sun.

At last, by the gracious aid of Mrs. Benson, who had compassion upon the forlorn interviewer, I succeeded in extracting some materials which, when worked up, read somewhat as follows:—

"It is more than twenty years since I took to the theatre. It began at Oxford. We put the 'Agamemnon' on the stage with quite a distinguished company. Lord Curzon and Lord Selborne were two among our actors. Among the others were Messrs. Andrew Bradley, W. L. Courtney, G. H. Britcher, and Sir Rennell Rodd. As I was the least studious of them all, being more devoted to athletics than to classics, the management was placed on my shoulders. Then I came up to London, and, by astonishing good luck, got a position at the Lyceum. Sir Henry Irving, who had run our Greek play, very kindly gave me the part of Paris at the Lyceum in their production of 'Romeo and Juliet.' In those days, with the fond presumption of youth, it all seemed so simple. Now, after twenty years of it, I begin to understand that it takes a lifetime to understand the conventions of our art."

"What started you as manager?"

"Dreams. Ideals, the aspirations and illusions of youth, combined with an unexpected circumstance that gave me the opportunity, led me to take over a theatrical company eight months after I had joined the profession. I have been twenty years at it now—this is the eighteenth time I have been at Stratford."

"And how much of your dreams came true?"

"Some; not all. I lost the remnant of my money by a fire which destroyed my property, which, foolishly, I had not insured. But, although I have not made a

fortune, that was no disappointment. I never was such a fool as to think that a theatrical company is a gold mine. No; that was none of my dream. What I wanted to do, what I tried to do, and what, I hope I may say, I have to some extent succeeded in doing, was to train a company every member of which would be an essential part of one homogeneous whole, and that whole consecrated to the practice of dramatic arts, and especially to the representation of the plays of Shakespeare."

"Your company is a veritable band of brothers like Nelson's captains," I remarked. "And you!—why, you are as mad as General Booth about your message and your work."

"When I came upon the stage all the great actors agreed in declaring that the art of acting was perishing in England. Rachel, Salvini, Phelps, Irving—in whose footsteps I endeavoured to follow—all declared that the Long Run and the Dividend-monger had smitten the British stage with a fatal paralysis. The Long Run is absolutely fatal to the all-round culture, the natural spontaneity of the true artist. It may and does rake in the shekels for the manager and the shareholders. But at what a sacrifice! Under the system of the Long Run the young actors run the risk of degenerating into a set of two-legged automata with gramophone attachments."

"And how did you set about counteracting this?"

"By reconstituting a company whose aim was to revive the old traditions of the stage and keep alive the stock company with a répertoire of the best plays."

"Why, Mr. Benson, if you go on like this, in another minute you will be quoting the Gospel, or at least recalling those brave days of old when none were for a Party and all were for the State. Really, you talk of your company with the same enthusiastic fervour that St. Benedict or St. Dominic might have spoken of their Order."

"And why not?" said Mr. Benson. "It is the same thing in essence. Poor players or begging friars, we go up and down the length and breadth of the land—the one that the poor may have the Gospel preached unto them, the other that the people may never be without an opportunity of seeing Shakespeare played by a company dedicated to his service. Our company may have its drawbacks and its shortcomings. And as for Shakespeare——"

Photograph by] [*Ellis and Walery.*

Mrs. Benson in "The Merchant of Venice."

"Oh, you don't need to tell me about that," I interrupted. "I am only a tyro, but everyone has told me that if it had not been for you Shakespeare would practically have disappeared from the stage for years on end. Just now there is quite a boom in Shakespeare. But it was you and yours who have been the faithful Abdiels of the Shakespearean drama. We all owe you grateful acknowledgment for that service, and nowhere could I enjoy paying that debt so much as at Stratford. The Festival has been a great success?"

"Very great. We have put fifteen of Shakespeare's plays on the stage and have revived Marlowe's 'Edward II.' We have played eight times a week for three weeks, and first and last 14,000 persons have witnessed our performances. As you have seen, they have been very enthusiastic."

"Yes. You have no need to complain of lack of appreciation on the part of your audiences. But why don't you have Shakespeare under the greenwood tree in August, when the town is full and the hordes of cheap-trippers invade Stratford?"

"Shakespeare Week, now Shakespeare three weeks, is linked on to the celebration of his birthday, April 23rd. It suits Stratford because it attracts multitudes to the town in the off season. In the mid-season there is no need of any dramatic attractions. But it might succeed."

"You would have a good chance of preaching to the unconverted. But don't you get very tired playing in new rôles every night?"

"That does not tire me. That keeps me alive. But to play Hamlet six nights running, it would be the death of me. No, I look tired, but I do not feel so. My early athletic training has stood me in good stead."

XV.—A HOME FOR THE HAGUE TRIBUNAL: DR. EIJKMAN.

As I begin to write this interview, I remember that it is May 18th. Seven years ago this morning with what high hopes and confident expectations, with the light of sunrise in our eyes, we assisted at the opening of the Hague Conference. Seven years ago—and to this day the permanent International High Court, which was established by that great International assembly, has not even yet been provided with a permanent local habitation. But if the friends of peace have been idle, the myrmidons of war have been only too busy. England and Russia, who seven years ago vied with each other in striving for the glory of being first in peace, have since then afforded a scoffing world an opportunity of proving on the largest scale that they were equally incapable of preserving peace or of waging war. In place of acting upon the proposition for an arrest of armaments, the Powers, England foremost of all, have piled up the burdens of military and naval expenditure more rapidly than ever.

This morning I went to see, as is my wont for days past, the robins' nest in the ivy. I found all the nestlings fledged and flown save one. The nest seemed somewhat forlorn, and my neighbour's cat suggested ominously the fate of the young robins. And in my musing mood it seemed to bear a melancholy resemblance to the Conference of Peace. The rules for civilising warfare, the standstill proposition, and how many projects hatched out in the Huis Den Bosch in that prime of the world's morning have gone to the cats? Only one, the Permanent Tribunal, remains behind. But at the Hague it is even worse than with the forlorn robin in the ivy bush, for the Tribunal has not yet been provided with a nest.

The Court, which this month has pronounced its third judgment, has up till now been in furnished lodgings. But at long last steps are being taken to provide the International High Court of the world with a permanent home. The Dutch Government in mid-May appointed a Commission to arrange for building the new Palace of Peace, for which Mr. Carnegie has provided the funds, upon a corner of the Zorgvliet estate, which lies to the left of the beautifully wooded road to Scheveningen. £60,000 is to be allocated for the purchase of the site. Just as I was thinking that, after seven years, something was going to be done, up came Dr. Eijkman and imperiously demanded that the Zorgvliet site should be abandoned. Dr. Eijkman, I may mention, is a leading citizen of the Hague, an anthropologist, a public-spirited idealist, and withal a wideawake man of the world. He had been travelling in the United States, he had crossed the Atlantic in the same steamer with Mr. Carnegie, and when he arrived at Mowbray House he was full of wrath at the prospect of the adoption of the Zorgvliet site.

"And why this indignation?" I asked.

"Because of the scandalous neglect of an opportunity which has never come to the human race before. All the Powers of all the world agreed seven years ago to make the Hague the capital of the world. The new era of internationalism began when the High Court of International Arbitration was constituted. But how are we rising to the height of the occasion?" And Dr. Eijkman became almost inarticulate in his disgust.

"But what is it you want to do?"

"Do?" said Dr. Eijkman. "Why, the only thing that ought for a moment to be contemplated as possible by anyone. We have got the International Court, let us provide it a site in the heart of a city which will be the great international capital of humanity. To tuck away such an International Court in the corner lot of a suburban building site in an old city is to show no appreciation of the new era and its international opportunities. Plant the High Court out in the open on the dunes to the north of the Hague, and round it will spring up, as by the wand of a magician, a new city, designed and consecrated to the international needs of an international world."

"What would it cost?"

"The first cost would be four millions, every penny of which would be repaid in twenty years. Think of it. There were nearly thirty Powers represented at the Hague. But put it at twenty. Three per cent. on four millions means only £120,000 per annum, or, say, £6,000 a year, from each Power, and in return the ground rent of the international city secured to them for international purposes for ever."

"Is the land available for such a site?"

"The land is available. It belongs partly to the City and partly to the State. It is now chiefly used as an exercising ground for troops. For the creation of an International City the Dutch Government would sell it, but for no other purpose could it be obtained. Look," said Dr. Eijkman, "here is a rough ground plan of the International Capital of the world."

And as he spoke he unfolded a map on which was laid out the general design of the world's capital that is to be—a city which would owe its origin to the international High Court of Arbitration, and which would provide shelter within its limits for all the international universities, academies, institutes, bureaus, theatres, etc., which at present are scattered aimlessly about the world."

"Do you think your city will materialise?" I asked Dr. Eijkman.

"Our first task is to capture the imagination and the intellect of mankind. When we have the heart and the soul, we need not be afraid that we shall open the purse."

The day after the above was written the Second Chamber of the Dutch Parliament voted, with hardly half-a-dozen dissentients, in favour of the purchase of the Zorgvliet site. The decision of the First Chamber has yet to be taken, and Dr. Eijkman is still contending with the powers that be in the hope of securing their support for his magnificent conception.

XVI.—MR. JAMES DALRYMPLE: GLASGOW'S FIRST MUNICIPAL MISSIONARY.

LAST month the City of Glasgow, no longer satisfied with setting a passive example to the other cities of the world of how a great municipality ought to be governed, sent forth its first municipal missionary in response to an urgent invitation from the Mayor of Chicago. The missionary in question is Mr. James Dalrymple, general manager of the Corporation's tramways, who sailed on the *Campagnia* about the middle of the month, to place his experience of tramway management at the disposal of "The Windy City" on the shores of Lake Michigan.

At the last mayoral election the people of Chicago voted in their thousands for the working of the tramways by the city itself, and not by a company, and they returned Mayor Dunne at the head of the poll with a mandate to carry out their wishes. No sooner was the result known than the mayor-elect cabled to the Glasgow Corporation requesting permission to borrow for a time their tramway manager, so that Chicago might have at its service the best possible information that could be obtained as to the municipal working of tramways. The Glasgow Corporation not only readily agreed, but felt that a compliment had been paid the town. If other cities follow the example of Chicago and Glasgow, we may expect in the near future not only the interchange between the cities of America and England of information, but also of the men engaged in the actual work of municipal government. This pooling of municipal information and experience would be an immense advantage to the cities of both countries, and especially to American towns just entering on the path of municipalisation.

A few days before he sailed I saw Mr. Dalrymple in his office in Bath Street, the headquarters of the Glasgow Corporation tramways system. He is a shrewd, hard-headed Scotchman, well able to keep his own counsel. He has never before been across the Atlantic, and was looking forward with pleasure to his visit to the United States, a pleasure somewhat tinged with awe, not to say dread, of the "yellow Press."

"Well, Mr. Dalrymple, I suppose you start on your mission with no doubts as to the advantages of municipal working of the tramways?"

"There are no two opinions about that, you will find, in Glasgow, and we have now had ten years' experience. I will not go so far, however, as to say that a municipality can always work a tramway system better than a private company. There are many excellent tramway systems being worked at the present moment by private companies. But here in Glasgow we have no doubt as to which has been the best system for us."

"What advantages has the municipality been able to give the citizens more than the private company which it superseded?"

"Well, in the first place, an immensely more efficient system; better trams, lower fares and quicker service. But the principal difference is that the private company is bound by the very nature of its constitution to look after the interests of its shareholders before those of the public. The municipality, on the other hand, aims at serving the public in the first place, and here in Glasgow it has always been the policy of the city to devote whatever profits may be earned to improving the tramways rather than in relief of the rates. That is the policy which has been followed in the past, and I hope it will be followed in the future."

"You mention fares; what has been the effect of lowering them?"

"The immediate effect has been the immense increase in the number of passengers carried and the popularity of the trams. The fares charged by the old company were not high when they are compared with the charges which are still made in many cities. But we have reduced those fares by twenty-five per cent. We have also introduced halfpenny fares, and these now represent over thirty per cent. of the passengers carried. We have also increased the distances you can travel on the trams for a halfpenny or a penny. Now it is possible to reach the outskirts of the city in almost every direction for a penny and in every direction for three-halfpence. The result has been, as I said, that the trams have been much more used than they ever were before. A couple of figures will make that plain. During the last year of the old company's *régime* they carried 55,000,000 passengers; last year we carried close on 200,000,000."

"Has the more general use of the trams had any effect on the distribution of the population?"

"Yes, it has considerably altered it in one or two respects. With the cheapening of the fares, the substitution of electric traction for horse, and the extension of the tramways system, the middle and shop-keeping classes have been steadily migrating from the centre of the city to the suburbs. A large suburban population has, in consequence, grown up beyond the city boundaries. The effect on the poorer and labouring classes has not been so marked."

"What about the employés? Have they also shared in the general benefit the trams have brought the city?"

"Yes, their condition has been improved in many ways. I will only mention one instance. The City provides them with a uniform free at the cost of from £5,000 to £6,000 a year."

"In the busiest streets I see that you have the overhead electric wires. Have you not had any accidents in consequence? When I was in America hardly a day passed but the papers reported deaths or injuries owing to the falling of the wires."

"No, we have had absolutely no trouble, and no person has been injured since the lines were electrified. It is all a matter of careful supervision. In

A WORD TO OUR READERS.

An Invitation and an Offer.

WE wish to invite the co-operation of our readers in making the *Review of Reviews* better known among their friends and acquaintances. With this invitation we couple an offer.

The Invitation.

If there are among your acquaintances any who are not as yet regular subscribers to the *Review*, it is doubtless because their attention has never been properly called to the magazine. No one has pointed out, for instance, its value to them if they wish to keep abreast of modern thought; nor, if they are busy men, that the *Review* is the one indispensable magazine which they cannot afford to be without. If you are a constant reader of the *Review* it, of course, needs no recommendation; but *your* recommendation of the Magazine will carry more weight with your friend than ours possibly could.

The Offer.

We therefore invite your co-operation in this matter, and shall be glad to mark our appreciation of your assistance by sending you, as a gift, **"The Little Masterpiece Library of Prose,"** in twelve volumes, and a bookcase in which to place them. All we ask you to do is to send us in the addresses, with their subscriptions, of **six new annual subscribers** to the *Review of Reviews* (***8s. 6d.*** including postage). In return we shall send you at once, carriage paid, this charming collection of prose masterpieces, published at one guinea net (including bookcase), full particulars of which will be found on pages ii and iii of the advertisements in this issue

Open to every Reader.

This offer is not restricted to the United Kingdom, but is made to any reader of the *Review of Reviews*, whether resident at home or abroad. The names of the six new subscribers and their subscriptions should be sent to the MANAGER, *Review of Reviews* Office, Mowbray House, Norfolk Street, London, W.C, to whom all inquiries connected with this offer should be directed.

It must be distinctly understood that the Annual Subscription is ***8s. 6d.,*** including postage, to any part of the world, and in order to secure the LIBRARY offered as a premium, the applicant must send in the addresses of the **six new subscribers,** together with a remittance of ***£2 : 11 : 0***

Glasgow the whole system is examined every night, and any defect that is detected is at once remedied, and any repairs that need making are at once executed. The result is that we have no trouble on that score."

"What result has the lowering of the fares had upon the revenues?"

"We have always found that as we have lowered the fares the receipts have increased. We have now a hundred and forty miles of tramway track in the city system, and our traffic receipts exceed £700,000. Last year the gross balance, after deducting working expenses and depreciation, was £228,584, leaving a net profit of £80,790 after paying interest on capital, providing for the sinking fund, parliamentary expenses, and the payment to the common good. In pursuance of the policy adopted by the city, the net profits were expended on the tramways, and not appropriated in relief of the rates. Now, remember," added Mr. Dalrymple, with a grim smile, as the vision of the "yellow journal" crossed his mind, "I have said nothing about Chicago."

"Not a word," I laughed, "and I pity the American reporter who tackles you on that subject. He is not likely to take much for his pains." Nor will he.

XVII.—THE TANNIC ELECTRIC CURE: DR. MARKOFF.

DR. MARKOFF, the Russian publicist, who has just returned from Russia, called to see me the other day. On congratulating him upon his good looks and improved health, he replied, "You may well do so. I have at last got rid of my rheumatism. You know what a sufferer I have been this long time, and now it has vanished."

"And how did that come about?" I asked, for although fortunately free from rheumatism myself, no subject is more interesting than the discovery of remedies for the various tortures to which mankind is subject under the name of disease.

"Ten years ago," said Dr. Markoff, "a German tanner who carried on business in Ulm fell by accident into one of his own vats, in which hides were being tanned by the electric tannic process. As the vat was deep and no help was at hand, the poor man had to lie immersed in the vat for half an hour. When, at last, he was fished out, he found that he had involuntarily made the beginning of the cure of a rheumatism from which he had suffered martyrdom. For weeks he had hardly been able to sleep. The night after his fall into the bath he slept like a child. The coincidence startled him. He began to experiment. His experiments justified his inference that there was a close connection between his good sleep and his plunge in the vat. He went on and studied both electricity and medicine, and finally produced the Stanger Electro-Tannic bath. That was what cured me."

"Never heard of it," I said. "Tell me all about it."

"It is not known in England, but then you don't know everything in England. There are thirty-five establishments where it is installed in Germany. It is in full work in America, and now Mr. Stanger is in London in order to secure its introduction into your conservative country."

"What do the doctors say? They are usually death on any remedies except their own?"

"They were, at first, somewhat hostile. There have been such hosts of frauds in electric treatments. But they are coming round. Some of the foremost doctors in London are sending Mr. Stanger patients, and he is curing them. I can assure you it works miracles. I am quite a new man. I sleep like a top. My nervousness has vanished, and my rheumatism is quite cured."

"What is the process, and how much does it cost?"

"You spend half-an-hour a day every other day in a wooden bath, on either side of which are hung a number of graphite electrodes, through which the electricity is passed into a bath of tepid water, in which a certain quantity of tannic acid has been dissolved. The bath is most enjoyable. There are no shocks, only a pleasant sensation of exhilaration and a soothing, restful feeling, which needs to be experienced to be understood. As for the cost, in Germany, where it is established on a commercial basis, baths cost from 3s. to 5s. each. But anyone who has electricity laid on to his house can buy a Stanger bath all complete for £50, and give himself a bath whenever he needs to be soothed, rested, toned up and put to sleep."

"What is the actual nature of the bath?"

"The electricity facilitates the entry of the tannic acid into the system, and combined they eliminate the uric acid, to which most of our rheumatic and other disorders are due. It works wonders in all cases of rheumatism and gout. It is excellent for neuritis, and nothing can excel its influence in nervous maladies."

"In short," I said, laughing, "it is a veritable fountain of youth and elixir of life combined, served out at 3s. a time. It seems to me, if all that you say of it is true, its use should be made compulsory upon all statesmen and sovereigns, especially those at the head of affairs in Russia just now."

"No doubt," said Dr. Markoff, "things are bad; but in Russia they have often been worse. And even in the midst of all this turmoil the Russians are opening up what promises to be the richest goldfield in the world in Siberia. Believe me——"

But that is another story, in which Dr. Markoff may have his say another day.

LEADING ARTICLES IN THE REVIEWS.

MR. BALFOUR: FABIUS MAXIMUS.

A VINDICATION BY MR. WILFRID WARD.

A MASTERLY article, one of the most ingenious of the year, is the essay entitled "A Political Fabius Maximus," which Mr. Wilfrid Ward has contributed to the June *Nineteenth Century*. An abler and more gallant attempt to glorify an English ruler for the very things which have discredited him most has not been published since Mr. Froude found the crowning proof of the disinterested patriotism of Henry VIII. in the invincible patience with which he persisted in his matrimonial experiences.

A BRITISH CUNCTATOR.

Taking as his text the declaration made by the *Spectator*, October 3rd, 1903, after the Sheffield speech, that "Whatever else may happen Mr. Balfour's day as a great British statesman is over," Mr. Ward maintains that—

The events which the *Spectator* regarded as the occasion of the downfall of a great statesman have proved to be his opportunity. His policy will live for posterity as a classical instance of a statesman who kept his head when hardly anyone else succeeded in doing so, who believed in himself in spite of the ridicule and invectives of assailants from both sides, and who gradually restored confidence and won back the faith of his party.

THE HIGHER CRITICS AND FISCAL REFORMERS.

The soul of Mr. Ward's paper is to be found in the brilliant conception of the Fiscal Reformers as the Higher Critics of Political Economy. Mr. Balfour's position is that of the Head of the Church who, when confronted by the speculative theories of the Wellhausen school, refuses either to endorse all the vagaries of the enthusiastic scholars or to ban them with bell, book and candle. The time is not ripe for a definite pronouncement :—

The wise ruler will not silence the Liberals. He knows that it is they who have hold of the materials out of which the true developments in theology are to be effected. He will have none of the dogmatism of the obscurantists. To treat speculation as heresy is as bad as to treat it as newly-won dogma. Change can only be safely made by very gradual steps, the wisdom of which is completely ascertained. It is only thus that its dislocating effect can be avoided. Yet the nature of these very steps can be satisfactorily ascertained only by the freest discussion. Provisionally, the dogmas of Free Trade must be largely disregarded in the discussion, as theological dogma is disregarded by the Biblical critic. That such dogma exists and is sound he does not doubt. A return to pre-Cobdenite Protection would, indeed, be to attack an irreformable decision in economic orthodoxy. But to condemn measures as Protectionist, in the sense in which Protection is disastrous before their nature and consequences have been fully sifted, is obscurantism and not orthodoxy.

"THE NOBLEST ROMAN OF THEM ALL."

Mr. Ward rapidly draws a vivid picture of the confusion and dismay which Mr. Chamberlain as the Fiscal Wellhausen caused among the true believers in the orthodox fold. Of Mr. Chamberlain's impatient plungefulness Mr. Ward speaks with chastened severity. Mr. Chamberlain, he says—

aroused party feeling, and gave the signal for strife not only before his colleagues had agreed that the war was wise or practical, but before he himself had seen how it could be carried on. In this trying position Mr. Balfour showed virtues truly Roman. He did not despair of the Republic. And he saw that the only hope lay in a Fabian policy of delay. Tantalising and irritating though it inevitably was, ineffective necessarily before the public eye, he persevered in it. The world held it impossible that the Cabinet could survive the removal of its strongest members. The loss of prestige attaching to great names was appalling. Nevertheless, Mr. Balfour faced the situation as the alternative to the death of the party, and carried his policy through. Probably no other man living except Mr. Balfour could have effected even the partial reconstitution of the party.

HOW HE WORKED THE MIRACLE.

This great Fabian thaumaturgist worked the apparently incredible miracle by his unique combination of qualities which Mr. Ward analyses with skill and sympathy :—

His aloofness and imperturbability, in the first place, enable him to carry out the decisions of an acute and highly critical intellect, undistracted by any disturbing force, either from the undue influence of others or from unregulated impulses in himself.

His power of attracting personal devotion is like Pitt's, and has been an important factor in his success.

He is marked by great tenacity in friendships, alliances, undertakings. He knows well the value of small things, as answering letters or a kind word, and measures out such gifts with care and judgment.

The complications caused by unnecessary initiative Mr. Balfour instinctively avoids, aided perhaps by a certain constitutional indolence.

His perception of public opinion is as accurate as is possible concomitantly with a certain deficiency in emotional sympathy.

Drive him into a corner, and with his back to the wall he will fight with a vigour and pertinacity astonishing to those who are accustomed to his normal imperturbability.

The net result is great insight, tenacity, and persistence, and the strength arising from these qualities. The main aim is never lost sight of. He acts on the motto, "More haste, less speed."

A touch of pessimism runs through his thought and work, yet not the profound pessimism which leads to inaction. Rather his pessimism goes with a certain philosophic contentment—for he looks in this imperfect world for no great results, and is therefore not easily disappointed.

All that is true enough and very well said. But what of Mr. Ward's essay as a whole? Never was there a more subtle, sophistical attempt made to prove that our King Arthur actually underwent an apotheosis when he forsook his Table Round in order to sit himself as an "accomplished whist player" at the card table with Mr. Chamberlain. But irresistible are the attractions of paradox, and the formula "I believe because it is impossible" has naturally great attractions for controversialists of Mr. Wilfrid Ward's school.

"MOST LAUGHED AT AND MOST LOVED."

Mr. Balfour is addressed in the *Atlantic Monthly* in an open letter by "Alciphron." The writer says that Plato, who dreamed of a day when philosophers were kings, would surely have hailed a philosopher as Prime Minister. Mr. Balfour is credited with a Platonic fondness for verbal dialectic, and an extraordinary adroitness and resource in its use, which reminds the writer of what Jowett said when asked

whether logic was a science or an art: "It is neither; it is a dodge." The writer proceeds:—

This astuteness, this immensely clever handling of an immensely difficult situation, your bitterest enemy cannot deny you. If you have carried water on both shoulders, you have at least carried it, not spilled it on the ground. Your assailants should have taken warning from your profuse confessions of ignorance, and your smiling good nature. They had heard you profess so often in the House of Commons, "I am but a child in these matters," and should have had in mind, as possibly you had, the prophecy, "A little child shall lead them."

You offer to-day, Mr. Balfour, the great paradox of being the public man of England most laughed at, and at the same time most loved. . . . So there has broken through your philosophy a great kindliness, with a high distinction, a wide humanity, a lettered sanity and ease, which have endeared you to the men of your day in both parties. If fall you must, you will leave office behind, but will always bear your friends with you.

AN UNCONSTITUTIONAL PREMIER.

"Mr. Balfour and the Constitution" is the title of a suggestive study by Mr. J. A. Spender in the *Independent Review*. Mr. Spender admits that the Premier's retention of office, in spite of indications that he no longer retains public confidence, is legal, but denies that it is constitutional. By deft citations he maintains:—

The true doctrine is, as stated by Mr. Bagehot, Professor Dicey, and Sir William Anson, that a Ministry should retire or dissolve Parliament "when it is shown to have lost the confidence of the House or the country"—one or other, or both of these things. Mr. Balfour's claim is, on the contrary, that the House of Commons itself should be the sole judge.

Mr. Spender protests against this inversion of the constitutional doctrine, but frankly admits that the remedies are not easy to apply. He says:—

The suggestion that the King should revive the prerogative of dissolving Parliament of his own initiative is not one that a Liberal can entertain. The principle that the King acts on the advice of his Ministers needs to be guarded against all encroachment. My own opinion is that the Septennial Act should be repealed, and the legal duration of Parliament reduced to five, or even four, years.

The Overcrowded Poor in the Dog Days.

GREY streets, grey houses, grey courts. Heavy air, sodden with the breath of thousands, with the stale odours of garbage and dirt. Pale and stunted children quietly sitting on the doorsteps, or noisily squabbling in the gutter. And overhead the brazen, scorching sun of a July day. This is a true—and pitiful—picture of many a quarter in London, where the poor crowd together. There, as the heat grows—and the happy youngsters of the rich are whirled off to grow brown and bonnie, by sea or hillside—the children of the poor droop and die, their spirit-broken mothers slip away from the life battle which has been too hard for them, and autumn reaps the crop of disease and death which the city summer has sown. The children have a right to live; the mothers have a claim to life and health which must some day be met. But life and health in the dog days means escape from the fœtid court and block and alley—a time of emancipation and freedom by meadow, or hill, or sea. And how shall the poor obtain these? Only as men and women recognise that they are in very deed their brother's keeper, that they must save the children to build up the State! The expenditure of 10s. will give a child a whole fortnight of joyous freedom. £1 will secure the same boon for an adult. All gifts for this purpose will be thankfully received by F. HERBERT STEAD. Warden, Browning Settlement, Walworth, S.E.

THE PERSONALITY OF MR. LLOYD-GEORGE.

BY MR. HERBERT VIVIAN.

MR. HERBERT VIVIAN and the editor of the *Pall Mall Magazine* between them did Mr. Lloyd-George a scurvy turn by publishing an interview with him before receiving his revise of the proofs. The fault is the more serious because it not only injures the innocent victim, it adds to the difficulty of inducing other men to submit to be interviewed. Mr. Vivian promised that Mr. Lloyd-George should receive a proof before publication. A proof was sent, but when Mr. George protested against its inaccuracy he was told that it was too late, the article had gone to press. Such bad faith is much to be deplored. It not merely annoys the person interviewed, it entirely destroys the value of the interview. Instead of quoting the remarks imputed by Mr. Vivian to Mr. George, I confine my quotation to Mr. Vivian's own appreciation of Mr. George's personality:—

To make his acquaintance is therefore a revelation. Instead of a noisy, bumptious demagogue, I found a smiling, gentle Celt, full of understanding for every adverse point of view, overflowing with catholic sympathies for the general. Most politicians are a surprise when you have only known them through their speeches or according to adverse journalists, but Mr. Lloyd-George is probably most of all unlike his counterfeit presentment by journalistic Tussauds.

The more I see of Mr. Lloyd-George, the more he surprises and the more he attracts me. He is for ever saying some new thing, or if he says an old one it is in a novel manner. Where prejudices would be looked for he shows disarming impartiality. When curses would seem appropriate in his mouth he will astonish, like Balaam, by bestowing his blessing. Like all Welshmen, he has a keen sense of humour, great quickness of perception, and an engaging manner. He is an expert in epigrams, with which he adorns his private conversation no less lavishly than his public orations.

There are certainly only two or three prominent politicians on his side who can make sure of attracting larger audiences. The reason for this is not very easy to communicate. He combines liveliness with earnestness, vehemence with logic, pugnacity with wit. It was only after I had enjoyed several conversations with him that I realised how acute his sense of humour really is; not a sunny, joyful sense of humour, perhaps, but none the less effervescent because it is tinged with acidity. He is not the playful fellow with the cap and bells so much as the swashbuckler with a repartee always at hand in his scabbard. But he has all the buoyancy of complete self-confidence.

One of his best chances as a Liberal, and especially as a Welsh leader, lies in the fact that he has in him something of the revivalist as well as of the politician. Born and bred a fighting Nonconformist, he has come to be regarded as a militant mystic, a champion of the conscientious objector, a passive resister to privilege in Church as well as in State. A significant sidelight was thrown over his character the other day, when he went to address a meeting in Wales and found that his audience had been kidnapped by those emotional agencies which have also cleared the public-house and the racecourse and the football field. Instead of being dismayed, he immediately abandoned his meeting and proceeded to present himself, with the members of his platform, at the doors of the tabernacle where the revival was in progress. Will he contrive to introduce the methods of a revival to his party, now that it is on the threshold of the temple of victory?

MUCH of the *Century Illustrated Magazine* is of specially American interest. Several articles, however, are noticed elsewhere.

THE FIRST RUSSIAN PARLIAMENT.

SKETCHES OF ITS LEADERS.

DR. DILLON, writing in the *Contemporary Review* for June, waxes slightly dithyrambic over the Congress of the Representatives of the Zemstvos which he attended.

THE ZEMSKY CONGRESS.

He says:—

On Friday morning, May 5th, the most important, imposing and influential of all the revolutionary conventicles, the Zemsky Congress, was opened in Moscow by Count Heyden, the President of the Imperial Economic Society. It was neither more nor less than a Russian Parliament, elected and authorised by a large section of the people, to discuss Bills and enact fundamental laws to which nothing but the Imperial sanction is lacking. But they are likely to be obeyed with as much alacrity and perhaps more generally than the average statute framed by the Council of the Empire.

ITS PRESIDENT: COUNT HEYDEN.

This first of Russian Parliaments was presided over by Count Heyden:—

An elderly, benevolent-looking old gentleman, who is the very embodiment of an iron hand in a velvet glove, Count Heyden was an ideal chairman. It may well be doubted whether in any parliamentary land, not excepting England, a firmer, readier, more affable or impartial president could be found. Had it not been for the skill with which this Speaker, who looked for all the world like a Nonconformist minister, economised the time of the Congress, it would probably still be sitting.

ITS ORGANISER: M. KOKOSHKIN.

The readiest debater at the Congress was M. Kokoshkin, a new man, young, hard-working and zealous for the people's cause. Secretary of the Moscow Provincial Board, he had been member of the Committee which drew up the programme and organised the assembly; and it fell to him to defend, explain, or modify the various Bills discussed. This he did with admirable terseness, logical force and remarkable knowledge of details.

Speaking on one occasion for three hours on end—

He advocated as the best form of representative government two chambers, of which the lower would be filled by deputies returned on the basis of universal suffrage, while the upper would consist of delegates sent by the Zemstvos—as soon as they are reformed on democratic lines—in the rural districts, by the municipalities in the towns and by national bodies like the future Polish and the present Finnish Diets in the autonomous provinces.

ITS ORATOR: M. LVOFF.

Perhaps the most inspiriting speaker in the Congress was Nikolai Nikolayevitch Lvoff, a nobleman still young, very earnest, modest and altruistic. His eloquence was not based upon rhetoric: its source was warm fellow-feeling for his people, its aim truth and justice; and his appeal to the workers who thought and felt as he did produced an immediate and a powerful effect. Enthusiasm was then revealed for the first time in the assembly, and men felt impatient that they could not proceed from words to helpful deeds. N. N. Lvoff, the member for Saratoff, is well and favourably known in Russia, and his well-merited reputation for high-souled patriotism imparted weight to his words.

ITS MORAL PHILOSOPHER: M. PETRUNKEVITCH.

Dr. Dillon speaks most enthusiastically of M. Petrunkevitch. He says:—

But if one could conceive a social worker in whom were blended in one harmonious personality the most sympathetic mental and psychical qualities of St. Bernard and Mr. Gladstone, the result would offer a tolerable resemblance to the impression one has of I. I. Petrunkevitch, after a seven hours' sitting, or a ten years' acquaintance. If I were asked to put into the fewest words the essential tendency of I. I. Petrunkevitch's political teachings and strivings, I should define it as the quickening of politics with morality.

OTHER NOTABLES.

Among the other prominent members of that historic assembly were the indefatigable and eloquent M. Rodycheff, the keen satirist, M. Shchepkin, the second of the two brothers Petrunkevitch, the two Prince Dolgoroukoffs who were members of the Committee, Prince Dmitry Shakhoffskoy and the Member for Novgorod, Kolybakin. One and all they are public men of whom Russia and indeed any other country might well be proud. Yet one and all they are misdemeanants, if not criminals, in the eyes of the Autocracy.

And, therefore, swans in the eyes of Dr. Dillon. It will be interesting to see whether any of these heroes will reappear in the real Russian Parliament which is shortly to be summoned by the Tsar.

HOW THE REFERENDUM WORKS.

THE EXPERIENCE OF SWITZERLAND.

PROFESSOR CHARLES BORGEAUD, of the University of Geneva, writing in the *Arena* for May upon the practical results which have followed the introduction of the Referendum into Switzerland, maintains that they have been so good that rival parties dispute with each other as to which has the credit for its introduction:—

Since 1874 about 250 Federal Bills were passed in Switzerland. The people were consulted on twenty-eight Constitutional amendments, half of which were rejected. The Referendum was demanded on thirty Bills only. Two-thirds of the same were ultimately defeated. I need scarcely point out that it would not be right to conclude from that proportion that the Referendum, having said *No* twice while saying *Yes* once, is an instrument of reaction. In politics, sometimes a conclusive *No* has more real creative power in itself than a *Yes*.

One of the most remarkable popular votes was fatal to the system of compulsory State insurance, authorised by the National Assembly with practical unanimity. Professor Borgeaud says:—

At the end of 1899 both Houses of the Federal Assembly adopted a Bill which organised compulsory insurance against sickness and accidents, without being fair to the numerous existing associations for mutual help and without guaranteeing sufficiently how the means would be found for their scheme in future budgets. In the Council of States the Bill was carried unanimously; in the National Council one lone member voted No. On the twentieth of May, 1900, the Swiss people voted the Bill down by 342,114 suffrages against 148,022. In one Canton only, Glaris, was there a majority for acceptation.

The Bill on compulsory insurance against sickness and accidents aroused a triple opposition: the peasants, who are easily frightened by new taxes; the mutualists, who would not give up their free associations; the citizens of the Roman Cantons, who are adverse to any extension of what they call "Federal bureaucracy." All these adversaries started the demand for a Referendum, but their vote, if remaining alone, would probably have been insufficient to kill the Bill. The work of the Houses was refused even in the large industrial towns of German Switzerland, like Zurich or Basel, and in Basel the working men's quarter gave the largest majority against it.

MISS GERTRUDE BACON has accomplished the feat of being the first woman to make a voyage in an airship, and she describes her experiences on the occasion of the trip, which took place last August, in the June number of *Cassell's Magazine*.

THE MAGNIFICENCE OF THE RUSSIAN COURT.

IN the *Century Illustrated Magazine*, Mr. Herbert Hagerman, formerly second secretary to the American Embassy in St. Petersburg, describes the magnificent exclusiveness of the Russian Court. Of course no one is invited to a Court ball without having been first presented at Court—a very rare occurrence in the case of foreigners :—

If the lines are closely drawn in regard to foreigners, they are fully as severe to the Russians themselves. A full list of those who have the right to attend an ambassador's official reception or a Court ball in St. Petersburg would involve a thorough examination into the origin and nature of the Russian hierarchy and even the whole political system. This can only be touched upon here; indeed, it is so complicated that none but a Russian born and bred in the system can thoroughly understand it.

Mr. Hagerman says there is not much gaiety now at the Russian Court, and the reason he assigns for this is the excessive busyness of the Emperor :—

He probably has more to do, even in time of peace, than any other man in the world. Combine the responsibility of the President, the cabinet, Congress, the governors of States, State legislatures, and mayors of the principal cities in this country, and you will begin to form an idea of the load on the shoulders of Nicholas II. There is no finality below him, except as he permits it; and the mass of details that actually reaches him is astonishing.

THE GRAND BALL.

But when the Russian Court does hold festivities at the Winter Palace they are without doubt "more magnificent than any others in the world." Especially is this true of the grand ball which opens the Russian season :—

The suite of enormous rooms on the second floor of the palace are used. The palace is so large that probably not one fifth of its available state apartments are used on this occasion, in spite of the fact that about four thousand people are entertained.

The guests are escorted by heralds through halls and ante-rooms to the Salle Nicolas I. During this long and interesting progress one is constantly astonished at the beauty and variety of the liveries and uniforms. At every corner is stationed a palace servant clad in some gorgeous costume.

Suddenly the doors are thrown open from behind, and the orchestra, hitherto silent, bursts forth in the regal polonaise of Glinka. His Majesty Nicholas II. and the Empress Alexandra Feodorovna, proud and beautiful, appear. They pause for a moment, while the whole assemblage, actuated by a single impulse, bow low in respectful homage.

After the polonaise of the Imperial party (nothing more, in fact, than a stately walk once or twice around the room), the Emperor and Empress speak for a few minutes to the chief diplomats, and the dancing begins. The Empress herself cannot enjoy it very much, as conventionalities require her to request the ambassadors to accompany her in the contra-dances. Sometimes these gentlemen, however aristocratic or powerful, are neither young nor graceful, and, as they frequently know little or nothing about the dance, the result cannot be entirely pleasing either to themselves or to the Empress. She occasionally calls upon some young officer to dance the *deux-temps* with her, but even then she must dance quite alone: the wands of the masters of ceremony tap the floor and all other dancers immediately retire.

Just before supper, as at all Russian dances great or small, is danced the mazurka, that fascinating and peculiarly Russian dance so popular among all classes.

The supper is by no means a light meal, served with four or five wines and a servant to every four guests, all guests being seated and served simultaneously, so that when the Empress rises everyone may have finished. With five or six courses, and 4,000 people, the amount of specially-made Imperial porcelain can be imagined. No wonder the writer thinks the splendour of Russian ceremonial is almost barbaric.

MEN AND WOMEN IN WORKHOUSES.

AN anonymous writer on "A Few Characters in a Workhouse Ward" in the *Cornhill Magazine* says that "one of the first things a visitor to the workhouse cannot fail to notice is the great difference in the human and social atmosphere that pervades the men's and the women's wards." This difference is nowise of the workhouse authorities' making :—

When you enter the precincts of masculinity you interrupt a pleasant hum of conversation, and the inhabitants show a lively interest in your presence. If there are no lynx-eyed officials within sight or hearing, they may even offer the lady visitor a small amount of good-natured chaff. But, apart from this, they always greet the stranger with a cheerful "Good day," and return with interest the new visitor's nod and smile.

It is not until you have become a permanent institution as a visitor amongst them that you hear any individual or private troubles, and then rarely without deliberate seeking on your part. There, seems, too, an almost entire absence of those small jealousies that are so common amongst the women.

A gift of sweets or of anything else to the men is handed over to So-and-So, who "will share it out all fair and square." But if the Archangel Gabriel were to descend from heaven to make such a distribution among the women, he could clearly not do so without its equity being seriously called in question.

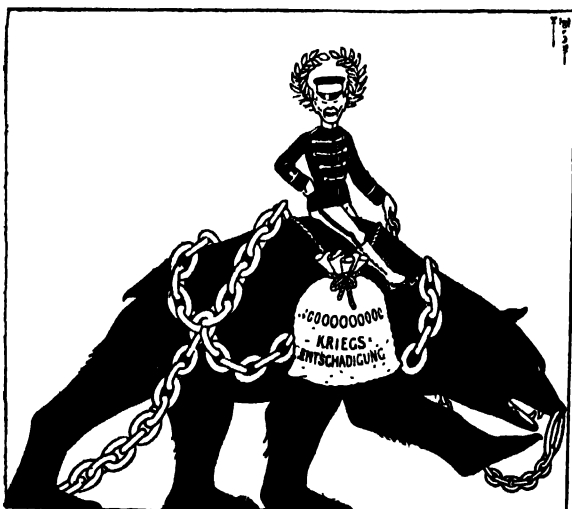
The men seem to avoid by instinct the formal rows of seats :—

The women, on the other hand, sit in rows, for the most part silent and listless, thus making the long, dreary ward, which is guiltless of decoration, look more dreary still. They return a dull, stony stare to the stranger's smile, and any remark offered generally, even one relating to so common a topic as the weather, seldom meets with a reply. The whole atmosphere is chilly and forbidding, and it needs an almost irrepressible spirit and much patience to break down the barrier of reserve.

The writer's conclusion is that the difference is inherent in the nature of men and of women. She proceeds thereby unconsciously affording one of the strongest arguments for the true emancipation of women :

A man goes out into the world and rubs shoulders with all kinds of his fellows, and thus becomes tolerant and companionable. He sees too many of the big tragedies of life to be able to retain an ill-proportioned amount of self-pity for his own troubles. In fact, the whole system of his life assists him to get the most that is possible out of existence in a workhouse ward, if either his faults or misfortunes take him there in his old age. On the other hand, a woman's life, spent more often than not quite apart from the world, in her little corner of one or two rooms, where she sees life only from her own point of view, breeds a spirit of narrowness and intolerance, and unfits her for the common life she is called upon to live in the workhouse.

IN the June *Architectural Review* Mr. Arthur C. Champneys gives the first instalment of what promises to be an interesting study—namely, a sketch of Irish Ecclesiastical Architecture from the times of the cromlech and dolmen.



THE "WHITE PERIL."

In the *Nineteenth Century* Mr. George Lynch writes on the "white peril" in a way fitted to rouse the Western conscience. The Yellow Peril is a figment of the Western imagination. The White Peril has, he says, been carved out of the continent of Asia, and the picture painted in the yellow man's blood. He recalls that on the first contact of Westerns with Asiatics the natives always received the strangers well, and continued to do so until the conduct of their visitors made a change necessary.

LOOK ON THIS PICTURE—

Mr. Lynch presents what he calls a very true and vivid pen-picture drawn by a Chinaman of the life of his people:—

Far away in the East, under such sunshine as you never saw (for even such light as you have you stain and infect with sooty smoke), on the shore of a broad river stands the house where I was born. It is one among thousands; but every one stands in its own garden, simply painted in white or grey, modest, cheerful and clean. For many miles along the valley, one after the other, they lift their blue or red tiled roofs out of a sea of green, while here or there glitters out over a clump of trees the gold enamel of some tall pagoda. The river, crossed by frequent bridges and crowded with barges and junks, bears on its clear stream the traffic of thriving village markets. For prosperous peasants people all the district, owning and tilling the fields their fathers owned and tilled before them. The soil on which they work, they may say, they and their ancestors have made. For see, almost to the summit what once were barren hills are waving green with cotton, and rice, sugar, oranges and tea. Water drawn from the river bed girdles the slopes with silver, and, falling from channel to channel in a thousand bright cascades, plashing in cisterns, chuckling in pipes, soaking and oozing in the soil, distributes freely to all alike fertility, verdure and life. . . . Healthy toil, sufficient leisure, frank hospitality, a content born of habit and undisturbed by commercial ambitions, a sense of beauty fostered by the loveliest nature in the world, and finding expression in gracious and dignified manners where it is not embodied in exquisite works of art—such are the characteristics of the people among whom I was born. . . . What have you to offer in its place, you our would-be civilisers?

Ulk.]

The Japanese Dream of Victory.

The Bear in chains, supporting the conqueror, who rejoices in a huge war indemnity

—AND ON THAT!

The picture which has been forced on the Chinaman's observation is next presented, as found in the treaty ports:—

There he sees imposing buildings, magnificent ships, well-kept roads, cleanliness, and all the evidences of civilisation by soap; but there the admirable features of the picture stop. The bars and brothels loom larger to the eyes of these people, who, except for the use of opium, which we have forced upon them, are temperate to a degree. Almost every street of these cities is dotted with saloons, where at evening the natives can watch white men getting soddenly or rowdily drunk inside these garishly lighted dens, to the twanging of a piano played by a bar-room harlot, so that they come to believe that the principal pleasure and pastime of the European is drinking. The notorious houses, kept principally by American women, their horses and carriages evidences of the lucrativeness of their occupation, he knows of. The most gentle, courteous, and polite people in the world cannot but contrast their own manners with the domineering aggressiveness and coarseness of the majority of the Europeans with whom they come in contact.

WHAT DROVE JAPAN TO WESTERN METHODS.

Mr. Lynch contrasts the rapid spread of Christianity in Japan in the sixteenth century with its slow progress in modern times. Japan has not adopted Christianity:—

The religion of the more educated portion of her population has been well described as that of an attitude of politeness towards possibilities, and there are fewer Christians in Japan at the present day than there were fifty years after the landing of St. Francis Xavier.

He insists that "the revolution in Japan was the result not of any admiration for our civilisation, our culture, our arts, manners, religion, or morals; it was adopted as the only means of defence against the White Peril." When Japan took the offensive against Russia she was waging war against the White Peril in all its manifestations. "It was the Asiatics taking up arms to stem the aggression of the West. At last the White Peril was to be faced and fought."

Mr. Lynch is quite confident of the final defeat of Russia. Already, he says, the Japanisation of China is in full progress. Chinese students are coming to Japan in great numbers. In Tokio alone there are over 4,000, while in Great Britain there are only 80 Chinese students. Japanese instructors are reorganising the Chinese army, navy, and arsenals. The two Asiatic Empires are bound to come together. European annexation in the Far East has reached a full stop:—

Now that the Russians have been driven out of Port Arthur, we will soon be under notice to quit Wai-Hai-Wai. If for any reason Japan should pick a quarrel with Germany, and insist on their evacuating Kiao-Chau, it is difficult to see what effective opposition the Germans could make. Very much the same applies to France in the case of Cochin China. The menace of the White Peril is passing away, if it has not already passed, from Eastern Asia.

The Monroe doctrine of the Pacific is now in the Asiatic mind. Mr. Lynch concludes by declaring that "as the White has created the Yellow Peril, so will the passing of the White Peril lay the ghost of the other." The idea of the Chinese people ever becoming aggressively warlike he denounces as absurd.

IN THE BRITISH MARRIAGE MARKET.

AMERICAN LADIES VERSUS COLONIALS.

A VERY smart article, certain to create a great deal of discussion on both sides of the Atlantic, is that signed "Colonial," which appears in the June *Contemporary Review* under the title "Titled Colonials *v* Titled Americans." "Colonial," who might with more tact have adopted a more impartial *nom de plume*, holds a brief for the Colonials against the Americans. Not be it understood against the Americans who stay and marry in America, but against the Americans who marry into English titled families. The latter are, he maintains, the worst sort of Americans. The best sort remain in America. The United States exports her worst, not her best.

THE STERILITY OF THE AMERICAN WIFE.

The popular delusion that an infusion of fresh American blood is reinvigorating the worn-out aristocrats of the old country is a grotesque falsehood. "Colonial" has many crows to pick with our American female imports, but his chief indictment is that they are such bad breeders. He says:—

Since 1840 thirty peers or eldest sons of peers have married in the United States. Of these thirteen have no children at all, five have no sons, and five have an only son. The total number of peers' children with American mothers is thirty-nine, of whom eighteen are sons. Since 1840 the number of titled Americans, exclusive of knights' wives, has risen to seventy-four, of whom thirty are childless and fourteen have but one child. These figures are proof, if any were needed, of the growing sterility of American women, a fact which presents a serious problem to the United States as one of the great Powers. In face of them the contention that by means of American brides fresh vigour may be imported into the British aristocracy is merely ridiculous. So far from the infusion of American blood into a decayed English family being a source of strength it is more often exactly the reverse.

THE COLONIALS NOT MUCH BETTER.

"Colonial" is compelled to admit that our female imports from the Colonies are not very much better than the Americans in this respect:—

That neither the Colonials nor the Americans can be said to contribute fresh vigour to the aristocracy may be gathered from the following table, but of the two the Colonial contributes most:—

American of Title	Their Children	Colonial of Title	Their Children
30 Peeresses	[illegible]	23 Peeresses	63
22 Wives of Baronets	4	30 Wives of Baronets	10[illegible]
22 with a Courtesy Title	26	4 with a Courtesy Title	[illegible]
74	107	5[illegible]	260

THE SUPERFICIALITY OF THE FAIR "AMERICAINE."

Sterility, however, although the chief fault of the women imported by marriage into this country, is by no means their only shortcoming. Their distinguishing characteristic is their superficiality. American women, he says—

hold perhaps the cheapest social ideal of any great people of whom we have any record, for it aims at nothing higher than "having a good time." Moved by it, women strive only to outdo one another in dress, inventiveness, and display, and in the race the true spirit of hospitality is lost.

THE AMERICAN WOMAN.

Up to a certain point she has no superior. Bright, good-natured, tactful, well dressed, she skims over the surface of things with all the grace imaginable. She has a cool head and a cold heart. Individually and collectively the word "charming" describes her to a nicety, for knowing that charm is essential to social distinction, she has cultivated it until she is a past mistress in the art. But because the world she moves in is divorced from politics and philanthropy, art and literature, she loses touch with the realities of life, the result being that her crowning defect is superficiality.

AMERICANS VERSUS COLONIALS.

"Colonial" is very much enamoured of the Anglo-Colonial wife as contrasted with the American. He says:—

Anglo-Colonial marriages are not the effect of plutocratic social ambition, but of Imperial unity. Anglo-American marriages have no sound basis whatever. Broadly speaking, they are an alliance between a title and dollars.

The Anglo-American wives represent at their strongest the two forces which are destroying the finest ideals bequeathed to the Republic by the Puritans—a false social ambition and the worship of wealth. Society in the Colonies is less shallow, less extravagant and less amusing than it is in the United States. For this reason, perhaps, a Colonial is hardly ever found in the 'smart set' of London. While Colonial influence in England touches the heart of things and titled women count for little in it, American influence in England is based on wealth, and titled women are by far the most important expression of it. In other words one is fleeting, the other is permanent. To put it shortly, Colonial influence in England is masculine, vigorous, and wholesome; American influence is feminine, frivolous, and fleeting.

WHY SHOULD THIS BE SO?

The reason why American women who marry titles are so superficial, vulgarly plutocratic, and generally objectionable is "that most of the American women with titles are the children or the grandchildren of emigrants, and in no sense represent the best families in the States. For another thing, Colonial women are not spoiled as are almost all American women, by their men folks. "In the Colonies a girl is her father's daughter. In the United States a man is very much his daughter's father." There are other reasons upon which "Colonial" discourses glibly, but these will suffice as a sample.

THE RESULT OF ANGLO-AMERICAN MARRIAGES.

The net result of Anglo-American marriages among the titled is, according to "Colonial," almost altogether bad:—

Unlike other "invasions" which have enriched England at the expense of other countries, the American represents no moral or political force. The Huguenots and French Royalists did nothing to lower the tone of English society, because their ideals were lofty, and their standards of duty, manners and public service as high as our own. This can hardly be said of the Americans who settle in this country.

He says:—

It is curious to note that there is not a single distinguished peer's son with an American mother, whereas there are several with Colonial mothers.

Peer's son, perhaps. But if grandsons are included, Mr. Winston Churchill ought to be put to the credit of the Anglo-American cross.

AN AMERICAN ESTIMATE OF OXFORD.

BY A RHODES SCHOLAR FROM NEW ENGLAND

THE *American Review of Reviews* for June publishes a most suggestive and interesting paper by Mr Paul Nixon, Rhodes Scholar from Connecticut, who is entered at Balliol College Mr Nixon's observations are necessarily the first impressions of a new comer, but they are all the more interesting on that account

TERM TIME PLAY TIME

Mr Nixon says —

If one were to form his conclusions concerning Oxford life from the observation of Oxonians during a single term and that the first, of "residence," those conclusions would inevitably be that wining, dining, and athletics were the English undergraduate's vocation, and his use of books and dons an heroically resisted avocation To a certain degree this inference is correct During term the Oxonians are remarkably gregarious animals I should say that in college the average student does not work three fourths as hard as the average American collegian The interminable breakfast and luncheon parties, the athletic games in some one of which nearly every Englishman participates for two or three hours in the afternoon the ensuing teas often protracted till the seven o'clock bell summons host and guests to "dinner in Hall", the hilarious evening wine all these in addition to the ordinary informal calls on friends consume a prodigious amount of time

WORK TIME THE VACATION

The balance is redressed by the fact that the Oxford student studies in vacation, whereas the American often has to work for his living Mr Nixon says —

Roughly, the American's work time, the college term is the Englishman's slightly interrupted play time but the American's play time, the vacation, is the Englishman's slightly interrupted work time During his eight months or more of term the average collegian in the United States may get in something like six, seven, or eight hours study a day including lectures and recitations which he must attend, during the vacations he earns money, "kills time," —does everything but read, in the Oxford sense of the word The average Oxonian not usually obliged to attend many lectures having practically no recitations and only three real examinations during his three four, or five years course spends his six months of term in cultivating the amenities of life with only a two or three hours daily dab at the dusty tome on his shelf But during the long vacations, covering more than half the year that Oxonian free from financial care and surfeited with frolicking sows his seed for the harvest of knowledge Eventually then through out the year English and American collegian study approximately the same number of hours

THE WIDER CULTURE OF THE ENGLISH

Mr Nixon is much impressed by the fact that—

the amount of information assimilated by American students is not to be compared with that of the English of our own It is a fact that in general reading the more studious Oxonian has us at his mercy in every form of classical scholarship except that of painstaking investigation of minute obscurities, a favourite pastime in Germany and America we are "down and out" The ordinary American collegian, maybe, has heard such names as Murillo and Titian He's an exception if even the names come to his mind spontaneously If he should be asked whether they were sculptors or painters, he'd probably think it a "catch" question, and answer, "musicians"

This comparative scantiness of general reading is due, Mr Nixon thinks, to the fact that most English graduates come from homes where they have the run of good libraries, into which they are turned loose, while the American boy is set to work in the stable and in the garden. Another cause is that the American scholar is crammed with a little of nearly everything under the sun, and this smattering education also tells on classical work

THEIR KEENER INTEREST IN POLITICS

Mr Nixon notes that there is a much keener interest in contemporary politics in Oxford than in American colleges —

A class of collegians already more or less definitely marked as the politicians of the next generation, exists here, a fact which seems odd to an American But the interest in State affairs does not stop with this body of men We have, of course, no such class of prospective politicians known during their college career, and by virtue of their college career, as almost certain to play a large part in ruling their country With the evils of such a condition we also lose the benefit—the having a number of intelligent, well educated men who have been from youth afforded a special incentive to making themselves acquainted with their country's government its internal and external relations and its needs The second class, also of collegians particularly interested in current affairs we lack

It is to be hoped that the Rhodes trustees will carefully collect and preserve in their archives all such articles as this of Mr Nixon They will be a most interesting and valuable collection

Coming Men on Coming Questions

Of this series of papers, ten have now been published. The latest issues are Mr George Barnes on Old Age Pensions, Mr Balfour's Imperial Defence Speech, with Lord Esher's Explanatory Letter, Mr Haldane's on the Executive Brain of the British Empire and Mr Keir Hardie on Woman's Suffrage In the number devoted to the next Prime Minister are collected the more important utterances of C B on the most important public questions of the day Among the numbers in preparation are the following True versus False Imperialism, by Sir Robert Reid the Labour Party, by Mr J R Macdonald the Welsh Revolt by Mr Lloyd George Self Government for South Africa, by Thomas Shaw

"Round-about" and the Correspondence Club.

It has been decided to raise the annual subscription of the Correspondence Club to one guinea, and the English Speakers Link to 5s, for inland members, for residents abroad 10s 6d and 2s 6d *Round about* will in future be published quarterly instead of monthly, and all inquiries should be addressed to Carbis Bay, Lelant, Cornwall It is now possible for members to exchange letters with English speakers in Greece, Spain, Saxony, the British Isles, Africa, America, Australia, Austria, Belgium, Canada, Holland, India, Japan, China, New Zealand, Russia, Prussia, Norway, etc, the lists being printed separately, and issued to members only The June *Round about* concludes the interesting series of Letters From a Japanese Gentleman to an English Lady, with his conversion to European ideas of courtship before marriage, and a discussion is started in the Editorial concerning the "Awakening of Man," showing how changes of opinion on all questions relating to the world as the home sphere of humanity are taking place among the civilised nations

ALFONSO XIII. OF SPAIN.

His Education and Character.

The coming of the youngest king in Europe to visit King Edward VII. naturally excites much interest in London. Mr. L. Higgin contributes to the *Fortnightly Review* for June an interesting sketch of the young-monarch. No Spanish king has visited England since the days of Bloody Mary; but Alfonso XII., before he was king, studied at Sandhurst in the seventies.

"THIS KING DOES!"

Mr. Higgin tells the following story of his childhood:—

While still a child in the nursery, his governess rebuked him for putting his knife in his mouth. "Gentlemen never eat like that," she said.

"But I am a king," remarked the child.

"Kings still less put knives in their mouths," said the governess.

"This King does!" was the reply.

He is still a youth of decision and unconventionality:—

He is extremely fond of motoring, and is said to be an accomplished *chauffeur*. When remonstrated with on not keeping up the traditional state of a Spanish King, he replied: "I mean to be a modern King, and go everywhere and do everything that other Kings do."

He also expressed to some of his advisers who had spoken of the advisability of his making an early marriage his determination on this subject: "Of one thing you may be quite certain, I am not going to marry a photograph! I must see my future wife and choose her myself."

HIS EDUCATION: PITY A POOR PRINCE!

Mr. Higgin, after speaking of his tutors, says:—

The apportioning out of each day's duties shows how practical and consistent his studies were. He rose at seven, and after a cold bath had half an hour's practice in hygienic gymnastics, afterwards breakfasting with the Queen. From nine to ten languages, alternate days being given to English and French, which he was also accustomed to use in conversation, German he learned as his natural language in the same manner as Spanish; from ten till eleven he rode in the Casa de Campo or in El Pardo; at eleven military exercises with the drill sergeant; at twelve luncheon, which he took with his military instructors; at one drawing or German alternately; at two either military practice or recreation; from half-past three to half-past four a lesson in universal history, or a fencing class with the boys of his own age who shared these and his military practice; from half-past five to half-past six political economy and administration. Once a week general literature and classics. After dinner, at half-past seven, he had his music lesson, and retired to rest at half-past nine.

HIS OUT-OF-DOOR TRAINING.

Even this list of studies did not exhaust the cramming to which he was subjected:—

Time has been found for him to make a practical and experimental acquaintance with agriculture, which he learned on the large Royal estate of El Pardo, which extends from almost the gates of Madrid to the foot of the Guadarramas.

The result of all this careful training is that Alfonso XIII. is perhaps singularly well-informed on general subjects, and not only in the history and literature of his own country, but in that of other countries. He speaks equally well German, English, and French, and has shown himself a graceful and good impromptu speaker in his own language.

Military exercises have always had the strongest attraction for the young King. When still a child his delight was to play at soldiers with the children of the Guard, and this led later on to the "Boys' Regiment," as it was called, composed of lads about his own age, children for the most part of the aristocracy, who were drilled, and taught military evolutions along with him, and whom he eventually commanded, under the superintendence of his instructors. About three months of each year were spent by the Royal Family at Santander, and here, the close routine of study being relaxed, the King passed his time very much on the water, learning the management of ships, and becoming not only a good sailor, but well acquainted with navigation and naval gunnery.

HOW HE GOT RID OF HIS PRIME MINISTER.

Alfonso, although only a boy, got rid of his unpopular Tory Minister, Señor Maura, by an exercise of the Royal prerogative, to which Edward VII. may some day resort if Mr. Balfour continues much longer to set at defiance the wishes of the majority of the nation:—

The King objected to the nomination of a certain General as Chief of the Staff, and expressed his desire that General Polavieja should be appointed, a man who is an excellent soldier and well known for honesty and straightforwardness, since, it is said, "he remains a poor man though he has occupied high posts." Maura insisted on the ministerial candidate, and the King at a meeting of the Council simply refused to sign the decree. There was nothing for it but resignation on the part of the Ministry.

A SYMPATHETIC SOVEREIGN.

The King is very sympathetic, very fond of travel, full of interest in all things, and a great admirer of England:—

In the troubles and sorrows of his people Alfonso XIII., like his father, takes a warm interest. In the recent disastrous accident to the new reservoir of the water supply of Madrid, he was on the scene as soon as he heard of it, and his remark to those who greeted him on his arrival was characteristic. A number of the people who had already reached the ground, rushed to meet his carriage, giving loud cries of "Viva al Rey;" "Nada, nada de vivas," he said—"no vivas; to work, to succour the victims." Stores of all that could be useful to the wounded were instantly sent from the Palace, and the King, later, visited in the hospitals the wounded who had been rescued alive from the ruins.

"LYCIDAS."

In his notice of the New Gallery Exhibition, in the *Art Journal* for June, Mr. Frank Rinder begins with a reference to Mr. Havard Thomas's "Lycidas," the presence of which is, perhaps, the chief thing of note in the eighteenth Summer Exhibition. He writes:—

Because, without justification, Mr. Thomas's life-size statue in wax was rejected by the Academy, it has suffered from an excess of praise.

As an extraordinarily close, earnest, and able study of the human figure, it deserves high commendation; its shortcomings, as it seems to me, are an incertitude of pose and a too unquestioning adherence to proportions as present in the model—some of the details are exquisite. To imbue it with a "living life," such as summons us to the heights in Milton's lament for his drowned friend, with a life and beauty such as dominate the stone in great pieces of sculpture, it would be necessary for Mr. Thomas to relinquish minute truthfulness to the model, in order to attain those larger phrases, those bigger aspects of truth, celebrated in a hundred ways in noble art.

As a foundation for future endeavour, the "Lycidas" takes a prominent place among modern works; judged as an end in itself, from the standpoint of an expressive design, of a satisfyingly-proportioned figure, of rhythm in the round, it is less of an achievement than several earlier pieces by Mr. Thomas on a much smaller scale.

AN INTERVIEW WITH FATHER GAPON.

By Mr G H. Perris.

THE *Grand Magazine* opens with an interview by Mr. G. H. Perris with "Father Gapon on the Russian Revolution," evidently assuming the revolution as a fact. *Vide* the articles signed "R. L." in recent numbers of the *Fortnightly Review*. Mr. Perris spent a day with Father Gapon "amid the dull respectability of Suburban London."

ONE OF A HUGE FAMILY.

Father Gapon is but thirty three years of age, of a humble peasant family in Poltava province, South Russia, descended from those Dnieper Cossacks famed in Russian history for their exploits against Turks and Tartars He is the eldest of nineteen children, six men and four girls being still living —

The eloquent gesture, in which the whole slight but well proportioned frame seems to have part, the rare outbreak of an almost boyish gaiety, the gentle touch and charming smile, and yet more the impetuous rush of speech, simple, direct, and graphic, the fire of determination that burns in every phrase, the complete possession by this one supreme idea that Russia must and shall be free as I recall these characteristics of George Gapon I understand how it is that the St Petersburg workmen worship him, how it is that his is a name to conjure with throughout the dark Empire

HIS EDUCATION.

The only one of the nineteen children not physically strong, and being fond of study, he was admitted to the primary school for the children of the clergy, and later to the Ecclesiastical seminary

After passing through the seminary he, for some time took to a lay career as a statistician of the Zemstvo Subsequently he met a young girl, whom he married and who awoke in him the consciousness of how much good might be done to the masses through the priest's calling He entered the St Petersburg Ecclesiastical Academy, where his independence of mind manifested itself While yet a student of the Academy he sometimes went to spend days and nights among the 'bossiaks' —the unemployed outcasts of society and won a great popularity among them He next became almoner of the Prison for the Transported, and came to know intimately the life of the prisoners, and of the factory and workshop hands in the capital

No recognisable portrait of him can be published, as it would lead to his discovery

HIS CONVERSION TO VIOLENCE

Asked by Mr Perris why he thought that the revolt of January last still continued in other words, that there is revolution or its beginnings in Russia— Father Gapon replied that the continuance of strikes showed the working-class dissatisfaction —

And the simple reason of it is that the workmen, from bitter experience, understand at last that no partial economic concessions can be of any permanent value if the people do not possess freedom of speech and of union and political rights enabling them to look after their own interests

The events of January 22nd killed in him the last hope of really bettering the people's lot by purely peaceful means He is a non resister no longer —

Leaders of both the great revolutionary parties, the Social Democrats and the Socialist Revolutionists, with whom I have spoken acknowledge that January 22nd is a line of demarcation between two periods of Russian life, and that the revival of energy, the development of strength in the movement exceed the utmost they had expected

THE FUTURE OF THE "REVOLUTION."

Nevertheless, Father Gapon thinks the present Government "may succeed in dragging on" some time longer. Asked as to his confidence in the future of the revolutionary movement, he replied.—

Notwithstanding rivalry and quarrelling among certain portions of the revolutionary forces, there is a powerful tendency to draw together as has been manifested in the agreement to which I have referred Hitherto the centrifugal tendencies have been strong enough to prevent the formation of one united militant committee which, in the name of all parties, would direct the Pan Russian uprising But we are now getting to this point

The work of such a Committee, which it is Father Gapon's dream to form —

must be to lay down the general plan of the national rising and to prepare the necessary means for it The next steps will be to procure the liberation of political and religious prisoners and exiles, the arming of the people, and the convening of Constituent Assemblies for the different nations within the Empire, on the principle of universal, direct, and equal suffrage and secret ballot As soon as these are convened the Committee must dissolve, putting its powers into the hands of the representative Conventions

---

WOMEN VOTING IN THE CHURCH.

THE *Sunday at Home* for June records the publication in Germany of a pamphlet containing the opinions of leading German theologians on this vexed question ("Die urtheilen Theologen uber das Kirchliche Stimmrecht der Frauen" Hamburg Martha Zietz) These opinions were in response to inquiries sent out by the German Union for woman's suffrage The following questions were asked —

Did Jesus prescribe equality of rights for men and women? Did this equality exist in the primitive church? What is your personal opinion?

In reply to the first two questions, most of the theologians assert that the solution of the problem does not depend upon the attitude of Christ or on the rule observed by the primitive church The Christian Church of the present has, they think, the right to decide the question for itself, in accordance with the modern social ideas and its own peculiar needs

In reply to the third question, the great majority of the theologians and pastors are in favour of the right of women to a vote Harnack, for instance, thinks that it is now necessary to organise authoritatively the co operation of women in church work Pfleiderer says that anyone who should co operate should also have the right to deliberate, and whoever has the right to deliberate should also have the right to vote Many others lay stress upon the advantage of having women to direct the early religious education of the young

MARIAN GARDINER contributes an interesting little article to the *Girls Realm* for June on the Bushey School of Painting and its new director, Miss Lucy Kemp-Welch Professor von Herkomer severed his connection with the school last July, and after it had been deserted for six months, Miss Kemp-Welch, a former pupil, was induced to save the school and carry on its traditions. The labour of reorganisation was no small task, but it was possible to reopen the school in January, and soon, no doubt, the maximum number of students will again be reached.

IN PRAISE OF THE ALIEN.

WANTED, MORE JEWISH IMMIGRANTS!

THERE is an excellent article by Mr. M J. Landa in the *Fortnightly Review*, the unwritten moral of which is that instead of bringing in a Bill to restrict alien immigration, the true interest of Great Britain, and especially of the British working-man, lies in introducing another Bill for the purpose of attracting more aliens of the Jewish race to this country. Mr Landa, who writes from close practical acquaintance with the Jews of Whitechapel, proves that the Polish Jewish immigrant is, physically and morally, a better man than the English East-Ender Of one lot of Russian reservists who arrived in January we are told "They are well developed, well fed, big chested men, with legs like moulded pillars" Major General Moody declared that he had never seen a finer lot of men, taken as a whole Their health is so excellent that there has been only one case of illness in the shelter in six years

The Jewish mothers are better mothers than English mothers They feed their children from the breast and not from the bottle Jewish children at twelve years of age weigh seven pounds more than English children of the same class, and stand two inches higher Whitechapel is the best vaccinated district in London

THE JEWS MORE MORAL THAN THE BRITONS

Their death rate is low, and they are so moral and sober that they have converted East End hells into respectable homes. The Rev W. H Davies, the Rector of Spitalfields told the Commission —

> The Jew has wiped out whole areas of vice and infamy Where once we had houses in streets like Flower and Dean Street, and various streets of that kind, now dwellings like the Rothschild Buildings stand I suppose it was as near a hell upon earth as it was possible to make a place and all that has been wiped out There are streets, too, where they have gone into houses of ill fame, notoriously bad houses, and they have taken one room and lived there They have been insulted and persecuted, but they have held their ground They have never quarrelled Then they have taken a second room, or some other Jewish family has taken a second room, until gradually they have got the whole house, and so purified the whole street by excluding the objectionable people who lived there It is a most marvellous thing, but they have done it (Minutes of Evidence, Cd 1,742, answer 9,768)

No wonder the police sigh for the Jews to move into Wapping, which gives them more trouble than any district but Stepney.

THEIR ZEAL FOR EDUCATION.

The Jewish passion for education is notorious. But it is not generally known how much more regularly they attend school than do the Gentiles —

> The average school attendance in the country is 85 per cent, in Whitechapel it is about 95—it is never less than that in a group of schools in the heart of Whitechapel of which I am a manager—while the Leylands Jewish school at Leeds some years ago won a prize of a piano for the best attendance in the kingdom for a year with the wonderful figure of 99 47 per cent The schoolmaster, Mr. J Watson, a non-Jew, claims a world's record in attendance for this school; for seven years it has not been under 98 per cent There are nearly 1,000 children in the school, and in a letter, dated January 13th last, Mr. Watson writes to me "I am proud of my scholars, most of whom will make citizens whom any nation may be delighted to possess." The same enthusiastic tribute to their Jewish scholars was paid by every East End schoolmaster—all non-Jews—who gave evidence before the Alien Commission.

THEY REDUCE THE POOR RATES—

The criminal alien is more often an American than a Jew The Americans, who are only 6 per cent. of the alien population, contribute 23½ of the alien criminality The Russians and Poles, who are 33 per cent of the population, only contribute 17 per cent. of the crime As for the accusation that they add to our pauperism and increase the poor rate, the very reverse is the truth Whitechapel is the most Jewish alien district in the country It is almost the only district where the number of outdoor paupers has been reduced almost to nothing, while the increase of indoor paupers is only 29 per cent in thirty-three years, as against 89 5 per cent in the rest of the Metropolis Clearly, if this be so, the more Jewish aliens we can import the lower will be the poor rate.

AND CREATE NEW INDUSTRIES.

But it is urged that these Jewish aliens blackleg, undersell, and oust the British working man To this Mr Landa replies that they have created work for the working man He quotes from the Commission the report as follows

> The development of the three main industries—tailoring, cabinet making and shoemaking in which the aliens engage has undoubtedly been beneficial in various ways, it has increased the demand for, and the manufacture not only of goods made in this country (which were formerly imported from abroad), but of the materials used in them, thus indirectly giving employment to native workers

Wages have gone up instead of going down after the Jews came. He says —

> During his election campaign in North Leeds in July, 1902, Mr Rowland Barran, M P, a member of what is probably the largest firm of ready made clothiers in the world, stated that the Jews had enabled England to maintain practically a monopoly of the clothing trade of the world Within the last twenty years huge factories have been erected in Leeds, and it is computed that fully 20,000 non Jewish workers are engaged there in an industry which the city owes almost entirely to the aliens

It was the Jews who introduced the ladies' tailoring industry into England Now 20,000 persons are employed in this business in England, doing work that formerly was sent abroad So it is in the cigarette and waterproof industry The only "industry" that seems to have suffered from the coming of the Jews is the trade in drink and the keeping of houses of ill fame

Mr. Landa should obtain the consent of the publishers of the *Fortnightly Review* to the reprinting of this article as a campaign document. Before the House goes into Committee on the Aliens Bill a copy should be in the hand of every M.P.

MOROCCO'S CHALLENGE TO CHRISTENDOM.

THE *American Review of Reviews* publishes a very interesting article by Mr R. N. L. Johnston, one-time British Consul, on "Morocco and the French Occupation." Everything, he thinks, depends upon

Melbourne Punch.]

"Morocco Bound."

KAISER WILH[illegible] that fell with his imposed majesty [illegible] a gift from me

the Ulemas, or learned Moslem priests who control the situation. Their position was recently summed up by a typical member of the class as follows:—

What do you want of us, you Christians? Do we owe you money? We can, and will, pay you. Have we invaded your land? Did we beg you to come and tread on our soil? Have we not continuously discouraged your coming? You say our country is "disturbed," that the government is weak, and so on. Is that your affair or ours? Surely your steamer which brought you here can take you back to your own shores? What have you done that we should love you? You have taught many of us, a nation of water drinkers, to be drunkards. You have also smuggled into our country magazine rifles by the thousand and sold them at 100 per cent profit, to our rebels, causing the very mischief you complain about. You have first duped and then betrayed our Sultan. Now you say you will help us to govern. We decline your help. We are told in the writings of Allah "Oh, true believers, take not the Jews or Christians for your friends," and, again, "Oh, true believers, take not the unbelievers for your protectors." You would help our Sultan to repress rebellion, and we are to allow you to slaughter our erring brethren? Never! When we have declined your pacific intervention, what then? You will use force. So be it. We also shall fight, for our land, our families, our dead saints, and our living faith. With this difference, we trust in our God, you have none.

Mr Johnston says that if France requires an Algerian army of one hundred and fifty thousand men to overawe her native subjects of that colony, in Morocco she has to face this solid fact. Half a million of men, of the plains and of the mountains, hardy and enduring, accustomed from early youth to carry arms, inured to long marches by night and by day, and every man of them resolved to fight to the death for the land and the faith. A people which believes in its heart of hearts that there is an Almighty God battling for Islam, and that, should death come, to fall in the holy war is a passport to Paradise.

An Indomitable British Matron.

THE abolition of the duty on paper made the fortune of the daily press, but incidentally it gave the death blow to some weekly papers which perished beneath the new competition. One of those which went to the wall was owned and edited by a North country journalist who married a Tyneside wife. His health broke down, his paper failed, and the wife, with a family of three children, had everything thrown upon her shoulders. She built up a business, only to have it seized by her husband's creditors. The Married Woman's Property Act enabled her to build up another, by means of which she gave a good education to her children and maintained her husband till his death. She then sold her business and took a boarding house in London, and, after having lost her money she went out to work as housekeeper, companion, and secretary. For thirty five years she has paid her way, reared her children, and maintained herself. But now, at the age of seventy seven, this fine specimen of a Tyneside matron has gone lame, and is left, after this stout and, on the whole, victorious battle against heavy odds, derelict and helpless. Surely there ought to be some shelter or harbour of refuge where so storm battered a craft could be left to end her days in peace. Should any of my readers wish to help this old lady, or if they have anything practical to suggest I shall be very glad to put them in communication with her if they address a letter to me on the subject.

[*Berlin.*

Morocco in Berlin.

YET ANOTHER FISHERY DISPUTE.

It is with a groan of horror and despair that we read in the *American Review of Reviews* for June the papers by Editor M'Grath of Newfoundland and Mr. Winthrop Marvin, proclaiming that there is once more a fishery dispute between Newfoundland and the United States.

WHAT NEWFOUNDLAND SAYS.

Mr. M'Grath announces that as a reply to the action of the American Senate in rejecting the Bond-Hay Reciprocity Treaty, the Newfoundland Legislature has enacted a law cancelling the privileges hitherto enjoyed by the American fishermen under the *modus vivendi*, and restricting them to their treaty rights alone.

The compromise by which United States vessels now obtain bait and other concessions in these waters is merely a temporary one, arranged in 1888 for two years only, but renewed from season to season by Canada and Newfoundland.

The Bond-Hay treaty having failed, it is urged that not alone should the *modus vivendi* be abolished, but that the Americans should be deprived of the food-herring fishery privileges besides. They would thus be thrown back upon the treaty of 1818, the concessions under which are comparatively valueless to them now. When it was drafted there were large fisheries in the St. Lawrence Gulf, upon which the west coast fronts. At present the chief fishing is done on the Grand Banks, off the eastern coast; the western seaboard, being remote from that, is worthless to the Americans even with its treaty rights, they having to rely for bait and landfall on the eastern shore, where they have no status except such as the *modus vivendi* grants them. Clearly, then, if that is cancelled, they will be shut out from Newfoundland waters and deprived of all privileges, as theirs is a deep-sea fishery; and as bait and outfits are necessary for the success of the enterprise, exclusion from these waters must leave them helpless and cripple their industry. These conditions also apply, though in a less degree, to the Canadian seaboard, as the bait supply there is small and the coast much farther from the Banks than Newfoundland, so the latter country holds the key to the whole position.

WHAT NEW ENGLAND REPLIES.

Mr. Marvin says that Newfoundland, in striking at the New England fishery because the Senate rejected the reciprocity treaty is strangely illogical, for New England, as a matter of fact, seems to be almost the only section where the treaty has won any considerable interest and favour. Unquestionably, if Sir Robert Bond and his colleagues enforce the Bait Act against the Americans as they have long enforced it against the French, a serious blow will be dealt to the fishermen of Maine and Massachusetts.

But it is altogether premature to boast that even this will destroy the New England fisheries. Our New England sea-folk are shrewd and tenacious men. Already schooners are being equipped with special appliances to catch their own bait, while long-mooted plans of supplying the fleets at sea from steam tenders may now be attempted. Newfoundland must not forget that there was never a commercial war which did not cut both ways. There will be desperate poverty on her coasts if her people are forbidden to sell their bait to the only fishermen who have the means to buy it. It is not fair to New England, or true to recorded facts, to say that New England influence, and influence of one single industry at that, has now alone defeated the plan, long cherished by far-seeing men, of reciprocity with Newfoundland. The Hay-Bond treaty, in the form in which the United States Senate recently considered it, was acceptable to the Maine and Massachussetts fishing interests. It had been so modified that cured and preserved fish was no longer on the free list, but fresh fish, uncured, was non-dutiable. This was not all that Newfoundland had desired, but it was an important concession to the ancient colony, for the fresh fish of Canada pays, in the United States, a duty of three-fourths of a cent or a cent a pound. To admit cured and preserved fish also free of duty would inevitably transfer the packing establishments of the New England coast to Newfoundland, with its cheap labour, and thus destroy, not only the calling of those New Englanders who catch fish from the sea, but the calling of those who, on the land, put this fish through processes akin to manufacturing.

There are one hundred thousand persons in Maine and Massachusetts who are dependent, directly or indirectly, on the ocean fisheries.

ROYAL ACADEMY STATISTICS.

The June number of the *Art Journal*, in addition to the notice by Mr. A. C. R. Carter, gives some interesting statistics of the present 137th annual exhibition of the Royal Academy.

It is stated that there are at present thirty-eight Academicians,- the two others being as yet R.A.'s-elect only. Ten of these are absentees, and the remaining twenty-eight send in all ninety exhibits.

There are thirty Associates, three only being unrepresented. The twenty-seven A.R.A.'s have sent another ninety of the exhibits, Mr. Cope, another portraitist, being the only one to send six oils. By an unwritten law, the writer says, Associates who contribute more than four works are apt to have one at least ill-hung. In this way he accounts for the fact that only two painters have exceeded this number.

As has been stated, Members and Associates are responsible for only 180 exhibits, about ten per cent. of the whole. It is further estimated that on the average each work attracts about 150 persons, making the attendance work out roughly at 300,000 for the three months. The total number of exhibits this year is 1,832; in 1904 it was 1,842. Of these, non-members are responsible for 1,645, 902 men sending 1,195 works and 357 women 450 works.

WHAT IS LIFE?

BY SIR OLIVER LODGE.

IN the *North American Review* for May Sir Oliver Lodge writes briefly upon the all-absorbing subject as to what Life really is. Incidentally he discusses the important function played by mere size.

THE IMPORTANCE OF MERE BULK.

If this planet is inhabited, it is because it is not too small. If the sun heats the solar system, it is because it is sufficiently big :—

Lumps of matter scattered throughout space, which, though they may be as large as a haystack or a mountain, or as the British Isles, or even Europe, are yet too small to hold any trace of air to their surface, and cannot in any intelligible sense of the word be regarded as habitable. If the aggregate of matter is large enough, very much larger than any planet, as large as a million earths aggregated together, it acquires the property of conspicuous radioactivity, it becomes a self-heating and self-luminous body, able to keep the ether violently agitated in all space round it, and becomes, in fact, a central sun, and source of heat, solely because of its enormous size combined with the fact of the mutual gravitative attraction of its constituent particles. No body of moderate size could perform this function, nor act as a perennial furnace to the rest.

HOW BIG IS AN ATOM?

The almost inconceivable minuteness of the atom, which again is subdivided into infinitely smaller electrons, is thus set out :—

A billion, that is a million millions, of atoms is truly an immense number, but the resulting aggregate is still excessively minute. A portion of substance consisting of a billion atoms is only barely visible with the highest power of a microscope; and a speck or granule, in order to be visible to the naked eye, like a grain of lycopodium-dust, must be a million times bigger still.

An atom, therefore, needs to be multiplied a million billion times before it becomes visible. If anyone had told the scientists of former days such a tale as this, they would have laughed it to scorn.

WHAT IS LIFE AFTER ALL?

Is life the mere result of a material aggregate of atoms? :—

Our complex molecular aggregate has shown itself capable of extraordinary and most interesting processes, has proved capable of constituting the material vehicle of life, the natural basis of living organisms, and even of mind, and of that further development of mind, consciousness, and sense of freedom, overshadowed by the possibility of wilful error or sin, which is the conspicuous attribute of life which is distinctly human.

Sir Oliver Lodge has his doubts as to the possibility of life being engendered out of death :—

Life may be something not only ultra-terrestrial, but even immaterial, something outside our present categories of matter and energy; as real as they are, but different, and utilising them for its own purpose. What is certain is that life possesses the power of vitalising the complex material aggregates which exist on this planet, and of utilising their energies for a time to display itself amid terrestrial surroundings; and then it seems to disappear or evaporate whence it came. It is perpetually arriving and perpetually disappearing. While it is here the animated material body moves about and strives after many objects, some worthy, some unworthy; it acquires thereby a certain individuality, a certain character.

THE BIRTH OF INDIVIDUALITY.

It realises *itself*, moreover, becoming conscious of its own mental and spiritual existence; and it begins to explore the Mind which, like its own, it conceives must underlie the material fabric—half displayed, half concealed by the environment, and intelligible only to a kindred spirit. Thus the scheme of law and order dimly dawns on the nascent soul, and it begins to form clear conceptions of truth, goodness, and beauty; it may achieve something of a permanent value, as a work of art or of literature, it may enter regions of emotion and may evolve ideas of the loftiest kind: it may degrade itself below the beasts, or it may soar till it is almost divine. Is it the material molecular aggregate that has of its own unaided latent power generated this individuality, acquired this character, felt these emotions, evolved those ideas? There are some who try to think it is.

THE UNSEEN UNIVERSE.

There are others who recognise in this extraordinary development a contact between this material frame of things and a universe higher and other than anything known to our senses; a universe not dominated by Physics and Chemistry, but utilising the interactions of matter for its own purposes; a universe where the human spirit is more at home than it is among these temporary collocations of atoms; a universe capable of infinite development, of noble contemplation, and of lofty joy, long after this planet—nay, the whole solar system—shall have fulfilled its present spire of destiny and retired cold and lifeless upon its endless way.

WHAT IS PERSONALITY?

AN INSOLUBLE PROBLEM: M. CHARLES RICHET.

IN the *Annals of Psychical Science* for May Professor Charles Richet discusses the profound problem of personality. He dissects the elements which go to form our personality. It arises first and principally from the memory of our past existence; then it emanates from all the sensations which come to us, sensations of our internal organs, sensations of the outside world, consciousness of effort and of muscular movement.

"THE COLOSSAL ERROR OF THE SPIRITISTS."

After describing well-known cases of multiple personality, he proceeds to speak as follows concerning the phenomena of trance mediumship and automatic writing :—

Many of these mediums appear to live a perfectly normal life; at no time do they lose consciousness; yet, while remaining conscious, they can, at certain times, create a whole series of thoughts which have no connection with their consciousness, yet systematic and co-ordinated, and appearing, according to the most perfect logical rules, to belong to another person. It really seems, then, that another person has intervened, so that the colossal error of the spiritualists is very easily understood. It is, in a certain measure, excusable, on account of our profound ignorance of the almost infinite resources of the intelligence and the malleability of the consciousness.

Examples have been given of automatic writing obtained with both hands simultaneously, as though there were two new personages, each having his own tastes, his style, his special personality. And yet the medium, who wrote with both hands at once, was at the same time carrying on an independent conversation. But really, for a psychologist, these phenomena have only the appearance of being supernatural. They prove to us the prodigious suppleness of the human intelligence, that mystery of mysteries, and the possible co-existence of various simultaneous consciousnesses.

THE COLOSSAL MISTAKE OF THE SCIENTIST.

This is hardly worthy of M. Richet. He might use the same grandiloquent language to explain away the existence of his son if we could imagine that he had used a bad telephone to communicate with his

father before the latter was aware of the existence of that useful invention. How learnedly he would repudiate the "colossal error" of supposing that it could possibly be the actual voice of his living son instantaneously audible at a distance of a hundred miles, and how subtle and ingenious and far-fetched the explanations that he would put forward to explain this mystery of mysteries. But it is difficult to credit so sane and courageous an investigator as M. Richet with really accepting these unworthy subterfuges. I prefer to think he is covertly covering his scientific sceptical friends with ridicule by suggesting the monstrous nonsense they must resort to if they persist in rejecting the spiritistic hypothesis.

THE MASTER OF THE HOUSE.

M. Richet makes the profound observation that the varying phases of personality induced by hypnotism or otherwise are, after all, only phases. The Master of the House never loses his control. Even under hypnotic suggestion, he asserts, subjects never do themselves real harm. They only make believe :—

These transformations of personality appear to me to be at once *fictitious* and *real*. They have that groundwork of simulation and comedy which always persists in us. But, behind all these personalities which manifest so plainly, there lives and thinks a personality much deeper, one which we never perceive, which is in us, which weighs all our actions, which may therefore rectify them, and at a given moment may stop us on the fatal brink. By knowing ourselves, in fact, we shall know the greatest mystery of the universe which is within our reach.

THE DUTY OF PSYCHIC INVESTIGATION.

ITS DANGERS AND POSSIBILITIES.

MRS. LAURA S. FINCH contributes a carefully-written paper "Should the Dead be Recalled?" to the *Annals of Psychical Science* for May. She insists very strongly upon the duty of recalling the dead, if they can be recalled, in order to instruct the living :—

If spiritism can prove survival, we dare not allow considerations of danger in the investigation thereof to weigh with us, to stay our quest. At no matter what price, we must push forward; as pioneers we may suffer from ignorance and inexperience, but others will reap the reward and will benefit by our efforts. Let us not put aside this work—forego our efforts to enter into communication with the departed—from any cowardly fear of the moral and physical dangers we may be incurring.

The development of what is called mediumship is only the development in ourselves of that psychic element in Nature which is identical with the eternal. Mediumship is by no means a force at the disposal of a privileged few; it is a faculty more or less latent in every man; for we must bear in mind that no faculty is bestowed on one individual and entirely withheld from another. All development is unsettling, and is accompanied by danger to a greater or lesser extent. Life is one continuous example of this.

Because there are perils to face when opening up new country, is exploration to be forbidden? We are told it is wrong to develop the psychic faculty; but wrong—that is "evil"—is only that which retards the ascent of humanity, and the refusal to use any faculty whatsoever is retarding this ascent.

I am aware of the nature of the dangers besetting the use of the psychic faculties. The man whose will is weak, who cannot control his passions and his impulses in ordinary life, cannot hope to escape either the dangers of his normal existence, or the dangers of the spiritual surroundings he may create for himself when he begins to develop his latent psychical faculties.

THE BEST AQUARIUM IN THE WORLD.

MR. HAROLD J. SHEPSTONE, writing in the June number of the *Pall Mall Magazine*, describes the Aquarium of New York, which, he says, is the largest, most up-to-date, and finest-equipped aquarium in the world. As a home for marine specimens, the building is only eight years old, yet is a model institution, not only on account of its immense size, but because there have been collected and kept alive in it a greater variety of fishes than has elsewhere been possible.

The collection includes 3,000 fishes, representing 250 different species. There are seven large pools, ninety-four wall tanks, four turtle tanks, and many smaller tanks. Most other aquaria are stocked chiefly with fish from local waters; the New York Aquarium contains representatives of the principal genera from the Arctic waters to the Gulf of Mexico, and thus requires elaborate equipment. For ten months of the year, we learn, the water has to be heated for the use of the tropical species, and for four or five months a refrigerating machine is required for the water for other species. The bill of fare is costly.

HOW MOSQUITOES GROW.

In the central circular pool, which is six feet deep, are the long brown sand-sharks and the dog-fish. On the margin of this pool are closed glass jars in which may be seen how mosquitoes grow. This exhibit always attracts a crowd. Mr. Shepstone says :—

They are lady mosquitoes, who lay from 150 to 400 eggs apiece. You can see the eggs floating in tiny, shallow-like groups on the water. You can also see myriads of tiny, curly hatched wrigglers swimming up and down from surface to bottom and *vice versa*. They will reach the Nirvana of their existence when they become full-fledged mosquitoes, which in the usual order of things requires about a month.

THE MANATEE OR SEA COW.

One of the most interesting creatures in the Aquarium is the manatee. The writer thus describes the two fine specimens of this curious sea-mammal, sometimes called sea-cow :—

The larger specimen, a female, is 8½ feet in length, and weighs about 520lbs. They were captured by Alligator Joe, of Palm Beach, in Florida, by means of a huge net. It measured 150 yards in length, was 30 feet wide, and had a mesh of 14 inches.

The manatee, it may be stated, is a warm-blooded, air-breathing, plant-eating, milk-giving water-animal. It has bones of the greatest density known among mammals, no front teeth, no hind limbs, no hip bones, and a huge beaver-like tail. It has six bones in the neck, whereas all other mammals, excepting the sloth, but including the giraffe and man, have seven.

The two in the aquarium are fed on eel-grass and pond-weed. As a rule they come to the surface to breathe at intervals of five to eight minutes, even while sleeping. They are quite tame, and will take food from the keeper's hand.

All the specimens of octopus, two white whales, a giant lobster weighing over 30lbs., and a kind of sea-serpent, were great attractions during their short life in the Aquarium.

The great institution, concludes the writer, is run at a cost of £10,000 a year. It is open free to the public, and the average number of visitors in the year is given as 1,750,000.

THE TRUTH ABOUT SPIRITUALISM TO-DAY.

BY REAR-ADMIRAL W. USBORNE MOORE.

Broad Views for May publishes a valuable and interesting article by Rear-Admiral W. Usborne Moore, who has been devoting the winter to investigating the truth of spiritualism in London and New York. Admiral Moore some little time ago published a book in which he declared "the evidence for the continuance of life beyond the grave is feeble and unconvincing." After a while his conscience pricked him. He felt that he had pronounced judgment without hearing the evidence. As soon as he retired from active service he undertook a personal investigation into the facts.

HIS STANDPOINT.

He thus states his qualifications for conducting such an inquiry:—

My position is this: I have observed, and I have heard, certain objective manifestations. I have throughout a long and not unsuccessful career in the public service been obliged to weigh evidence and test the truth of a variety of reports and narratives, written and oral; I have exercised for many years the duties of a magistrate; without presumption I think I may say that I am as capable of sifting out falsehood as well as any man who should take up the position of my critic. I do not wish to proselytise; I state the facts as I have observed them, for the information of those who wish to hear them.

HIS CONCLUSIONS.

He now tells us that the phenomena that he has seen and heard

were so remarkable that I was obliged to admit to myself, however mortifying it might be, that what I had written on the subject of a future existence required reconsideration; and I there and then made the resolve to follow the subject up, to collect careful notes, such as I should do if investigating any subject in the way of my profession or otherwise, and come to a decision one way or the other as to the reality, of the phenomena of Spiritualism.

The phenomena, of the truth of which he has had personal testimony, may be broadly divided into three classes:—

(1) Materialisations, when the spirit of a deceased person assumes a form, or part of a form more or less resembling the bodily face or form of the personality it purports to be.

(2) Clairvoyance, when a medium not entranced describes the spirits of deceased personalities present in a room, and gives details and messages which afford means of identification.

(3) Trance mediumship, when the medium goes into trance, and is taken possession of by another spirit who has been some time on the other side, and who gives details of spirits who were in life known to the sitter, and enables the latter to identify them.

WHAT HE SAW OF MATERIALISATIONS.

The phenomena of materialism are best seen in the dry, cold winter of New York. To New York, therefore, Admiral Moore repaired, and what he saw well repaid the trouble of the journey. For instance, here is his account of one of his experiences:—

In the séance room of Mr. Hough we sat in a circle on chairs and sofas without joining hands, comfortably at our ease. One figure after another glided out of the cabinet. The clairvoyant, Mrs. Conklin, asked the name and then repeated it to the circle. Surnames were not given. If a Christian name were given—say some common name such as Mary—and a person advanced who was not related to the Spirit, the Spirit form would immediately draw back and disappear. They would never take the hand of a stranger. Each form was as solid as life, the women veiled and clothed in drapery, the men dressed as they were in Earth life, with faces clear, but usually shading their eyes from the light. The temperature of arms and hands was normal. The lamp was lit at a signal from the Spirits in the cabinets, and it was regulated by them. It was covered with blue paper, and its brilliance was just sufficient to enable a person who had good sight to read a watch with a white face.

One of the prettiest sights in this room was the materialisation of a female figure from the bare carpet five or six feet outside the cabinet. A "something," quivering with life, would appear, rise and fall, gathering strength slowly, and at last develop into a tall woman who would take a French flag and walk round the room waving it visibly to every member of the circle.

When the power was strong, the figures would succeed one another with inconceivable rapidity. A gigantic figure, at least 6ft. 6in. high, would be succeeded by a slim girl not 5ft. 2in. The most remarkable exhibitions were dematerialisations and materialisations through the floor, sometimes twelve or fourteen feet away from the cabinet.

THE VOICES OF THE CHOIR INVISIBLE.

If New York offers the best evidence as to materialisation, London has its own speciality. Admiral Moore says:—

The most beautiful developments of modern Spiritualism, the singing of solos by departed artists, and the Angel Choir joining in the hymns, are only to be found in London, and, I believe, only through one medium (Mr. Husk). I heard of nothing of the kind in New York or Boston, nor have I heard of it on the Continent. To an enquirer into Spiritualistic phenomena, nothing can be more satisfactory than a solo, for the confusing errors caused by "personation" cannot exist. One Spirit may assume the appearance of another Spirit, and the few words he utters may pass muster as those of the real individual; but it is quite another matter to construct a chest and larynx for a particular kind of voice, and then sing a song right through precisely as it was sung in the Albert Hall. No one who had ever heard Signor Foli before he passed over, and who had joined in the applause which always greeted the first two preliminary bars of his favourite encore, could ever agree that "Rock'd in the Cradle of the Deep," as we have heard it, proceeded from any other Spirit than that of the great artist who has given his name and who claims to be present.

The second and concluding part of this interesting paper will appear in the June number.

Cornishmen—"Nearly all Preachers."

IN the *Young Man* Mr. A. T. Quiller-Couch is interviewed at home, at Fowey, which is supposed to be the true "Troy Town," by Mr. Charles T. Bateman. Mr. Quiller-Couch bears witness to the strain of mysticism in the Cornish nature which showed itself in the days before St. Augustine. To-day, he says, the interest in religious subjects abides with rekindled and strengthened force. "Q" says:—

At Polperro, for instance, the male inhabitants are nearly all preachers. It is a familiar scene to see the men of that place sitting on a long bench close to the quay smoking their pipes. Presently, without a word, an old fisherman will rise to his feet, stolidly knock the ashes out of his pipe, put it into his pocket, and then begin to preach to his companions whilst walking rapidly backwards and forwards in front of the seat. Just as suddenly as he commenced he will leave off, relight his pipe, and rejoin his companions, whilst someone else will be moved to continue the preaching.

THE BUTCHERS' BILLS OF WAR.

Some Curious Statistics.

Dr. Louis Elkind has an interesting article in the *North American Review* on "Losses on the Battlefield." His conclusions bear out those of most students. The deadlier the weapon the less deadly its effects. Even the carnage in Manchuria is a bagatelle to the butchers' bills of wars waged with swords and spears and blunderbusses. Dr. Elkind says that the Thirty Years' War cost Germany 11,750,000 lives, but this, of course, included other deaths than those from wounds inflicted by weapons.

THE PARADOX OF WARFARE.

The modern rifle will kill at a couple of miles, but it is not half so deadly as Brown Bess, which was hardly good for a couple of hundred yards. Dr. Elkind says:—

In the great battles fought, say, between 1741 and 1878 (including the Russo-Turkish War), out of each hundred hit twenty-five perished immediately, the percentage of immediate deaths in more recent campaigns, according to the latest statistics, did not exceed 17·3, and, as a rule, it varied between 7·5 and 15·1.

The modern bullet is so small that 79 per cent. of those who receive bullets in the bodies, or even in their heads, go through life without feeling any discomfort, although the bullet is not extracted.

DIRT AND DOCTORS.

The chief cause of death from bullet wounds in old times were dirt and the doctors. The importance of cleanliness has been remarkably demonstrated in the present war. Dr. Elkind says:—

The Japanese, before going into battle, changed their shirts, evidently, with the object of avoiding wound-infection that might arise from contact with the dirt and perspiration which would collect on a shirt that had been worn for some little time. The supposed "low" mortality amongst the Japanese troops was ascribed partly to this simple precaution.

As for the doctors, the greatest medical and surgical authority of the sixteenth century, whose directions were implicitly followed by army doctors—

felt justified in expressing his view to the effect that a shot fired by powder poisoned the wound made, the explosive being the poisonous element. Again, continuing his researches, he came to the conclusion that the best way to treat such a wound was "to cauterise it, and then pour boiling oil into it"—a frightful infliction on the unfortunate man who fell into the surgeon's hands.

The fact that cautery increased the mortality was discovered by the accident of boiling oil running short on one occasion, to the great horror of the doctors, who were mightily surprised next morning to find that those who had not been doctored were recovering much better than those treated with boiling oil.

THE PROPORTION OF HITS TO SHOTS.

At the battle of Leipsic—

12,000,000 cartridges were used on the side of the Allies, together with 179,000 gun charges, and these killed or wounded 48,000 men on the French side. It follows, therefore, that only one shot in 250 found a human billet. When smoothbore rifles were used, 325 cartridges were fired for every adversary hit, while the old muzzle-loaders necessitated an expenditure of between 350 and 475 shots; but, with the breech-loader, not more than some 120 cartridges, or thereabouts, are required to obtain one sucessful shot.

Infantry lose much more severely than cavalry, even though the latter get under heavy fire. In the Franco-German war—to mention only one instance—the number of killed in the infantry amounted to 52·79 per cent. as against 27·08 in the cavalry, 27·22 in the artillery, and 17·63 in the pioneers. Russian armies have not been defeated until the ranks had been reduced to the extent of 30 or 45 per cent.—a circumstance which tends to confirm the reports of many eye-witnesses that Russians in battle are quite indifferent to death. The losses sustained by the British troops in some of the battles in South Africa, in which they were defeated, were comparatively very small, only 2·5 or 4·8 per cent. of the whole. The proportion, on an average, of the death rate of officers to that of the rank and file being 28·04 per cent. against 13·7 per cent.

DOGS AS POLICEMEN.

A Hint from Philadelphia.

Watchdogs were invented long before watchmen. It was therefore only a reversion to the original order of things when the Philadelphia police conceived the idea of swearing in a number of dogs as special constables. According to Mr. H. D. Jones, who writes on the subject in the *World of To-day* for May, the Philadelphia dog police hunt for drunkards as the St. Bernard hunts for pilgrims who have succumbed to cold in the passes of the Alps. They are of the same breed, and they work in the same way. At night they patrol the street, and when one of them discovers a drunken man in alley or doorway or backyard, he rushes to the nearest policeman and pulls him to the spot. Not until the helpless man is transferred to the ambulance or the patrol wagon will the dog give his attention to other things:—

With their marvellously keen scent these dogs are quick to detect the smell of fire, and therefore it has been easy to teach them to give warning to the police whenever they ferret out the presence of an incipient conflagration. One dog, named Rex, has discovered no less than five fires before a sign of smoke had revealed the danger to the watchman. Discovered thus early, while still in a smouldering condition, the fire was easily quenched, and thousands of dollars' worth of property thereby saved.

The St. Bernard dogs are also effective in the recovery of lost children. A little training has taught them that a crying child in the midst of a group of people is probably lost, and they have several times brought to the station-house some little boy or girl who has strayed away from home or friends.

The dog police auxiliary has not yet been officially recognised in Philadelphia, but it is nevertheless a very efficient branch of the service. The demonstration of the ability of the dogs and the interests of public safety may lead in the future to the use of the St. Bernard in other cities and towns as adjuncts to the police force.

Those interested in the work of the late Constantin Meunier, the Belgian sculptor, will be glad to note two articles on the artist and his work—one in the *Revue Universelle* of May 1st, written by T. Leclère, and the other by Henri Hymans, published in the May number of the *Zeitschrift für Bildende Kunst*. In November, 1902, an exhibition of his work was held at Brussels—paintings, drawings, pastels, water-colours, statues, busts.

THE WISDOM OR UNWISDOM OF LIFE ASSURANCE.

I.—Its Wisdom. By Mr John Holt Schooling

In the *Grand Magazine* for June the second paper is a discussion on the wisdom or the reverse of life assurance. Mr John Holt Schooling maintains that the civilised world has agreed that life assurance is wise, as is proved by the vast amount of life assurance business done, £33,000,000, or nearly £650,000 a week, having been paid in 1902 in the United Kingdom alone for life assurance premiums —

The population was 42,000,000 and the premium paying part of the population may be regarded as persons aged fifteen and older—namely, 28,000,000 persons, who amongst them paid the £33,000,000. This means, approximately, a yearly and voluntary payment of £1 3s 6d per head of the population of this country, aged fifteen and over, as practical proof that in their opinion life assurance is wise. In this country alone there is accumulated evidence, to the value of £289,000,000, of the truth that life assurance is wise. And in addition to the facts just stated, we have all the friendly societies doing life assurance and sickness assurance, whose accumulated funds are approximately £40,000,000.

Now if life assurance is wise, why is it wise? Primarily, because it is prudent. "It enables a man to rid himself of some injurious effects of an adverse chance that is always present while he lives, the chance of death coming to him unexpectedly." The insinuations that life assurance is but a form of gambling Mr Schooling indignantly and, most people will think, successfully repudiates.

The man who assures his life ceases to be engaged in a gamble with Death, in so far as relates to money, and he takes upon himself a contract that involves a certain yearly payment, for a certain amount to be paid whenever he may die. The nature of this contract constitutes the radical difference between life assurance and betting. For in life assurance you replace a chance by a certainty, and in betting you continue to take the risk of a chance.

A certain small minority, he admits, whose death would entail no hardship on any other person, may without much harm continue taking the chances of betting, and let the bookmakers and not the life assurance company have the profits. But, as Mr Schooling says, there are very few persons so situated.

As to the "palatial offices" of life assurance companies supposed to have been paid for out of lapsed policies, Mr Schooling says —

These are usually the growth of years of successful and wide spreading business, and inside inspection of them will disclose the fact that they are a very hive of industry directly promoting the thrift and prudence of the nation, and in no way out of proportion to the vast business that has to be got through daily. These buildings, palatial or otherwise, are simply adapted to the most efficient performance of the work that has to be done in them.

As regards lapsed policies. In ordinary life assurance, which constitutes the bulk of the business, no company could live that did not give a surrender value for a policy that its owner could not continue. And in industrial life assurance the fair principle of giving a surrender value for a policy that cannot be continued has been greatly extended since the time when lapsed policies meant a pure gain to the company of all the premiums paid.

II.—Its Unwisdom. By Mr. Hugh Bellot.

Mr Bellot's view is that insurance is but a form of gambling, and that if gambling is unwise, so must life assurance be unwise also —

So far, therefore, as the assured puts down his money with the certainty of repayment sooner or later, either to himself, if it is an endowment policy, or to his representatives, if it is a life policy, whereas the gambler runs the risk of losing not only the increase he expects to gain, but the sum wagered as well, insurance and gambling are not on all fours. But, subject to this distinction, the practice of life assurance is as much gambling as backing a horse on a racecourse, or bulling or bearing shares in a bucket shop.

Even Mr Bellot, however, admits that "apart from the morality of the question, it must undoubtedly be admitted that life assurance is economically beneficial not only to the individual, but to the community at large." But, he asks, is the benefit conferred commensurate with the outlay, and are the companies' profits legitimate in the sense that the shareholders receive no more than a fair market return for the use of their money? Profits exceeding five per cent. on the original capital he considers excessive, and there is not one of the large number of well known companies he instances whose profits do not exceed, often very greatly exceed, that sum, one (Sun Life) even reaching ninety five per cent! His remedy is the fixing of a maximum rate of interest, which he does not propose to impose on present companies, though he thinks by a system of graduated taxation it might in course of time be brought about.

Or the State might extend and expand its present restricted Post Office system of life assurance, or better still take over bodily the whole business of life assurance in the United Kingdom.

In which connection it is strange that he does not mention the long tried and successful experiment of State life insurance in New Zealand. His objections are not to life assurance in itself, however, but merely to the way it is often conducted. It is not free from the spirit of gambling, profits to shareholders are excessive, and require State limitation. But his article is not in the least likely to make policy holders in good companies wish they had never insured their lives.

From an article by Miss Gertrude Kingston on "Stage Life and Real Life" in the *Grand Magazine* I take the following —

In the matter of modern stage dresses the habit imported from Paris of over dressing a part is much to be deprecated, and while we would be heartily ashamed to don powder and patch with the short waist of the Empire as an unpardonable anachronism, we should be equally careful not to wear an unsuitable gown in a scene of our time, for instance, if the scene be laid in a quiet country house, it is absurd to wear a frock that is only suitable for Cup Day at Ascot or a bazaar in the height of the season! There is an idea current that the feminine part of our public "wants something to look at and copy", yet we should remember that the largest proportion of women amongst the audience have but slender means for their dress. How much more satisfactory is it to them to see some pretty simple fashion that they can carry away in their minds and reproduce at home!

SPECIAL POLICE COURTS FOR CHILDREN.

In the *Cornhill Magazine* for June Mrs. Canon Barnett pleads eloquently for the institution of some such courts, a bill for which is before Parliament this session.

HOW CHILDREN FARE IN LONDON.

In 1903 there were, in London alone, twenty-two police courts, to which in that year 668 children were brought under arrest, besides the number brought there for other reasons. Children charged with offences likely to involve their committal to industrial schools are remanded to one of the three Remand Homes, under the Metropolitan Asylums Board, where they remain sometimes for several weeks, appearing regularly in the police courts until vacancies have been found for them in industrial schools. The drawbacks of this procedure are manifold and manifest. Children merely charged with being destitute or trespassing are placed in the dock as though they were criminals.

A PROTEST AGAINST PRISON.

Again, Mrs. Barnett disapproves of the present system of dealing with young children. Like the older ones, they are sent to industrial schools, of which there are 139 in England and Wales. These schools, however, being under the Home Office, along with prisons and reformatories, are practically prison schools. The severe discipline and restraint suitable for a lawless lad of fourteen or fifteen is not adapted "for poor bairns of seven, whose only crime is orphanage, whose sole sin it is to be 'utterly destitute.'" "To subject these mites to repressive discipline for seven, eight, or nine years is to wrong them. They want kissing at that age, not drilling; petticoats, not labour masters."

Again, children must appear again and again in court until the busy court officer can find a vacancy for them among the other 18,000 to 19,000 children already treated as semi-criminal. With the establishment of special children's courts in London and other large towns, we should get the child into the particular school most fitted for it.

WANTED: PROBATION OFFICERS.

Should such a reform as the establishment of special children's courts be instituted, Mrs. Barnett thinks another reform would speedily follow—the appointment of probation officers on the American principle:—

> Under this system youthful delinquents are allowed by the justices of the Children's Courts to return to their parents on probation, while probation officers, usually women, are appointed by the Court to watch over the children, to visit them at their homes, and to report on their progress and conduct from time to time. If the delinquents are beyond school age employment is found for them, and means are taken to interest employers in their welfare. In all but a very small proportion of cases this action obviates the need for committal to industrial and reformatory schools.

THE EXPERIENCE OF CHICAGO.

It is the work of these officers which, it is generally acknowledged, has so much reduced the number of child prisoners in the States. Before the Chicago Juvenile Court law about 600 children out of the 1,300 charged were committed every year to the county gaol, besides those confined at times in police cells. Now, since the appointment of probation officers, though about 1,300 children are still brought before the Court every year, less than twelve of these are committed to gaol. Mrs. Barnett says:—

> I have known bad parents deliberately tempt their children to steal their own money, and then send for the officer, have them arrested, and themselves give evidence against them, congratulating themselves to their intimates that they have got relieved of their offspring and their responsibilities to them. The cost to the ratepayer of supporting some 18,000 children, at certainly not less than £20 a year for each child, is easily reckoned, an expenditure no child-lover or patriot would object to if it were the best for the child or the country.

American probation officers are usually women, and must not be allowed to have too many children under their care. Perhaps at first, Mrs. Barnett thinks, charity-money will have to pay in England for such officers; "but as their work proves their value it will surely be borne home, even to unthinking people, that it is cheaper to pay one woman £150 a year to reform, by personal care, eighty children than it is to support those eighty children in institutions at the rate of £1,600 a year."

WANTED: ONE HUNDRED MORE BISHOPS.

In the *Sunday Magazine* for June the Rev. F. L. H. Millard, Vicar of Aspatria, Cumberland, notes as a striking feature of the religious movements in England to-day the increasingly urgent demand for bishops. At present, he says, the bishops are cruelly overworked, the demands on their time being beyond all reason. The Roman Catholic bishops in Ireland never have to rule more than 240 clergy; those of the Church of Scotland on an average 37 each; an American Bishop, 53; and an Italian, 75. But in London we have Bishop Winnington-Ingram ruling 1,600, the Bishop of Rochester ruling 732, and the Bishop of St. Albans ruling 852. "How," asks the writer, "can one man supervise the work, encourage the efforts, and have personal knowledge of 732 clergy and 852 parishes, still less of 1,600 clergy and 580 parishes?" Work killed Bishop Creighton, and has prematurely aged Bishop Winnington-Ingram. Bishop Stubbs, of Oxford, once said that so busy was he that he had not read through a single book in one month; while the great literary gifts of Bishop Creighton were largely lost to the world through the other excessive demands on his time. Yet a bishop among his many parts is supposed to play those of a student and leader among the great intellects of the age. The writer's suggestion is that at least 100 Anglican bishops are needed, instead of, as at present, 35 diocesan and about 30 suffragan bishops. He would proportionately increase the number of archbishops, to whom, and not to the bishops, should be allotted the seats in the House of Lords. He would also relieve the bishop of his "fatal opulence," illusory as it is, and of his palatial residence, allowing him to live more like an ordinary man.

AN INDUSTRIAL ARMY OF 600,000.

A VIVID conception of the magnitude of the railway industry is given by Mr. Charles H. Grinling in his *Windsor* article on railway employment. From the Board of Trade returns he shows that the total of persons employed by the railways in the United Kingdom is 575,834. About half that number form the managerial and operating staff of the lines. A third are busied about the maintenance of permanent way and rolling stock; while the remaining sixth is occupied in the "various side-shows" carried on by our railways. The London and North Western Railway Company employs no fewer than 82,835 persons. Mr. Grinling mentions as the chief characteristic and attraction of railway employment, its permanency. Once a man is placed upon the regular staff, if he keeps steady and works with moderate efficiency he is usually retained until incapacitated by age, and in many grades he can reckon on a pension when retired. The fluctuations in trade affect only supernumeraries. The regular staff is never out of work. The writer says that for permanency railway service in the United Kingdom is practically as good as service under Government. In the higher grades of the staff there is the certainty of a superannuation allowance.

AN INDUSTRIAL UNIVERSITY.

Those who imagine that education only consists in what is given in schools and colleges will have their eyes opened on finding how carefully trained many classes of railway *employés* have to be. The engine driver, the signalman and the guard have not merely to serve through lower grades, but are subjected to careful examination, not only in technical knowledge and experience, but in general intelligence, capacity and character. The rules and regulations to be observed by all persons in the service which are issued by every railway company form a volume of some hundreds of pages, which is carefully revised from time to time. Mr. Grinling says:—

The task of mastering the contents of the rule-book is not easy, as the regulations have necessarily to be framed to meet all conceivable combinations of circumstances. To meet this difficulty, the Great Western Railway Company has recently established classes at all important centres for the study of railway working arrangements, the rule-book being adopted as the text-book for the students, and the instructors being chosen from amongst the officials of the company who are best acquainted with the details of railway operation. At the termination of each course an examination is held, and certificates are awarded to successful students.

Candidates for railway clerkships have to undergo an entrance examination in writing, spelling, arithmetic, etc., the usual age for entering the service by this door being about fifteen—*i.e.*, immediately after leaving school. Of late years the problem of giving opportunities to railway clerks to acquire knowledge of the theory of railway management, in addition to what they can pick up daily in the offices, has received a good deal of attention. In London, lectures have been arranged in connection with the London School of Economics; in Manchester, under the auspices of the Faculty of Commerce of the Victoria University; and at Dublin, in connection with the Rathmines School of Commerce; whilst at Cardiff, York, and other centres, lecture and discussion societies have been formed amongst the clerks themselves, without affiliation to any teaching body.

COAL AND COMMERCIAL SUPREMACY.

MR. W. R. STEWART writes in the *Cosmopolitan* an interesting sketch of the coal industry of the United States. He opens his paper with an array of facts which need to be faced:—

Three hundred and seventy million tons of coal were mined in the United States during last year. The entire rest of the world produced only one-third more. By no other sets of facts is the future industrial predominance of the United States so convincingly foreshadowed as by the statistics of coal-production and coal-supply here and abroad. Seizing the primacy from Great Britain in 1899, the United States now mines more than a hundred million tons in excess of that country, and double the output of Germany, which stands third as a coal-producer. Comparing the growth of the industry with the increase of our population, it is found that whereas the latter shows an increase of 235 per cent. since 1850, the production of coal has increased 4,180 per cent.

The transfer of commercial and industrial supremacy from Great Britain to the United States has been coincident with the latter's passing of the former as a producer of coal. More and more as machinery plays its increasing *rôle* in the workshops of production, it is certain that that nation which possesses the largest supply of accessible coal will dictate the economic policy of the world. The United States not only possesses the greatest coal areas, but by the employment of the newest labour-saving devices in the mines, obtains its product at a cost greatly below that of Europe. Abroad, the price of coal per ton at the pit's mouth varies from about one dollar and eighty-five cents in Great Britain, to two dollars and forty cents in France. In the United States the average price last year was one dollar and sixteen cents. It is even probable that, in view of the gradual exhaustion of European mines, this country soon will practically control the coal markets of Europe, as it has for many years the market for cereals. In Europe, the veins near the surface have been worked out and deep shafts have had to be sunk to reach the lower areas. In this country, on the other hand, there are very few deep coal mines, and in many workings the car-loads of coal are brought from where they are mined to the breaker, or tipple, simply by gravity.

Within ten years the number of coal-cutting machines in use in this country has increased over 600 per cent., reducing the cost of mining by from fifteen to thirty cents a ton. In 1904 there were more than seven thousand undercutting machines in use in the bituminous districts.

In face of these facts it is well to remember that if exhaustion of European coal means American ascendency, the time may come when the immense deposits of coal and other minerals in China may give the yellow man his chance over America.

Good Words for June is a very interesting number. The "Love Quest of Beethoven" calls for separate notice. Mr. H. G. Archer tells of the formation of the Gotha Canal, formed after the manner of the Caledonian Canal, by linking together rivers and lakes, in a waterway 370 miles long, stretching from Stockholm to Gothenburg. Mr. G. S. Layard describes the illustrated houses of St. Légier, which M. Béguin has decorated with humorous cartoons, and added to the history of caricature the exploit of making the very walls of a town laugh at you with pictorial fun. Professor James Robertson discusses the beginnings of Hebrew history and religion in the light of recent Assyriology. Mr. E. Manson recalls humorous incidents of Sidney Smith's exploits as a talker. Richard Davey writes on monarchs who have been authors. There are also interesting memories of Eastern servants by one who spent her childhood in the Near East.

THE ATHLETES OF INDUSTRY.

MR. C. E. HUGHES contributes to *C. B. Fry's Magazine* a really valuable paper, entitled "Athletes Without Knowing It." It is a very important contribution to the sporting idealisation of daily toil. The writer glorifies some of the humblest occupations by tracing in them the presence of athletic ability of a very high order. He begins with the coal-heaver. The coal-heaver's work, he says, "demands as much trained skill as a good many exhibition feats of athletes." The man who poises a score of orange crates on his head, and walks cheerily along, is quite a juggler in his way. "A good many costers would make quite passable jugglers if they cared to practise." Other unconscious athletes described are the man who carries a barrel on his shoulder up a ladder without using his hands to steady the load; the bricklayer who carries a hod of bricks up a lofty, swaying ladder—"few trained athletes could change places with him"—the man who wheels barrow-loads of clay along narrow planks; the porters, with cunning turns of the wrist, guiding the empty milk-cans; the fishmonger's boy, who undergoes daily as great an amount of physical strain as that endured by a football player; the pavior; the scavengers; the cyclists who distribute the evening papers; the railway guards; the hangers of telephone wires; the excavators of street trenches; the drivers of the old-fashioned milk-carts, who are as near a survival of the old charioteer as anything that civilisation has left us.

It is papers of this kind which may slowly help to do for the daily work of the adult what Kindergarten methods have done for the work of the infant. When the worker views his daily toil as a species of athletic sport, it may in time cease to be regarded as menial or irksome.

HINTS FOR CYCLISTS.

MR. G. A. OLLEY, who broke the record from London to Edinburgh last year, covering 382 miles in 27 hours 10 minutes, tells in *C. B. Fry's Magazine* how to make records on the road. There are many points, however, in what he says that are of interest for the ordinary cyclist. On training he gives the somewhat quaint advice, "If your weight is inclined to the heavy side, extra clothing should be worn to ensure reduction, but on no account be sparing in covering." When weather prohibits cycling, "skipping can then be requisitioned, and will be found most beneficial. It may sound childish, but after three or four hundred skips the opinion as to its efficacy will change." He lays great stress on massage. He says:—

After any exercise which has caused perspiration, all clothing should be removed, and the entire body rubbed briskly with a rough towel, and then massaged by kneading the muscles. This very useful work should not be neglected on any account. The success of American athletes is due in no small measure to the attention given to this preparation, which by exciting the blood-vessels, expedites the repair of the waste tissue caused by exercise.

Cold baths are good for those who can stand them, but to those who feel the shock tepid baths are better. A hot bath is weakening, and should only be allowed after a long and hard ride, provided the rider goes to bed directly afterwards. As to the machine, he says that its weight should not exceed 22lb. for an average rider. He advises the carrying of spare tyres for a long journey. A hint that others beside record-breakers will find useful is the method of carrying watch and schedule:—

The schedule is a list of the important points along the route with the times at which the rider is due at each. This, in conjunction with the watch, which can be fitted to the handle-bar or to the wrist, will enable the rider to ascertain how he is progressing, and whether he need hurry or can take it easy over the next stretch.

What he says about the wrists is worth remembering:—

The wrists should be supported by lint and bandage, as, strange as it may seem, this part of the body is generally the first to feel the effects of a long ride. The watch already referred to may be strapped 'round the wrist over the bandage. This accessory possesses the advantages of supporting the wrist, and obviates the risk of losing one's "compass" in a hurried change to a spare machine.

ARTILLERY PRACTICE IN THE AMERICAN NAVY.

MR. G. UPTON HARVEY, writing in the *American Review of Reviews* on the Manœuvres of a War Fleet in Peace Time, says:

The invention of a new system of training for gun-pointers, the secrets of which are carefully guarded, and which has led to the abandonment of sub-calibre gun practice, has improved marksmanship in our navy marvellously. To-day the records of our ships for rapidity and accuracy of fire are the envy of the navies of the world.

In former times, target practice was chiefly confined to shooting at a barrel or buoy with sub-calibre guns, with occasional shots with the regulation projectile and reduced powder charge. Observation launches were stationed comparatively near to the target to judge and record the shots. Under the new system, the gun-pointers get almost constant training, but without any waste of ammunition. Then when the time comes for the annual target practice, the regulation ammunition is used in all except the very largest guns, and in these the powder charge is only slightly reduced.

The range is laid out in the form of an equilateral triangle, the target marking the apex and the angle of the base being indicated by flag buoys. For guns of six inches and over the triangle is 1,500 yards on a side, and the target is 16 feet high and 22 feet long. For guns under six inches the side of the triangle is 1,000 yards, and the target is reduced one-half in height. Practice is had with but one gun at a time, and as each gun and gun crew has its turn at the target, it requires from a week to ten days, even in the most favourable weather, for each battleship or big cruiser to finish its turn on the range.

The test is for rapidity of fire as well as for accuracy, therefore firing must begin and cease at given signals as the ship steams at ten knots along the base of the triangle. In the case of 13-inch guns the time limit is five minutes. A few years ago this time limit would have admitted of but one or, at the most, two shots. The record to-day is eleven shots, and scores of nine or ten shots within the five minutes are common. The record for 13-inch gun speed and accuracy is eleven shots and ten hits. This was made under exceptionally favourable weather conditions in Manilla Bay.

Target practice is expensive, the cost of each shot from a 13-inch gun being about £100, but the public has no cause to grudge the expenditure.

THE MAGNA CHARTA OF THE CRADLE;

OR, THE GOLDEN RULE FOR BABIES.

MR. C. R. WOODRUFF, writing in the *World of To-day* for May, commends to the American public the action taken by the Mayor of Huddersfield in giving to every mother in the town as soon as her baby is born a legal promissory note for one pound, payable twelve months after date, provided the child survives the year. By this means he is able "to get in some good advice" on the rearing of infants. The promissory note is prepared in due legal form, and is accompanied by "The Golden Rule for Babies," the whole document being printed in colours and the shape of a certificate. The following is a copy of the note and the instructions following it:—

FOR THE BABY.

Longwood District of the County Borough of Huddersfield.
Name of the Baby. Date of Birth.
Name and Address of Parent.

THE GOLDEN RULE.

For the Life and Health of the Baby.
"Feed with the Mother's Milk. The Mother's Milk is the natural food AND THE BEST."

Twelve months after date I promise to pay to the parent or guardians of the above named child the sum of one pound on production of proof that the said child has reached the age of twelve months.

Signed .
Mayor of Huddersfield.

For every baby fed on its mother's milk who dies before the age of three months, fifteen babies die who have been fed by other means.

HINTS FOR THE WELFARE OF THE BABY.

When the mother cannot suckle the child it should be fed on new milk and water mixed in certain proportions according to age.

At first half milk and half water, with a teaspoonful of cream and a little sugar. Then, as the child grows older, less water to be added. When cream cannot be obtained a small piece of suet may be shredded into the milk.

WHAT TO DO.

Always feed the baby at regular intervals every three hours.
Always keep the baby very clean.
Always bathe (or sponge all over) the baby once a day in warm water.
Always let the baby sleep in a cradle or cot. A wicker basket makes a good cot (or even an empty packing case).
Always use fullers' earth to powder the baby, not starch or flour.
Always attend to the baby when it cries. The baby cries for one of three reasons: (1) The baby is hungry, or (2) The baby is uncomfortable or something hurts, or (3) The baby is ill.

WHAT NOT TO DO.

Never give the baby soothing syrups, fever powders, or anything of that sort.
Never give the baby bread, or sops, or gravy, or any other food except milk, till it is more than seven months old.
Never give the baby skimmed milk or milk that is not perfectly fresh and good.
Never use a feeding bottle with a long tube. Nobody can keep the inside of a tube clean.
Never carry the baby "sitting up" until it is five months old.
Never neglect to send for a doctor if the baby is ill. Babies are soon overcome and easily die.

WHAT SOLDIERS EAT.

IN the June *Windsor* Mr. Horace Wyndham contributes much information as to how soldiers are fed. He begins by recalling the time when the Government supplied no rations, and the soldier lived on what he could get, levying contributions on the country in which he found himself. Queen Elizabeth appointed a "Provient Master to the Troops," who was to furnish and inspect the rations given. Each soldier was then allowed 2lb. of bread per day and 1lb. of cheese or meat, with two bottles of beer, or one of wine. The Provient Master being found somewhat otiose, was later abolished. Then a supervisor of contracts was appointed, but it was not till after the Indian Mutiny that the War Office took over the commissariat department. The writer says that now England has the best-fed army in the world. He thus describes some features in the soldier's diet:—

As for the simpler dishes in daily use, the commonest are, after plain roasts and boils, those known as "sea-pie" and "toad-in-the-hole." The former is made of meat mixed with vegetables and flour and steamed for three hours, while the latter is a succulent preparation of meat, eggs, powder, flour, and milk. In either case the allowance of meat is 45 lb. for every sixty men. Another popular item in the bill of fare is "Turkish pillau," the ingredients of which are meat, rice, flour, herbs, and onions, seasoned with cayenne pepper. In India curry looms largely in the daily *menu*.

The "Advantages of the Army" include three meals a day—breakfast, dinner, and tea; but in most battalions a light supper is also provided. A soldier's official ration allowance consists of 1 lb. of bread and ¾ lb. of meat per diem; tea, coffee, vegetables, and "extras" (such as butter, jam, eggs, fish, etc.) being provided regimentally. Breakfast is served at 8 a.m., dinner at 1 p.m., and tea at 4 p.m.

Attendance at breakfast and dinner is compulsory, but at tea is optional. The private soldier sees neither teacup nor tablecloth. The tea supplied is Congou, "good medium." War rations are more generous than peace:—

During the late campaign in South Africa, the daily allowance for each soldier was as follows: 1¼lb. of bread, or 1lb. of biscuits; 1lb. of meat; ½lb. of vegetables; 4oz. of jam; 3oz. of sugar; 1 oz. of tea; 1 3 oz. of coffee, with salt and pepper.

Fifty thousand tons of food are said to be needed every thirty days for 50,000 men with horses and mules.

GOATS AMONG THE SHEEP.

One funny story is told about a meat purveyor in the Ionian Islands:—

A favourite device in certain stations abroad was to palm off goat flesh for mutton. A zealous quartermaster in the Ionian Islands, suspecting this practice on a certain occasion, thought he would assuredly defeat it by ordering that all the legs of mutton sent in by the butchers should have the tails attached. The Greek contractor smiled knowingly, but promised compliance, and for the next few days every joint was delivered in the manner required. The quality of the meat, however, did not improve; on the contrary, it had a more "goaty" flavour than ever, and loud and bitter were the complaints of its consumers. At last the mystery was solved. One day, when the inspecting officer picked up a leg of mutton to weigh it, the joint fell to the ground, leaving the tail in his hand. Subsequent investigation showed that it had merely been sewn on with a thread.

THE TERCENTENARY OF "DON QUIXOTE."

Tributes to Cervantes.

Mr. Havelock Ellis writes, in the *North American Review* for May, upon Cervantes and his immortal book "Don Quixote," says Mr. Ellis, is the world's greatest and most typical novel. After three hundred years—

"Don Quixote" remains the one great typical novel. It is a genuine invention, for it combined for the first time the old chivalrous stories of heroic achievement with the new picturesque stories of vulgar adventure, creating in the combination something that was altogether new, an instrument that was capable of touching life at every point. It leads us into an atmosphere in which the ideal and the real are equally at home. It blends together the gravest and the gayest things in the world. It penetrates to the harmony that underlies the violent contrasts of life.

It is a story book that a child may enjoy, a tragi-comedy that only the wisest can fully understand. It has inspired many of the masterpieces of literature, it has entered into the lives of the people of every civilised land, it has become a part of our human civilisation.

"Don Quixote"—more especially the second and finer Part—was written by an old man, who had outlived his ideals and his ambitions, and settled down peacefully in a little home in Madrid, poor of purse but rich in the wisdom garnered during a variegated and adventurous life. "Don Quixote" is a spiritual autobiography. That is why it is so quintessentially a Spanish book.

Cervantes was a Spaniard of Spaniards, although the great writers of a nation are not always its most typical representatives. Cervantes was a typical Spaniard. He was a great personality, a brilliant soldier, long before he conceived "Don Quixote."

Yet on an intensely national basis "Don Quixote" is the most cosmopolitan, the most universal, of books. Not Chaucer or Tolstoy shows a wider humanity. Even Shakespeare could not dispense with a villain, but there is no Iago among the six hundred and sixty-nine personages who, it is calculated, are introduced into "Don Quixote." We see Cervantes, a man of average height, with heavy shoulders, light complexion, bright eyes, chestnut hair, great moustache and golden beard, a little marred by short sight and an impediment of speech, yet the type of the man of sanguine temperament and audacious action.

Born in 1547, probably on Michaelmas Day, in the ancient Castilian town of Alcalá de Henares, near Madrid, Cervantes died in Madrid, a popular author, but a poor and unhonoured man, in April, 1616, departing from the world but a few days before his great fellow-spirit Shakespeare.

HOW MR. GLADSTONE BECAME AN ANGLICAN.

Sir Edward Russell, in a paper in the *Sunday Magazine* on the religious life of Liverpool, tells this story about Archdeacon Jones, who lived to be well on to a hundred years old:—

Mr. Gladstone's father, who had been a substantial and active Presbyterian, became inclined to go over to the Church of England. He was dissuaded, or, at all events, deterred, by the disinclination of his wife. It was in the rather dead time before M'Neile, and Mrs. Gladstone did not find the Church of England preaching good enough. Her husband, who usually liked his own way, took her to hear all sorts of clergymen in vain. At last he came to know of Mr. Jones in some other town. The good pair made a journey to hear him preach. They admired him greatly, and the husband proposed to the wife that he should build a church for Mr. Jones, and that they should attend it. The conjugal bargain was struck; and that was how it was that the great Mr. Gladstone was brought up in the Church of England. He was born a Presbyterian, and was six years old when his father passed from the Scotch to the English Establishment—and brought his wife with him.

LIKE PRIEST, LIKE PEOPLE.

A Horrible Picture of the Russian Church.

Mr. Percival Gibbon contributes to the *Monthly Review* for June a horrible account of the bestial brutishness of the Russian peasant, and the worse than impotence of their official spiritual apparatus. After describing how punctiliously the peasants perform their ritual in church, Mr. Gibbon says:—

I have a conviction that these poor blind souls see in the eikons only charms that can hit back, and in their dim deity no more than a terror to be conciliated.

Ritual Religion has no relation whatever to morality. The priest is merely regarded as an

implement in a ticklish trade. No consideration attaches to him save when about the business of his office. He is often a drunkard, almost always ignorant, generally a cadger and a beggar. The common run of parish priests are quite unlettered; the authentic voice of intonation and a vocation for an unlaborious and unproductive life are their sole qualifications. They are rapacious, immoral, and intemperate. I myself have seen a Sacrament administered by a bloated man who was too drunk to stand without support, yet that Sacrament was in order. The moujiks asked nothing of the priest—only the words and forms of the spell or incantation, or whatever they held the ceremony to be.

There is a dreadful tale which I have told before in another place. It was given to me as authentic, to illustrate the condition of the priesthood of the Orthodox Church. Let it be a picture. A hut in which a man lies dying, sodden with fear that he may pass ere the last Sacrament be administered to him. The shaggy, long-robed pope has come, and the gear is laid ready, but ere he will get to his work and unburden the poor soul, he will have an enhanced price for it. The wife of the dying man comes from the side of the squalid bed and pleads with him. He leers and is obdurate. Then a son will compel him, and they fight about the room, while the shaking patient stares from his pillow. The priest seizes the bread and strives to break it, for broken bread may not be blessed, while the son of the dying man grasps his arm to save it. And in the wrestle, the little loaf crumbles at last, and the sick man closes his eyes with a sigh of despair, awaiting death and damnation.

Mr. Gibson's conclusion is that—

It is a dreadful thing to say, but a true one—that only by the growth of irreligion, like that flamboyant atheism that puffed the French Revolution to a blaze, can the great slave land come by its own. It is over the body of the priest that the peasant will strike at the prince—the priest that fashioned a god to awe him with the menace of perdition.

That surely is a *non sequitur*. Mr. Gibbon admits that the Russian dissenters are earnestly religious, moral, decent people. Why it should be by the road of Atheism, and not by that of Nonconformity, the peasant should find deliverance, Mr. Gibbon does not explain.

The June *Leisure Hour* has an article on London's motor omnibuses and their future. The writer gives the history of the experiments with steam-propelled vehicles since the passing of the Light Locomotives on Highways Act of 1896. Now the steam omnibus has been replaced by the petrol public service vehicle, and it is calculated that the present 2,500 horse buses running in London may be reduced to half the number of motor 'buses, which will also be quieter, cleaner, quicker, and more comfortable vehicles. The motor 'bus should prove a valuable adjunct to the electric tram.

THE REUNION OF CANADIAN CHRISTENDOM.

A RECORD OF PROGRESS.

ACCORDING to the Rev. J. P. Gerrie, who writes in the *American Review of Reviews*, the Church Union movement is making considerable progress in Canada. He says:—

The progress of church union in Canada is interesting and suggestive. Thirty years ago the different sections of the Presbyterian Church were united, and to-day nearly the whole of Presbyterianism is ranged under one banner. Eight years later the Methodist, the Methodist Episcopal, the Primitive Methodist, and the Bible Christian churches came together as the Methodist Church, which, with very few exceptions, embraces the entire Methodism of Canada. The Baptists are also one body, and have never been separated, as they are in the United States and other lands. The denominations are therefore practically one among themselves, and this augurs well for the wider union now considered by the Presbyterians, Methodists, and Congregationalists.

A three days' conference separately and jointly of the committees of the three Churches was held in Toronto in December last. Five representative sub-committees were appointed to deal with questions of doctrine, polity, the ministry, administration, and law. The unwritten creed covers the great essential facts of a common religion, but leaves doctrines of baptism, inspiration, evolution, and other debated questions to the individual mind and conscience. Both the Presbyterians and the Methodists show a marked approach toward Congregationalism in the self-management of their congregations, and in the advisory rather than in the authoritative tone of deliverances from their Church courts. This movement toward centralisation on the one hand and the recognition of democracy on the other will greatly help in reaching a basis of union.

THE CHRIST-THORN AND JUDAS-TREE.

Two interesting pieces of Eastern Christian folklore are given in *Good Words*, under the title of "Memories of Eastern Servants." The writer's old Greek gardener, Pericles, used to call the butterflies "flying flowers," because, he said, they were the spirits of the dead flowers. The scent of the flowers was, he said, the breath of God:—

He also pointed out in the hedges the wild Christ-thorn of which the Crown of Thorns was plaited, and told me how the little yellow flowers we knew so well first blossomed at the touch of the Saviour's head, to soften, as much as was in their power, the pain cruel men's hands were inflicting through its sharp thorns, and how they changed the Crown of Thorns into a Crown of Golden Glory. That is why they are always in bloom at Easter, covering the thorn bush with beauty. At Easter time, also, the hills of the Bosphorus are tinted with the colour of the blossom of the Judas-tree, of which Pericles told me the story. He said the tree was one of the same kind as that on which Judas had hanged himself. It never flowered, and it had not then even come into leaf, but now in very shame it burst out into bloom, not in the usual way, but in bunches of blood-coloured blossoms, hanging from the bare trunk, covering the stems of the naked branches, as we see it now. "Judas' blood" is offered yearly at Easter by these trees, in expiation of his great offence. No sooner has the tree covered itself with the blood-blossoms than God, in token of his forgiveness, sends a mantle of green leaves to cover it and make it like other trees.

IAN MACLAREN AS PREACHER.

THE chief paper in the *Sunday Magazine* is that on the religious life of Liverpool, by Sir Edward Russell. He refers to the formative influence on the growing city exercised by Dr. Hugh M'Neile, the great anti-Romanist evangelical. Since his day, says Sir Edward—

"The Pulpit," in Liverpool, as elsewhere, degenerated in brilliancy and diminished in power. That, unless London be an exception, is the universal general history of English religious life since the mid-nineteenth century.

Broad Church preachers have never gained the Liverpool ear, and the sacerdotal school has only a minority of churches behind it. Nonconformity suffers from the lack of eminent men. The exception is Dr. John Watson. Of him Sir Edward says:—

In his remarkable preaching no aspect or element of Christianity has been ignored. But he has been a Broad Church in himself. He has shirked no difficulty, while he has sought no difficulty. His sermons, while intensely interesting, have been visibly responsible. As waves of difficulty arose in the course of his thought, which he unbosomed continuously to his audience, he breasted those waves. He made his hearers feel that he was breasting them. Many of his hearers, who might not even have known of the difficulties, breasted them with him and were the better for it. Hard-headed men, who had won their way to commercial and other distinction, felt that it was worth while to address themselves to religion under such a guide, and to accept, in reverence for what he reverenced, the spiritual impetus, the constant presence of spiritual motive, which overflowed into their minds and hearts from his teaching and from his very being. They got to know what manner of man he was. They instinctively perceived that what was important to him, looking at matters with the utmost attainable knowledge and with an absence of any concession to professional bias or predilection, could not be unworthy of their attention; could not without impertinent folly on their part be put aside as mere parson's talk. And so there gathered unsought around him men of every church. I don't think I need avoid saying, that although no part of Dr. Watson's preaching was overtly "apologetic," men of eminence in Liverpool, and of conspicuous, though reserved, mental power, have in moments of special confidence told me that Dr. Watson had brought them back within the Christian fold when they were astray in indifference, excused by nascent scepticism.

Admiral Togo and the Y.M.C.A.

THE June *Sunday at Home* contains the following paragraph about a man of whom everyone talks and no one knows anything personal:—

It is of special interest just now to recall the testimony which Professor Stanley, speaking at the Rest-day Congress at St. Louis, bore to the character of Admiral Togo. Admiral Togo some thirty years ago, he said, was a student in the Naval School at Annapolis, U.S.A., for three or four years, and was so active in the work of the Y.M.C.A. that he was unanimously elected President of the Naval Y.M.C.A., and acted as such during his last years at Annapolis. Returning to Japan after graduation, the young officer went into the Y.M.C.A., and has continued all these twenty-five years in his firm, quiet, and unostentatious way to lead the Christian forces in Japan.

READERS who wish to keep in touch with the Evangelical movement on the Continent will be glad to subscribe 10s. a year to Hachette and Co. for *Foi et Vie*. It is published twice a month. It is edited in a spirit of broad Christian charity. *Foi et Vie* is now in the seventh year of its existence.

HOW THE POOR ARE RELIEVED IN RUSSIA.

By Miss Edith Sellers.

Few people are doing better work than Miss Edith Sellers. She is constantly going to and fro about the Continent seeking to discover suggestions, based on the experience of other nations, as to the best method of solving troublesome social problems. In the *Nineteenth Century* for June she describes her search for light in Russia.

GLEAMS OF LIGHT.

Her quest was not wholly unsuccessful. She says:—

No people are so lavish in their charity as the Russians, no people give alms with the same reckless generosity. Never was I in a country where there are so many private institutions for the benefit of the poor, especially the aged poor. Then, although the State spends nothing on poor relief, and the local authorities the merest pittance, the Crown gives away huge sums in alms. Half the orphanages, charity schools, and almshouses in the Empire, as well as all the great foundling hospitals, are supported out of funds provided by the Tsar and members of his family.

THE MODEL CITY OF THE EMPIRE.

Moscow she found had established a regular system based apparently upon a cross between the English and the Elberfeld method of dealing with the destitute. The Municipality of Moscow, she says, lodges

the respectable aged poor, so far as space can be found for them, in old-age homes, where they are made extremely comfortable. As for the children, for them it has not only orphanages and homes of all kinds, but, what is much more remarkable, some very well-managed schools, over which it watches with infinite care and pride. The city has even founded holiday-homes for the more delicate of its boys and girls, and has made arrangements by which all the poor children who go to the elementary schools are taken for walks in the country from time to time. Moscow is the model city of the Empire, in fact, in all that relates to the poor. The treatment it metes out to the destitute among its inhabitants is quite surprisingly good.

AUTHORISED BEGGING.

Miss Sellers' account of the topsy-turvy method or no method of providing for the destitute poor chiefly, if not entirely, at the cost of those almost as destitute as themselves, is appalling. Her best story is the report given by the mir of one village as to the "excellent arrangement, which works admirably," for providing for their twenty-three paupers—worn-out old men, women, cripples, and children. "Tell me exactly what you do for your poor," said the Empress's commissioner:—

"We send them out to beg in other villages," the Starosta replied, with the air of a man who is doing his fellows good service and knows it. "They are all out begging now," he added.

It was mid-winter; the whole country was covered with snow; and the nearest village was miles away.

Granting permission to beg may be regarded, in fact, as the official solution of the pauper problem in Russian towns, the recognised method of providing for the destitute.

A TERRIBLE INDICTMENT.

Miss Sellers says:—

The State has never yet attempted to organise poor relief, or do anything else for the poor, except to punish them sometimes for being poor. In St. Petersburg there is not a single official institution for the benefit of the pauper class.

The only refuge for the destitute in the Russian capital is the Viazemsky Dom, a private lodging-house run for profit. Miss Sellers says:—

I have seen many wretched resorts for the poverty-stricken in my time, but never another resort so wretched, or so demoralising, as this Viazemsky Dom. I have visited many cities, too, where the poor are neglected, but never another city where they are neglected officially so wantonly and pitiably as in St. Petersburg.

THE RESULT: DEATH BY HUNGER.

Miss Sellers says:—

Anything more absurdly wasteful, or anything more demoralising and unjust, than the way in which the Imperial charities are distributed it would be difficult to conceive. Whoever clamours most receives most, and while sturdy beggars flourish the respectable poor wax lean. If all the money that is given away in alms by the Tsar and his subjects were spent under a properly organised, carefully administered poor-relief system, no man, woman, or child need go hungry. As it is, the number of those who die of starvation is appalling. Elsewhere in Europe the poor die this death by twos and threes, sometimes, perhaps, by tens; but in Russia by hundreds, nay, thousands.

CAMPING OUT BY THE SEASIDE.

An Invitation to Lady Cyclists.

The tent which, at Cambridge House, Wimbledon, for years past afforded accommodation for lady cyclists who wished to camp out under the greenwood tree, has now been transferred to the seaside. It is pitched close to Holly Bush, Hayling Island, between the house and the haystack. Any cycling girls in the City or any inland town who want to spend a day or two at the seaside can have the tent placed at their disposition free of charge. The experience of sleeping

Site of Tent, Holly Bush, Hayling.

under canvas is a luxury usually monopolised by men. The tent will accommodate a couple of girls, who can, if they please, cook their own meals, make their own beds, or, if they prefer they can be supplied with boiling water, and can order what food they require from the housekeeper. Hayling Island is seventy miles from London by the Portsmouth Road. The cyclists can stay for a couple of nights or longer if no other applications are made. Anyone who desires to take advantage of this opportunity of camping out by the seaside should write to "Tent," Mrs. Stead, 5, Smith Square, Westminster, to book the tent for the days they wish to occupy it.

"ELECTORAL CRICKET."

THIS phrase is a bit of a puzzle to the man in the street. It, perhaps, suggests a metaphor akin to Parliamentary "innings," a "party score," etc. But the phrase means cricket, and not politics. It is thus explained in *C. B. Fry's Magazine* by Mr. Victor Trumper in his sketch of the Australian batsman in the making. He says:—

Some ten years ago an alteration was made in the constitution of big club matches in Sydney. Up till then there was no qualification required to play for any particular club, except the possession of the necessary cricket ability, and the result was that two or three clubs gathered all the best players to their ranks, and no other side had a look-in. Why, in those days no thousand people to witness their representatives struggling against a visiting team. The whole scene has changed. The game that was drooping is now full of life and vigour. There are nine first-grade electoral teams in the metropolitan area, and the University team also plays in the first-grade competition. Most of these have both second and third-grade teams which play in the second and third-grade competitions, and other electorates which cannot supply a team strong enough for first-grade ranks are represented in the lower competitions.

This increased energy has made itself felt in many ways. . . . I cannot too greatly emphasise the revolution, for such it was, made in big club cricket by the introduction of localism, and the comparative weakness of Melbourne cricket to-day is primarily due to the retention of the old club system, by which nearly all the best players are drawn into one or two clubs. The local scheme has been a magnificent success, and, while one team at present is

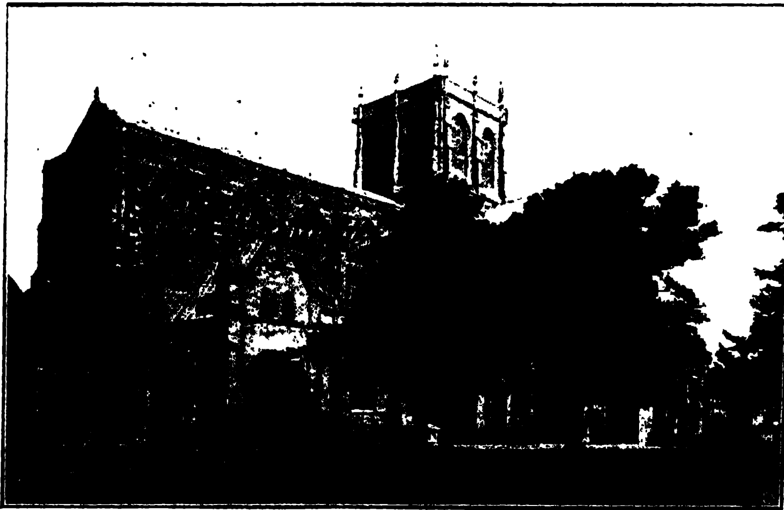
club outside the Carltons, Warwicks, and, later on, the Belvideres, dared to hope for a victory against the palpably stronger teams. The result was that only a few club matches in the year possessed any public interest. There was no local feeling to stimulate enthusiasm, and it was only when the leading sides met that there was any attendance worth talking about. Without public support no game can prosper, and New South Wales cricket was showing signs of falling off, at least in its power of attracting interest, when the idea was seized upon of reforming the clubs upon a local basis. It was a happy solution of the difficulty. The divisions of Sydney and suburbs made for the purposes of Parliamentary elections were adopted, and electoral cricket sprang into life.



The immediate effect of infusing local interest into the competitions was startling. Where before it was almost impossible to get an attendance of over a hundred or so at a match in which half a dozen inter-Colonial players were engaged, now it is no unusual thing to see a local oval thronged with three or four wonderfully strong, it has to be remembered that half the clubs playing have won the premiership since the inauguration of the system.

"WILD FLOWERS" AND "THE COUNTRY SIDE."—I do not usually notice under the heads of magazines and reviews the parts of books issued periodically. I must, however, make an exception for "Wild Flowers in Their Natural Haunts Month by Month," which Mr. Edward Step has written, and Messrs. F. Warne and Co. are issuing every fortnight in eightpenny parts. The speciality of this publication is that it is illustrated by reproductions of the photographs of the various flowers as they are found growing in the fields, hedgerows, and ditches. The appearance of this book, together with the publication of Mr. E. K. Robinson's new penny weekly, *The Country Side*, are welcome indications of the existence of a healthy interest in nature and nature study.

HISTORIC PAGEANT AT SHERBORNE.

IN the *World's Work* Mr. Chalmers Roberts gives a most enthusiastic sketch of the Sherborne pageant, which is taking place on June 12th to 15th. The occasion is the twelve hundredth anniversary of the founding of the town by St. Ealdhelm. The playwright, Mr. L. N. Parker, who was one time a resident of Sherborne, has, with the help of several writers of verse and Dorset dialect, written out and arranged eleven of the leading episodes in the history of Sherborne, with all manner of accompanying choruses, dances, and a grand final moving tableau. The town itself only contains 5,000 population, but near the picturesque ruins of Sherborne Castle a covered arena has been erected to seat 2,000 visitors, with standing room for thousands more :—

Mr. Parker is daily rehearsing on his open-air stage a company of no fewer than seven hundred performers. The zeal with which all the local people, from the great ladies to the girls in the shops and the mills, from the squires to the butchers, bakers and labourers, are lending a hand, taking part and working too, is not to be surpassed in Oberammergau itself. The local silk looms have turned out thousands of yards of beautiful brocades as well as ancient tapestries, and these have been put together by working parties of the ladies of the town, who have been hard at work for many months studying and designing a series of correct English costumes dating from 705 to 1600, and, what is more, making them with no outside help.

[Photograph by Frith.]

Sherborne Abbey.

The Dorset peasant is said to take to acting naturally. The episodes show, first, Ealdhelm announcing that he will build a city and church, 705 A.D.; second, the defeat of the Danes by Bishop Eahlstan, 845 A.D.; third, the death of Aethelbald, 860 A.D.; fourth, the introduction of the Benedictine rule by Bishop Wulfsy, 998 A.D.; fifth, the visit from William the Conqueror, 1075 A.D.; sixth, the building of Sherborne Castle, 1107 A.D.; seventh, parishioners' complaint of the monks' extortion, 1407 A.D.; eighth, the founding of the Almshouse, 1437 A.D.; ninth, the dissolution of the monastery, 1539 A.D.; tenth, the founding of Sherborne School, 1550 A.D.; eleventh, the home-coming of Sir Walter Raleigh, 1593. One wonders whether picturesque history abruptly stopped at 1593, or why no later scenes have been depicted. The illustrations are very taking.

THE LUCK OF EDENHALL.

THE *Wide World Magazine* for June publishes an article, by Mr. Minto F. Johnston, on Family Lucks, and the writer gives an account of some of the mascots found in historic families in Great Britain.

The best known "Luck" of all is the Luck of Edenhall, an heirloom of the ancient Musgrave family of Cumberland, for has not Uhland's ballad, translated by Longfellow, made it world-famous? It is described as a beautiful cup of clear glass with the slightest tinge of amber in it, with an exquisite ornamentation in an arabesque pattern worked in gold and in red, blue, and green enamel. How the Musgraves obtained the cup is not known, but legend has much to say on the subject. That the cup is in very safe keeping may be gathered from the couplet :—

Should the cup e'er break or fall,
Farewell the luck of Edenhall.

Uhland, however, breaks the goblet and shatters the Luck of Edenhall.

The writer gives the following version of the origin of the relic as the one most generally accepted :—

A serving-man of the Musgraves went one night, as usual, to draw water from St. Cuthbert's Well, which is close to the house. When near the well he suddenly came upon a very merry company of fairies, who were holding high revelry, and who were so engrossed in their frolic that they did not become aware of his approach until he was almost upon them, when they dispersed in a panic, running helter-skelter in great confusion, and leaving behind them in their haste a goblet, which the serving-man caught up and made off with.

He was pursued by the whole company, who soon discovered their loss, and who were almost beside themselves with rage. He sped along in headlong flight, and they tore after, but were unable to catch him, for, breathless and panting, he reached the precincts of the Hall just as the foremost among them came up with him.

The "little people" were furious, and the Elfin Queen, in the frenzy of her passion, pronounced the famous curse. It reached the ears of the serving-man, who, carrying his treasure in triumph to his master, told him his tale.

A NEW progressive illustrated quarterly journal appeared last month at Newcastle-on-Tyne. It is entitled *The National Crusader*, and it proclaims on its title page that its foundation principles are the Sermon on the Mount. It is published at Heaton, Newcastle-on-Tyne, at one shilling.

HAS ENGLAND FAILED IN EGYPT?

A French View of the British Occupation.

In *La Revue* of May 1st Jehan d'Ivray publishes an article criticising the British Occupation of Egypt.

FLAUBERT'S PROPHECY.

He begins by quoting a prophecy written in January, 1850, by Flaubert, who said in effect:—

England will in time become mistress of Egypt. She already holds Aden and has filled it with troops, and one fine day the Suez passage will be found very convenient for the transport of redcoats to Cairo. The news will reach France a fortnight later, and everybody will be astonished. Remember my prediction: there is nothing to oppose an invasion; 10,000 men would suffice, especially if they were French, because of Bonapart whom the Arabs regard as a demigod; but it i · that the pasty is cooking.

The great French novelist was only wrong in the number of troops necessary for the invasion, for eventually, in 1882, Admiral Beauchamp Seymour found 800 sailors sufficient, after the bombardment of Alexandria, to quell the revolt in a city of some 300,000 inhabitants.

JUDICIAL FAILURE.

The writer then endeavours to give a *résumé* of the effects of the British occupation from the point of view of the interests of Egypt and her inhabitants, native and foreign. To begin with, he says it would be most unjust to say that the extraordinary progress made in Egypt during the twenty-two years of British occupation is due to Britain alone. It would be equally wrong to say that the presence of redcoats alone has sufficed to stop revolutions, for there has never been anything like revolution in Egypt. A mere mutiny among soldiers is a very different thing. The best work which the British have accomplished in Egypt is to be found in the military reforms, in finance, and in the irrigation works. Far otherwise, however, are the British efforts at judicial reform. The writer protests against the introduction of Englishmen into judicial tribunals to the exclusion of the natives. The British justices, he says, not only have no knowledge of the Arabic language, but many of them know very little about law. In the schools the French language has been suppressed and replaced by English, and the native justices are required to study English, as it is easier for them to learn something of our language than it is for the British to acquire a knowledge of theirs. The result is, the new native justices have given up the practice of studying in France, and are satisfied with an inferior training in their own country. Thus the judicial condition of the country has returned to the deplorable ignorance complained of twenty years ago.

BRITISH INFLUENCE DISASTROUS TO EDUCATION.

While Britain has been happy in the reforms she has brought about in the domains of agriculture and finance, her influence in the domain of education has been disastrous. Nearly all the French professors of Cairo and Alexandria have been replaced by Englishmen, and even in the provinces native teachers who have passed some time in England, or have acquired a knowledge of English, are chosen. The curriculum of studies has been lowered, and all the pupils are adepts at football and tennis. The school of medicine has recently had to close its doors owing to lack of pupils, with the result that in 1904 only twenty native doctors against eighty foreigners applied for permission to practise their art in Egypt. In every domain the British fill the best posts, and the doors are closed to the natives. The Egyptian is kept in a veritable state of servitude. He is taught nothing which could awaken in him ideas of justice and humanity. Alcoholism has spread like a train of fire. The British have introduced their bars. Whisky is sovereign on the banks of the Nile, as in India brandy takes the place of bread. As with Malta and India, and all the conquests of Albion, Egypt is regarded as a source of revenue, and little concern is shown for the condition of the worker or producer.

THE SEAMY SIDE OF JAPAN.

Painted by a Japanese Socialist.

The mood of the moment to worship the Rising Sun will find a useful corrective in the article which Mr. Kitchi Kaneko, a Japanese Socialist, contributes to the *Arena* for May. This observer is very far from thinking Japan and the Japanese the idyllic paradise of the modern world. He tells us that most of the popular pictures of Japan as the abode of peace, sobriety, and prosperous industry are fairy tales:—

Japanese history is a history of war, of bloodshed, of warriors. No nation ever existed in the world's history with such a sanguinary record as Japan. We have saloons under the name of beer-halls, of *Sakaya*, and the *machiai*, which is very much worse than the American saloon. We also have many strikes nowadays going on much of the time. The condition of the working-men in Japan is a most miserable one. They are yet in a state which may be described as wage slavery. In 1899 we had 280,922 workers employed in the various factories in Japan. Of these 184,111 were female workers. They are working generally twelve hours a day, and sometimes fifteen hours, for a wage varying from 6d. to 1s. per day.

While the cost of living is increasing year by year, the workmen's wages are not increased accordingly. The conditions of his labour are terrible; 2,810 workmen were injured in a single month in 1904 in the Tokio arsenal. Our agricultural products are not enough to support our people. We are importing Chinese rice nearly every year.

The Japanese government system is the make-believe system. It is not by the people, of the people, for the people. It is the government of the few, of the nobles, of the titles, and above all, of the figure-head—the Mikado.

Who can prove that Ito is greater than Witte, that the Imperial Diet is better than the Russian Zemstvo? I am of the opinion that these differences of political institutions are not of much importance when it comes to the actual strength of the people. Some critic has said that the Japanese are playing with their toys, namely, the constitution and the parliament.

As for liberty of the Press, it can hardly be said to exist in a land where editors can be and are sent to gaol for criticising the legislation proposed by the Government. "In Japan it is absolutely impossible to criticise or even to talk about the royal family."

BEETHOVEN AS LOVER.

"THE Love Quest of Beethoven" forms the subject of a pathetic paper in *Good Words* by Miss M. B. Whiting. The great master's career is shown as one long wistful seeking after a love which was never found. More truly than of any poet he seems to have learned in suffering what he taught in song:—

Beethoven's home life was a miserable one; his father's drunken habits dragged the family into the depths of poverty, and the musician's boyhood was spent in comforting his beloved and sorely tried mother, in watching over his younger brothers and in saving the household possessions from the pawnshop. From this wretchedness he was rescued by Count Waldstein, through whose influence he was first made Court Organist to the Elector, and afterwards sent to Vienna to study. On his return to Bonn, he was asked to compose a cantata for performance during the Elector's visit to his palace at Mergenheim, and in the midst of the applause that followed the concert, the Prince asked the ladies if they had not a wreath to give the composer. In answer to this appeal, a beautiful girl took the flowers from her hair and blushingly bestowed them upon Beethoven. Her loveliness filled him with an exquisite delight.

Not long after the Austrian Ambassador asked him to teach a young relative of his. He accepted the post with reluctance, until he found that his pupil was the fair maiden of Mergenheim. A friend warned him of the hopelessness of his passion. The girl belonged to one of the oldest and proudest families in the land. One day, going as usual to give his lesson, he found the room empty, and, sitting down to the piano, poured out his heart in a flood of melody, "Adelaida," the wonderful song which has been called the perfect expression of hopeless love:—

"How beautiful!" cried a voice as he finished.

He turned and saw his beloved before him, and, falling on his knees, he kissed her hands, crying, "I love you! I love you!"

To the young girl he seemed a madman, and, trying to free herself, she shrieked for help. Her uncle and aunt ran into the room and ordered the young man out of the house, and without a word of explanation or excuse Beethoven went his way.

When he was twenty-five he met the Contessa Guilietta Guicciardi. He writes joyously of the change which has been wrought "by a lovely, fascinating girl, who loves me and whom I love. I have once more had some blissful moments during the last two years, and it is the first time I have ever felt marriage could make me happy." Next year, however, the Contessa married a man of wealth and title. Of his next love affair the mysterious letters found in his desk after the death are the only record. And a passionately incoherent record they are. His "Fourth Symphony" is supposed to record the transport of accepted love. Here again the engagement was broken off. Miss Whiting says:—

To marry a man of such eccentric habits would doubtless have required much courage; careless in dress and uncouth in appearance, he was absolutely indifferent to the impression that he made upon other people. His habit of stamping, groaning and howling while he composed, and of dashing cold water over his head until the floor became a veritable lake, were sources of immense annoyance to his fellow-lodgers, nor, when he set up a house of his own, was his condition any the better.

Beethoven's affections were, unfortunately for himself, always set on women of a superior rank. But, says the writer, "while he yearned after the unattainable, a silent and devoted love was laid at his feet, and that he should have been persistently blind to it is but another instance of the irony of fate." His nephew was committed to the tuition of a Spaniard named Del Rio, whose younger daughter Fanny came to adore the great genius. From her diary we learn her passion. Her last record of it runs: "I feel that no heart has ever beaten which longs so intensely, so eagerly, and so vainly for love as mine does." So it may be, conjectures the writer, that Beethoven, debarred from what he sought so eagerly, gave himself up more completely to the worship of ideal love. His works tell the story of his life-long quest after love.

GOUNOD ON WAGNER AS DRAMATIST.

THE musical power of Wagner exists elsewhere than in the melodic element. Wagner possesses, says Gounod in the *Revue de Paris* of May 1st, the faculty of appropriating sounds to the scenic impression. To him music is not the aim, but the theatrical means. It is important to note also the connection which exists between the musical language of Wagner and the essentially symbolic and legendary character of the subjects which he affects. He is the most German of all the German musicians. The key of his work and the secret of his power in matters theatrical is the expression of symbolic thought and dramatic movement in a combination of declamation and instrumental accent. The virtue of his music is less in the music itself than in its relation to the poetry and the drama. His music is more objective than subjective; it is almost impersonal. Wagner is a great master in the matter of scenic *entente* and unity of plan in his dramas. Everything is made to converge implacably to that end decorations, *mise-en-scène*, lights, and the concealment of the orchestra.

The theatrical dream of Wagner was the dramatisation of allegory. In art, as in life, Wagner loved the grandiose, and his brain magnified his figures, and gave them proportions epic, gigantic, and superhuman.

In considering the dramatic system of Wagner, Gounod deals with it from two distinct standpoints—the expression of passions and situations, and the absolute subordination of the musical form to the exigencies of the poetic and scenic idea. Truth of expression, he says, is a condition *sine quâ non* of dramatic art, and to this principle Wagner shows a fidelity constant, scrupulous, and absolute, without compromise or concessions of any sort. He has never written a note which did not seem to him absolutely imperative.

With regard to the musical form, the danger in Wagner's dramas and the Wagnerian system is the abolition of certain conditions or laws established by the great masters as essential to musical art. Gounod regrets the substitution of declamation for singing, the exclusion of vocal polyphony, and the suppression of tonality or harmonic unity.

SCHILLER IN MUSIC.

THE German reviews for May are filled with appreciations and estimates of Schiller, and the *Deutsche Rundschau*, *Velhagen*, and *Westermann* may be called Schiller numbers. Max Friedlaender contributes to the *Deutsche Rundschau* an interesting article on a theme untouched by any of the other writers. He deals with the Musical Settings of Schiller's Works, and his article represents, as may be imagined, a great deal of research. He shows how Schiller has inspired composers, Germans and others, and gives particulars of the various musical settings of the songs and dramas.

Johann von Schiller.

THE "ODE TO JOY."

In the first rank among the musical settings of Schiller stands, of course, Beethoven's music for the "Ode to Joy" in his great Choral Symphony. In 1793 the idea occurred to him to write music for the whole of the Ode, but he did not occupy himself seriously with the poem till near the end of the second decade of the nineteenth century, and then it was with little success. In 1823, however, thirty years after the first intimation of his intention to provide the Ode with appropriate music, and nearly twenty years after Schiller's death, the work was completed.

The writer thinks it odd that Beethoven should have composed music for so little of Schiller's work, seeing that the poet and the composer had so much in common. Love of man, love of freedom, a noble pathos, and a desire to raise harmony out of discord in the heart of man, characterise, he says, Schiller's works and Beethoven's great sonatas, quartets, concertos, and the symphonies, notably the third, the fifth, and the ninth.

SONGS BY SCHUBERT AND OTHERS.

Haydn, Mozart, Carl Maria von Weber, and several other eminent composers, appear to have taken little interest in the poetry of their German contemporaries, for they have contributed nothing to Schiller-music. But Schubert's text of seven hundred vocal works forms a not uninteresting anthology of the best poems of his day, including eighty poems by Goethe and over fifty by Schiller. Of the two poets, Goethe inspired, on the whole, the greater compositions, while Schiller's lyrics, which are rather art than nature poetry, left little to be added by the musician. To Bernhard Anselm Weber we owe one of the most charming melodies for "Mit dem Pfeil, dem Bogen," which a Schiller-poem has yet found; but far higher than Weber as a composer stands Schiller's friend, Johann Rudolph Zumsteeg, whose setting of Joan of Arc's Farewell has rendered his name immortal.

THE SCHILLER DRAMAS.

A list of all the musical works inspired or suggested by Schiller's dramas would be a long one. The most popular is Rossini's opera, "William Tell," but "The Maid of Orleans" has been treated musically many times in Germany and elsewhere—by B. A. Weber, Andreas Romberg, G. A. Schneider, Volkert, Graf Gallenberg, Ignaz Moscheles, J. Hoven, Verdi, Södermann, Leopold Damrosch, Max Bruch, August Langert, Moritz Moszkowski and Tschaikowski.

WHAT GOUNOD THOUGHT OF WAGNER.

IN the *Revue de Paris* of May 1st the publication of Wagner's letters to Frau Mathilde Wesendonk is completed. From them we learn what Wagner thought of Gounod, a musician who had declared himself enthusiastically on the side of Wagner.

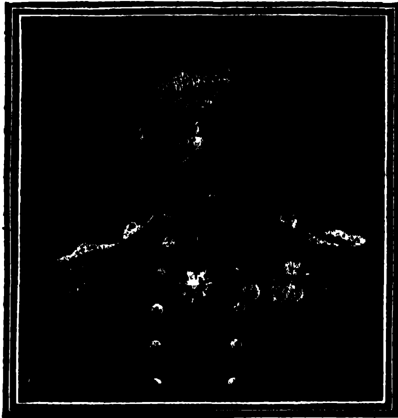
In 1859-1860 Wagner wrote of Gounod:—

> An artist with a very amiable exterior and honest intentions, but without any superior gifts. . . . A tender, good, and pure man, but not profoundly gifted.

The same review has now the good fortune to be able to publish Gounod's judgment of Wagner, the musician, written in 1887.

THE MELODIC ELEMENT.

Gounod discusses Wagner under two aspects—his musical and poetic faculties and the system to the establishment of which he consecrated those faculties.



From the point of view of pure music, that is, from the point of view of giving to the ear a pleasure exclusively musical, such as is experienced in the inspirations of Mozart, Beethoven, Mendelssohn, etc., Wagner, says Gounod, cannot be placed in the first rank. Wagner, he admits, has written many charming and beautiful melodies, but what his partisans call the leading motive gradually becomes, so to speak, a sort of *etiquette*, a sign affected for a personage, a thought, or a symbol, to be reproduced with modifications of the orchestral accompaniment with every appearance of the personage or the myth which it represents.

MISS A. GOODRICH FREER, formerly assistant editor of *Borderland*, is now Mrs. Spoer, as she married a savant in Jerusalem. In the June number of the *Occult Review* she begins a series of papers under the attractive title, "The Occult in the Nearer East."

THE LATEST WAR SCARE.

THE INDISCRETIONS OF ADMIRAL FITZGERALD.

THE chief article in the *Deutsche Revue* for May is, of course, that by Admiral C. C. Penrose Fitzgerald, which the comments of the Press have made world-famous.

Photograph by] [*Russell and Sons.*
Admiral Fitzgerald.

Early in February the Civil Lord of the Admiralty, Mr. Arthur Lee, made a speech at Eastleigh on the new distribution of the British Fleet, in which he remarked that we had to look with more anxiety to the North Sea than heretofore. This was regarded by the German Press as a firebrand speech, and the German Navy League, whose chief business seems to be to point out defects in the German Navy, made all the capital possible out of it. In March Admiral Thomsen wrote an article on Mr. Lee and his speech in the *Deutsche Revue*, and in the present number Admiral Fitzgerald replies to that article and defends Mr. Lee's statements, while M. von Brandt contributes a German reply to Admiral Fitzgerald.

The editor prefaces the article by a note to the effect that Admiral Fitzgerald desires only to strengthen the long friendship between England and Germany, thinking a frank expression of his views of greater service than silence regarding certain points, which in his opinion might trouble the mutual relations of the two countries.

GERMAN AMBITIONS.

Admiral Fitzgerald begins by saying he cannot see anything in the nature of a menace to Germany in Mr. Lee's speech, so severely criticised by Admiral Thomsen. The existence of Great Britain depends on command of the sea, and the new mobilisation of the fleet is not an unusual precaution for a nation to take in the face of the sudden rise of a powerful fleet near her coasts. At the present moment that fleet chances to be the German, and it is not unnatural to have some misgivings as to the objects of an ambitious, energetic nation, desirous of expansion, and seeking colonies and commerce in every part of the world. Such ambition on the part of Germany is perfectly justifiable and no one can reproach her on that score so long as her policy is restricted to lands not yet appropriated by the colonial and commercial interests of other countries.

THIRSTING FOR MILITARY FAME.

Admiral Fitzgerald does not agree with Admiral Thomsen when he says that for the last thirty-four years Germany has shown no desire for war or military fame. Nor does Admiral Fitzgerald admit that Germany has never seized territories from her neighbours, for he happened to be in China when Germany took possession of Kiao-Tchau on the excuse that two German missionaries had been murdered. If China had been strong enough to defend her territory, he says, Germany would never have committed the act of robbing a friendly Power.

BON CAMARADERIE

On the other hand, Admiral Fitzgerald is in accord with the views of the German Admiral in reference to the friendly relations between the officers of the German and British fleets, though the British Admiral admits that his comrades in the German navy would not be agreeable enemies.

FALSE FRIENDSHIP.

It is a widespread belief in England, continues Admiral Fitzgerald, that for years Germany has never lost an opportunity to create discord between England and her neighbours, including the United States. While the English regret this envious behaviour of Germany, they cannot shut their eyes to it, and hence the measures which are considered sinister designs. But it is not yet universally believed that Germany is just now desirous of a quarrel with England. She is not yet ready; but in a few years, when she possesses thirty-eight first-class battleships, and sees England in a similar position, perhaps, to that of 1899, or engaged in a war on her Indian frontier, she would not hesitate to try her fortune once more in war to get a few of those spots now in our hands in order to extend her commerce at the expense of England.

ENGLAND MISTRESS OF THE SEAS.

The Admiral, in conclusion, says he would regard a war between England and Germany as a great calamity, but if such a war is to come, he would rather see it break out to-morrow than be postponed for a number of years, when Germany would be stronger by sea, and might get the better of us. In the next great naval war England will have to fight for her very existence, whereas her enemy will be fighting for honour, glory, or conquest.

Germany is jealous of our commerce and our power, and if she continues to increase her navy at the present rate so as to bring it more or less up to the standard of the British Navy, we can only regard her action as a menace against our supremacy at sea, which we must defend at all cost, seeing that it is vital to our existence as a nation.

IN the *Sunday Magazine* Miss Elizabeth Grierson describes Roehead, Mirfield, where Charlotte Brontë went to school.

TO DAM THE NIAGARA RAPIDS.

In the *Engineering Magazine* Mr. Alton D. Adams suggests an alternative to that utilisation for power purposes of the American Falls which is proceeding at so great a pace as to threaten to dry up that half of the great cataract. His proposal is as follows:—

Dam Niagara, drown the White Horse Rapids, fill up the whirlpool, raise the water level in the gorge 100 feet, change the river into a storage reservoir from the foot of the cataract to the brow of the escarpment, and 1,500,000 electric horse power may be developed at Lewiston. When this power is not in use a third cataract will be created, with the combined discharge of both the American and the Horse Shoe Falls flowing over a dam 100 feet high between Lewiston and Queenston. At this dam fully 60 per cent. of the energy of 222,000 cubic feet of water per second falling 100 feet and developing 2,500,000 horse power may be transformed into electric current. A dam about 100 feet high, corresponding to the drop of the river surface from the foot of Niagara Falls to Lewiston, five miles below, would work no substantial injury either to the natural falls or the existing power plants.

On the other hand, the 100-foot dam at the brow of the escarpment would flood the rapids, and turn the whirlpool into a comparatively quiet body of water. As an offset to the loss of these scenic advantages, the proposed dam across the river just above Lewiston would develop a great power at a much lower cost per unit than can be effected with tunnels between different points in the gorge. The 1,500,000 horse power that might be developed by means of a dam 100 feet high at Lewiston is more than twice the capacity of all the hydro-electric plants now completed or in process of construction about Niagara Falls. As only a small fraction of the ultimate combined capacity of these plants is at present utilised, it seems that the additional development of 1,500,000 horse power at Lewiston, thus raising the total from Niagara River to more than 2,000,000 horse power, would provide all the energy that could be utilised within 300 miles of the Falls in at least the next half-century.

The prospect of cheap electric energy is not the only inducement to the development of the above water powers in the gorge, either by means of tunnels through the cliffs or of a dam at Lewiston. A result of these developments on the lower river might well be to save from destruction that portion of the American Falls that has not already been granted away for power purposes.

Mr. Adams is not indifferent to the scenic charm of Niagara. He says:—

Those who have enjoyed the wild scenery of the White Horse Rapids at close range will be loth to give them up, but when the hard alternative is to drown these rapids, or dry up the American Falls, the former seems much the less of the two evils.

What would the old North American Indian have thought of the power that could dry up Niagara by turning it into lightning?

THE second number of the *Rivista Musicale Italiana* contains a number of learned articles. A valuable one for the musical historian is that on Pietro Guglielmi, who died in 1804, and in commemoration of the centenary of his death a chronological list of the composer's works has been arranged by Francesco Piovano. The "Parsifal Question" in America is discussed by Nicola Tabanelli, and J. G. Prod'homme publishes some new letters by Hector Berlioz. Several volumes of Berlioz' letters have already been published, but the series here collected includes a large number which have been scattered in various journals and reviews or have appeared in sale catalogues of autographs. They range from 1828 to 1863, and are naturally somewhat fragmentary.

THE FRENCH WORKING MAN AT HOME.

By a British Engineer.

MR. F. W. BOCKETT, writing in the *Positivist Review*, calls attention to a shilling book published by the Twentieth Century Press under the title "The Working Classes in France." It is written by Mr. Henry Steele, a British engineer, who can speak French and has lived with his wife for years in Paris. Mr. Bockett says:—

Such a vivid, photographic picture of the daily life and the social conditions of the French people has not been presented to English readers since Arthur Young produced his "Travels in France," and it is important that English men and women should read it, because the essential step towards bringing about an international spirit of fraternity and toleration is, for the peoples of the various countries of the world, to know more of the details of one another's lives, their thoughts, difficulties, environment, and aspirations. One of the many deep impressions made upon my mind by this book is this, that the French workman and his wife possess one priceless gift that comparatively few English working people have secured for themselves, and that is the art of rational enjoyment. What most struck our English workmen in Paris was the absence of drunkenness and of any form of organised games, such as cricket or football.

In the chapter on workshop life English workmen will be surprised at the looseness of discipline, as compared with that of workshops in this country. A good quarter of an hour is lost every morning in friendly salutations, smoking is allowed, and the workman will stop to roll his cigarette under the nose of the foreman. Short of deliberate waste of time, the utmost freedom is allowed, and the pace of the average English workshop is evidently never reached in France. One curious custom is mentioned—"no one would dream of working when a former shopmate was being buried." From this and other customs that are noted the impression made is that there is more unselfish comradeship, more genuine affection, between workman and workman in Paris than in London.

No less than one hour and a half does Jules take for his dinner, with five minutes' grace thrown in for washing hands. For nine months out of the year he dines in the garden of his restaurant. His *serviette* is as necessary as his wine. He starts with meat and bread, followed by one or two vegetables, then a salad or cheese, a dessert of fruit, winding up with a glass of black coffee, to which occasionally is added a little cognac. "Cigarettes are rolled and lighted, and they sit back at peace with the world and themselves. There is no hurry, no bolting of food, but a steady appreciation of each detail in a healthy, sane and satisfying meal." Here is a copy of a veritable bill of fare: "Soup and beef, 4d.; stuffed rabbit. 6d.; mixed dried fruits, 1½d.; cream cheese, 1d.; fresh fruits, 1d." Total, 1s. 1½d. By knocking off the second course, 7½d. And all skilfully cooked and delightfully palatable.

Mr. Steele, however, is emphatically of opinion, after spending the greater part of his life among French workmen, that, for general health and bodily strength, they compare very favourably with our own people.

The general impression gained from this book is that in many respects the French workman and his wife and children lead a happier life than do people of a similar class in this country. One great factor in the prosperity and happiness of the working class in France is that there is almost an entire absence of the degrading desire to ape the dress and manners of the so-called higher classes. Mr. Steele thinks that all the chief points in the character of the race are bound up in one great ruling social instinct, which goes far to justify the adoption of the last word on the national motto—"Fraternity."

IN the June *Idler* Mr. V. Blanchard writes on the passing of the ancient towns of Rye and Winchelsea, and in the June *Cassell* Mr. Tighe Hopkins has an article on the Five Head Ports, or Cinque Ports, as the parent of the Royal Navy.

THE REVIEWS REVIEWED.

THE AUSTRALASIAN REVIEW OF REVIEWS.

THE *Australasian Review of Reviews* for April appears under the editorship of Mr. W. H. Judkins, whose portrait accompanies this notice. The contents of the April number include a sketch of Australian progress. Interviews with General Booth, Sir J. Ward, and the Hon. H. Daglish, and a sketch of the wood milling industry in Tasmania by Mr. Henry Stead. Lady Stout reviews the dreary Utopian romance, "Limanora."

VICTORIAN POLITICS AND ARBITRATION.

Mr. Bent has announced the intention of the Government to launch an association having before it the following aims: The promotion of closer settlement; of water conservation and irrigation; the appointment of agents in various parts of the world to distribute Victorian produce; the advertising of Victoria; opposition to socialism in every possible manner; opposition to State Arbitration; making permanent the Shops and Factories Acts, with an alteration in regard to improvers, so as to ensure them a better technical education; economies in the public service; amendment of Public Service Acts so as to make promotion by merit; decentralisation; agricultural education.

Mr. W. H. Judkins.

Mr. Judkins points out that Mr. Bent, while professing himself opposed to State arbitration, is in favour of the Factories Acts, which contain the principle of industrialism. The principle of arbitration, as it is expressed in the Factories Act in operation in Victoria, is so simple and expeditious that it will surely come to be the favoured method of settling trade disputes. It simply means that representatives of employers and *employés* in the disputes concerned meet together and arrive at a mutual understanding, their decision becoming law and being binding upon each.

IMMIGRANTS WANTED IN AUSTRALIA.

General Booth, being interviewed at Melbourne, was asked: "Are you likely to negotiate for lands here for emigrants from Home?" He replied, "No; why should I? There are such vast areas of untouched lands elsewhere, and some of the Governments of the nations are approaching me with offers, nations that want population; but Australia does not want population."

As against this Sir Jos. Ward, of West Australia, in an interview declared that his Colony was bidding against Canada for immigrants. "Canada will give him land for nothing, so will West Australia. We will give him 160 acres. If he wants any more he will have to purchase it at a price not exceeding 10s. per acre, payable in twenty years, but we will give him the 160 acres, and he can make his selection where he chooses in the land which is thrown open for selection." Mr. H. Daglish also called attention to the fact that, for assisting immigrants, West Australia has a splendid institution, the "Agricultural Bank." Its capital was raised last session from £400,000 to £500,000. The money is obtained from the Savings Bank and lent to the Agricultural Bank at 3¼ per cent., which again lends to the settler at 5 per cent. on the security of land and improvements and also of stock. Mr. Daglish, of New Zealand, said that there are great facilities in New Zealand for land settlement. "We want to settle as many people on the land as possible in the easiest and cheapest way to them."

PROGRESS IN NEW ZEALAND.

The New Zealand Government has established the metric system and decimal coinage which will go into operation on January 1st, 1906. Another startling change has been to exclude alcoholic liquor from all railway refreshment rooms. Mr. Daglish stated that the Government is looking forward with much interest to the opening of the Panama Canal. "It will be to us one of the biggest things of the century. We will be able to connect with the Old World in an almost straight line, to say nothing of touching more easily the Eastern States of North America. Be assured that we shall take every advantage of it."

TASMANIAN TIMBER.

Mr. Henry Stead, describing his visit to the logging camp of Mr. Henderson, in Tasmania, calls attention to the extent to which the Tasmanian blue gum is supplying the markets of the world:—

> Trains in South Africa, India, New Zealand, and Australia run over sleepers sawn from the mighty trees which stood in Tasmanian forests long before the settler set foot in the land. In Manila the American victors and the vanquished Filipinos drive and ride over streets paved with blocks sent from mills in Southern Tasmania. The fact that blue gum does not float, but sinks, gives it an especial value in building piers.

Note that Tasmania has introduced a slight modification into the English language:—

> A tree is "falled," and the men who do it are called "fallers." This word has been coined by the sawmiller, "felling" never being used. For "falling" a tree five men are generally required; two others attend to hauling the logs, another puts the log on the trucks, and an engineer in charge of the stationary hauler completes the party.

THE AMERICAN REVIEW OF REVIEWS.

DR. ALBERT SHAW, the editor of the *American Review of Reviews*, paid a brief visit last month to France and Italy. He sailed for New York on May 28th. The June number of the *Review* is full of varied and interesting matter. I notice several of the articles elsewhere. Among the shorter papers are brief character sketches of Count Cassini and Mr. Takahira, who is Japanese Minister at Washington.

MADAME MODJESKA.

There is a short illustrated paper on Madame Modjeska, who is said to be preparing her autobiography in the seclusion of her fine country estate of Arden, near

Los Angeles, in California. This was the place in which she at one time hoped to found a modern Utopia, and it was here that she mastered the English language in six months. She is now forbidden to play either in Russia or Germany.

Mr. Kinnosuke, in an article on Admiral Togo's larger problem, says that the Japanese Admiral does not regard the destruction of the Russian fleet as anything but a curtain raiser for the great drama, when Japan may have to face the combination that deprived her of the fruits of her victories over China.

JOSEPH JEFFERSON.

Mr. J. P. Gilder writes an interesting sketch of the famous American, Joseph Jefferson. It is forty years ago since he created "Rip van Winkle," but his fame is still fresh. Mr. Gilder declares that he is the best-loved American of his day:—

The star system has superseded the stock as completely, and apparently as irrevocably, as the electric trolley has displaced the horse-car; and Jefferson himself was one of the first to organise a "combination" the arguments for which he marshals with force and conviction, claiming that his own responsibility for the introduction of the star system must be shared by no less a man than Shakespeare—not Shakespeare the actor and manager so much as Shakespeare the dramatist, the interest in whose plays almost always centres in one or two characters.

The interesting account of Oxford by a Rhodes scholar is noticed elsewhere. Mr. Millet describes the American Art School in Paris. There is a character sketch, with portrait, of General Fitzhugh Lee. The *Review of Reviews* is the only monthly magazine that even attempts to present the public with a living picture of the teeming life of the whole American world, in politics, sociology, literature and arts.

THE UNIVERSITY REVIEW.

SEVERAL magazines started recently have not been heard of at our office after the issue of the first numbers—the *Albany*, the *Interpreter*, the *Liberal Churchman*, for instance.

This month we have to welcome another new sixpenny review, the *University Review*, published by Messrs. Sherratt and Hughes, at 65, Long Acre.

The May number opens with a short article, which serves as Introductory Note, by Mr. James Bryce, on the University Movement. Mr. Bryce sees in the extension of the old Universities and the creation of new ones one of the most hopeful signs of the times, full of promise for the future. At the same time we have much to learn from the Continent, particularly Germany and France, and not less from the United States.

There are several other university and educational articles in the number, the most interesting one being that by Professor Churton Collins, on the Education of the Citizen. The question he discusses is the relation of our Academic system to the present educational requirements of English citizens. He thinks that the time has now come when "a University must be something more than a mere nursery for specialists; that if provision for specialisation be one of its functions, it has more important functions too, namely, the definition, regulation and dissemination of civic liberal instruction and culture -of education in the sense in which it was understood by Plato, by More, by Matthew Arnold, and by Jowett."

Professor E. A. Sonnenschein contributes an article on Shakespeare and Stoicism. He says the passage "The quality of mercy is not strained," etc., is one of the brightest jewels in the poet's crown, and proceeds to show that it is a beautiful rendering of Seneca's treatise "On Mercy."

THE MONTHLY REVIEW.

THE June *Monthly Review* is an average number. The paper on Gibraltar is interesting. Mr. Gibbon's appalling picture of the Russian Church and the Russians is noticed elsewhere.

MEDICAL RELIEF IN LONDON.

Miss Helen G. Nussey, out-patient Almoner of Westminster Hospital, discusses what should be done to reform medical relief in London. She would abolish letters for in-patients. She says:—

Changes with regard to out-patient management are in the air. If all those who have formed any principles in the matter work together to educate those around them to a right public opinion about what is the right use and what the misuse of hospitals, and will urge the provision for ordinary illness such as is made in country places, a gradual and steady improvement may take place among those who have been taught of late to rely on obtaining their medical treatment free, and thus the ground will be prepared for the sounder administration which is coming.

A RALLYING CRY FOR MR. BALFOUR.

In the first paper of the *Monthly Review* "Conservative" makes an earnest appeal to the party to forswear Mr. Chamberlain and rally round Mr. Balfour and efficiency. The bye-elections, he admits, have

been bad, very bad; but it was the fear of the effects of Protection which made them bad. Convince the electorate that Protection is no longer to be feared, and the chief cause of defeat is removed. But, apart from that, if our chiefs are efficient, and if we are loyal to the Prime Minister, we need not grow pale even if Brighton is out-Brightoned; for the Liberal party had a "flowing tide" once before.

But he forgets that the flowing tide of 1892 was a mere neap tide to the spring tide which is drowning out the Unionists to-day.

EMIGRATION ON A DIVIDEND-PAYING BASIS.

Mr. J. Hall Robinson, who managed the *Daily Telegraph* Emigration Fund for the transfer of West Ham workmen to Canada, gives an interesting account of his experience. The following is his conclusion:—

My own belief is that there are two ways of "settling" Canada from England profitably. The first is based upon the principle adopted by our direct system of emigration, *i.e.*, the wide distribution or scattering of families, taking care that not more than one family should be placed in each sub-centre. The other way rests with the Dominion.

Instead of asking a man without experience to farm 160 acres even with a small capital, I think it would be far better if the Dominion Parliament would permit of a company finding the capital to take over the free grant lands, and engage to tutor the ultimate owner by training him first of all here, and then in Canada, and finally finance him until he is well upon his feet, releasing him as he paid off the debt which may have been incurred upon his account.

This endorses the suggestion I made some months ago when writing on Canada as an emigration field.

THE *Windsor Magazine* for June is made beautiful, as is its wont, by the first art article. Mr. Fred Morgan is the artist selected for the month. Mr. John Oldcastle contributes an interesting sketch to accompany the eighteen choice reproductions of Mr. Morgan's pictures. Mr. Morgan, when he was only sixteen years of age, sent a picture to the Royal Academy, which was hung. When he went on varnishing day, the elderly artists asked if he had brought his pap-spoon. Two other principal articles—on the feeding of our soldiers and on the employés of our railway companies—are noticed elsewhere.

THE FORTNIGHTLY REVIEW.

THE *Fortnightly* for June opens with a character sketch of the young King of Spain, which is noticed elsewhere. So is Mr. Landa's admirable presentation of the case for the Alien. Mr. Lawrence Binyon contributes a dramatic poem based on the death of Paris and the contrast between the loves of Œnone, whom he deserted, and of the adulteress Helen. The literary articles discuss the literary value of Anthony Trollope's novels, the literary associations of the American Embassy, and the ethics of Don Juan. Mr. V. E. Marsden's paper on "The Present State of Russia" is not illuminating. Mr. Bashford's exposition of the recent action of Germany in the Mediterranean is well informed, but not very new. "Militarist," who reviews the third volume of the *Times'* History of the War, reproves Mr. Amory for his lust for killing, and ridicules his laudatory picture of Lord Kitchener as a British Nana Sahib.

IS MAN A QUADRUPED?

Mr. Chesterton, in his amusing dialogue, makes one of his characters declare :-

There is only one sane argument against female suffrage, and that I happen to believe in. That is, that the man and the woman in their normal relations are, in the emphatic words of Scripture, one flesh ; that they are parts of one creature ; that they are the two ends of a quadruped. And if this is so, there is no more unreason in one branch having the political function and the other not, than there is unreason in our taking knives and forks in our hands and not taking knives and forks in our feet. . . . I tell you that, whether the two people are for the moment friendly or angry, happy or unhappy, the Thing marches on, the great four-footed Thing, the quadruped of the home. They are a nation, a society, a machine. I tell you they are one flesh, even when they are not one spirit.

That is all very well. But who has the right to decide which end of the quadruped shall use the knives and forks—or have the vote ?

THE FRONTIERS OF THE EMPIRE—AND CONSCRIPTION.

Major-General Sir Thomas Fraser contributes a very powerful and alarming article under the somewhat unfortunate title "A Century of Empire." In reality his paper is a vigorous exposition of the enormous responsibilities of empire, with the view of compelling us to face conscription :—

We are, on land, in contact and concerned with about 1,200 millions of people, rulers and ruled, in addition to the 450 millions that form our own Empire. We have, in a single century, passed from the position of the least continental nation, to one with by far the most extended land frontiers in the world, and, what is more important still, very many of them accessible to our neighbours independently of, and in spite of, our power at sea.

Confining ourselves to the seven Powers, our land frontiers with them extend for 18,000 to 19,000 miles—much more than twice the distance from pole to pole.

The land frontiers of Russia, which probably come next to ours in length, number, perhaps, some 7,500 miles, and touch five great Powers in two continents, while we touch seven in three.

His moral is that :—

If, with the requirements of the Navy, we cannot have enough regular troops at home as well as abroad, it is difficult to see how we have any alternative for home defence except the constitutional principle bound up with our historic past, and which still remains —namely, the principle of personal obligation to defend our own homes.

In other words, Empire spells conscription. Professor Beesly, in the *Positivist Review*, says the same thing, but his moral is, let go the Empire.

A DWELLER IN A FOOL'S PARADISE.

Mr. W. Philip Groser, in an article entitled "Imperial Relations : a Policy," entertains the delusion that the Colonists are willing to reduce their duties on British goods, and he thinks that by this means they might be made to pay for the cost of their defence :—

The Colonies are willing to grant us a preference ; but it is difficult for us by fiscal arrangements to make them the return we wish to make. We are willing to bear the burden of Imperial defence, but it is difficult for the Colonies by direct payment to make the contribution that they wish to make.

Therefore he proposes to accept preference as a set-off to the cost of defence :—

Originally the assessment of the preference could be at such a reduction of the present duties as would be equal to the ascertained share of contribution at our present average of export. That is, the amount lost by the Colony in excise duties, on the supposition that our exports remained stationary under the preference, would be the amount due from them in contribution. It would be necessary that the reduction should be proportionate in favour of all articles we export to them.

But there is not the remotest notion in the Colonial, especially in the Australian, mind of a reduction of the present duties. The utmost they dream of is clapping higher duties on foreign imports, leaving the present duties on English goods unaltered.

CAN BULGARIA BEAT THE TURKS?

Captain von Herbert, in a very lucid but somewhat statistical article, reports the result of his inspection of the Bulgarian Army. He says the Bulgarian barracks are much better than those of Great Britain, and the Bulgarian private a much more sober man than Tommy Atkins. But he does not think the Bulgarians are a match for the Turks. He sums up the situation thus :—

Firstly, as regards money, Bulgaria works economically and honestly, and obtains excellent results for her outlay, almost the best obtainable, taking the Servian as the maximum.

Secondly, as regards men, 8½ per cent. of the population are available for war, which is not up to the Servian standard, but better than the Turkish, and much better than the Roumanian, achievements.

Thirdly, Bulgaria is a match for any of her neighbours, excepting Turkey.

650,000 is, to the best of my belief, the strength which Turkey would bring to bear on Bulgaria, and that is more than double the strength of the Bulgarian forces, even if the Principality succeeds in calling out, organising, and rendering fit for the field the whole of her Militia. Is, then, the average Bulgarian soldier worth more than two average Turkish soldiers?

But could Turkey put 650,000, or even half that number, into the field ? The Bulgarians do not think so, otherwise they would not be so confident of victory.

Broad Views.

IN Mr. Sinnett's magazine for May the editor discourses upon Earthquakes and their consequences. Dr. Helen Bourchier propounds a theory "that hallucinations are veritably revelations, in which glimpses may be obtained of the country beyond the great Barrier towards which we are all travelling, and which we must all pass through singly and alone." A writer signing as Nadir Maldora makes extraordinary claims as to the psychic gifts which she says she possesses. But they are as nothing to the gifts of another woman who "enjoys the privilege of seeing her own double, and often walks beside herself in the street." Admiral Moore's paper on American Spiritualism is noticed elsewhere.

THE CONTEMPORARY REVIEW

THE June number is hardly up to the average. It opens with Mr. Courtney's plea for the cumulative vote as the regenerator of Parliaments. Mr. R. Warwick Bond contributes an elaborate literary essay on Ruskin's Views of Literature. Mr. Hilaire Belloc constructs a subtle argument for Protection apparently in order to prove that even this argument is worthless in the case of Great Britain. Mrs. Alfred Earle writes on the sphere and opportunities of the wives of the masters of our public schools. Dr. Macdonald sets forth a reasonable view of vivisection and progress which will please neither the physiologists nor the anti-vivisectionists. The paper on the faults of the American women who marry titles is noticed elsewhere.

RELIGIOUS LIBERTY IN RUSSIA.

Dr. Dillon, in his Chronique on Foreign Affairs, is compelled to pay a tribute of high praise to the ukase by which Nicholas II. made his reign glorious. Characteristically enough no credit is given to the Tsar. All the glory is given to M. Witte. This is Dr. Dillon's way. Whenever a bad decree appears, debit all the discredit to the Tsar; when a good one is published credit everything to one of his Ministers. Dr. Dillon says:—

"No such incisive and beneficent reform has been proclaimed in the Tsardom since the day on which Alexander II. freed some millions of serfs nearly half a century ago. Hundreds of thousands of men and women, who have never ceased to be Catholics, but were driven by force into the Orthodox Church, can now return to the fold without fear of having to pass through Siberia or a dungeon. Millions of Old Believers, whose doctrines, rites, and practices are identical with those of Orthodoxy, but who differ from it in a few externals, will have their marriages recognised as legitimate and their children purged from the stain which Christians ought never to have put upon them. Already Uniates are hurrying into Vilna, asking to be received into the Catholic Church; Esthonians are crowding into country rectories to obtain readmission into the Lutheran Confession; Evangelical Christians are fearlessly announcing that they have severed their connection with the Orthodox Communion—in a word, the State Church has lost many millions of nominal adherents, who have gained the right of serving God in accordance with what they take to be His will.

THE UNIONIST FAILURE IN IRELAND.

Mr. Thomas Lough, M.P., writing on "Ten Years' Tory Rule in Ireland," points out that the Unionists, after twenty years' resolute Government, have adopted the leading principles of legislation which, when it was demanded by the Nationalists, they declared was worse than Home Rule. But since they have refused Home Rule all their concessions have been abortive:—

The results so far of all this legislative activity are distinctly disappointing. There is not the slightest sign of emigration being checked, and this affords the most incontrovertible evidence that no new channels for obtaining a livelihood have been opened up. Pauperism continues to increase, and this is the more remarkable because the seasons have been fairly good and there has been no serious calamity of any kind to account for the continuance of depression or despondency. All the gloomy features of the vital statistics revealed in former census returns are reproduced once more in those issued for 1901. There is no growth of industrial activity worth recording, in spite of the praiseworthy efforts of a society for the organisation of agriculture, and it is practically impossible, without Government aid, to find the means to commence or to carry on any new enterprise. Thus there is no employment for the dwindling bands of labourers which still exist.

As for the financial grievance, when the Commission reported—

The total taxation of Ireland worked out at an average tax per head of £1 15s. 9d. The report of the Commission implied that this was excessive to the extent of 12s. per head of the population. Instead, however, of any reduction being made, the amount has been increased to £2 5s. 6d. per head.

THE GERMAN FAILURE IN POLAND.

M. Givskov contributes a very lucid and instructive account of the total failure of Prince Bismarck's scheme for Germanising Poland. A Committee was appointed with nearly £25,000,000 to buy up Polish estates and plant them with German colonists. Polish landlords sold their estates and invested the money in Polish Land Banks, which bought other estates and planted them with Polish peasants. As the net result—

The Germans have only acquired 3,772 estates from the Poles as against 5,183 estates bought from Germans by Poles. The area thus lost during these years by the Germans amounts to 32,200 hectares, or about 104 English square miles, and the loss is still increasing, having in 1902 amounted to more then 7,000 hectares, or about 24 square miles.

The operations have resulted in planting 16,000 German peasants on the land by the Government, while 22,000 Polish peasants have been planted by the Land Banks.

WHAT IS CHRISTIANITY?

Professor S. McComb maintains that Christianity is Christ:—

The Incarnation, the advent of God in the mind of Christ, the presence of the Absolute so far as the Absolute can enter into finite conditions, is the article with which Christianity stands or falls.

Christianity, then, centres in a Person. Through Him we gain certainty as to the nature of God, and the assurance that in some way good must be the final goal of ill. The heart of things is not cold and dead, but throbs with an infinite pity; man is not the helpless victim of nature's blind fatalisms, but the child of the Infinite, who knows he was not made to die, whose highest good is not at the mercy of time, but lies hidden in the hand of the Eternal. Christ is, as it were, an epitome of the world-programme, and the long reaches of history have as their end the realisation of the ideal incarnated in His person.

THE PALL MALL MAGAZINE.

THE June number of the *Pall Mall Magazine* contains two articles on Natural History, for to Mr. Shepstone's on the New York Aquarium may be added that of Captain Kennion, recounting his adventures while hunting ibex in the Himalayas. The sight of any new game animal, he says, produces a thrill, though not like the thrill caused to the sportsman by the sight of his first game animal. That sensation occurs only once in a lifetime.

Mr. C. Lewis Hind contributes an article on the Guildhall Gallery collection of pictures. Few but City men visit the permanent collection, for it is not generally known that such a collection exists. Mr. Hind first visited the gallery alone in the luncheon hour, and inquired of an official which were the most popular pictures, and the second time he was accompanied by a City merchant, whose criticisms are also recorded. The two favourite pictures are Mr. Bacon's "Return of the C.I.V.'s" and Mr. Gow's "Diamond Jubilee."

In "London at Prayer," Mr. Charles Morley describes the rite of renewing baptismal vows in Sardinia Chapel, an old chapel in what was once the house of the Sardinian ambassador in Lincoln's Inn Fields.

THE NINETEENTH CENTURY AND AFTER.

THE June number is chiefly distinguished by Mr. Wilfrid Ward's eulogy of Mr. Balfour as a political Fabius Maximus, Miss Edith Sellers' official "Poor Relief in Russia," and Mr. George Lynch's "White Peril"—all noticed previously.

OLIVER CROMWELL'S REMAINS.

Bishop Welldon discusses the various theories concerning the fate of Oliver Cromwell's remains, and arrives at the following conclusion:—

All the evidence which I have collected and compared establishes the belief that the body of Oliver Cromwell was privately buried, not long after his death, in Westminster Abbey; that his body was taken to Tyburn, and there decapitated and buried; that the trunk of his body remained, where it was buried, beneath the site of the gallows at Tyburn; it has long since mouldered away, or has been removed or disturbed in the course of excavation, and it is now irrecoverable; that his head, after being exposed on Westminster Hall for more than twenty years, disappeared; it has never been seen since, and it too is now irrecoverable.

He confesses that this is to him a disappointment, for when at Westminster Abbey he dreamed of undoing, if possible, the sacrilege of the removal of Cromwell's body by replacing it.

"THE ENTHRONEMENT OF THE CROWD."

Sir Martin Conway asks, Is Parliament a mere crowd? and answers in an emphatic affirmative. But it is a crowd that has lost its old powers of initiative and control, which have passed to another crowd called the Cabinet, which again has to bow to public opinion, or the crowd enthroned, which is democracy. The writer says:—

For a crowd is not merely the most despotic and irresponsible of beings, but it is a lower kind of thing than an individual. A crowd is a creature devoid of religion, devoid of human morals, ungoverned by reason, the victim of every kind of sentiment and sentimentality, puffed up with pride, and belongs in the scale of living creatures to the realm, not of men, but of beasts. . . . All the securities so elaborately built up in the past have been destroyed, and we are face to face with an enthroned despotic crowd which the inner Cabinet may or may not be able to control, but which might at any time take the bit between its teeth and rush the country headlong to perdition.

PLEA FOR A BROAD CHURCH REVIVAL.

Under the quaint heading of "Anglican Starvation and a Liberal Diet" the Rev. Hubert Handley inveighs against Anglo-Catholics for their obscurantist attitude towards natural science and historical criticism, their clerical effeminacy, their paucity of men, and their clerical "side." He boldly declares that in the twentieth century the Broad Churchman must prevail—broad-based upon spiritual experience, or trust in the living consciousness of Christendom, an open mind to the results of historical science, wide sympathies, manly religion, and religion essentially English. He urges at the end that Liberal Churchmen must be champions of prayer, the exercise of which, he naively admits, has not perhaps been their *forte*.

OTHER ARTICLES.

Mr. G. T. Lambert calls attention to what he considers the scandal of University education in Ireland—the fact that there is no proper provision for the highest training of the brains of the Catholics, who form three-fourths of the population. The Rev. Canon Lyttelton defends the need of professional teaching for public schoolmasters against conservative attacks. Mr. John Fyvie objects to the so-called revival of phrenology, on the strength of recent brain researches. He insists that as to the localisation of the higher intellectual or moral qualities, nothing whatever is known. Mr. G. G. Coulton calls attention to the valuable evidence as to the religious condition in the Middle Ages afforded by the diary of Brother Salimbene of Parma, who lived from the days of St. Francis into the days of Dante. It is a sad picture of secular and clerical immorality. Mrs. Villiers Hemming traces "the feast of fools" from pagan Saturnalia through mediæval adaptations. Lady Grove applauds the Kaiser's designation of woman's sphere as *Kinder, Küche, Kirche*, and asks, Could a more boundless sphere be suggested? Mr. Edmund Robertson sees in the recognition in the last Licensing Act "that it is the bounden duty of the licensing authority to secure for the public, by means of additional duties, the full monopoly value of all new licences"—a step that will in the end compel Parliament to deal with the whole question of these monopolies. He demands an authoritative inquiry into the subject. Miss C. F. Yonge reproduces some of the love letters of Henry the Eighth and Anne Boleyn.

THE EMPIRE REVIEW.

IN the *Empire Review* for June Mr. C. Kinloch Cooke writes very sensibly about "Mr. Balfour and the next Colonial Conference." The Liberals have lost their heads a little over this matter, and Mr. Cooke is at pains to point out how groundless is their scare. Of course the best thing would be for Parliament to be dissolved this year. It is a nuisance for the Colonies to send their representatives to confer with a moribund Ministry. Sir Charles Bruce, writing on the Transvaal Constitution, puts in a word for the Indians. How much need there is for this Mr. L. Elwin Neame, of Johannesburg, shows in his paper on "British Indian Claims in the Transvaal." Three London administrators express their approval of the editor's scheme for emigrating to the colonies the orphans and deserted children of the State. Mr. Dicey writes a paper which Admiral Togo's victory puts out of date. Sir E. Collen, writing on the "Defence of India," suggests that the Afghans should be encouraged to make railways on their own account. As at present they won't tolerate even a telegraph line, the chances of an Afghan National Railway are fortunately remote. Mr. Bashford, who is sane and sensible about German matters, declares that every responsible German authority believes the invasion of England practically impossible. Sir F. Young writes on "Land Settlement in South Africa," and Mrs. Gertrude Page gives a very vivacious description of her first week on a Rhodesian farm, which is not particularly calculated to lead to a rush of settlers to South Africa.

THE STRAND MAGAZINE.

AN article by Mr. Arthur T. Dolling, in the June *Strand Magazine*, gives a bird's-eye view of London's Largest Landlords. He tells us that there is no reliable official information to be had on the subject; neither the authorities at Westminster and Spring Gardens or the parish authorities know, for all attempts to compel the owners to make a return have failed. The only method left to ascertain any estimate of the magnitude of the property is to make local inquiry and collate old maps. The property of the Duke of Westminster is the largest, whereas that of the Duke of Bedford is stated to be the oldest. The Cadogan estate is about half the size of that of the Duke of Westminster. The other large landlords quoted are Viscount Portman, Lord Howard de Walden, the Eyre family, Lord Northampton, Lord Amherst, Lord Llangattock, and others.

THE INDEPENDENT REVIEW.

THE June number has in it several good articles, three of which have claimed separate notice. In his notes on current events the editor laments the absence of a penny Liberal morning paper in London—an absence which has led many staunch Radicals of the middle-class to buy and read habitually penny Unionist papers. He suggests a morning paper of the *Westminster* type, to do for London what the *Manchester Guardian* does for Lancashire; and asks whether an old Unionist paper could not be bought over, or the *Manchester Guardian* get itself distributed in London by 8 instead of 9 a.m.

"THE CALL OF THE EAST" TO PEACE AND PLEASURE.

A. M. Latter discusses the effect of Japanese successes on European standards of life. The European cannot regard the Japanese as Western in anything save trains, telegraphs, and guns:—

> He has to realise that he is now to be thrown, on terms of equality, into direct intellectual contact with a new people, whose civilisation is inconsistent with Christianity, whose test of morality is utility, and to whom the value of the individual is only his value to the community. The moment at which this new force is thrown into Europe is one in which the rampant individualism of the mid-Victorian age is being subjected to the gravest scrutiny.

The effect on international politics will undoubtedly be pacific: on social life will be to welcome and develop pleasure for pleasure's sake. Mr. Latter predicts that the new influences will be opposed by clericalism and militarism, but welcomed by Liberal thinkers, "even at the cost of estranging the Nonconformist conscience."

HOW TO FEED THE UNDERFED CHILDREN.

Canon Barnett discusses the public feeding of children, and lays down the crux of the problem thus: "The children must be fed; yet common feeding tends to relax the family life, which is as much the strength of a nation as the bones and muscles of its people." He dismisses all attempts at discrimination by Poor Law or other bodies. There must be "universality of relief." He advances two alternatives:—

> (1) A breakfast of porridge, with milk and treacle, might be prepared in certain central schools at eight o'clock, open to all school children, so that none might feel humiliated by coming, or aggrieved by being refused.
>
> (2) Another more simple and perhaps better suggestion is that the managers in every school should, without any distinction, provide the children with milk, and that the teachers should see to its consumption.

The porridge breakfast or free milk would, in the judgment of the Canon, not interfere with the provision of the other meals by the parents.

OTHER ARTICLES.

Mr. A. Hook, writing on Labour and Politics, after describing the conflict of Tories and Whigs in last century as essentially a struggle between rents and profits, forecasts a Party of Capital arrayed against a divided World of Labour. He urges Labour to link itself with neither Tory nor Liberal, but to keep in touch with the progressive elements in Liberalism which will not go over to the ranks of Capital. Mr. G. L. Bruce sets forth the exceeding moderation of the Report on the London Voluntary Schools now before the L.C.C. So moderate are its demands that if the Board of Education were to reject the whole scheme on appeal he would not regret it. Doris Birnbaum inveighs against the iniquity of Chinese Labour in the Transvaal.

MACMILLAN'S.

IN *Macmillan's Magazine* for June Mr. Frederick Payler re-enforces his recently uttered plea on behalf of speedier methods of administering justice and the abolition of the wasteful circuit system. Another paper is on the history of the Barons of the Cinque Ports, their rise to fame and their decline in importance. Mr. Hugh B. Philpott discusses why our modern workmen and expensive architects cannot produce pure Gothic masterpieces as in the Middle Ages. The fault lies partly in the degeneracy of the British workman, but also:—

> It was an æsthetic as well as a religious life which found expression in the church building of the Middle Ages. They were leisured and imaginative times, with much in them that was gross and brutal, but free, at any rate, from the twin foes of æstheticism in modern England—commercialism and the scientific spirit.

HOSPITALS AND MEDICAL SCHOOLS.

Mr. Edward J. Prior laments over London's twelve medical schools, none of them occupying in the medical world such a position as Edinburgh University, whereas London from its very nature should be the great school for medical students in the world. He admits that the twelve medical schools are fairly good in their way, but says they lack the advantages of one or two good centres, able to pay for the very best men:—

> There are, of course, some very distinguished men teaching in the London medical schools, but when opportunity offers they go elsewhere. Many of the schools would have to close their doors if it were not for the support they receive out of the funds of the hospitals to which they are attached. Such schools are known to lack in many respects the complete equipment which big medical centres possess. Consequently they are somewhat inefficient; but they are also expensive, and it is this question of expense, together with the pitiful fact that London as a medical centre is ceasing to exist, that possesses a vital interest just now.

There are four medical schools absolutely self-supporting—Guy's, the Royal Free Hospital, King's College, and University College. The writer's suggestions are as follows:—

> The remedy lies in a system of amalgamation by which the hospitals would be relieved of the great expenses of supporting schools where new students would commence their studies. As, however, hospital experience is now absolutely necessary before a student can acquire any practical knowledge of his profession, the hospitals should admit students who have passed the preliminary and intermediate stages of the training which might be as well passed from a hospital as in one. The last stage of the student's career could be passed in a hospital where the actual work of the regular doctors and nurses would afford the student every chance of learning the more practical side of his profession, and there would really be no expense to the hospital under this head.

The Grand Magazine.

THE *Grand Magazine* for June is a good number, though some of the articles tend to be scrappy. Besides the papers separately noticed, there is one on "A Carnival of the Irrational," the title given to a description of Monte Carlo Life; on "Names Ordinary and Extraordinary," and on "Diet Fads in Relation to Feminine Beauty," by Ignota, who evidently, on the whole, thinks the feminine diet faddist has much to say for herself. There is also a "non-appreciation," justly so called, of the Athletic Girl, though we are not quite sure whether she exists any more than the Dodo and the New Woman.

THE WESTMINSTER REVIEW.

THE *Westminster Review* for June does not contain any very important article. An ex-public school teacher, Mr. Norman A. Thompson, writing on "The Education at our Public Schools," makes some practical suggestions for the improvement of the curriculum, the most notable of which is that there should be an organised course of English literature as an optional study.

THE DECAY OF MORALS.

From Mr. Trobridge's paper on "The Decay of Morals" I take the following :—

What a change has come over society in the past fifty years in the outward decencies of life! We may allow that there was a tendency to prudishness in the early Victorian age, but there is a world of difference between prudishness and the licence that prevails to-day. In the matter of female dress we have almost gone back to the indecencies of the Stuart period, while in what we call "art" we have gone far beyond them. Not only are paintings of the nude, sometimes of a suggestive character, more freely exhibited than ever before, but photographs are circulated in thousands that can only have a demoralising effect on the rising generation. So far have things gone within the past two or three years, that pictures of the nude or semi-nude, which can by no pretence be regarded as works of art, and are often grossly indecent, are openly exhibited in shop-windows in the guise of picture post-cards. Many public advertisements also are of a more or less improper character.

QUESTIONS OF RACE.

The writer who deals with "Mr. Andrew Carnegie and the Re-union of the English-speaking Race" thinks that Mr. Carnegie's prophecies in his "remarkable and epoch-making essay" in the *North American* (1893), "A Look Ahead," as to the drawing together and ultimate re-union of the two great divisions of the English-speaking world, show signs of fulfilment, or, at any rate, that the trend of affairs does not go against them.

There is a very good article by "An Unprejudiced Observer" on "Black and White in South Africa." His suggestions are: (1) a law, stringently binding on black and white alike, the graver offences against which must be punishable by death, forbidding any intermingling of black and white races by marriage or otherwise; (2) prohibition of the sale of intoxicants to natives—a law to remain in force for fifty years and then be reconsidered; (3) regular work compulsory for every able-bodied male native; (4) properly qualified and educated natives to administer local affairs jointly with white men, but white men only vote for white and black men for black. Answering the question where shall we then look for labour for the mines, he replies without hesitation: "Not until the native is educated out of his childish fear of the dark, and of his animal-like terror of a trap, will mine-work ever be undertaken willingly as an occupation."

THE COMING RACE AND MORAL DEPRAVITY.

Miss Priscilla Moulder, who signs herself "A Working Woman," writes very interestingly, but in a depressing vein, on this subject. As a working woman she considers that "the moral of the coming race seems to be well-nigh non-existent." The causes for this decadence she considers various. "Penny dreadfuls" are saddled with too much responsibility, the Press with far too little :—

I certainly do not hold a brief for "penny dreadfuls," or kindred publications, but I do say that I would rather see boys reading "penny dreadfuls" than studying the columns of some daily papers. The power of the modern Press is a great and glorious thing when used to spread the virtues of justice and morality, but it is dangerous and deadly when its pages teem with records of breaches of promise, the filth of the Divorce Courts, details of revolting murder cases, and society scandals of every kind.

Questionable pictures and photographs are another great cause of mischief, while cigarette-smoking has grown to an extent hardly realisable by anyone not constantly in touch with working-class boys :—

I have known several cases where, after working for some weeks in a factory, boys have had their wages risen, say sixpence per week. Instead of taking the extra money home to their parents, it has been kept back for several weeks in succession on purpose to indulge more in the favourite pastime of smoking cigarettes. After a while the parents have become suspicious, when the wages did not increase when the usual period had elapsed, and they have then inquired at the factory. Naturally enough the result has been the full exposure of the boy's lies and deceit, and very often dismissal from work has followed.

Utter lack of parental control, betting, and bad language, according to this working woman, have reached a pitch which may well cause the gravest alarm.

THE WORLD'S WORK AND PLAY.

THE June issue is a "Holiday Number." Its account of the Sherborne pageant claims separate notice. A lady enthusiast writes on women and motoring, and declares that the motor is to accomplish a greater revolution in the habits of women than even the bicycle. The writer hopes that in the new schools and colleges for women a course of instruction in the use of tools and a rudimentary course on mechanics will be introduced. The editor revels in a description of a perfect touring car. "An Expert" tells how to recognise motor-cars according to their make. Mr. T. H. Holding explains in an interesting manner how to take a motor-cycle camping holiday; Mr. E. B. D'Auvergne, where to go for holidays abroad; and Mr. W. H. Gallichan, where to spend a fishing holiday. In an interview with Mr. Lloyd-George, M.P., that gentleman makes bold to say that the greatest living poets in the United Kingdom to-day write in Welsh. He mentions two, Professor Morris Jones and the Rev. Elvet Lewis. Mr. H. G. Archer, under the title of "The Safety of the Summer Passenger," describes the new system of track inspection adopted from American models by the London and South Western Railway, which offers a challenge cup and a money prize of £2 for the best inspector's section, and a challenge cup for the best foreman's length through the line. With the challenge cups go silver medals to keep. Miss Rose Newmarch describes the May Musical Festival in the town of Kendal, one of a series of competitive musical exhibitions initiated during the last twenty-five years by Miss Mary Wakefield. These competitive festivals have spread widely over the country. Mr. G. D. Abraham describes, with almost breath-taking photographs, the dangers of Alpine climbing.

The World To-day.

THIS ten-cent illustrated popular miscellany, published in Chicago, has devoted much of its space in the May number to articles about Russia. These articles cover a wide range. Count Cassini gives the official version of the Bloody Sunday of St. Petersburg; Mr. J. W. Pattison discourses on Russian Art and the Russian Financial Agent in America; Mr. Gregory Wilcukin writes on the Political and Social Organisation of Russia. There are other articles dealing with the Student Strike, Schools for the Peasantry and the Russian as a Soldier. The letterpress is, however, somewhat disappointing. The illustrations, printed in two colours, are very good.

CHAMBERS'S JOURNAL.

MR. J. E. WHITBY, writing in *Chambers's Journal* for June, asks, "Shall We Die of Thirst?" He reminds us that many great water-beds are drying up in every part of the world. In Africa, for instance, Lakes Chiroua, Ngami and Tchad have almost disappeared. In Central Asia deserts are gradually spreading, and in Siberia the lakes have greatly diminished. Even in European Russia large stretches of country once covered with water are now dry.

In another article Mr. T. C. Hepworth draws attention to various Artistic Incongruities and Anachronisms. Mr. Reginald A. Gatty, in his article on the Rural Exodus, advocates instruction in farming, etc., for the boys of rural districts. He would provide every rural school with a piece of land for practical experiments in planting and sowing. He sees no reason why a youth of sixteen should not go out to farming equipped with a knowledge of the rotation of crops and the rudiments of agriculture. As a school manager the writer deplores the neglect of rural subjects in village schools.

THE TREASURY.

THE June number of the *Treasury* opens with a timely article on the very interesting old church, St. Saviour's, in the Borough, now known as Southwark Cathedral. Mr. Arthur Reynolds gives a sketch of the church, its buildings, its historic associations, and its vicissitudes. The original Norman nave, he writes, has long since disappeared, but a few remains of transitional Norman work are still to be seen. Early in the thirteenth century the Norman nave was transferred to early English; and there are examples of the Decorated style, of Perpendicular, and of other succeeding styles in various parts of the building. The nave has recently been entirely rebuilt and the rest of the fabric put into good order. Mr. Reynolds describes the choir as a chaste specimen of early English, and he thinks it would be difficult to match the early Pointed Lady Chapel anywhere.

Mabel Adeline Cooke tells the story of Sherborne Abbey, which in June celebrates the twelve-hundredth anniversary of the founding of the Bishopric of Sherborne by St. Ealdhelm. In commemoration of the event a series of pageants will take place within the castle ruins and a brief history of Sherborne will be depicted.

EAST AND WEST.

IN *East and West* for May Mr. James Cassidy describes the library at the India Office, which he rightly says is as little known as it is remarkable. On its three miles of shelving there are 90,000 works in about 67,000 volumes. In an article on the Caliphate, the author, Mr. Abdullah A. M. Sohraworthy, concludes with the following significant hint :—

> A cultured Japanese (Mr. Okakura) has recently defined Islam as "Confucianism on horseback, sword in hand." The Land of the Rising Sun may produce the hero who, by a simple process, would weld the conquering Japs and the warlike Muslims into one brotherhood, and direct the fanatical forces that lie locked-up in the wilds of Asia into the paths of peace and progress, or perhaps of new conquests.

The Editor, writing on Empire Day, makes the following remarks :—

> Since the Japanese victories in Manchuria an almost unlimited vista of possibilities has opened up before the vision of the Indian patriot; and sympathy with Imperialism is apt to be scouted as if it could be prompted only by cowardice, and a craven diffidence in the capabilities of the Asiatic races.

Of which let the devotees of Imperialism and of the Japanese Alliance take due note.

THE CORNHILL MAGAZINE.

THE June *Cornhill* is unusually good, several papers being separately noticed. Attention is called to the second charming paper on "From a College Window"; such papers in magazines are too rare. Mr. George A. B. Dewar, writing on "Wild Animals as Parents," pays high tribute to the rabbit for her maternal tenderness. The stoat, too, is one of the best of parents :—

> We have no word which describes the ecstatic state of beasts and birds with helpless young to rear and shield. They are hardly to be recognised, sometimes, as the same self-centred animals we know out of the breeding season. They are translated. We have to go to the Greek for the right word. This is the Greek *storgē*. The Greek, too, has also the word *antistorgē*, which describes what often takes place when *storgē* ends—for the season, that is—and the fathers, if not the mothers as well, drive their offspring away out of the neighbourhood.' The robin is a strong instance of *antistorgē*.

Little long-tailed titmice, however, after having been educationally finished off, are often allowed to remain with their parents. "The whole family of titmice will sleep together in a bunch, and so keep each other warm on bitter winter nights." As a charming instance of parental affection in the supposed indifferent male bird, Mr. Dewar says :—

> Discredit has been thrown on the statement that the cock blackcap sometimes actually sings as he sits on the eggs of his mate. But I have seen and heard him singing as he sat on the eggs. In this case mistake was out of the question: here were no quick, deceptive movements. I stood still and took careful note of the bird, of his black cap, of his song, of the nest, and, when he had flown off, of the eggs.

THE ENGLISH ILLUSTRATED MAGAZINE.

IN the June issue of the *English Illustrated Magazine* Mr. Harold Macfarlane gives some interesting statistics of our Sugar Bill. John Bull, Mr. Macfarlane shows, has a very sweet tooth indeed, for a block of sugar about 11½in. high, wide and deep represents the amount of sugar consumed by the average Briton in a year. In a diagram in which the names of the nations are arranged according to the quantity of sugar consumed per head per annum, the United Kingdom easily heads the list. Mr. Macfarlane asks us to imagine a test tube with an area of about seventeen square inches; in this case each Briton's annual allowance would fill it to the height of 7ft. 7in., the American's allowance would fill it to the height of 5ft. 5in., and the Frenchman's 3ft. 1in. Another diagram shows how the world's production of sugar has increased nine-fold between 1840 and 1903, and yet the year 1903 showed a drop of more than a million tons compared with 1902. At present John Bull is paying something like 1½d. per pound more for his sugar than he did.

Mr. E. Almaz Stout describes a curious Mahomedan festival, which takes place at Cairo before the departure of the Mahmal with the annual pilgrimage to Mecca. There are two topographical articles, with Cape Castle and Scandinavia for subjects, by Mr. A. H. Fullwood and Mr. H. T. Timmins respectively, and Mr. John J. Ward adds a scientific article on the legs and feet of insects.

The Indian World.

WE gladly welcome the appearance of this new periodical, which aims to some extent at doing for the Indian world what the REVIEW OF REVIEWS does for the public at home. Its editor, Prothurn Chardra Ray, of 3, Humayoon Place, Chounughee Road, Calcutta, is full of patriotic and literary ambition, and I heartily wish his new venture all the success which it deserves.

THE NORTH AMERICAN REVIEW.

THE May *North American* is a capital number. I notice elsewhere Mr. Havelock Ellis's paper on "Cervantes," Dr. Elkind on "Losses on the Battlefield," and Sir Oliver Lodge on "What is Life?"

MORE TRACES OF OUR MONKEY GRANDSIRES.

Dr. Louis Robinson, who is never so happy as when he discovers another resemblance between men and monkeys, contributes an ancient reading of finger prints, which is exceedingly ingenious. Why have we ridges in our fingers? For one thing, to protect the pores through which clear water exudes—especially when we are nervous or frightened.

A simian or human hand, when wet, and closely applied to a moderately smooth surface, must be regarded as a multitude of tiny suckers rather than one large one. It gains the advantage of atmospheric pressure chiefly on the flattened-out ridges, with their myriads of minute cuplike pores (each of which, being wet with perspiration, is a perfect little sucker), while the gripping muscles are in strong action. The moment these relax, the air finds its way back again along the intervening furrows, so that the hand can be moved without the least difficulty. It is plain that, since a wet hand gives a safer hold than a dry one, any terror-stricken ape in danger of falling from the trees would gain by this automatic association between the palmar sweat-glands and the emotion of fear. Practically, nothing has been added to the machinery of the emotions since our forefathers loved, or fought, or fled, among the inaccessible tree-tops. Falling from a height has long ceased to be one of the deadly and constant dangers that threaten us.

But to fall from a social height, to commit a *faux pas*, brings out the sweat in our palms now as it did a million years ago. Now it is of no use. Then it enabled our ancestors to survive. A monkey whose palms did not sweat was soon eliminated as unfit by the summary process of falling from the tree-top and being eaten.

WHY THE JAPS WANT VLADIVOSTOK.

According to a Japanese who writes on Japan's probable terms of peace, the Japanese Government intends to insist upon the cession of Vladivostok. He says:—

Nippon's actual demand will probably be for the territory east of the River Amur—the line of demarcation to be drawn from the mouth of the river to Nicholaievsk, and then to follow the course of the river to the Manchurian boundary. This, of course, would include the fortifications and naval base at Vladivostok. The reason for this demand is simple: it is the very same reason for which Nippon took up arms—the permanent peace of the Far East and the future security of the national existence of Nippon.

THE ABSOLUTE INDEPENDENCE OF HUNGARY.

Count Albert Apponyi sets out the Hungarian view of the Pragmatic sanction, and the relation now existing between Austria and Hungary. He says:—

Austria-Hungary—as is shown by the double term itself—does not mean one empire, but the permanent union of two nations for certain international purposes. In all international affairs not belonging to the sphere of national defence (such as railway conventions, extradition treaties, copyright conventions, etc.) the international personality of Hungary not only can, but must, act separately, because with respect to them there is no union with Austria, and therefore their joint action cannot even be juridically constructed, except on the grounds of some (*ad hoc*) convention between them. But, even where joint action is necessary, it is not the action of *one* empire (which, having no substance, is hardly capable of action of any sort) but the joint action of two.

THE MODERN ENGLISH DRAMA.

Mr. Henry A. Beers, after passing in review the various dramatic authors of our day—comparing Pinero and Shaw to Goldsmith and Sheridan—thus sums up his conclusion of the whole matter:—

The Puritans have always been half-way right in their opposition to the theatre. The drama, in the abstract and as a form of literature, is of an ancient house and noble. But the professional stage tends naturally to corruption, and taints what it receives. The world pictured in these contemporary society plays—or in many of them—we are unwilling to accept as typical. Its fashion is fast and not seldom vulgar. It is a vicious democracy in which divorces are frequent and the "woman with a past" is the usual heroine; in which rowdy peers mingle oddly with manicurists, clairvoyants, barmaids, adventuresses, comic actresses, faith-healers, etc.; the contact between high life and low life has commonly disreputable motives. Surely this is not English life, as we know it from the best English fiction. And, if the drama is to take permanent rank with the novel, it must redistribute its emphasis.

THE HAGUE THE CAPITAL OF THE WORLD.

Mr. James F. Barnett urges the United States to purchase for the use of their Legation at the Hague

the celebrated De Witt House, so called from having been the home of the brothers De Witt immediately prior to their assassination. It is described as a commodious house of twenty-five rooms, located in the best and most convenient situation in the city for the purpose. The interior is described as being finished in handsome old oak.

Mr. Barnett urges that the Hague as the seat of the International High Court is so important, the American Government must have a permanent Legation there:—

The Hague, on account of the location of the international court, is unique among all our legations of lesser rank. The establishment of a permanent home at the Hague would not fail to touch the public sentiment of Europe, and would be to all the nations an additional guaranty of our intention to resort, whenever possible, to the international tribunal.

THE CATHOLIC CHURCH AND DIVORCE.

The Rev. T. P. Hayes makes mincemeat of Bishop Doane's attack upon the teaching of the Catholic Church on the subject of divorce. Bishop Doane suggested, if he did not actually assert, that Rome, by dispensation and by discovering illegalities annulling marriages, opened as wide a door to divorce as her opponents. Father Hayes says:—

Prior to 1886, the year in which divorce was legalised in France by an anti-Catholic Government against the solemn protest of the Church, only "some few cases" from France were before the S. Congregation of the Council in Rome during a period of eighty years. The divorces in France from 1887 to 1896 numbered about 57,000; in the same period of ten years, 63 petitions for annulment were passed upon by the Church: of this number 16 were declared valid, 47 invalid, of which latter number 37 had never been consummated. Last year, in the City of New York, there were at least 15,000 Catholic marriages, including mixed marriages; and, from experience, it is safe to say that of these 15,000 marriages not even five will be annulled.

ENGLISH AND FRENCH CATHEDRALS.

Professor Baldwin Brown, in an interesting article on English Gothic architecture, says that it differs from that of France—

in surroundings, in plan, and in general æsthetic effect, as well as in technical construction, and it largely depends on the fact that English cathedral churches, unlike those of France, are the outcome of a monastic tradition. The predominance of this tradition in mediæval England is a result of the early history of the land. Christianity was not introduced into Teutonised Britain until it had become permeated with the monastic idea. In some of the more important features of general scheme and construction, the greater English churches are inferior to the corresponding monuments of France. The smaller buildings, on the other hand, possess a charm, a piquancy that are all their own, and that make them one of the most fascinating studies in the whole history of the arts.

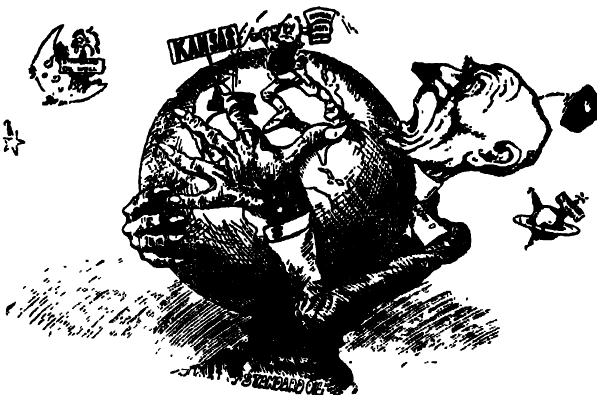
THE ARENA.

THE *Arena* continues its strenuous campaign against corruption in high places. The May number describes how Philadelphia has been governed and looted. Mr. Eastman describes the struggle which Kansas is waging with the Standard Oil Company, and Mr. Beard in a cartoon, reproduced here, expresses his disgust at those religious bodies which—unlike the Board of Congregational Missions—eagerly accept Mr. Rockefeller's donation.

Dr. Henderson, of the University of North Carolina, praises and criticises the poetry of Stephen Phillips, whom he describes as the finest English poet of the younger generation :—

The autobiography of his mind, written so exquisitely in the volumes of his poetry and drama, reveals him to us, not as the contemporary of Morris, Kipling, and Whitman, but as the companion of Virgil, Dante, Marlowe, and Milton. After all shortcomings are taken into account, there remains a rich treasury of poetry, much essentially fine, all essentially dramatic.

He laments, however, that "the trend of Phillips' art as a poet and dramatist follows a course of progressive deterioration."



An interesting account of Japan by a Japanese Socialist and a paper on the Swiss Referendum are noticed elsewhere. Mr. Joaquin Miller continues his account of the building of the House Beautiful, Dr. Pentecost expatiates on Anglo-Saxon Unity in the Far East, and there are any number of reviews and short articles.

Politics, the People and the Trusts.

"What's the matter with Kansas?"

THE GENTLEMAN'S MAGAZINE.

THE June number of the *Gentleman's Magazine* has several excellent articles. Two articles on London have to be added to the literature of the great city. Mr. W. Howard-Flanders takes the Ward of Vintry, the ward lying between Cannon Street and the Thames, for his subject, and gives an account of the buildings in the district and the associations of the district with the past. Here, for centuries, was the heart of the wine trade in England. In the fourteenth century Thomas Drinkwater, taverner, let his house on London Bridge to a vintner for the purpose of retailing wines, and thus the "tied-house" system was begun.

Mr. J. Holden Macmichael continues his history of Charing Cross and its neighbourhood, the present instalment being devoted to St. Martin's Lane. In the seventeenth century there was a hop garden in St. Martin's Lane belonging to Sir Hugh Platt, the horticulturist, who also had experimental gardens in Bethnal Green.

The tour of Johnson and Boswell in Scotland is described by Mr. J. Cuthbert Hadden. Johnson had an antipathy to the Scots, and little liking for "rural beauties." To him a mountain was merely "an immense protuberance," and a charming solitary Highland only awoke in him fresh admiration for Fleet Street.

Mr. Alexander H. Japp, in another article, discourses on the Mottoes of Noble Houses. One set of mottoes tells of the origin of great families in glorious victories. The Curzon motto is "Let Curzon hold what Curzon held." The motto of the Ashleys, Earls of Shaftesbury, is "Love, serve." Some mottoes are a play upon words. The motto of Lord Battersea (Cyril Flower), for instance, is "Flores curat Deus" (God preserves the Flowers).

LA REVUE.

AN anonymous writer, in an article which he entitles "The Children's Crusade of 1905," published in the first May number of *La Revue*, discourses on the question of Poland, and exhorts the Poles to persevere in their demand for Polish schools.

In the same number Henry D. Davray has an interesting paper on Fiction, in which he compares the novel of manners in France with that in England. During the last fifty years, he says, the French novel has been realistic, and French novelists have sought to paint human passions with all possible truth, with the result that the realistic novel in its ardour for truth has often failed to be artistic. The novel of manners was born in England, and it is to the English what conversation is to the French, and what music is to the Germans. The English novel differs as much from the novel of France as the English character differs from the French. The title which Balzac gave to his work is suggestive. In the "Comédie Humaine" he studies men, and describes or celebrates their passions. Dickens never looked at life as a comedy; his personages represent virtues or vices, and their words and actions sought to teach a moral. It is only necessary to compare how a miser, or a hypocrite, or a drunkard has been depicted in French fiction with the manner in which the same characters are depicted in English novels to realise the striking difference. But the novel is dead, both in France and in England, for the simple reason that the story-writers have lost the art of telling stories. They think of everything but of interesting their readers in their stories, and they do not take enough pains to find something new.

The second May number opens with an article by Charles Géniaux on the condition of the French peasantry. During the last twenty-five years, when so much public attention has been given to the condition of workers, and we have seen the creation of so many institutions in their interests, the French peasants remain as they were. Their want of solidarity, and their ignorance of the social movement, are doubtless to blame for their weakness, but the writer thinks it incredible that they should not have seriously concerned themselves with the new ideas of trade unions. Their condition, as described by the writer, however, is appalling.

In another article E. de Morsier refers to the new sixth sense, which he says has always existed in England, if only in a latent form, but which was born in France only some ten years ago, namely, "tourism." As touring implies meeting people, seeing the world, historic monuments, etc., it will be understood that a sense for the beauties of Nature had to be awakened, and if the new sense was to be exercised, it was evident that certain other conditions needed to be realised. After the miracles of steam on land and sea came the cycle, and after the cycle the automobile. To-morrow it may be the balloon. Thus, out of the new desire to enjoy Nature, and the realisation of quick modes of locomotion, the modern tourist was born. The touring fever has taught the modern man to come out of himself, he has learnt to admire and compare, his horizon has been widened, and the old sport of the millionaire has become a veritable national school of initiative, activity, goodwill and noble and healthy ambition, contributing to the development of the beautiful and the good in the noble human animal and co-operating in the work of human fraternity. The writer then describes the work of the Touring Club in France.

THE REVUE DE PARIS.

IN the first May number of the *Revue de Paris* A. Douarche discusses the problem of illegitimate children in France in connection with a Bill which has been framed by the National Council of French Women to deal with the paternity question. Every year there are born in France 80,000 illegitimate children, and the mothers on whom falls the responsibility of bringing up and maintaining these children naturally succumb in the majority of cases, and the children either die of misery or fall into the paths of vice and crime. It is maintained that if the fathers were required to contribute to the maintenance and education of these children, the mortality among illegitimate children would soon be considerably reduced, for the protection of the father would be more efficacious than the assistance rendered by the community or the State with parsimony and indifference.

Mr. James Bryce's address to the Eighty Club on March 23rd dealing with the Eastern Question in Europe is published in translation in the second May number.

In the same number Victor Bérard has an article on France and the Kaiser *à propos* of the Franco-English and Franco-Spanish Treaties, and the Kaiser's visit to Tangiers. Germany pretends not to have been properly informed as to these Treaties, and does not therefore consider herself bound by them in any way. The writer says both Treaties were officially known about in Berlin before their publication, and the Kaiser went to Tangiers to encourage the Sultan of Morocco to oppose the reforms which the French Ambassador was about to submit to him. German interests are safeguarded by the Treaties; what, then, is the true motive of the Kaiser's visit to Morocco?

THE NOUVELLE REVIEW.

RAQUENI, in the *Nouvelle Review* of May 1st, gives particulars of David Lubin's scheme for an International Agricultural Institute. M. Lubin thinks such an Institute ought to fight against the trusts which oppress agriculture. He is convinced that agricultural questions are more international than national, and everyone will be agreed that an International Institute, from the scientific as well as from the peace point of view, may exercise a happy influence. The edifice which the King of Italy is about to build, adds the writer, will tend to bring about an amelioration of the economic conditions of the entire proletariat, and will be the surest guarantee of social progress and international peace.

In the number of May 15th Michel Paillarès writes on the work of the French Military Mission in Macedonia. The writer has spent five months in the country, and has witnessed a good many horrors, which he describes.

Joseph Ribet, who continues his articles on the United States in both numbers, deals with Venezuela, Porto Rico, Panama, etc., in the first. In the second we have the Genesis of Imperialism, the Interoceanic Canal, the Philippine Islands, etc.

BESIDES the sketch of American coal industry noticed elsewhere, the *Cosmopolitan* for May contains an interesting dialogue between Mr. Leonard and Mr. Higashi on American wrestling versus Jujitsu. The American claims that Jujitsu is only one part of the larger and more complete system of American wrestling. Mr. J. M. Boraston gives pretty illustrations of "hunting with the camera," which he expects will in time supersede the brutal sport of hunting with the rifle. There is a picturesque sketch of a West Indian cruise by Mr. T. J. Hains.

THE DUTCH REVIEWS.

Vragen des Tijds contains four articles this month, which is unusual; all are good reading, which is not unusual. There is, however, just a little too much of the labour question in this issue. The first article deals with that part of the Drink Law which forbids the payment of wages in public-houses; this prohibition is greatly appreciated, but the law is not sufficiently explicit. There are ways of dodging it not very difficult to find, and it may entail hardships which are not intended; definitions of "public-house" and "wages" are not full enough, and some useful amendments to this beneficial piece of legislation might well be made. Similar remarks are made in another article on the hours of labour for *employés* on trams and other public conveyances; there is a law dealing with hours of labour and rest for railway servants, and another law for servants of tramway and other companies, and the point to be noticed is that there *is* a law regulating the duration of labour, defective as it may be.

Elsevier contains the concluding portion of the sketch of the career of Hendrik Adriaan van Reede, the "Mæcenas of Malabar." This Dutch official, who flourished during the last half of the sixteenth century, made himself famous in two ways: firstly by his botanical researches, secondly by his upright and able administration. He is the author of "Hortus Malabaricus," a work which has taken rank as a classic. One of the illustrations in this book is here reproduced on a reduced scale. How he fought official corruption, and the many other things he did, the writer relates in so interesting a manner as to make one sorry that there is no more of it. "Art in Tapestry," with some particulars of the Dutch factory for carpets and tapestry at Deventer, a few miles from the celebrated town of Zutphen, is another interesting contribution; it is copiously illustrated, and the pictures show some quaint designs. The representation of the visit of the Queen of Sheba strikes me as too modern; it looks more like a scene from the time of our own Queen Elizabeth, and suggests that the artist copied the costumes of his own time rather than those of the period he was representing. "The World's Greatest Volcano" is a description of a journey to the Kilauea crater of Hawaii; the illustrations of lava formations and other aspects of the crater rivet one's attention, although one would prefer not to get too close to the brimstone vapours so graphically depicted and described. It is easy to admire the courage of the man who descends into this lava formation by means of a ladder, but to imitate his action would be quite another matter!

Varieties of Plants.

(Reproduced from "*Hortus Malabaricus.*")

In *De Gids* there is a thoughtful article on the sea power of Holland; as the author says, this subject is almost ignored by all political parties, yet it is one that really demands attention. The important factor in the problem is the possibility of some attack on the Colonial possessions of the Netherlands; the navy would be quite inadequate in such a contingency, so it follows that Holland must spend more millions on naval construction. There are some Dutchmen, and not the least among her people, who think that Holland has enough to do with her money already! Dr. Byvanck contributes an essay on his friend, Marcel Schwob, the well-known French writer, whose death he deeply laments. The last two or three years of Schwob's life were passed in a struggle for health, and he died at the age of thirty-eight. I have enjoyed many of the productions of Marcel Schwob's fertile brain. "Inland Birds" is a contribution that will be eagerly read by those who love ornithological studies.

Onze Eeuw gives us another article by Professor Chantepié de la Saussaye; this time the subject is the belief in evolution. It is "evolution" in everything, says the learned writer; evolution of man, of religion and what not. A wine merchant recently sent out circulars in which he stated that he was able to quote better prices in consequence of the advantages gained through the evolution of the vine. Is all this belief justified? Ought we to desire it? Shall we be any happier therefrom? Mr. Hugo de Vries tells us about Tucson, a town in the "West American Desert." In those parts the chief difficulty is the lack of water in the proper place: the wit of man has been exercised in order to devise means of collecting water and distributing it from the reservoirs after collection: windmills are used to do the pumping into the containers, and thus is obtained the water required to turn a waste into a fruitful stretch of land. Tucson is really only twenty years old, and is an example of marvellous growth. Another entertaining article is that on the "Old Greek Dress and Modern Fashions for Women," in which the author asks which form of Greek dress is meant, and gives a description of various styles.

C. B. Fry's Magazine.

THE "outdoor man" of the month is the new Head of Eton, the Rev. Canon Lyttelton, who is described as a high-souled Christian and a courageous reformer. It is also mentioned that he is a vegetarian. Australian cricket naturally bulks largely in the number. Mr. Victor Trumper's paper on the Australian batsman, and Mr. C. E. Hughes' sketch of "Athletes Without Knowing It," call for separate notice. The method of training by the eye through photographs that show both how to do it and how not to do it is applied to golf by Messrs. Taylor and Beldam, and to batsmanship by Mr. Fry himself. Mr. G. A. Olley, who broke the record from London to Edinburgh last year, covering 382 miles in 27 hours 10 minutes, tells how to make records on the road, and gives many practical hints.

THE ITALIAN REVIEWS.

THE *Rivista d'Italia* (May) publishes a scathing article on the canonisation of Joan of Arc, by M. A. Regis, who evidently is at one with Professor Thalamas, whose criticisms of the Maid recently produced such an outcry in Paris. Briefly, his assertion is that, historically considered, there was nothing miraculous in Jeanne's partial successes, and that there are in her life various "deplorable circumstances" quite at variance with sanctity. He asserts both that Jeanne does not come up to the Church's normal standard of sanctity, and that the Church that burnt her has no business to-day to claim her as a daughter, which, indeed, she is only doing for political purposes.

To the *Rassegna Nazionale*, May 1st, G. Urtoller contributes an admirable historical survey of the relations that have existed between Church and State in the various countries of Europe, pointing out how necessarily as civilisation advances the State takes over many of the duties performed under more primitive conditions by the Church. The ideal to be aimed at to-day he maintains to be a reasonable interpretation of Cavour's famous formula "A free Church in a free State," and from that standpoint he condemns recent legislation in France as opposed to lawful liberty of conscience. In the mid-May number the well-known Deputy, R. de Cesare, gives a vivid picture of the social condition of Rome between the years 1850 and 1870, which certainly does not make one wish to recall the days of Papal rule. He describes the vast majority of the inhabitants as living either by jobbery or by charity, and the city as wholly destitute of all modern improvements or conveniences; yet so great was its beauty and fascination that thousands of travellers thronged it every year. There is also a summary of an extremely important address by the venerable Cardinal Capecelatro, in which he speaks out strongly in favour of a wider and more thorough education of the clergy.

The *Riforma Sociale* (April) prints some interesting statistics on the marvellous growth throughout Germany of the rural banks known by the name of their founder Raffhausen, which have done so much to build up the agrarian wealth of the country. Started as an experiment half a century ago, these small rural banks founded on unlimited liability now number over 4,000, with a membership of 350,000. To their original scheme of loans for productive purposes they now add an immense co-operative business in agricultural requirements, and many peasants have been brought from penury to affluence by their help.

The most interesting contribution to the *Nuova Antologia* is a translation of one of Richard Wagner's early prose articles—an "imaginary conversation" with Beethoven—written in the days of his poverty and obscurity in Paris, and full of pathos and idealism. Writing from Pekin, N. di Giura describes the rapid growth of Japanese prestige in China as a result of their victories over the Russians. The writer considers that a close alliance between Japan and China will be one of the results of the war, and declares that the Chinese are prepared to learn much from the Japanese which they would refuse to learn from Europeans. He considers China already started on a policy of reform which may have stupendous results.

Emporium is full, as usual, of admirable illustrations. An article on the ancient city of Alba Furensé, in the Abruzzi, reveals the artistic treasures of the untrodden by-ways of Italy, and lovers of lace will find much of interest in an account of the lace-makers of Pescocostanzo.

THE REVUE DES DEUX MONDES.

IN the first May number of the *Revue des Deux Mondes*, Emile Michel has an interesting study of Théodore Rousseau and the painters of the Barbizon School. He places Rousseau in the first rank of this famous group of painters, as he marks the zenith of the school and contributed greatly to its success. Millet was two years his junior, but the two friends had enough affinities and dissimilarities to enable them to appreciate each other.

Auguste Moireau, in the same number, writes on the New Policy of the English Admiralty. He finds it difficult to understand the necessity of getting rid of so many old ships of the British fleet, many of them marvels of naval architecture. But the Japanese torpedo-exploit at Port Arthur in the night of February 7-8, 1904, seems to have acted with the power of an obsession on the imagination, and it is no longer sufficient to be prepared for war, we must be in a position to strike the first blow with such force as to decide the issue of the war.

Dr. Lortet, who has travelled a great deal in Egypt in search of animal mummies, describes some of these creatures in the second May number. For years, he says, he endeavoured in vain to get possession of some, it being usual to destroy them rather than take the trouble to preserve them for serious study. Thanks to M. Maspero, these treasures are now preserved in the Egyptian Museum at Cairo, where they may be studied by naturalists and Egyptologists. Very few mammals seem to have been embalmed, for the country has never reared them in great numbers. The mummified dogs represent many varieties, from the dog of the bazaars of the Orient to the peculiar greyhound depicted on monuments. The skeletons of oxen which have been exhumed all belong to the species *Bos Africanus*. This race furnished to the priests the animals worshipped in the temples under the name of Apis. The Apis ox is always mummified separately, and his mummy is easily recognisable by the isosceles triangle in brown cloth sewn under the bands covering the frontal region. The ass has never been mummified, but mummies of gazelles, sheep, and goats are often found. The Egyptians seem to have mummified not only those animals consecrated to the divinities, but almost every animal living about them, and the cost of the linen to wind round their bodies must have been prodigious.

THE CORRESPONDANT.

IN the *Correspondant* of May 10th Jean de La Peyre passes in review the chief problems which it is the object of Maritime International Law to solve, but Maritime International Law, he says, is still in an embryonic condition. It is indispensable that some demarcation of the open sea and the territorial sea be determined upon, and other points—the use of submarines on the high seas, the bombardment of an undefended fort, the limits and conditions of an effective blockade, the regulation of wireless telegraphy, etc.—require elucidation or await solution.

Louis Gillet contributes a notice of the work at the Salons. He fears the art of painting religious and historical works is fast disappearing. The only great historical picture this year appears to be "Le Désastre" by J. P. Laurens, the subject of which is the field of Waterloo, but there is no religious picture equal to this. In sculpture Auguste Rodin is a world in himself, and an embarrassment to other sculptors. He has shown that in statuary a head is a negligible quantity, and to demonstrate the theory further has suppressed an arm from each of his figures.

SCRIBNER'S MAGAZINE.

IN *Scribner's Magazine* Lieutenant Barney, of the United States Army, gathers up into a very interesting paper the latest information about the use of dogs in war, in which almost every important army in the world, except the British, have now made experiments. The complete training of an Ambulance dog takes about three months, and the German Society for Ambulance Dogs, on the whole, prefers the rough Scotch collie from the Highlands of Scotland only, with a keen scent and great endurance.

There are some very entertaining extracts from the letters and diaries of two daughters of Ambassador Edward Everett (United States Minister to England from 1841 to 1845). There are many descriptions of Queen Victoria and the dresses she wore, of her Courts, and what an ambassador's daughter and her mamma wore at them, much simpler garments, one gathers, than would be considered at all suitable nowadays; and there is also something about the present King as a child, Sydney Smith, and other celebrities of the day. In the height of the London season, under Queen Victoria's successor, these letters are pleasant reading.

Mr. Henry Van Dyke describes "A Day Among the Quantock Hills, Somersetshire," in country where Wordsworth and Coleridge lived, and where Coleridge's best poetry was written—a pretty paper, which might afford a holiday suggestion to one of a literary bent. Wordsworth was finally driven away from this charming country by the suspicion attaching to anyone who took long rambles by day and night, talked to himself, was a friend of Coleridge, who was known to be a Radical, and was even suspected of having lived in France and sympathising with the Revolution. The lady who owned the delightful Alfoxton house, of which so pretty a picture is reproduced, therefore gave him notice to quit.

LONGMAN'S MAGAZINE.

Longman's Magazine for June contains the publication of a summary, with quotations, of "A Tenant Farmer's Diary of the Eighteenth Century." The MS. was discovered by chance by Mr. W. M. Dunning, the writer of this article, in an oak door panel, which he picked up in Lincolnshire last summer. It covers the years 1756 to 1801, and is the record of the life of one Elias Melton, the last of his family, an only child and a bachelor. The glimpses it gives of eighteenth century country life in Lincolnshire—for the writer was no traveller beyond the borders of his county—are most curious and interesting.

NEO-MALTHUSIANISM A PASSING PERIL.

MR. G. G. COULTON replies in the *Independent Review* to Dr. Barry's denunciation of "the Age of Agnosticism" by a counter-condemnation of "the Age of Faith." He quotes from Catholic contemporaries to show the shockingly low level of morals in the very age of Aquinas. He does, however, concede to Dr. Barry that Neo-Malthusianism is comparatively modern as a general practice. In the Middle Ages, he says, restriction would have been sheer lunacy, and a more primitive form of Neo-Malthusianism was practised "most generally in convents." Our better medical knowledge has created new temptations—which are merely "God's ways of proving and improving the human race":—

Those who cannot resist alcohol die out, first individually, and then in their descendants. So also with those who cannot resist Neo-Malthusianism. For Dr. Barry has entirely ignored the one reassuring side of the problem: that medicine is beginning to preach against the practice as emphatically as theology. The habits of which he complains began in, and have spread to us from, France and Italy. But in France and Italy, as I know from having seen them, cheap medical books have for years been sold broadcast, which preach plainly, not the altruistic "you are ruining the race," but the more direct "Neo-Malthusianism ruins your own health." We have, therefore, here only the same story as with alcohol—first, rapid diffusion and great abuse, then a gradual return to the normal state of things, as a later generation learns by experience, locates the enemy clearly, and is armed to fight against it.

Languages and Letter-writing.

THE time for the Summer Modern Language Holiday Courses is at hand, and those who have not yet arranged will do well to get a complete list of them from the Director of Special Inquiries, St. Stephen's House, Cannon Row, S.W. But many people prefer to spend their foreign study time in places where there are no Language Courses; and to these and all those who desire to find a pleasant place of abode at a moderate price, no better guide can be found than that supplied for a shilling by the Teachers' Guild, 72, Gower Street, W.C. For the first time there will be a summer meeting at Amsterdam. Inquiries should be made of Miss Scriven, Northwold Road, Clapton, N.E. The programme of lectures, excursions, etc., is very attractive. For the Edinburgh course, write to Mr. A Gordon, 128A, George Street, Edinburgh.

DR. ZAMENHOF AND THE ESPERANTO CONGRESS.

The Doctor has just sent out a letter which may in one sense be deemed official. Many people have heard of the great International Congress which, it is arranged, will be held at Boulogne from August 3rd to the 15th. One result anticipated is the formation of a Central Committee for the control of matters connected with the language. If the present rate of progress is maintained, no one man can possibly continue to regulate the diverse business which incessantly arises, and it has to be remembered that probably every Esperantist, even the Doctor himself, is able to attend to these matters only after the bread-winning labours of the day are ended. The letter is about a page and a half long, so I can only give a summary of it. It will be found in the *British Esperantist* of June, price 1d., published at 13, Arundel Street, Strand. Dr. Zamenhof writes that he desires all to have his suggestions in time to think of them before the Congress. For a long while he has realised that the appointment of a Central Committee is a necessity. For one thing, because there must be no *personal* government in these matters. Many, he says, are convinced that he himself should remain the sole authority on Esperanto affairs. But supposing he should die, or become incapacitated in any way, even in the fashion of which there was a chance a little time back—that is, his being despatched to the seat of war—then matters would be in a bad state; whereas if the committee is arranged now all will be safe and there is nothing to hinder his continuing to advise or even direct, supposing he is desired to do so, the difference being great between his *constituting himself* the authority and being unanimously chosen as such by others. As he also remarks, the very people who say that "his word is their law" very often mean that his word should be law for *other* people, whilst he should listen to and adopt *their* suggestions. Thus he desires that a Central Committee should be constituted for the government of Esperanto business generally; but though he does not for one moment suppose such a committee would act hastily or unadvisedly, yet, as we are all human, he desires to safeguard the cause by the appointment of a Court of Appeal in the shape of a yearly Congress, which will either confirm or negative the decisions of the Central Committee. Whilst thus planning he desires all to remember that he wishes others to plan also, and that at the Boulogne Congress every such scheme will be earnestly considered, so that the one finally adopted may by general consent be that which is most suitable, by whomsoever proposed.

LITERATURE.

Additions are continually being made to our stock. The Monaco group has contributed a pleasant little account of a balloon adventure. The aeronaut is unable to go himself, so sends a workman painter, and as the Mayor of Brussels invites himself as a passenger, there is some fear of the issue. All goes well, however, and the experience is charmingly described. The price of the "Kolorigisto-aerventuranto" is 4d. Another new book is the "Komerca Secretario," 6d. The author is a Spaniard, but his commercial material comes from every part of Europe, and his balance sheets, bills, receipts, etc., will form fine models for business men. These books are to be obtained from the office of the *British Esperantist*, 13, Arundel Street, Strand. The REVIEW OF REVIEWS will issue in July a translation of the "Christmas Carol," by Dr. Martyn Westcott. There will be an issue in paper covers and another bound in cloth. It has been said that Esperanto literature should be original and never a translation. But Jules Verne died before he could do more than plan (he was President of the Amiens group), and except Dr. Zamenhof himself we have few authors of celebrity in our ranks as yet. These are to come. Meanwhile we have the world's treasures to translate, and Charles Dickens in his Esperanto dress will be welcomed by Swedes, Danes, Russians, French, and many another nation as well, whilst many British Esperantists will be glad to compare the original and its translation, and so add to their stock of everyday words and phrases.

NOTICES.

At the International Congress of Lithographers held at Milan last year it was resolved that "The Fifth International Congress of Lithographers wish that in all sections of different national federations an active propaganda should be made in favour of the diffusion of the international language, Esperanto, thus permitting workmen all over the world to understand each other without the aid of interpreters."

British Esperantists who have the hope of going to the Boulogne Congress are asked to make their desire known to the Association. The usual fares from London to Boulogne are, for the August Bank Holiday, 10s. 6d. return. For the holiday week end 17s. 6d., and ordinary tourist returns are 25s. third-class. If, however, a good number signify their intention to go, it may be possible to arrange with the railway authorities for cheaper fares, so Mr. Reeve, of 40, Crofton Road, Camberwell, has kindly consented to receive names of intending travellers. As all ticket-holders will probably be in possession of a vote in the election of the Central Committee, it is much to be hoped that only necessity will hinder Esperantists from being present.

Friends of the blind should remember the *Ligilo*, the blind Esperanto magazine, which contains articles, chronicle, etc., in Braille.

Womanhood (8, Agar Street, Strand) continues its series of Esperanto lessons.

THE BOOKS OF THE MONTH.

TWO NOTABLE NOVELS: PSYCHICS AND PASSION.*

THE Psychic it is now evident will be the new leading *motif* of the fiction of the future. The phenomenon of the Double, the capacity for automatic telepathy, are practically unworked mines, while the novelist who first took the phenomena of the *séance* room seriously would find himself in a field of hitherto unimagined extent. "John Chilcote, M.P." shows what use can be made of a spurious Double. But what could not be made of a genuine Double? "Dr. Jekyll and Mr. Hyde" was one of the earliest essays to press the truth of multiple and alternating personalities into the service of the novelist. Mr. Wells, who in his "Time Machine" showed a keener and truer sense of the realities of the psychic world than that which has been displayed by any other writer, may yet achieve greater success than he has yet dreamed of if he decides seriously to exploit the new wonderland that lies all around us as invisible as the atmosphere, but whose pressure is not less constant.

In "The Tyranny of the Dark" we have an attempt by a powerful and original Western novelist to build up a love story, the whole machinery of which is supplied from across the Border. In "The Tyranny of the Dark" Mr. Hamlin Garland steps boldly across the dividing line by which a tyrannical convention has confined modern writers to human intelligences which are still clothed upon by their bodies. In the modern world it is as inadmissible to bring a disembodied spirit upon the scene as it would be to go to a dinner party in the costume of Adam before the Fall. Mr. Hamlin Garland calmly sets this arbitrary convention at defiance. In his story we are back to the true tradition of all great imaginative literature. What would the "Iliad" be if Homer had not constantly described how the deities of Olympus mingled in the fray outside the walls of Troy—mortals with immortals mixed, the whole action of the drama dominated by the Invisibles? In Mr. Garland's romance the *dramatis personæ* are half of them incarnate in physical bodies, the other half discarnate, disembodied, viewless entities who are real as the gods of Homer, and quite as important to the fortunes of the hero. The story is one among many other signs that the long winter of a purblind materialism is passing away, and that the children of men, after long wandering in the wilderness, are nearing the Promised Land, where the exercise and evolution of their latest psychic faculties will so enormously increase their range of vision and their perception of the realities of the universe that the Race will declare, "Whereas I was once blind, now I see."

This extension or discovery of what is practically a sixth sense has been brought into evidence this year in many quarters—notably in the Welsh Revival. When Mr. Evan Roberts, swooping like a falcon on its prey, picks out from a thousand strangers a single unknown person, to whom he reveals his recent transgressions and half-forgotten crimes, until the trembling wretch feels as if he had been haled before the Judgment Seat of Him before whose countenance all secret sins are set, he is exercising

Serviss listened with growing amazement.
(*Reproduced from "The Tyranny of the Dark."*)

this enlarged perception, which, being hitherto discountenanced and pooh-poohed, has been relegated to clairvoyants and thought-readers. The mysterious melodies sung by choirs of Invisibles which have been heard by many of late in North and South Wales, and the strange lights which accompany the Egryn evangelist, are other symptoms that the barrier between us and the other world is wearing very thin. But of all the marvels which defy the accepted explana-

* "A Dark Lantern." By Elizabeth Robins. (Heinemann. 6s.)

tions, and which compel even the worst sceptic to shrug his shoulders and admit that there must be something in it after all, none are so marvellous as the phenomena of the Double. That a man can be in two places at one time is admitted by the Roman Catholic Church, whose doctrine of bi-location bears witness, as do many of its most derided dogmas, to a real underlying truth. But that a man can be to all appearance physically present in two places far removed from each other, and can at the same moment be seen by two sets of observers in different places is, to my own personal knowledge, absolutely true. But there is no phenomenon so absolutely impossible. We

"Do you want to kill the psychic?"
(Reproduced from "The Tyranny of the Dark.")

may credit the truth of the apparition of the ghosts of the dead. But this visible, tangible, audible ghost of the living, this duplication of the body and clothes, and the mind of a man who is still liable to pay rates and taxes as an ordinary citizen of this work-a-day world—who can fathom the abysmal mystery which underlies such a phenomenon? Yet that Doubles do manifest much more frequently than people imagine is me certain. I have twice seen doubles under umstances that precluded either mistaken identity, coincidence, or inaccurate observation, and my experience is by no means singular.

The House of Commons is not exactly the place where we should naturally anticipate the manifestation of any mysteries of a psychic character—the continued survival of the Balfour Ministry being the outside limit of the miraculous and uncanny occurrences to be observed from its lobbies. But the Double has been seen at least thrice within the precincts. The first and the oldest apparition was that of the Double of Mr. T. P. O'Connor, who was seen distinctly sitting in the House at a time when he was actually in Galway. The second case reported is that of another Irish member whose Double is declared to have actually voted in a division in Westminster when its original lay ill in Ireland. But the third and the most recent case is that of Major Sir Carne Rasch, who was seen in the House of Commons just before Easter by at least three members, at a time when he was afterwards said to have been lying ill at home.

In "The Tyranny of the Dark" there is no phenomenon of the Double. It is confined to the phenomena of the *séance* room. Mr. Garland's story tells how a young, beautiful and delightful American girl, living among the Rockies, develops mediumship at a very early age. There was no inducing of trance, no holding of *séances*, no knowledge of spiritualism in the early stages of this young psychic's development. When her little brother died, he came back and manifested through her, to the great comfort and consolation of his bereaved mother. Then her fame as a medium having been established on the other side—for at first all knowledge of the fact was jealously concealed from her neighbours—she became the channel for communication between this world and the next. Her grandfather, her father, her brother and others were her chief controls, especially her grandfather, who became a veritable tyrant, from whose grasp she in vain endeavoured to escape. She would be seized by the throat by this old tyrant of a grandsire, thrown into a trance whenever he chose, and compelled to allow him and other spirits to communicate through her to the survivors. At first this intercourse was a Divine privilege; but trouble came owing to the ignorance of the medium and her mother as to the law by which every medium is bound to preserve intact the inviolability of her own faculties. A medium should never allow the spirits to control her excepting when and how and where she pleases. If she neglects this rule she will become, like Mr. Garland's heroine, the helpless slave of the Spirits of the Dead. The story tells how she struggles to escape, and finally succeeds by the aid of her lover, a young scientific materialist, who succeeds in reinforcing her will power, so as to enable her to baffle the tyrannous controls when they endeavour to take possession of her against her will.

"The Tyranny of the Dark" is a very interesting story. The characters are admirably drawn, and are very true to life. The millionaire Pratt, who became the merciless Mæcenas of the psychic world; the

young minister who deserts his church for the *séance* room; the stepfather of the medium; Mr. Serviss, the scientist, with his sister, Mrs. Rice, and her chief, Dr. Weissmann, are all living beings, vividly painted. They live, move and breathe before us. Hardly less real are the unseen denizens of the dark, especially of the grandfather Macleod, a ruthless imperious spirit, who is so intent upon using his granddaughter to open up a communication between this world and the next, that he makes her life a burden to her, and finally precipitates the revolt. But Mr. Garland is true to nature in declaring that the control of the medium by the spirits was in no way prejudicial to her health. She remained bright and blooming and radiantly youthful and healthy, despite all her trances and other experiences. The only trouble arose, although Mr. Garland does not point that out, from the medium not realising from the first the absolute necessity of always being herself in command. If she had always been able to stipulate when, how and for how long she would consent for them to use her organism, she might have had all the good and tasted none of the evil which darkened her life.

A fair young girl with beautiful grey eyes, with exquisite lips scarlet as strawberry, stands gazing wistfully on the sunset on the mountain peaks. That is the heroine, Viola Lambert, whose stepfather is a wealthy miner of silver and gold in the heart of the Rockies. To her enters on horseback the hero, Morton Serviss, a man of culture and a scientist, with eyes of subtle appeal, who falls in love with the heroine at first sight. He was passing through the mining village when he saw her, and fell a victim to her charm. He discovers that she is a haunted creature subject to trances, and when under the control of spirits she plays divine music, and professes to commune with the risen dead. He recoils in horror from the beautiful fraud, for he is a scientist of the Ray Lankester type, who scouts the very possibility of the existence of a spirit. Viola seemed wondrous fair, but as she was a medium it followed, according to his logic, that she must of necessity be a fraud. Her mother, a lady of character, was also branded by him as an accomplice, while the Rev. Mr. Clarke, her minister, who had been converted to spiritualism by the alleged return of his dead wife, through the mediumship of Viola, was also set down as a scoundrel. Viola told him frankly in a mountain ride that she hated the whole thing, and longed to be free from it all; but although he was loth to believe she was playing a part, he felt as if she had been tainted with leprosy. He fled from the scene, leaving her to contend as best she could with the machinations of Clarke.

Morton Serviss was a materialistic biologist, one of those men who will spend gladly six months in studying the parasites that infest the abdomen of a flea, but who resent the mere suggestion that they should devote six hours to examine the evidence which goes to show the persistence of the individual after death, or the existence of invisible discarnate intelligences in the world in which we live and move and have our being. Mr. Garland describes with much subtle sarcasm, carefully veiled, the imbecility of the superstition of those arrogant scientists who are false to the first law of scientific progress in refusing to face the facts or investigate phenomena which conflict with their favourite prejudices. It is true that from one point of view they are wise. As Serviss said, "to admit a single one of the premisses," which are axiomatic to the convinced spiritualist, "would turn all our science upside down." As these premisses have been verified a thousand times, and will be verified a thousand times more, the scientist who prefers to cling to his gross materialism had much better give all psychic research a wide berth.

This was what Morton Serviss had fully intended to do. But his love for the beautiful Viola and his determination to rescue her from the degrading surroundings of a spiritualistic medium drag him irresistibly into the arena, where it is no longer possible for him to evade experiment. These experiments convince him that Viola at least is entirely innocent. It is, however, admirably true to nature that while all the phenomena, which he declares impossible, occur under test conditions imposed by himself, he is as far from believing after the experiment as he was before. He resorts to every conceivable—and inconceivable—conjecture to explain away what happens under his very nose. Dr. Weissmann is more open to conviction than Morton Serviss, and they both are sufficiently impressed by what they have seen to contemplate devoting the rest of their lives to the foundation of an institute for the investigation of the supra-normal. But Morton's zeal for the discovery of truth vanishes when brought into antagonism to his love for Viola. He wanted to marry her, and he insisted upon ridding her of her controls, destroying a miraculous medium in order to monopolise her as his wife. She herself felt that she was being sacrificed to the cause of spirit communion. "It seems time," she said; "I am becoming more and more like a public piano, an instrument on which anyone can strum—and the other world is so crowded, you know." Her struggle to escape from the tyrannous grasp of the old grandfather is very finely told, and it is all very true.

Few have investigated what M. Richet calls the metapsychical world without coming to the conclusion that the spirits—the invisible intelligences—who dwell across the border are as capable of abusing opportunities of influence as any visible and tangible mortal. Nothing can be imagined more dangerous than for the medium—to borrow Viola's phrase—to lose the key of her own piano. In other words, spirit control ought always to be subject to the veto of the medium. It is when the medium becomes, like Viola, the helpless tool which the spirits can use whenever they please, that the mischief comes in. If Morton Serviss had been really devoted to the pursuit of scientific knowledge, he would have been far more eager to marry Viola

as a scientist than he was as a lover. For Viola, according to the story, was an almost faultless instrument for penetrating into the invisible world. From the scientific point of view it would be as wicked to destroy her mediumship as it would have been for an astronomer to destroy the only telescope in the world. What he ought to have done was to have married her, restored her power to exclude spirits at will, and then to have undertaken with her aid and the co-operation of the spirits themselves, an investigation into the nature and reality of the other world.

That Mr. Garland believes in the duty of the serious and scientific investigation of the metapsychic problem is obvious. He is evidently convinced of the genuineness of the phenomena, although, like all other earnest inquirers, he shrinks from dogmatising as to how they are produced. He knows enough to rule out the hypothesis of fraud. That there have been and are many fraudulent imitations of the genuine thing is, of course, as certain as that there are hypocrites in every church. But the facts are indisputable, and they deserve to be studied as carefully and as dispassionately as any other facts. Whether they prove or disprove the spiritistic hypothesis, they enormously widen our conception of the latent capacities of the human mind. "The Tyranny of the Dark" will set many people thinking, and its net effect will be to make us all "feel more the burden and the mystery of life."

MISS ROBINS' "A DARK LANTERN."

MISS ELIZABETH ROBINS has written a tragic modern version of the gay and rollicking farce of "The Taming of the Shrew." It is a powerful performance that had much better have been left undone. For it is not the proper part for a woman to place the head of womanhood beneath the hob-nailed boots of the insolent, brutal male. Shakespeare dealt with the rude elementary facts and forces. He did not analyse, he caricatured. His woman was a cursed shrew who was mastered by sheer violence and hunger as a wild beast is tamed. Katharine's is the shrewishness of a spoiled child. Nothing she says or does excites the sympathy of the onlooker. There is not even in her the iridescent rainbow of sentiment, to say nothing of the intense passion of love. She was a termagant who, being deprived of food and subjected to a deliberately calculated course of insult and violence, is so completely cowed that she proclaims her submission with a servility as exaggerated as was her previous ill-temper. Nevertheless, the gorge of the modern man rises against Shakespeare's gay and genial brutality of the treatment of the eternal problem. Shakespeare was a man, he was writing a farce, and he lived three hundred years ago, but even these excuses hardly suffice to condone his offence.

Miss Robins is a woman. She is writing in the twentieth century. She is writing not a rowdy farce, but an elaborate analysis of a woman's heart. Her heroine is no shrew, but a creature full of charm and tender womanliness, whose character is represented in the most attractive colours. She is the cultured, high-bred woman with whom all men fall in love, who is good-hearted, romantic, delightful. And then she is flung like carrion to a savage brute of a Society doctor—a supreme type of the selfish, cynical, autocratic male. To him she sacrifices everything voluntarily, and counts the world well lost to become his mistress. No humiliation that Petruchio heaped upon Katharina can be compared with the degradation which he heaps with unmeasured insolence upon this high-spirited idealist, whom he reduces to the abject depth of shame involved in the pitiful, agonised entreaty that he would permit her to sacrifice herself to his pleasure. It is the prostitution of womanhood of a lofty type to the masterful male, compared with whose arrogance, insolence, coarseness and brutality even Mr. Oscar Asche's Petruchio is a polite and chivalrous gentleman.

When Titania, the fairy queen, is brought by a magic spell to fall in love with the ass-headed Bottom, it excites only compassion. But imagine Titania in full possession of her natural senses becoming besotted not with an ass, but with the rudest and savagest of bulldogs, and you have the picture which it has pleased Miss Robins to paint for the entertainment or the edification of her public. That the picture is marvellously and cleverly drawn aggravates rather than condones the offence. Why should Miss Robins, of all women in the world, delight to portray a modern Englishwoman, delicately nurtured and full of lofty idealism, surrendering everything a woman holds most dear—her modesty, her self-respect, her reputation, the future of her child—to a male brute who, in his capacity as her physician, coarsely tells her that that is the only way to get well?

Instead of being disgusted, she exclaims after he has gone, "Of what use to fight? He has got into my blood." She knows that he despises women, for he expresses his contempt for the whole sex in round terms as follows:—

> "They lie," he exclaimed, "lie to me as if I were one of their little tame-cat men or artist idiots, and couldn't read the facts under the powder on their faces and under the skin of their rotten bodies. . . . In a damned world like this, full of lying, nervous people——"

And so forth.

But the more he bullies and scolds and insults and abuses, the more abjectly she cowers beneath his hoof. Is there anywhere in modern fiction a more humiliating scene for a woman than that in which she implores him to make her his mistress by asking him as "a

man" to complete the cure which as a doctor he had begun?

"I thought you were going to cure me?" she told him. "You only took me a certain way on the road. Why don't you finish what you began?"

There was even a lower depth still. "But what avails it against a man whose look held her as Arctic iron holds and burns bare flesh? The only safety lies in submission to the searing contact."

A most damnable doctrine, which has paved the way a thousand times to the Inferno of the streets.

An apologist or eulogist, Mr. Edward Garnett, writing in the *Speaker*, says:—

The whole meaning of Katharine's bold action, as we understand it, is that by being true to her passion and being ready to risk everything on the chance of winning the man she loves, she obeys the deepest and finest of her feminine instincts, even if she has to sacrifice thereby what men and boarding-schools lay so much stress on — "female delicacy." The fact is that he is the only man in the book worth her winning. But if we grant this, then what better thing could Katharine have won than possessing him, and being possessed by him? Miss Robins' heroine, Katharine Dercham, has the courage boldly to cast aside all secondary considerations to grasp at the chance of winning the man she loves . . . to choose and win the best and strongest man who attracts her.

Photograph by] [*E. H. Mills.*

Miss Elizabeth Robins.

Here we have, writ large, naked and unashamed, the anti-social doctrine of solely self-regarding selfishness as the law governing sex relations, and the related immoral doctrine that if a woman is attracted by a man she can do no better thing than to tempt him by throwing herself at his head as his mistress. There is nothing new in this. It is the accepted doctrine of the scheming adventuress in all time. What is much worse for practical purposes, it has been, and is to this day, the working creed of Don Juan and all his tribe. And the curse of such a book as this is like unto the curse of the example of George Eliot: it will be used constantly to encourage weak and passionate women to believe that they can do no better thing than to obey the deepest and finest of their feminine instincts by yielding to a seducer, who, in nine cases out of ten, will fling them aside like a sucked orange when his wayward fancy takes another turn.

The Doctor grudgingly accepts her proposal. At the last moment she recoils and flies from the station where she had agreed to meet him. But like a bird fascinated by a basilisk, she returns later, and then becomes his mistress. The fact that afterwards, when baby was well on its way, they married privately, relieves none of the horror of this sacrifice. Mr. Garnett asserts that in the end — in the last two pages of the book — she subjugates her husband. What she does is to lock him out of her bedroom; whereupon he smashes the door in, and in italicised words of command orders her never to lock him out again. It is the first time he even pretends really to love her, and who can say how long it would last—prompted as it was apparently by blind rage at finding himself locked out? The story closes with the heroine's final act of self-abnegation. She gives up the desire she had cherished that her husband would tell her all about his past. It is but a trivial thing, but it is the final note, and is certainly not suggestive of what Mr. Garnett calls the final feminine victory.

It grieves me horribly to have to say these things about the work of a woman, and especially of a woman like Miss Robins, who is as far as the poles

removed from the self-indulgent traitor to her sex whom she paints so sympathetically. It is perhaps the way women have. George Eliot dispensed with marriage when she lived with George Lewes, and filled novel after novel with portrayals of the misery and wickedness of women who followed her example. Miss Robins, who remains true to the ideal, spends her time in sympathetically describing a woman who betrays it, and by such treachery blacklegs her sex and cheapens womanhood.

It grieves me the more because "A Dark Lantern" is an exceedingly able piece of work.

There is much skill, deep feeling, and a much more keen sense of movement in the story than in Miss Robins' other novels. The narrative never drags. It marches in breathless haste from the ill-starred romantic love affair of a schoolgirl to the deliberate surrender of the woman to a man who "had never shown a sign of affection or even of ordinary sensitiveness to the fact that she was a woman." But the assertion of the wicked old saw—

> A wife, a dog, and a walnut tree,
> The more they're beaten the better they be—

was never more subtly, persistently and even malignantly insisted upon.

It used to be said that Newman would preach a whole sermon for the sake of letting off a single favourite sentence. The rest of the sermon was only the setting of the sentence. I have somewhat of the feeling that "A Dark Lantern" was written round the following discourse of the heroine upon "the prison of her sex." But how disagreeably it suggests that the licence which has been and still is one of the greatest curses that has mildewed the roses of the natural and romantic affection of the man, is an easement, a liberty, a relief which in itself is a thing which the woman might naturally envy and desire for herself apparently on purely physical grounds:—

> It is only woman who suffers through the burden of mere sex.
>
> Men have the permission of public opinion to evade this suffering.
>
> A grant derived from the mighty men of old, who established that public opinion through which to-day even the weak male finds liberty—finds immunity from the grosser burden of the flesh.
>
> But is not woman as old as man? Why did she not in these robuster times, even while accepting the yoke of labour and subserviency—why did she not employ her thousand arts and all her subtle strength to compass liberty in this respect at least? Why with the very beginning of civilisation do we find the women commonly cherishing chastity in fact as well as in appearance?
>
> The root of woman's suffering (and of her rarest joy) lay deeper than any mere lack of custom's sanction to escape from the importunity of the flesh. Were it otherwise, woman had ages ago been free, and left freedom, unattainted, a heritage to all her daughters. But she will never be free. Not for her, except in the lower types, the satisfaction men find in the temporary, the makeshift, the soothing of the body while the soul sleeps.
>
> No reasonable woman would make this difference a ground for any assumption of superiority. Just as surely as her body is made something different from man, so in this is her soul different. It is the mark of the feminine in the spirit, this hunger for the special, for the one that out of all the world alone is hers, the one that, whatever he may do, she is bound to hold herself sacred to. Any man may give her a child, but only one can give her what, even more than that blessing, her soul and her body hunger for. This knowledge (instinct rather)—this it was that kept so many neglected wives and single women chaste. They cannot help feeling, "If I do not weary—if I am not false, he will surely come."
>
> She faced the truth, and formulated it once for all. We are each in the prison of our sex, we women. The tragic thing—the glad thing too—is that each prison has a single key. And the man who holds it may never even see the outer walls behind which we wait. Nevertheless we wait.

This is a very pretty theory; but how long would this essential monogamic instinct survive the general acceptance of the moral standard of Miss Robins' heroine? George Sand was not remarkable for her monogamic passion, nor was she exactly "a lower type." And if women were encouraged to "risk everything on the chance"—to quote Mr. Garnett's phrase—is it reasonable to suppose they would be content with only one chance if the first did not succeed?

I am loth to take leave of a book like this, written by a woman whom to know is to love, without a recognition of the exceeding sincerity and earnestness with which it is written. That it is admirably written, and that there is sympathy, tenderness and power in its presentation of a very unpleasant case, needs not to be said, seeing that it is written by Miss Robins. But why should women be represented by women as always the prey and the helpless slave of man—and such a man? The lion who remarked that if lions were sculptors the man would not always be depicted as victorious, assumed that his own kind would not give themselves away. But Miss Robins is a woman, and a very charming womanly woman, and behold what she has done! What the lion in the fable would have thought of her I do not like to imagine.

The Review's Bookshop.

June 1st, 1905.

MAY has been a dull month in the book world. Glancing over the volumes that have come into my hands during the month, I do not note any single book that is likely to attract special attention, with the possible exception of one or two biographies. There have been several books of fair average merit which may be read with pleasure and instruction, and others that will make a special appeal to well-defined groups of readers as filling gaps in the literature of the subjects in which they take a peculiar interest.

RUSSIA IN EVOLUTION.

Ignorance about Russia and the Russian people is a characteristic of the English people, and this ignorance unfortunately is too frequently shared by the writers of books on the Russian Empire. Several volumes were published last month, however, which can be recommended to readers who wish to obtain a more complete and accurate idea of Russian life than that to be gleaned from the columns of the newspapers. Mr. G. H. Perris' "Russia in Revolution" (Chapman and Hall. 259 pp. 10s. 6d. net), although it cannot be accepted as an impartial statement of the case, and is the work of a partisan, is at least a serious attempt to study the problem of Russian discontent. It is worth reading because it sets forth with clearness and force one side of the question, and emphasises certain elementary facts of the situation too often lost sight of by English readers. You should also read in the same connection Mr. Maurice Baring's "With the Russians in Manchuria" (Methuen. 305 pp. 7s. 6d. net). He describes his book as the record of the fleeting impressions of an ignorant and bewildered civilian, but his pages are filled with many shrewd and true remarks upon Russia and things Russian. His judgments are not warped by prejudice, and his book deserves careful reading. It is the system, he maintains, rather than the men which is at fault. He found the Russian soldiers splendid fellows, and has words of praise for the much-abused Russian officer. Want of direction and lack of cohesion are the two crying faults of the Russian army to which, in his opinion, the Japanese have owed their military successes. He quotes and endorses the remark of a soldier, that "If the authorities at the top of the ladder were anything like as good as the men at the bottom the result would be very different." A melancholy interest attaches to Captain Klado's book on the "Russian Navy in the Russo-Japanese War" (Hurst and Blackett. 281 pp.). His gloomy forebodings have been only too amply justified. It is a cogent statement of the salient facts of the Far Eastern situation, and an urgent plea that every effort should be made to regain the command of the sea. Events have moved swiftly since the book appeared, but there is much in it of permanent interest and value.

RUSSIAN LITERATURE.

English people read Russian literature, but somehow or other manage to disassociate that literature from the causes which have produced it. If you would obtain a broad and comprehensive view of the literature of Russia I can strongly recommend you to read Prince Kropotkin's "Ideals and Realities in Russian Literature" (Duckworth. 7s. net). It is an excellent volume which will assuredly become the standard work on the subject. It is biographical as well as critical, and its writer is not only intimately familiar with the subject on which he writes, but is also well qualified to describe the conditions that have produced a literature that has gained the admiration of the whole world. You should also glance at the brief sketch of Maxim Gorky, in the first of a new series of little volumes that Mr. Heinemann is publishing under the title of "Illustrated Cameos of Literature" (78 pp. 1s. 6d. net). It is a concise and admirably illustrated monograph upon the best known of the younger Russian writers.

THE REAL FRANCE.

A book that should assist in furthering the good understanding between England and France is Miss Betham-Edwards' "Home Life in France" (Methuen. 300 pp. Illustrated. 7s. 6d. net). It should do something to banish from the public mind some of those ancient and traditional ideas about France and French life which have little or no foundation in fact, such as that French people lack seriousness and that there is no family life in France. "We are accustomed," says the writer, one of the most competent of living Anglo-French authorities, "to regard the French as a volatile, pleasure-seeking, even frivolous race. Nothing can be farther from the truth. In very truth our neighbours are the most persistently serious folk on the face of the earth." Intellectually and socially, in France civilisation has reached its highest expression—such is the summing up of this writer's long experience. Not that the book is one of unmixed praise; but it is invariably sympathetic and invariably interesting. Among the chapters to which I would particularly draw attention are those on "Wives and Mothers," "The Single Lady," "Characteristics," "The Baby," and "The Family Council." No such valuable and comprehensive book on French home life has yet appeared—at any rate, in English.

THREE NATIONAL EVILS.

When not engaged in criticising the mote in our neighbour's eyes, we occasionally spare time for an inquiry as to the beam that is obstructing our own vision. Three volumes published last month dealing with betting, the opium trade, and the problem of unemployment will assist us in the performance of this unpleasant but necessary duty. Two of these volumes are due to the labours of the Rowntree family, a family that has already done yeoman service in the cause of social reform. Mr. B. S. Rowntree has edited a series of papers on "Betting and Gambling" (Macmillan. 250 pp. 5s. net), setting forth in plain language the extent to which this evil has eaten like a cancer into the life of the nation. The facts are placed on record in a concise and accessible form, and various practical proposals are outlined for checking the spread of the mischief. It is in this direction rather than in mere denunciation and wringing of hands that the authors look for some improvement. Mr. Joseph Rowntree raises his voice in protest against another iniquity which he calls "The Imperial Drug Trade" (Methuen. 304 pp. 5s. net). He declines to regard the question of the opium trade as having been laid to rest by the finding of the Royal Commission, and in order to rouse the conscience of the nation in this matter he has published this book. He

briefly examines the past history of the opium trade, analyses the proceedings of the Royal Commission, and sets forth the new evidence which has been given to the world since the report of the Commission was made. A third volume which the social reformer and progressive politician should add to his collection of books on the question of the unemployed is a collection of papers by members of the Christian Social Brotherhood on "Our Industrial Outcasts" (Melrose. 155 pp. 2s.). The volume is edited by Mr. Will Reason, and contains a brief but incisive preface by Dr. Clifford, besides papers on the extent and cause of the evil and on suggested remedies.

IDEAL CONDITIONS OF LABOUR.

A far more cheering book is an admirable and most useful volume, compiled by Mr. Budgett Meakin, on what has actually been accomplished in England, on the Continent, and in America in improving the conditions of labour. Hitherto it has been impossible to obtain this information in any convenient form. Mr. Meakin's "Model Factories and Villages" (Unwin. 480 pp. Illustrated. 7s. 6d.) is not a bundle of theories, or dreams, or unrealised ideals. Its value and importance lies in the fact that it is an authentic record of what has been already successfully done in various parts of the world. Mr. Meakin describes a great number of experiments in the erection of model villages, the improvement of factories, and a hundred different methods of bringing employer and employed into humanising contact. He lays stress, and rightly so, on the fact that it pays to treat a workman as a human being, and not merely as an animated machine. With this book in our hands it should be the business of all interested in social reform to see to it that pressure is brought to bear on employers who fall below the standards set by the ideal employers of labour so that there may be a general levelling up all round. The two hundred photographs with which the book is illustrated add greatly to its interest and value.

THE SOUL OF LONDON.

No Londoner who takes a pride in the city of his birth or adoption should neglect to read Mr. Ford Maddox Hueffer's "The Soul of London" (Rivers. 176 pp. 5s. net). Myriads of books have been written about London, but this must be numbered among the best. Too often the writer on the great metropolis fails to give any idea of anything beyond the material body of the city he describes. His pages are filled with bricks and mortar. Mr. Hueffer has been more successful, and has written a book fully worthy of its title. There is in its pages that indescribable "feel" of London which casts so potent a spell over the dweller in its midst. To have done this is no mean achievement, and deserves the grateful recognition of every true Londoner.

THREE POLITICAL BIOGRAPHIES.

The biographies of the month have been numerous, and have covered almost every phase of human activity. If you are interested in the affairs of parties and nations, there is the autobiography of Mr. Andrew D. White (Macmillan. 2 vols. 30s. net), a man who played a distinguished and honourable part in American life as politician, diplomatist and professor of history. For the majority of readers the most interesting portions of the book are those which describe his experiences as American Minister at St. Petersburg and Berlin. Mr. Asquith has by no means completed his political career, but, notwithstanding that fact, Mr. Alderson has succeeded in compiling a substantial biography of the next Liberal Chancellor of the Exchequer (Methuen. 284 pp. 7s. 6d. net). Mr. Alderson admits only one defect in his hero—the lack of a magnetic personality; but although Mr. Asquith is now fifty-three years of age, his biographer confidently looks forward to the time when the hidden and smouldering fires will burst forth and make of Mr. Asquith a second Gladstone. We shall see; but a biographer is not always qualified for the *rôle* of a prophet. I note also that Mr. T. P. O'Connor's "Life of Lord Beaconsfield" can now be had in a new edition, published at half-a-crown (Unwin). A third political biography, that of the Earl of Elgin, by George M. Wrong (Methuen. 300 pp. 7s. 6d. net), has a special interest at the present moment. Lord Elgin was the first Governor-General of Canada to accept fully the principle of Colonial self-government. He was also the first British Ambassador to make his way to Pekin, and the first to conclude a commercial treaty with Japan.

JOHN KNOX AND ERNEST RENAN.

Two other biographies—those of John Knox, by Mr. Andrew Lang (Longmans. 281 pp. 10s. 6d. net), and of Ernest Renan, by Dr. Barry (Hodder. 288 pp. 3s. 6d.)—will be read with widely different feelings. There hardly could be a greater contrast in the characters of two men both of whom played a prominent part in influencing the religious thought of their age. Mr. Lang's biography will rouse the wrath of all admirers of Knox by the freedom with which he handles the character of the Reformer. He refuses to accept the traditional view of Knox, and roundly asserts that if he was, in Carlyle's phrase, "an old Hebrew prophet," he was also a young Scotch notary. He disputes the accuracy of his "History"; he accuses Knox of "chuckling" over the death of an enemy, instead of merely rejoicing, as other good men were content to do; and so on and so on. All of which will raise a pretty tempest. A less critical and, as Mr. Lang would call it, a more "traditional" view of Knox will be found in a little volume by Dr. John Glasse, entitled "John Knox; a Criticism and an Appreciation" (Black. 194 pp. 2s. 6d. net). Dr. Barry deals with his subject in a less contentious spirit. Last year he wrote a masterly biography on Newman, and his Renan is in every respect worthy of that performance. Dr. Barry has all the qualities for writing well on Renan, and the result is a fine monograph, marked by much grace and charm of style.

A NOVEL OF PUBLIC-SCHOOL LIFE.

Two novels, at any rate, relieved last month's commonplace output of fiction—"The Dark Lantern," noticed as one of the Books of the Month, and "The Hill," by Horace Vachell (Murray. 319 pp. 6s.). The Hill is that of Harrow, and the story deals entirely with public-school life at that famous school. It is a very well written novel, quite removed from the common run. To the old Harrovian it will, of course, make a strong appeal; but its interest will be hardly less for the reader who has never been to Harrow, or who, perhaps because of sex or other disqualification, could never have been there. It is a powerfully drawn picture of English public-school life, with its traditions, its fine training, and its obvious weaknesses. Another novel that is above the average is Lady Goodenough's lively and idiomatic translation of Don Pedro de Alarcon's famous little book "The Three-Cornered Hat" (Nutt. 152 pp. 2s. 6d.). The tale is a great favourite with Spanish readers, and is to be found in many and varied versions, having undergone changes in passing from mouth to mouth. The scene is laid in Andalusia between 1804 and 1808, and it gives a curious and very quaint

picture of Spanish life in the adventures of the hump-backed miller and his handsome wife Frasquita.

NOVELS FOR HOLIDAY READING.

Problem novels do not make good holiday reading, and with the approach of the summer months they become more rare. Stories full of plot and incident, and others in which the pleasant rather than the sombre interests predominate, take their place. Among the May novels of this description there is, for instance, Madame Albanesi's "Marian Sax" (Hurst and Blackett. 6s.), of which it can truly be said that the reader's interest will never flag. Some of the women characters are well drawn. Another good though not very probable tale is Mrs. Henry Dudeney's "The Wise Woods" (Heinemann. 6s.). It is filled with wonderful coincidences, which are unconvincing to the hardened novel reader's mind. The hero, who possesses a boundless capacity for spending and losing money and none whatever for earning it, settles on £110 a year in the ugly suburb of Clapton, with his wife Vashti, in whose veins runs gipsy blood. It is an amusing, if somewhat sordid, picture of life in a London suburb. Adeline Sergeant's "The Missing Elizabeth" (Chatto. 6s.) is a capital companion for an idle hour, although her idea of making a twentieth century man scourge himself once a year on the scene of his crime is somewhat startling. Among other stories of the month that will afford pleasant reading without any severe tax on the reader's attention is "Duncan Polite," by Marian Keith (Hodder. 6s.), a simple and healthy tale of a year spent in a far-away Canadian village; Dorothea Deakin's "The Poet and the Pierrot" (Chatto. 3s. 6d.), a brightly written story, though hardly a convincing one; Mr. Thomas Cobb's "Friendships of Veronica" (Rivers. 6s.), the nature of which would better deserve the title of love affairs incipient and otherwise, and Mr. A. H. Vesey's "A Cheque for £3,000" (Arrowsmith. 3s. 6d.), full of hearty laughter over the troubles caused by a whim of an eccentric millionaire who desires to go on the spree by proxy.

NOVELS OF MORE SERIOUS PURPOSE.

Two novels of more serious purpose are worth reading. One, "Gran," by D'Arcy Martin (Welby. 6s.), is the story of the Revival of '66, and is written with a power and vividness suggesting that the writer was a witness of the scenes he, or more probably she, describes. Gran, the child of the old Puritan preacher, is both witty and clever, and, indeed, there is not a dull sentence in the story. In "George Eastmont, Wanderer" (Burns and Oates. 3s. 6d.) John Law describes the effect of war upon an idealist who happens to be trained up to the profession of arms. In the revulsion of feeling that follows an experience of the horrors of warfare, he resolves to devote his life to the service of the people. In order to get nearer them he, an Irish peer, marries an agriculturist's daughter. The impulse was an unfortunate one, but despite the encumberance and many bitter disappointments, he struggles on in his self-appointed task. Finally he arrives at the conclusion that "virtues and vices vary in different classes of society, but their sum total is the same among aristocrats and peasants." The Cardinal Loraine who figures in the story is an easily recognisable alias for Cardinal Manning.

LOVE LETTERS.

The love affairs of a great man are of perennial interest, and I have no doubt that Juliette Drouet's Letters to Victor Hugo, published last month by Mr. Wack (Putnams. Illustrated. 6s. net), will have many readers. Only a few of the letters that passed between Hugo and his mistress are published in this volume, although their connection lasted for over fifty years. These belong to the year 1851. From the January day in 1833, when Juliette Drouet first called on him, she being then twenty-seven, and an actress of a reputation far from untarnished, till the day of her death, May 11th, 1883, she retained her attraction for the great French poet and novelist. During his Guernsey exile there were practically two establishments, Madame Hugo's, at Hauteville House, where Hugo worked and took his breakfast with his wife, and "The Friends," Juliette's little house near by, where he generally dined with his sons and any friends who might be visiting him. Mr. Wack tells the story in simple narrative style, and allows the passionate love letters to tell their own tale. M. François Coppée contributes an introduction to this deeply interesting volume.

IN A SYRIAN SADDLE.

Among the books of travel of the month Miss A. Goodrich Freer's "In a Syrian Saddle" (Methuen. 363 pp. 7s. 6d. net) is far and away the best worth reading. It is well written, deals with an interesting district, and will hold the reader's attention from beginning to end. Miss Freer describes her experiences on horseback in Moab, Galilee, and Samaria, in company with a doctor, two sportsmen, and a professor. Old traditions and modern scenery are brought vividly before the mind of the reader. Messrs. A. and C. Black's coloured books have almost become a monthly event. Those published during May included "Ireland" (212 pp. 20s. net) and "The West Indies" (272 pp. 20s. net). The illustrations of the two volumes are in striking contrast, and afford some indication of the different effects of sunshine and moisture on landscape.

WISE WORDS FOR TEACHERS.

Sir Oliver Lodge's "School Teaching and School Reform" (Norgate. 171 pp. 3s.) should be in the hands of every teacher who takes his or her profession seriously. It is a strong plea for more common-sense methods in education and a more thorough training of teachers for their duties. He protests against the time wasted in the acquisition of useless knowledge, and pleads for the substitution of studies that will be both helpful to the scholar and a better training for mind and memory. What he says about religious instruction in schools is very much to the point, and should be read by all who confound dogma with religion. Another book which will be of special assistance to classical teachers, but not to them alone, is Mr. Percy Gardener's "Grammar of Greek Art" (Macmillan. 267 pp. 7s. 6d.), in which he explains the main principles of Greek art and its relations to literature. Its many illustrations are of great assistance in elucidating the text.

BRITISH TRADE POLICY.

We have had to import the best book—according to Mr. Parker Smith, Chamberlainite and Protectionist—on the trade policy of Great Britain and her Colonies since 1860. This is a sad admission to have to make, but Mr. Smith finds some compensation in the fact that on the whole the book agrees with his views on tariff matters. It is by a German, bears the title of the "Trade Policy of Great Britain" (Macmillan. 413 pp. 7s. 6d. net), and consists of a laborious survey of the trade relations of Great Britain and her colonies with foreign countries since the establishment in England of Free Trade. The book was written twelve years ago and only comes down to 1892. In the translation the figures have not been brought up to date. This is as might

have been expected, for are they not regarded by the true Chamberlainite as mere illustrations. Apart from this, the book is a conscientious study of our trade problems by an outsider writing from the standpoint of a competing and rival nation.

BOOKS ON VARIED TOPICS.

There are several other books of the month that I can no more than mention. Mr. Masterman has gathered together a bookful of essays, written in a time of tranquillity, under the title of "In Peril of Change" (Unwin. 331 pp. 6s.). It is an attempt to estimate forces that are making for change, and includes a group of sketches of the dead who have recently passed away. A sombre and somewhat doleful note pervades the volume. A poetical drama of more than useful excellence and power is K. H. D. Cecil's "The Historical Tragedy of Nero" (Kegan Paul. 159 pp.). I can strongly recommend you to read it if you have any taste for dramatic poetry. If you care for a simply written record of a remarkable life spent mainly in the Australian colonies, you will read with pleasure "After-glow Memories," by Anglo-Australian (Methuen. 307 pp.), and there is also Mr. Henry Boynton's little book on Bret Harte (Heinemann's Contemporary Men of Letters series. 117 pp. 1s. 6d. net). The point and pith of it all is that Bret Harte did one thing supremely well, "The Luck of Roaring Camp," and lived for thirty years on the reputation of that single achievement. An entertaining and brightly written volume is that in which Mr. Arthur H. Beaven records his experiences of "Animals I Have Known" (Unwin. 301 pp. Illustrated. 5s.) in various lands, Great Britain, Australia, the West Coast of South America and Brazil. It does not profess to be a scientific book, but simply a pleasantly written account of the observations of a lover of animals who has made good use of his opportunities. To the music lover Miss Olga Racster's "Chats on Violins" (Laurie. 221 pp. Illustrated. 3s. 6d. net) will afford pleasant reading. The history of the rise and perfection of the violin is well and interestingly told.

A TIMELY BOOK ON NORWAY.

"The Constitution of Norway" is the title of a little book written by Mr. H. L. Brækstad (David Nutt. 75 pp.). It is a timely publication. For Mr. Brækstad not only gives us a historical and political survey of the present controversy between Norway and Sweden, but he supplies us with a complete translation of the Norwegian Constitution and the Act of Union between Norway and Sweden.

"Our Stellar Universe," a Roadbook to the Stars (King, Sell and Olding. 5s.), is a remarkably novel exposition by Mr. Thomas E. Heath of his discovery of a method whereby the distance of the stars from each other and from the world can be shown stereoscopically. It is an interesting book, written very lucidly. Mr. Heath says that if the distance which light travels in one year be represented by one mile, then the distance of the earth from the sun will be represented by one inch on the same scale. He takes, therefore, one inch as equivalent to 92,800,000 miles, and frames his scale accordingly.

MASTERPIECES OF PROSE.

The popularity of cheap reprints of standard works shows no signs of declining, and in literature the dead have become the most formidable competitors of the living. Of all the convenient and dainty reprints that have come into my hands, none is likely to be a greater boon to the busy man than the Little Masterpiece Library of Prose, published by the Masterpiece Press (cloth, [illegible] net, leather, 34s. net, with bookcase). This little library contains twelve dainty volumes, eleven of which are devoted to the best work of each of the following writers: Bacon, Addison, Johnson, Lamb, De Quincey, Emerson, Carlyle, Macaulay, Poe, Hawthorne and Irving. Only the most finished pieces, which at the same time are short in length, have been selected for inclusion. But the reader who obtains this set of little books will have in his possession those essays, stories, pen portraits, historic scenes, and words of wise counsel that make up the fine gold of English literature. The first volume of the set on "Books, and How to Read Them," contains a special chapter by Mr. John Morley on the Great Commonplaces of Reading, besides much useful advice on the choice and reading of books by James Russell Lowell, Frederic Harrison, Emerson, Mr. James Bryce, Dr. Fairbairn, and Charles Lamb.

NEW AND CHEAP EDITIONS.

The month has also seen the addition of many new volumes to series already in course of publication, and the issue of one or two new series of reprints. There have been added to Mr. Heinemann's Favourite Classics Tennyson's "Idyls of the King," "English Idyls," "In Memoriam," and "Maud," each published in a separate volume, and Sheridan's "School for Scandal," "The Critic," and "The Rivals," in three volumes (6d. net each). Messrs. Macmillan have commenced the publication of an exceedingly neat pocket edition of the works of Scott, Dickens and Thackeray, printed on thin India paper, with illustrations, and bound either in cloth or leather (2s. net and 3s. net). "Waverley," "Vanity Fair," and "The Pickwick Papers" have been selected as the first volume published in each of the three series. Messrs. Nelson have still further lowered the price at which good editions of standard fiction can be obtained by their publication of Sixpenny Classics, bound in cloth. The size of the volumes is almost that of the New Century Library; the type is large, and they are certainly a vast improvement upon the sixpenny paper-covered reprints, whose day must now almost be over. Mr. Fisher Unwin still is providing the public with recent copyright fiction at low prices, and has added to his Shilling Library Maxim Gorky's "The Man Who was Afraid," John Oliver Hobbes' "A Study in Temptations," and Lance Falconer's "Mademoiselle Ixe." At last we can have Ruskin's most popular work, "Sesame and Lilies," at a price that will place it within the reach of the poorest. Lowell once expressed the wish that Ruskin's works might be in the hands of every working man. The day when this will be possible is now fast approaching. Mr. George Allen has anticipated it by issuing an edition of "Sesame and Lilies," well printed, and strongly bound, at one shilling. "The Stones of Venice," in three volumes, has also been added to the Pocket Edition of Ruskin's works. As these volumes contain illustrations, their price is 3s. 6d. instead of half-a-crown.

NOTE.—I shall be glad to send any of the books noticed above to any subscriber, in any part of the world, on receipt of their published price, except in the case of new books, when the amount of postage should also be sent. Any information my readers may desire as to the books and other publications, either of the current month or of earlier date, I shall endeavour to supply. All communications must be addressed to "The Keeper of the Review Bookshop" at the Office of the "Review of Reviews," Mowbray House, Norfolk Street, London, W.C.

A Supplement to the "Review of Reviews."

No. 48. Issued as an integral part of the "Review of Reviews" of June, 1905.

HOW OLD ENGLAND IMPRESSED EMERSON.

I SEE this aged England pressed upon by the transitions of trade and new and all incalculable modes, fabrics, arts, machines, and competing populations. I see her not dispirited, not weak, but well remembering that she has seen dark days before; indeed, with a kind of instinct that she sees a little better on a cloudy day, and that in storm of battle and calamity she has a secret vigour and a pulse like a cannon. I see her in her old age, not decrepit, but young, and still daring to believe in her power of endurance and expansion. Seeing this, I say, "All hail! Mother of nations and mother of heroes, with strength still equal to the time, still wise to entertain and swift to execute the policy which the mind and heart of mankind requires in the present hour, and thus only hospitable to the foreigner, and truly a home to the thoughtful and generous who are born in the soil."—*Speech at Manchester, November*, 1847.

THE REVIVAL AT HOME AND ABROAD.

A CHRONICLE OF THE MONTH.

THERE has been a lull in Wales. Mr. Evan Roberts has been resting. Mr. G. Hughes, of the *South Wales Daily News*, has written, and Mr. E. W. Evans, of Dolgelly, has published, a shilling volume entitled "Evan Roberts, Revivalist: Story of the Liverpool Mission." Mr. Roberts is going on a mission tour through Anglesey. It is reported that he intends coming to London in October. Some of the singing sisters have already arrived here, and great results are reported as the outcome of their Service of Song. Dr. Geil, who was interviewed in this REVIEW last month, is about to devote eight months to a series of meetings in the North of England. I am publishing, as No. 4 of the Revival pamphlets, some account of the remarkable career of this great traveller and evangelist. The interest in the Revival continues to spread. In addition to the French, Welsh, and American editions of the pamphlet "The Revival in Wales," it is now being translated into Dutch and German. The Torrey and Alexander Mission has been transferred this month from Brixton to the Strand, where a temporary hall holding 5,000 people has been erected on the vacant ground near Aldwych. Mr. Quinton Ashlyn has been spending some weeks in Wales, where he has been scandalised by the mystic lights which he saw gleaming like jewels in the hair of Mrs. Jones, of Egryn, and which he dogmatically declares were hung there by Satan. Mr. Ashlyn is also horrified by the preaching of women, which he is certain was absolutely prohibited for all time because of the temporary restriction placed by Paul upon the women of Corinth. An Australian edition of the Welsh Revival pamphlet is announced. The subject, says Mr. Judkins in the *Australasian Review of Reviews*, is creating the widest interest in Australasia, and no one will be surprised to see an outbreak there. The attitude of the people is one of expectancy. If it develops, it will probably help very greatly towards the solution of the national problems which reformers there are grappling with.

In the *Occult Review* for June Mr. Beriah G. Evans publishes his third paper on the "Merionethshire Mysteries." In addition to the lights which attend Mrs. Jones, of Egryn, he tells us that "her hostess has heard in the small hours of the morning angel choirs singing above the house—Mrs. Jones herself saying that this was a by no means unusual occurrence in connection with her missions."

In the *Annals of Psychical Science* for May Mr. Edgar Vine Hall, B.A., writes upon "Some Aspects of the Welsh Revival." He notes that "both the music and the lights are heard and seen by many ordinary people; it is not a case of an abnormal character alone perceiving them." Mr. Hall has written a pamphlet on "The Revival in North Wales," which is published at 1½d., post free, by J. Jacob, 149, Edgware Road, London.

The editor of the *Theosophical Review* for May says that the editor of the *Revue Théosophique* for March—in speaking of the Welsh Revival, says: "The veritable origin of the movement is possibly the action of a powerful Helper who has made of Evan Roberts and others a channel for the outpouring of spiritual force." This seems reasonable; and as no spiritual force thus poured out upon them can do more than enhance—put more life into—what they are by nature, we need not wonder that, though at least for the time raised and glorified, they remain Welsh Methodists still. It is power they have received—not light; for *that* they are not yet ripe.

TOWARDS THE CIVIC CHURCH.

THE BRADFORD GUILD OF HELP.

BRADFORD, which was one of the first towns in England to welcome the formation of the Association of Helpers which aimed at the evolution of the Civic Church, is now once more leading the way towards the union of all who love in the service of all who suffer.

Miss Alice B. Priestman has sent me her article, reprinted from the *Friends' Quarterly Examiner*, describing the City Guild of Help by which they are attempting to apply something like the Elberfeld system, described by Miss Sutter in "Britain's next Campaign," to Bradford. Its objects are as follows:—

To unite citizens of all classes, both men and women, irrespective of political or religious opinions, for the following objects: (*a*) To provide a friend for all in need of help and advice. (*b*) To secure timely aid for the suffering and needy. (*c*) To bring about, if possible, lasting improvement in the condition of each case, by patient study and wise methods of help. (*d*) To prevent overlapping and waste of charitable effort. These objects to be attained by means of the hearty co-operation of existing charities; and by a group of voluntary helpers for each district of the city, working under a district head, who shall be in touch with all local charities. For the above purposes the city shall be divided into four divisions. Each division shall be subdivided into ten districts.

The Mayor is the president, they have as a paid secretary a former worker at Mansfield Settlement in the East

End. They have now got 600 helpers, each with a case-book and four families to look after, a map of his district, a food chart (showing how best to invest a shilling in nourishing food), and a diagram showing the various influences which are available for the improvement of the condition of the people. They are classified under six heads: - Family, Personal, Neighbourhood, Civic, Private Charitable and Public Relief.

They have a loan fund, a poor man's lawyer, and are entrusted with looking after the feeding of the hungry scholar. Those who want more information to enable them to go and do likewise in their own town can obtain it by writing to the Secretary, City Guild of Help, 2, Darley Street, Bradford, Yorks.

Municipal Action in Middlesbrough.

The Middlesbrough Town Council is taking the lead in seeing what can be done to carry out the recommendations of the Physical Deterioration Committee. Their General Purposes Committee has ordered an inquiry into the sufficiency of the water supply in the poorer districts. The question of open spaces for children was also raised, and it was decided to suggest to the Education Committee that they should place at the disposal of the Council a number of the school playgrounds, so that the children could play in them after school hours during the summer months. A resolution was passed asking the Justices to consider whether it would be possible to deal with cases affecting children in a separate court, and thus remove the young from the contaminating influences of the ordinary police court.

Action of the Free Churches.

The Free Church Council through its Social Questions Committee has urged local councils everywhere to take up the question of the condition of the people. Some of the earliest councils to act in this direction are those of Tottenham, Edmonton and Enfield. They have appointed a Social Questions Committee of their own, charged with the duty of defining the methods of the practical application of the doctrines of humanity and duty and religion to those aggravated and accumulated social evils, and to encourage an explicit policy on the part of the Churches towards remedying these evils. The printed suggestions are suggestive and encouraging:—

Lines of Redemptive Effort. (*a*) District Visitation—Mothers' Conferences. (*b*) Division of District into areas of personal influence. (*c*) Oversight of (1) the Old; (2) the Blind and Deaf and Dumb; (3) the Crippled Adults; (4) the Sick Poor. (*d*) Workhouse Services—Brabazon Industries. (*e*) Care of Crippled Children. (*f*) Public Morality (1) Disorderly Houses; (2) Prostitution; (3) Rescue Work; (4) Betting and Gambling; (5) Drink Traffic; (6) Preservation of the Sabbath; (7) Proper Conduct in the Streets; (8) Places of Amusements. (*g*) The Care of our Youths and Maidens—(1) Secondary Sunday Schools; (2) Institutes. (*h*) Sanitation, Housing, and Transit.

Symptoms of Social Conditions: Suggested Lines for Enquiry.—(*a*) The Drink Curse. (*b*) The Degradation of Women—Rescue Work. (*c*) Gambling. (*d*) Unsanitary Houses. (*e*) Poverty. (*f*) Pauperism. (*g*) Insecurity of Labour. (*h*) Minimising of Wages. (*i*) Bread Winning by Mothers. (*j*) Scaling of Wages by Sex instead of Work. (*k*) Child Labour. (*l*) Under-nutrition—not only from low wages, but from ignorance or neglect of domestic economy. (*m*) Inhuman Surroundings of Labour.

If every Free Church Council would work on these lines something might be done to make the Church "as lofty as the love of God and wide as are the wants of man."

THE FARM LABOURER'S WAGE AND FOOD.

Mr. Seebohm Rowntree, in the *Independent Review*, quotes from Mr. Wilson Fox's Second Report on the Agricultural Labourer several most interesting statements.

What He Earns.

Dividing the workers into the two classes:—I. Ordinary agricultural labourers—*i.e.*, all labourers not specially in charge of animals. II. All classes of agricultural labourers—*i.e.*, including horsemen, shepherds, cattlemen, etc.:—

In England the wage is 17s. 5d. for Class I., and 18s. 3d., or 10d. more, for Class II.

In Wales it is 17s. 7d. for Class I., 17s. 3d., or 4d. less, for Class II.

In Scotland it is 19s. 5d. for Class I., 19s. 3d., or 2d. less, for Class II.

In Ireland it is 10s. 9d. for Class I., 10s. 11d., or 2d. more, for Class II.

The highest average weekly earnings in England were 22s. 2d. in Durham, the lowest, 14s. 6d., in Oxfordshire; in Wales the figures were 21s. 3d. in Glamorgan, and 15s. 8d. in Cardiganshire; in Scotland, 22s. 2d. in Renfrew and Lanark, and 13s. 7d. in Shetland, Orkney, and Caithness; in Ireland, 13s. in Co. Down, and 8s. 9d. in Mayo.

What He Eats.

For the man with 18s. 3d. a week wages, and 1s. 3d. from garden produce, etc., the weekly family budget is thus set out:—

	s.	d.
Expenditure for food	13	0½
Rent	1	6
Light and fire	1	9
Club	0	6
Clothes	3	0
	20	3½

This is the account given of his food:—

The family consume weekly about 7lb. of meat, of which more than half is pork or bacon. Their weekly rations also include about 34½lb. of bread and flour, 26lb. of potatoes, ½lb. of tea, 1lb. of butter, 1lb. of lard, margarine, or dripping, 4½lb. of sugar, and 4½ pints of new or 8¾ pints of skimmed milk.

Mr. Rowntree finds the energy value of the diet to fall only 3 per cent. below standard requirements, but the proteine falls short by 22·4 per cent.

Mr. Rowntree adds his conviction that the prospect of possessing small holdings will check the migration townwards.

Amid so much that is discouraging and revolting in the news that comes from the Congo, it is an agreeable surprise to receive the first copy of the *Congo Balolo Mission Record*, published in October of last year. The whole of the type of the magazine was set up by two native lads, under superintendence. The get-up certainly does credit to native intelligence. The reports from various mission centres show the enormous value of the magic lantern in native evangelism. The mission is under the direction of the "Regions Beyond Missionary Union," whose central offices are Harley House, Bow, London, E.

THE WORTHY AND WORTHLESS OUT OF WORKS

A CO-OP-CHASS IN THE COUNTRY.

MR A. C. BARTON, of Henley, Rawdon, near Leeds, sends me the following sketch of a plan which he is prepared to work out in his Yorkshire village. His plan of advancing Christian Brotherhood by helping the unemployed to helpful co-operative employment will be read with interest by many who are at present asking, somewhat despairingly, what they can do to cope with this open sore. Mr Barton calculates that with a thousand pounds he could fix up a laundry, bath house, with sleeping and dining rooms, obtain the freehold of the necessary land, and purchase the raw material for labour. He will be glad to hear from any person or persons who would like to help in carrying out this scheme. If it could be made to cover expenses it might serve as a model to be followed elsewhere:—

There are two kinds of inhabitants, workers and non-workers. These latter are again divided into classes: unfit, unemployed, and shirkers.

The workers are those who have work and are working, with the result that food, clothing and lodging is provided for themselves and others dependent upon them.

Of the non-workers, those who are unfitted to work through old age, illness or accident (and there are very few who are totally incapacitated) should be provided for and taken care of by those for whom they have spent their years.

Those who shirk work and prey upon the strength and labour of others should be rigorously refused a supply of necessities. If a man will not work neither shall he eat.

It is for the unemployed who want work that the following is planned. After the first meal opportunity would be given him to prove his truthfulness and willingness.

At present they beg their food and lodging and loaf about with nothing to occupy themselves, and are consequently miserable.

I would guarantee them food and lodging, and ask them to return the goodwill by helping me, leaving them spare time to seek for regular work. They would be no worse off than at present, and it would be real kindness to find them occupation, as I have abundantly proved.

I would not pay anything as wages, and they would be free to leave at any time, but I would endeavour to hold them to the place by making the work attractive and enjoyable. This will keep *me fully* employed.

As to practical proposals. A start in a small way is advisable and most probable, and in fact only possible. I have here 5½ acres of land, and it is obvious that only a limited number can be sustained thereon. Part is occupied by the house and stable, having stalls for one horse and two cows. The kitchen garden is to be enlarged. Half an acre is for hay, afterwards to be used as pasture for a goat, and ultimately to be put under the spade, until needed for building purposes. Nearly two acres is now used as pasture. The remaining land is being added to the house as additional grounds, to include tennis lawn, entrance drive, and shrubbery. But the area needed for this scheme can be enlarged as time goes on.

The first provision would be for sleeping. Cottages to be rented and bedding provided. I have already taken a furnished cottage capable of accommodating eight men, but have not bedding for more than two.

A bath is necessary. As hardly any of the cottages in the village have a bath, I would make the use of it public upon a small charge. This would cover rental and capital expenses. After the bath, which would be the first condition of entrance, I would endeavour to provide each man with decent, clean clothing, so that he might mix with others without causing disgust or spreading disease. Many are willing to give away cast off clothing.

Vegetarian meals would be provided at fixed hours in one common room, and anyone desiring to join us would be introduced at the assembly for meals, when any objection could be expressed, otherwise it would be presumed that the newcomer is welcome.

Family reading and worship would be conducted every morning after the first meal.

All washing would also be dealt with at one centre.

As for work, this would consist of *building-land culture*, and that consequent upon the existence of any community, knitting, mending and darning, as well as making clothing, footwear, mat making, and similar indoor work, besides educating the little ones.

Luxuries (that is, meaningless and useless decorations, whether of the person or premises) will not be provided. But beauty has a use, and therefore things will be as beautiful as possible. In fact, beauty can only attain its purest if intimately associated with utility. This will have a refining effect.

Each will be asked to take up some responsibility. As trustworthiness and capacity is displayed, the post of responsibility will be enlarged. This will have an educational effect.

At first I must have sole control as to the filling of such offices. After developments will enable these to be filled by election, suggested by fitness for the post. But it will be necessary for all to realise that each holds office in order thereby the better to serve his fellows—to act as elder brother or elder sister. These would take charge of all material and implements required in the work under their charge, and, to prevent confusion, no material or implement should be removed without mentioning it to the elder.

At first the company will probably consist of poor knocked-about specimens of mankind, such as are not generally wanted and find it hard to get work, who have lost the eager hope of youth and strength, and been subjected to the buffetings of a thoughtless world. Among these are generally few with wives and children dependent upon them, but should there be any such, they would help in the work.

Working hours would be regular, and each would be encouraged to take up something during the remaining hours as a hobby, either for the benefit of one's mind, for the pleasure of one's fellows, or the gratification of one's own inclinations.

Our fortnight's experiment has shown the feasibility and pleasure of work carried on as here planned. Opportunity has been given for four women, five men (not all "unemployed"), and five children to work thus together. One took charge of the food preparation, together with her three children and housework, another looked after the cottage and helped the first. The third took charge generally, save that undertaken by the first two, while the fourth looked after the little baby, and, after method was introduced here, also helped the third. The five men, of varied type and temper, have each been busily and enjoyably employed, with little hitch or trouble, one at building (helped by one child, a lad), one at plumbing, one at odds and ends, one at land work, and the other wherever help was most needed.

If the adjoining field were added to the scheme—as value of land is increasing in this neighbourhood—it would be a good investment, and will fit in well with this scheme of development. In the meantime it would provide pasture for a horse, cow, and poultry, which would be needed for this work. This again would give employment to more men. A cricket pitch could be let off for an annual rental for the young men at the Wesleyan Chapel adjoining, another portion would be put under the spade. The four or five cottages thereon would give much needed accommodation, while the slaughter house would well be converted into a small laundry or bath house, as previously indicated. A disused mill pond near by would provide for a swimming club.

It may be urged that men will not stop long here, but as soon as they are on their feet again will want to be off where there are prospects of rising more quickly. At any rate, it will be good to give them the start, and should any desire to leave (as, for instance, emigrate to Canada), it would be our desire to help them in necessary outfit.

Many shop girls would be glad to come during their holidays if simple board and lodgings were provided without expense—and those would be given opportunity of helping to make a return. Of this department my wife would take charge.

COMPARATIVE ENGINEERING EXPORTS.

JOHN BULL ought to feel very much cheered up by Mr. W. Pollard Digby's paper in the *Engineering Magazine* for June on the engineering exports of Great Britain, Germany and the United States. He selects these three countries for comparison because they are the only countries in which over one million persons find employment in the preparation of iron and steel and manufactures thereof, including shipbuilding. According to the latest figures, such persons in the United Kingdom number 301 to every 10,000, or an aggregate of 1,249,000; in the United States 152 persons per 10,000, or an aggregate of 1,151,000; in Germany 215 persons per 10,000, or a total of 1,115,000. Mr. Digby tabulates the total engineering exports of the three countries as follows:—

Year.	1899.	1900.	1901.	1902.	1903.	1904.
	All figures are in thousands of pounds sterling.					
United Kingdom	59,627	62,702	55,746	56,830	58,246	58,507
Germany	25,892	28,759	28,894	30,257	28,413	26,487
United States ...	18,743	24,383	23,464	19,711	19,827	25,711

He works out the value of engineering exports per head of the population as follows:—

Year.	£ 1899.	£ 1900.	£ 1901.	£ 1902.	£ 1903.
United Kingdom	1·46	1·52	1·34	1·31	1·37
Germany	0·47	0·51	0·51	0·52	—
United States	0·25	0·32	0·30	0.25	—

THE BRITISHER TWICE AS PRODUCTIVE.

Perhaps the most significant comparison is that in the value of engineering exports per worker engaged in engineering industries. The German figures, which are only to hand for 1895, are dismissed by Mr. Digby as not up to date, and therefore are not given. But after all that we have heard about American energy, economy and labour-saving appliances, it is surprising to find the figures work out as follows:

United Kingdom (1901), £ value per head of engineering population	44·63
United States (1900), £ value per head of engineering population	20·85

In other words, every British workman in the engineering industry produces for export more than twice as much as every American workman.

Passing next to the total value of interchange of engineering commodities between the three countries, Mr. Digby gives the following tables:—

Year.	1899.	1900.	1901.	1902.	1903.
Imports into the United Kingdom, ex	In thousands of pounds sterling.				
Germany	1,115	1,340	1,603	1,638	1,287
United States ...	4,093	3,781	3,614	3,809	3,130
Total	5,208	5,121	5,217	5,447	4,417

Year.	1899.	1900.	1901.	1902.	1903.
Imports into Germany, ex	In thousands of pounds sterling.				
Great Britain and Ireland	4,713	5,812	2,835	1,879	2,169
United States..........	1,604	2,499	1,639	1,216	1,098
Total	6,317	8,311	4,474	3,095	3,267

Year.	1899.	1900.	1901.	1902.	1903.
Imports into the United States, ex	In thousands of pounds sterling.				
United Kingdom	1,507	2,821	2,282	3,064	5,201
Germany	333	564	603	1,054	2,674

BRITISH EXPORTS INCREASING.

Readers who have been scared by the fiscal "bogey" will note with surprise in these tables that while imports into this country from the United States have gone on steadily decreasing, the imports into the United States from this country have increased from a million and a half to more than five millions.

Concerning the relative hold of the three countries on European markets, Mr. Digby supplies this suggestive table showing the exports to the eight countries, Belgium, Italy, Russia, France, Holland, Spain, Portugal and Austria-Hungary:—

Year. Ex	1899.	1900.	1901.	1902.	1903.
	In thousands of pounds sterling.				
United Kingdom	14,016	14,167	9,665	10,330	10,691
Germany	16,307	19,680	18,633	18,432	18,866
United States	2,134	2,390	2,033	1,789	1,971

Here, undoubtedly, Germany has scored, raising her proportion from 50 per cent. of the engineering trade in 1899 to nearly 64 per cent. in 1902. The advantage which Germany has by virtue of the centrality of her position must, however, in this connection be remembered. Mr. Digby's study will be continued in succeeding numbers. It is rendered luminous by diagrams. His aim is to show the trend of trade supremacy.

Something Like a Cheap Trip.

THE Travel Club of the Browning Settlement will this year visit Lille in August, where special arrangements are made for their reception. The party will be housed in the suburbs of Lille, in the School of Arts and Crafts, which has been described as the most magnificent technical school in the world. Its fitting gallery is 405 feet long. It is equipped with all the most recent and complete appliances of mechanical science. Dormitories with separate cubicles will be provided. The programme is expected to include a day at Dunkirk, with its new docks and wharves, combining the latest improvements in shipping facilities, and a day at the International Exhibition at Liége. The Walworth party will be warmly welcomed at Lille. The Mayor of Lille and a municipal committee appointed for the purpose are considering a reception for the Walworth party, at which Sir Thomas Barclay has promised to be present. Receptions are also being prepared by the Compositors' Union and the Union of Co-operative Societies. Total cost per head for food, fare, and lodgings, two guineas. Weekly wage-earners of Walworth have the first preference. Applications from mechanics in South London suitably introduced are invited. Mr. G. N. Barnes, of the A.S.E., Mr. Fredk. Rogers and Mr. George Lansbu[ry] hope to join the party. A return visit to the Settleme[nt] will be paid by a company of French workmen fr[om] Lille in the latter part of September.

THE *Engineering Magazine* for June contains tw[o] articles of especial interest to the general reader, that [by] Mr. Pollard Digby on the engineering exports of Great Britain, Germany, and the United States, and that by Mr. Alton D. Adams on the project of damming [the] Niagara Rapids. Both of these have been noticed el[se]where. Dr. Alfred Gradenwitz discusses the gas eng[ine] for marine motive power, and argues that the possib[le] introduction of gas ships would allow of many millio[ns] being saved in coal, when the waterways, owing to chea[p] gas operation, might become much more powerful c[om]petitors to railways than heretofore. Mr. W. S. Stan[d]ford discusses recent developments of roll-turning, wh[ich] was invented in 1784 by Henry Cort. In rolling iron [and] steel bars, rails, etc., it has added immensely to the com[]forts that the civilised nations enjoy, but there have been very few improvements in the lathe by which these results have been turned out. The rest of the articles are chi[efly] of technical interest.

Diary for May.

PRINCIPAL EVENTS OF THE MONTH.

May 1.—The Russian soldiery in Warsaw attack a procession of workmen, killing and wounding at least 200 ... In consequence of the removal of religious disabilities in Russia, cemeteries and altars belonging to the "Old Believers" of Moscow, closed for forty-nine years, are unsealed in the presence of the local authorities ... About 200 foreign delegates to the International Railway Congress arrive in New York .. The Cretan authorities state their inability to comply with the request of the Consuls to remove the Greek flag from public buildings.

May 2.—The German Mission leaves Tangier for Fez . . General Botha, in behalf of the Executive Committee of the *Het Volk*, issues a Dutch translation of the Transvaal Constitution .. Six hundred delegates meet at Bala to formulate the Welsh Nonconformist education campaign against the Government's coercive policy.

May 3.—The American Railway Appliance Exhibition is opened in Washington.

May 4.—The King leaves Paris and arrives in London . After twenty-eight days' debate Mr. Borden's amendment to the North-West Provinces Autonomy Bill, leaving educational matters to the new provinces, is defeated in the Canadian House of Commons by 140 votes to 59 . In the Cape Colony Assembly the Treasurer announces a deficit of over half a million, to be met by temporary loan . . All work and street traffic cease in Warsaw ... The teamsters' strike in Chicago continues amidst scenes of violence.

May 5.—The second congress of *Zemstvoists* opens at Moscow; the proceedings are private ... A banquet is given in the Mansion House by the Lord Mayor in honour of Mr. Choate, retiring Ambassador of the United States.

May 6.—The *Zemstvoists* assembled at Moscow agree on the question of universal suffrage ... A treaty of commerce is signed between Great Britain and Cuba at Havana .. The Naval Exhibition at Earl's Court is opened by the Lord Mayor.

May 8.—The trial of Captain Tamburini opens in Paris ... Mr. Whittaker and other promoters of the Trades Union and Trades Disputes Bill withdraw owing to the nature of amendments passed in the Standing Committee on Law, which are fatal to the usefulness of the Bill ... At the inquest at Markyate on the boy Clifton, killed by a motor-car belonging to Mr. H. Harmsworth, the driver is committed for manslaughter ... The Congregational Union open their session in London.

May 9.—The hundredth anniversary of the death of Schiller is celebrated throughout Germany ... The *Zemstvo* congress concludes its labours in Moscow; resolutions antagonistic to the various Government reforms are carried ... Thirty persons lose their lives and 120 are injured by a tornado in Kansas ... An earthquake in Persia causes the death of fifty people ... The Woman's Liberal Federation opens its annual council in London.

May 10.—The Upper House of Convocation discusses the Athanasian Creed. It is moved by the Bishop of Birmingham, and carried, that Bishops shall have, on the application of incumbents, the power to dispense with the public recitation of this Creed ... A reception is given at the Sorbonne to the party of British medical men now arrived in Paris ... Mr. Chamberlain presides at the dinner of the London School of Tropical Medicine ... The Anti-Vivisection Society holds an enthusiastic meeting in Queen's Hall.

May 11.—A Bill is introduced into the Italian Chamber in Rome which, if adopted, will double the Italian Navy in a few years ... In the United States a tornado at Snyder causes the death of 100 persons ... In a railway accident in Pennsylvania thirty persons are killed and 120 injured ... The East Ham Borough Council publish a manifesto on the Education Question ... The hundred and fifteen Army shoemakers on strike, who have tramped from Raunds, Northamptonshire, reach London.

March of the Raunds Army Bootmakers to London.
(From a photograph by W. Coles taken at Watford.)

May 12.—Mr. Carnegie formally hands over to the Natural History Museum the reproduction of the skeleton of the Dinosaurian reptile *Diplodocus*.

May 13.—A Parliamentary paper issued shows that the destruction of stores sent out to South Africa 1899-1901 amounted to a public loss of £284,914 .. The Education Committee of the L.C.C. propose an increase of £215,000 per annum to teachers' salaries ... The King receives four of the Hull fishermen concerned in the Dogger Bank incident, and bestows upon them the Albert Medal for gallantry ... The Chief Justice of Nova Scotia dismisses the election petition against Mr. Fielding and Sir F. Borden on a technical point ... The motor-boats engaged in the race from Algiers to Toulon are caught in a storm and nearly all lost.

May 14.—A demonstration in favour of the Raunds Army bootmakers now on strike is held in Trafalgar Square.

May 15.—In the French Chamber, M. Vaillant and M. de Pressensé ask for a day for the discussion of French neutrality in the Far East; the Premier deprecates the question being raised, the debate is adjourned *sine die* The German Mission arrives at Fez ... Sir Edwin Egerton and others are appointed British delegates to the Agricultural Congress at Rome.

May 17.—Lord Selborne arrives at Capetown . . The Atlantic Yacht Race for the Kaiser's Cup starts from Sandy Hook.

May 18.—The Annual Meeting of the National Liberal Federation opens at Newcastle-on-Tyne; Mr. Birrell is re-elected President ... Three L.C.C. workmen are overcome by foul gas in a sewer in Rotherhithe; two are rescued, one is killed.

May 19.—The Conference of the National Federation concludes ... A meeting is held in London in support of the building and endowment scheme of the Bedford College for Women ... Prince George declares that there is but one solution for the troubles in Crete—*i.e.*, union with Greece ... Judgment is delivered in the Court of Appeal in favour of the Yorkshire Miners' Association in the Denaby strike case, with costs.

May 20.—Lord Selborne arrives at Bloemfontein. He is sworn in as Governor of the Orange River Colony .. The battleship *Africa* is launched successfully at Chatham Dockyard.

May 22.—Mr. Choate, the United States Ambassador, unveils in St. Saviour's Cathedral, Southwark, the memorial window to John Harvard, of which he is the donor .. The Hague Tribunal gives its decision in the dispute between Japan and Great Britain, France, and Germany, with regard to the house tax levied in Japan on the foreign concessions. The decision is in favour of the European Governments ... The effort to end the Chicago strike fails.

May 23.—The authorised translation of the Afghanistan treaty with Great Britain is published .. The Woman's Liberal Federation Conference opens in London . The General Assembly of the three Scottish Churches opens in Edinburgh ... The assassin of the Grand Duke Sergius is executed at Moscow ... By a majority of 13 the East Ham Borough Council rescinds its resolution of April 18th .. Disclosures take place before the New South Wales Commission of secret payments of money in land sales ... Lord Selborne reaches Pretoria . The King receives Mr. Choate, who presents his letters of recall.

May 24.—The Mayor of Brest sends invitations to London business men and trade unionists to visit Brest during the British squadron's visit to the French coast ... Empire Day is celebrated in some parts of the kingdom ... Prince Nakashidze, Governor of Baku, is assassinated there by means of a bomb .. The Chief of Police of Siedlic, near Warsaw, is severely injured by a bomb ... An extensive agrarian movement is reported from the province of Minck; the peasants divide the lands of the nobles, and plough them ... The Japanese accept the decision of the Hague Court with reference to the house tax . The New Zealand Treasurer announces a surplus of £761,000 for the past financial year ... A banquet is given to Lord Selborne in Pretoria.

May 25.—The Ohio Republican State Convention is held. Mr. Taft is chosen Chairman of the Convention . The Chicago strike continues and spreads ... Prince Arisugawa, of Japan, is received at a reception by the Franco-Japanese Society of Paris ... Admiral Biriloff leaves St. Petersburg for Vladivostok. Not a single member of the Imperial family is present ... The King opens the Royal Naval and Military Tournament at Islington ... A manifesto of the people of Wales is issued by the Welsh National Committee on Education ... The Zionist executive refuse the offered territory in South-East Africa for colonisation.

May 26.—The General Assembly of the Church of Scotland resolves to apply to Parliament to relax the formula required from ministers at their Ordination by the Act of 1693 .. The London County Council's Bill for carrying the tramways over Blackfriars and Westminster Bridges passes the House of Commons Committee, subject to the widening of Blackfriars Bridge .. The total of the Huth sale at Christie's amounts to £148,281.

Admiral Biriloff.

Sent to Vladivostok to succeed Rojdestvensky.

May 27.—The Queen returns to London from the Continent . In the Norwegian State Council King Oscar refuses to sanction the Consular Law. The resignation of the Norwegian Cabinet is immediately tendered. The King refuses to accept the resignation ... King Alfonso leaves Spain for Paris ... The Cretan Chamber passes a resolution again appealing to the Powers to assent to their union with Greece.

May 28.—Philadelphia wins a great victory over corruption: it rejects the gas company's offer of £5,000,000 for the extension of its lease for fifty-three years longer ... The Atlantic Yacht Race is won by the American yacht *Atlantic*.

May 30.—The King of Spain arrives in Paris ... The Raunds Army bootmakers' strike is settled.

THE WAR.

May 6.—The Japanese are extremely displeased with France for allowing the Russian Fleet to coal and take in provisions for ten days in Kamranh Bay ... Four Russian torpedo-boats make a raid from Vladivostok and burn a Japanese sailing vessel ... The subscriptions to the fifth Japanese domestic loan amount to £49,000,000.

May 7.—The Japanese Minister in Paris visits M. Delcassé on the question of French neutrality . Instructions are received at Saigon from Paris that the Russians are requested not to make any further use of French territorial waters.

May 9.—Admiral Rojdestvensky's Fleet sails from Cochin China after receiving peremptory orders from the French Government ... Admiral Nebogatoff's squadron approaches Saigon, but is warned that the French Government request that the junction of the Russian Fleets be effected outside French territorial waters.

May 13.—News arrives that a Japanese transport and the British steamship *Sobraleuse* strike mines off Port Arthur and sink; the Europeans on board the British vessel are rescued.

May 15.—The Japanese Government prohibit the export of coal to Indo-China.

May 16.—The Russian Fleet is seen in Chinese waters slowly steaming North.

May 19.—A British steamer reports that when she left Saigon on the 13th forty transports were loading, to follow the Russian Fleet.

May 20.—The Japanese forces deploy on both flanks of the Russian army in Manchuria . The Tsar addresses a rescript to the Grand Duke Nicholaievitch appointing a council of defence for the Empire.

May 27-28.—Admiral Togo completely defeats the Russian Fleet in the Korean Straits. All the Russian battleships destroyed with the exception of two captured, and the cruiser *Almaz*, which escapes to Vladivostok. The three Russian Admirals are reported to be prisoners of war; and 2,223 naval officers and men are picked up at various points in the Sea of Japan or landed in small boats.

PARLIAMENTARY.

House of Lords.

May 8.—Reassembles after the Easter holiday.

May 9.—The Baltic Fleet; statement by Lord Lansdowne. The Australian Natives; speech by the Archbishop of Canterbury.

May 10.—Polling arrangements—The Bill making arrangement is read a second time ... Rural Dwellings Bill, second reading.

May 22.—British Shipping; speech by Lord Lansdowne.

May 23.—Third reading Public Meetings (Facilities) Bill. Second reading Christmas Day (Ireland) Closing Bill.

May 25.—Extradition Bill, with the addition of bribery to crimes, is read a second time.

May 26.—Deck timber loads, their danger; statement by the Duke of Marlborough.

THE ROYAL WEDDING AT WINDSOR.

Princess Margaret of Connaught, now Crown Princess of Sweden.

No. 187. Vol. XXXII.] [July, 1905.

THE

REVIEW OF REVIEWS

THE PROGRESS OF THE WORLD.

LONDON, July 1st, 1905.

Have We Crossed the Watershed?

The nineteenth century was the century of national consolidation and Imperial expansion. Is the twentieth century going to be the century of the disintegration of States and the contraction of Empires? It almost looks as if we had crossed the watershed which divides the centrifugal and centripetal forces that govern the affairs of States. The century opened with an apparent assertion of the old tendency in South Africa. But it now is seen to have been suicidal rather than constructive. The evidence supplied by the Butler Report is but the latest, and by no means the last, testimony as to the fatal blow which was inflicted by the Boer War. The lesson which we are tardily learning in South Africa, the Russians are ruefully contemplating in the Far East. To talk about the collapse of Russia after Mukden and Tsushima is as exaggerated as to speak of the downfall of Britain after the Butler Report, which in its way is quite as indicative of the dry rot which destroys Empires as the destruction of Rozhdestvensky's Armada. But even the most captious critic must admit that the two aggressive Empires which annexed the greatest areas of the world's surface in the nineteenth century have suffered disastrous eclipse before the twentieth century was five years old. The Boer War was our Mexican Expedition. Russia appears to be already face to face with her Sedan.

The Heir to the Throne of Sweden: Prince Gustavus Adolphus of Sweden. Married at Windsor, June 15.

The Fissiparous Tendency in Modern States.

We are at least temporarily in the domain of the Centrifugal. The fissiparous tendency of modern States, suppressed so severely during last century,

is asserting itself in many quarters both within and without our own Empire. The nineteenth century opened with the Union of Ireland with Great Britain, one of the articles of which solemn international compact was the right of Ireland to a certain proportionate share in the members of the House of Commons. Mr. Balfour has just announced that he is determined to introduce Resolutions into the House of Commons, the avowed object of which is to deprive Ireland of some 30 per cent. of the representation to which she is entitled by the Act of Union. This is a direct and deadly blow struck at the Union, and it is the more rather than the less direct and deadly because the weapon is grasped by a Unionist Ministry instead of by the Nationalist Party. In Wales we see the whole Principality, led by its elected authorities, in revolt against the Education Act. In South Africa the Boers meet in Council on July 5th to decide whether, in face of the determination of the Government to arm the garrison of soldiers and constabulary with votes as well as with rifles, the Africanders had not better stand aloof altogether from the miserable gimcrack abortion of the new Constitution which is the latest monument of the destructive ingenuity of Lord Milner and the Colonial Office. The patience of the Boers in face of the cynical violation of our promises to pay in money for the goods we commandeered, and in institutions which we pledged ourselves to establish, has been very great. They are long-suffering, but their patience is not everlasting. And unless there is a prompt reversal of all this policy of fraud and chicanery, the fissiparous tendency may become as supreme in South Africa as it is in Ireland.

In Disintegration.

The most conspicuous outstanding event in the evolution of European States since the century began has been the severance of the Union between Norway and Sweden. The forces which deprived King Oscar of his Norwegian kingdom were in operation last century, but they were in abeyance. But the twentieth century was not five years old before it destroyed the Union which was one of the most successful achievements of the nineteenth century in the making of States. The cause precipitating the dissolution of the Union was of the slightest; but it sufficed to sever the tie between Sweden and Norway. It is, perhaps, an event of good augury that the inevitable has been accepted with philosophical resignation by the predominant partner. The King, in assenting to the loss of half his realm, declared in words which should be written up before the eyes of Unionists everywhere, "A union to which both parties do not give their free and willing consent would be of no real advantage to either." In the message of the Swedish Government to the Riksdag, the King and his advisers, after insisting that the due formalities must be observed before the dissolution is complete, continue:

Photograph by Gosta Florman.] [Stockholm.

The King of Sweden (late of Norway).

> But Sweden is averse from coercing Norway into its maintenance, which could only be done by force of arms and by a fratricidal war. Besides, in those conditions the Union, established in the interests of peace and mutual support, would lose its very *raison d'être*. Sweden would, therefore, rather consent [illegible]s dissolution than have to force Norway to remain in the U[illegible]gainst her will.

We are here in the kingdom of the Centrifugal, and no mistake.

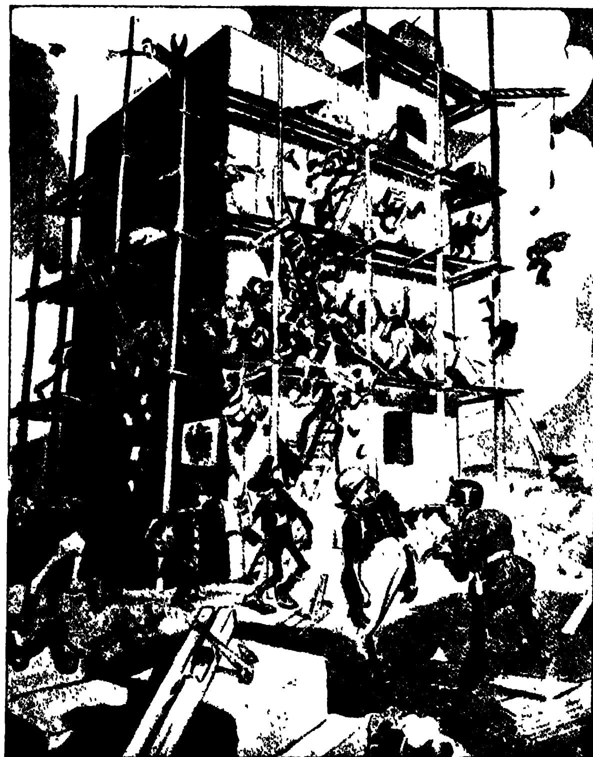
The Contagion of Example.

Norway has got her decree *nisi*, and in a few months or weeks it will be made absolute. There is no danger of an international Queen's Proctor intervening. The example of a dissolution of the union between two independent kingdoms being effected without more ado than attends the dissolution of a marriage in the Divorce Court is likely to prove catching. Already it has

operated directly and with perceptible effect upon the Magyars. The situation in Hungary is more inflamed than ever. The Emperor-King's attempt to create a new Ministry under Baron Fejervary, who does not even pretend to have a majority in the Chamber, has not been very successful. When the Hungarian Parliament met on Wednesday, June 21st, it was confronted by a Royal message proroguing its sittings till September 15th. In defiance of all precedent it refused to allow the King's message to be read until it had carried, by a majority of two-thirds, a resolution moved by M. Kossuth, expressing its distrust of the Fejervary Cabinet, "because it was incompatible with the Parliamentary form of government." The Royal rescript of prorogation was then read, and the Chamber ceased to have any legal right to despatch business. But although Count Tisza and the Liberals left the House, the majority, amid cries of "Long live Norway!" carried a resolution, moved by M. Banffy, the ex-Premier, "declaring the prorogation of Parliament before the granting of supply to be illegal and unconstitutional forbidding the payment of the Hungarian quota of contribution to Austro-Hungarian common expenditure, summoning counties and communes to collect no taxes nor enrol recruits, and denouncing as illegal and unconstitutional any eventual calling out of reservists for military service." Passive resistance, in short, on a much more extended scale than has been dreamed of in England and Wales.

The Future of Russia.

It is probable that we shall see the most remarkable illustration of this fissiparous tendency in the vast amorphous frame of the Russian Empire. The centripetal tendency of the last century has worked out its own destruction. As in the British Empire the destruction of responsible government in the Transvaal and the Orange Free State indicated the high water mark of Imperialistic aggression, so the Bobrikoff policy in Finland denoted the culminating point of failure in the centralising *régime*. Whatever happens in Russia—and the unexpected is tolerably sure to arrive in that country as in others—one thing seems certain. The old policy of excessive centralisation has gone by the board. Finland will regain her liberties. Poland has already received concessions as to language and religion which two years ago seemed to be beyond the pale of practical politics. Georgia is on the point of declaring its own autonomy. The Caucasus is in fierce unrest. Siberia is tolerably certain to claim at least as much Home Rule as any other outlying portion of the Empire. What we may hope to see is the gradual conversion of the huge, unwieldy bulk of the Russian Empire into a congeries of autonomous States, each self-governed according to its own ideas in all local matters, but all subject, like the various States and Presidencies of India, to the supreme authority of the autocracy in all matters involving war and peace. Imperialism in Russia, like Imperialism in Greater Britain, can only survive if conditioned by Home Rule.



Jugend.] [No. 24.

The Russian Ship of State.

Wanted, a Lloyds for States.

The disastrous consequences which have followed so rapidly in the wake of the Russian defeats, in the destruction of the European equilibrium and the consequent domination of the German Empire, compel the reflection whether the time is not near at hand when, in their own interest, the civilised nations will have to insure each other against the risk of war. We want an international Lloyds for States. Even if Japan is not staggered by the mischief resulting from the disappearance of Russia as an international force, Japan's

ally is in a very sore quandary as to what the result will be in the West of Europe. The old doctrine of the balance of power was a fetich before which millions of lives were sacrificed. But the principle at the back of it was sound. Prince Lobanoff advised the young Tsar when he came to the throne that an alliance with France was essential to re-establish the equilibrium of Europe. There was nothing in it of menace to Germany. It only terminated the eclipse of the Continent that had followed the effacement of France. The soundness of this counsel is amply

Kladderadatsch.] [Berlin, May 28

The Tower of Babel: More Languages in Austria-Hungary.

The Hungarians have already insisted
Army. Now the Croatians insist on the beginning to
languages.

attested to-day. For no sooner is the Russian partner in the alliance crippled than Europe passes once more under the German eclipse. Hence we find even vehement Russophobes suggesting the necessity for an arrangement, an *entente* with Russia, if only to bring back that counterweight on the eastern frontiers of Germany which is essential to the balance of power.

Germany's Turn Next.

If we are right in believing that we have crossed the watershed, and are now in the realm of the Centrifugal, and if the note of the new century is to be the blighting rather than the expansion of Empires, it is probable that Germany's turn will come next. At present, no doubt, the star of Germany is in the ascendant. But so was the star of England after the recapture of Khartoum. So was the star of Russia after the occupation of Port Arthur. The German Colossus has feet of clay like all the others. The German Emperor to-day walks upon a tight-rope, high over the outstretched heads of a wondering world. But the wire is fine, and without his balancing-pole he would break his neck. He has two great risks which he must face continually. The death of the Austrian Emperor, or the outbreak of war between Austria and Hungary, would compel the Kaiser to rapid decisions in a region where a wrong step might be fatal. For the last forty years the centripetal forces directed by the Hohenzollerns have been supreme in Germany. But the centrifugal forces are there all the time, just as they were in Scandinavia, and the merest accident may enable them to assert their power. The other danger is in the steady growth of Social Democracy, which has been one great constant feature in the history of the modern German Empire. Of the German Empire it is written, as of all other Empires, "Thy feet shall slide in due season." Britain and Russia have slid. Will it be Germany's turn next?

An Object-lesson from the Black Sea.

No more vividly sensational object-lesson in modern politics has been afforded the world for many years than that which startled Europe at the close of last month in the mutiny of the crew of the great Russian battleship, *Prince Potemkin*, in the Black Sea. It was already known that the crews of the Russian Black Sea Fleet were in a dangerous state of disaffection. Some months ago there was an outbreak at Sebastopol, which was quelled with some difficulty. Last week the smouldering fire burst out into fierce flame. The crew of the *Prince Potemkin*, the best, largest and latest battleship of the Black Sea Fleet, made a formal complaint by memorial and deputation of the quality of their rations. The spokesman of the memorialists was promptly shot as a mutineer by the officer to whom the petition was presented. There was vigour promptly and unhesitatingly exercised to crush discontent. The result, however, did not justify

the expectation of the highflying advocates of coercion. A minority of the crew, instead of being intimidated by the killing of their spokesman, rose, suddenly overawed the rest of their comrades, butchered all their officers but three, and flung their bodies into the sea. They appear to have secured the support of the crew of a destroyer, either by persuasion or by menace, and the two vessels, flying the red flag, entered the harbour of Odessa. The body of the seaman slain by his officer was landed on the quay, where it lay in grim state, demanding the homage of the forces of discontent while it awaited burial with military honours.

The Officerless Battleship.

It is impossible to conceive a scene more calculated to stimulate the lurid genius of Carlyle. There in the harbour, sullen and grim, lay the great battleship without an officer in command. The red flag of the social revolution was flying at her masthead, her great guns and her quick-firers were trained upon the town, while round and round the floating fortress steamed, restlessly vigilant, her attendant destroyer, red-flagged and mutinous like herself. On the quay lay the dead man, summoning, with the eloquent silence of martyrdom, the proletariat to avenge his wrongs. In the city the garrison was small, being chiefly composed of reservists. The mob, cosmopolitan and predatory, seized the significance of the moment. Out from the slum and the tenement house swarmed the forces of disorder. Pillage became the order of the day. One after another the great warehouses which line the quays of the third city in Russia were fired. Odessa was enveloped in a pall of smoke, beneath which rioters and soldiery fired and fell in dim and tragic confusion. Barricades were raised; bombs were used. Martial law was proclaimed. Hundreds of desperate men were shot down in the streets. And through it all, his white face silently upturned to the smoky firmament, lay the impeaching corpse, guarded by bluejackets sullenly determined that, come what might, their martyred mate should be buried with military honours. What a spectacle! What wonder if even optimists began to believe that the end was at hand!

The Badger's Hole.

Odessa harbour was full of British shipping. The city had its full complement of British subjects. The blazing warehouses were partly filled with British goods. But in the presence of that battleship in mutiny what could be done? When the Spanish insurgents at Cartagena, nearly thirty years ago, seized the ironclads of Spain and sailed the high seas under the red flag, they were hunted down and shepherded home by the British fleet. But in the Black Sea what can be done? Entrance to that enclosed water is forbidden by International law to the battleships of the world. On the waters of the Euxine only the Russian and Turkish flags can float. The Turkish flag no longer represents an effective naval force. The Euxine is as a badger's hole, from which no one is allowed to draw the badger. The spectacle of the Russian Black Sea Fleet under the red flag of the Revolution is one well calculated to appal the world. All the nations have subjects, ships, and property on these waters. But they were powerless to interfere. It was no use threatening the Russian Government. Ukases are powerless against battleships. The mutineers had only to stick together and they could have dominated the Black Sea. Wherever they went, revolts would have broken out. A revolutionary centre might at last be found, for the first time in history, not on land, but on sea. The situation had tragical possibilities which Jules Verne never dreamed of. Suppose that on board the *Prince Potemkin* there had been a dreamer of genius who hurled the great battleship like a shell into the heart of Constantinople! As it was, the result of the two days' anarchy and arson in Odessa was that flour rose one shilling a sack in Liverpool market—so intimate is the connection between the daily bread of the British citizen and the maintenance of the authority of the Government in Russia. That immediate rise in the price of flour is prophetic of far vaster financial ruin that would overtake us if by any terrible mischance the Government of the Tsar should be destroyed in Russia.

What a Tsarless Empire would mean.

What the *Prince Potemkin* has been in the harbour of Odessa, that Russia will be in the European family if the revolution so eagerly desired by our short-sighted fanatics were to triumph in Russia. We should see an empire under the red flag. A Tsarless empire would be a monstrous analogue of the officerless battleship. The blazing warehouses, the blood-red streets of Odessa, would but faintly foreshadow the appalling destruction of life and property that would ensue. So terrible would be the consequences, that it is not difficult to conceive of a European intervention to re-establish the autocracy to avert catastrophes which would appal civilisation. The mutineers of the red flag would begin by repudiating the Russian debt, and would, as likely as not, proceed to promiscuous mas-

sacre, first of the Jew and then of the foreigner. Even if we acquiesce in the slaughter, just think what a financial catastrophe would shake every Bourse in Europe as with an earthquake if the payment of Russian bonds were suddenly to be suspended? France, of course, would be worst hit; but when one nation reels and staggers in the close-pressed ranks, all the others feel the impact of the blow. If ever that day arrives, the ruined victims of hundreds of broken banks will have bitter cause to curse the day when England concluded the treaty which let loose the Japanese upon the Russian Empire.

Hoist with Their Own Petard.

It is a far cry from the bloody scenes of Eastern Europe and far Eastern Asia to the Scottish Church, but there is this link between the two. The Anglo-Japanese treaty which was to maintain peace precipitated war, and that war has affected already most disastrously the political and material interests of Great Britain. In like manner the Wee Kirkers attacked the United Free Church in the interest of the straitest orthodoxy of the Westminster Confession, and what do we find to-day? The immediate and direct outcome of their vigorous and successful onslaught upon the heretics of the United Free Church has been to precipitate a legislative proposal to relax, in the case of the Established Church, the securities for orthodox Calvinism. Mr. Balfour has tacked on to the Bill relieving the Wee Kirk from the obligation of administering a gigantic trust, which was far beyond its capacity, a section which opens wide the pulpits of the Established Church to all the pestilent Higher Critics and Arminian anti-Calvinists which it was the great object of the Wee Kirkers to banish from Scotland. The Bill proposes to empower the Church of Scotland to substitute for the existing formularies of subscription such formularies as might be prescribed by the General Assembly. As that General Assembly has unanimously resolved that its creed needs relaxing and expanding, that the Confession of Faith is no longer acceptable, and that, in short, the Scotch Church must no longer be bound by the bonds of the Westminster Confession, we can only say—Alas, for the poor Wee Kirkers!

The Peace Negotiations.

When the Japanese wiped out the Russian fleet in the Far Eastern Trafalgar most people imagined that peace would ensue. But the Russians, who saw in the disaster merely a failure to regain sea-power which they had lost long ago, did not see things in this light. General Linievitch and his officers insisted that the loss of the fleet had not altered their position for the worse, and they protested against any talk of peace while the army, still practically intact, was longing for an opportunity to try conclusions once again with the victors of Mukden. No Russian Government could possibly set at defiance the wishes of its army in such a matter. President Roosevelt, however, believed that it would be well to get the belligerents to talk of peace, even if they were not prepared to make it. He opened negotiations which have so far led to this result that by the middle of August the plenipotentiaries of Russia and Japan are to meet in Washington to see if they cannot agree to stop the war. Of this at present there is not the remotest chance. The Japanese are said to insist on an indemnity, but as they have nothing to give in exchange, they will have to beat General Linievitch and take Vladivostok before Russia will consider any such proposition. The allies of the combatants are very anxious to get the war stopped at any cost, seeing that as long as Russia is fast by the leg in Manchuria, Germany is cock of the walk in Europe. But Russia and Japan naturally consider their own interests first of all, and there is as yet no indication that either of them is at her last gasp, or that Japan is willing to reduce her demands so as to make their acceptance less onerous than a continuance of the war.

The State of Russia.

The internal condition of Poland and the Black Sea littoral is deplorable enough to make their ruler despair. But the rest of Russia is tranquil. General Trepoff answers for order in St. Petersburg, and slowly out of the apparent chaos liberty and progress are emerging. Liberty of religious faith has already been guaranteed. Finland is to have its Constitution restored. In Poland, as has been said, concessions have been made to the national language and to the educational needs of the people. Liberty of the press and liberty of public meeting practically exist to an extent before undreamed of, and it must, at least, be reckoned as an element of the situation that the Tsar has not despaired. On the contrary, it would seem, from his speech to the deputation of the Zemstvoes on June 19th, that it was his firm and unalterable intention to summon a national representative assembly by which there will be re-established as formerly a union between the Tsar and all Russia, a communion between himself and the men of the Russian soil. "I hope from this day forth," said the Tsar, in a passage subsequently toned down by the

Censor, "that the relations between me and my people will enter upon a new phase." The horizon is dark. But if we steadfastly keep in mind that the Russians are fellow human beings, that the Tsar, although not a Peter the Great, is a man full of sympathy with modern ideas, and that it is the interest of most journalists habitually to make the worst of everything that happens in Russia, we need not jump to the conclusion that the Russian Empire has gone up the spout.

Admiral Togo's Victory.

From the mass of details to hand as to the battle of the Sea of Japan, two salient facts stand out which have impressed the imagination of the world. The first is Togo's signal, modelled on Nelson's at Trafalgar. "The destiny of our country depends upon this battle. You are all expected to do your utmost." The second is the fact that, although the fighting was spread over two days, Admiral Togo reports that the battle was decided in exactly thirty-seven minutes after the first shot was fired. The battle appears to have been decided by the superior gunfire of the Japanese, who are accustomed to hit their mark even when the sea is rolling mountains high. Four of the Russian ships which went down carried 2,498 out of their complement of 2,500 to death. It was not until night when the sea abated that the torpedo boats could be used. Then they were launched in sixteen flotillas of a hundred boats against the crippled fleet. The great guns had pounded the Russians at a distance of four and five miles. The torpedo boats delivered their deadly blows at a distance of three hundred yards. The men on board Nebogatoff's squadron are said to have mutinied; but the majority fought with heroic and unavailing gallantry. Poor fellows! many of them never had seen the sea until they were dragged from the ploughtail to serve on board the battleships. Commanded by officers many of whom were mere schoolboys, they went to their death in dogged silence. 6,140 officers and men were made prisoners; about 9,000 were killed or drowned. The Japanese only lost 113 officers and men killed and 424 wounded. Nelson won Trafalgar with a loss of 402 killed and 1,139 seriously wounded.

The Spoils of Victory.

Of the thirty-six Russian fighting ships which went into action on the fatal 27th of May, twenty-two were sent to the bottom. Seven—including four battleships, two special service ships, and one destroyer—were captured by the Japanese, and will be immediately put in commission. Three protected cruisers escaped to Manila, where they have been interned by the American Government, and one crippled destroyer has been interned at Wusung. Admiral Rozhdestvensky was captured with a fractured skull, from which he is recovering. Admiral Nebogatoff was also made a prisoner. A third admiral was said to have been killed by one of the first shots fired by the Japanese. One small protected cruiser and two destroyers got through to Vladivostok. Russia has now only two battleships left in the Baltic, and two old cruisers. The Black Sea Fleet no longer counts. Russia has lost since the war began eighteen battleships and five armoured cruisers, although some of these are interned, and may be restored when the war is over. In Vladivostok she has three or four cruisers, but no battleship. The sceptre of the Pacific has passed, for the time at least, into the hands of Japan.

The Kitchener-Curzon Crisis in India.

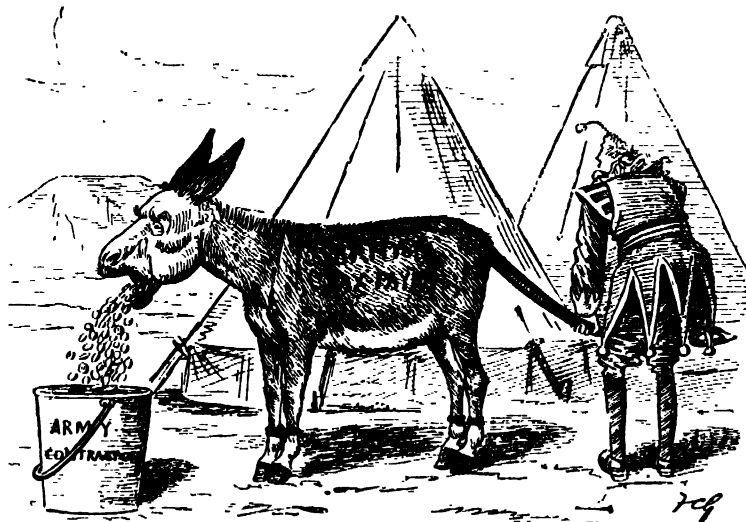
One of the minor sensations of the month has been the crisis in India which arose out of the determination of Lord Kitchener to be Commander-in-Chief in fact as well as in name. It is useless attempting to describe the precise merits of the controversy between Lord Kitchener and General Elles, the military member of the Viceroy's Council, who stood up for the *status quo.* Suffice it to say that Lord Curzon backed General Elles, and in so doing had the support of Indian opinion, notwithstanding the threatened resignation of Lord Kitchener. Mr. Brodrick, however, decided that it would never do to lose Kitchener, and supported his views in a despatch, the publication of which was promptly followed by the resignation of General Elles, and for a few days the air was thick with rumours as to the impending resignation of Lord Curzon. It would be a good thing if Lord Curzon left India. The man responsible for the Thibetan crime, and who tried to involve us in a war with Afghanistan, ought to be cashiered. But failing that drastic measure, his resignation would be very acceptable.

Where is Lord Milner?

By the way, where is Lord Milner? He might have gone into the next world, so utterly has he disappeared from the public gaze. He came home by the East Coast, and was reported to be resting somewhere on the Continent. In South Africa, at the banquet given to Lord Selborne, there has been a strange and significant silence concerning his predecessor. For a pro-Consul who involved us in the greatest and most disastrous war that we have

waged since Waterloo was fought, this sudden oblivion that has overtaken Lord Milner is very remarkable. How merciful is oblivion!

Mr. Chamberlain's Collapse.



If there is one man more than another whom the Tory Tadpoles and Tapers hate with a whole heart fervently it is Mr. Chamberlain. At one time he was the god of their idolatry. Now there is none so poor to do him reverence. It is this "alien immigrant," as Lord Hugh Cecil called him, who has wrecked their party even more disastrously than he wrecked the party to which he first belonged. He and Mr. Balfour tried to come to some agreement, and the result, as stated by Mr. Chamberlain, is as follows. Mr. Balfour's words were vague. But Mr. Chamberlain interpreted them thus when he spoke at St. Helen's on June 3rd:

> What did Mr. Balfour say? He said last night, Tariff Reform will be the most important part of Unionist policy. He said, Colonial preference will therefore be the first item in the future Unionist programme. Then he asked all of us through that great audience that the question which, as he truly says, touches the whole of the Empire should be referred to the Conference representing the whole Empire. He urged, lastly, that the Conference should be absolutely free, and he asked that all who were represented at that Conference, the Motherland as as well as the Colonies, should be free afterwards to consider and to deal with the results, whatever they may be. Here is the official programme to which I most heartily subscribe.

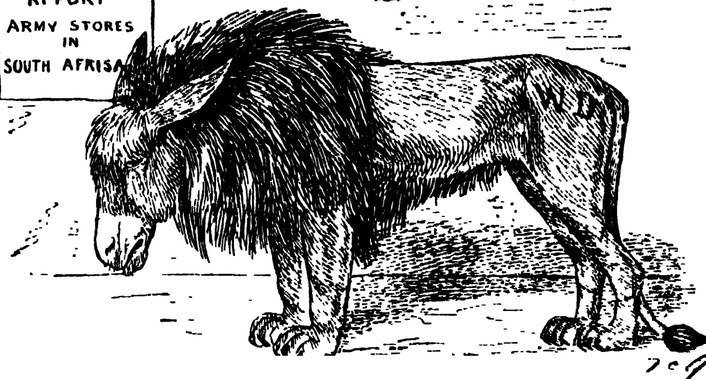
But the Conference that meets next year does not represent the whole of the Empire, but only the self-governing Colonies. Mr. Maxse, in the *National Review*, is dissatisfied and insists that Mr. Balfour must "announce in clear and categorical language, such as leaves no scope for misinterpretation, that the Unionist Party is pledged to Fiscal Reform on these lines: (1) A readjustment of food duties with a view to Imperial Preference; (2) a general tariff on imported foreign manufactured goods." Mr. Balfour, in view of the by-elections, is not likely to be so foolish as to make any such declaration.

The Butler Report.

There has been considerable commotion excited last month by the publication of Sir W. Butler's Report on the clever contrivance by which, after the war was over, millions of pounds' worth of stores were sold by the Government to contractors at a low price and immediately bought back by the Government from the same contractors at a very high price. Hay, for instance, was sold at 11s. per 100lb. and bought back at 17s. 11d. As there was no need to have sold it at all—otherwise it would not have been bought back again—this transaction represents an ingenious contrivance to put 6s. 11d. for every 100lb. of hay sold into somebody's pocket at the expense of the British taxpayer. Mr. Bowles very wittily described the methods exposed by the Butler Report as equivalent to buying a penny bun for twopence and never selling it again for less than a farthing. The hopeless state of confusion into which Ministers had allowed everything to slide in South Africa is shown by the fact that they are quite unable to say definitely whether we lost £500,000 or £4,000,000, or whether, as Mr. Balfour seemed to make out, we had actually made a million on the transaction. Jingo finance is a mere affair of blind man's buff. The War Office at first objected to selling the stores by contract, then gave way. It first demanded monthly returns of sales, and then allowed month after month to pass without any returns being made. Meanwhile, contractors got rich, hand over fist. Ministers obstinately turned a deaf ear to the warnings of the Liberal leader, and instead of exposing, did all they could do to hush up the scandal. Fortunately the Auditor-General, an official independent of the executive, brought the matter before the Public

Westminster Gazette.]

Working the Machine.



Sir William Butler's Committee, in their Report on the War Scandals in South Africa, say that some 60,000 animals became the machines by which a certain Army contractor made large profits.

N.B—The handle of the pump is being worked by a "Pantaloon in Putties."

Accounts Committee. By this means General Butler's report came to be published. Otherwise everything would have been hushed up "in the best interests of the Army."

One Half has not been told.

The only surprising thing about the Butler Report is that any one at this time of day can affect to be surprised at such revelations. The "clever contrivances" exposed by Sir W. Butler did at least pay the homage of hypocrisy to honesty. The corruption that was almost universal—nay, that is now almost universal—in South Africa seldom took the trouble to disguise itself. When will the British public open its eyes to the most obvious of facts? There surely ought to be a limit to the ostrich-like policy of putting John Bull's honest thick head into a bush and pretending there is no danger near. The fact of the matter—notorious enough to everyone in South Africa—is that business was generally done during the war on principles of corruption. Many British officers were up to the chin in the filthy puddle. When you see a British officer losing £100 at poker night after night, you need not ask if that comes out of his pay, especially when you have had to pay heavy blackmail in order to secure a Government order. The honest British officers—of whom there are many—shrink from denouncing their corrupt comrades, with whom they sit at mess. It is just as in the Dreyfus case, the honour of the Army forbids exposure. And so the canker eats deep. When I came home in the *Saxon* last year I travelled with the head man in one of the large stores in Cape Town. He was a thorough-going advocate of the war, and our conversation began by his upbraiding me for being a pro Boer. But after a time he remarked that there was one thing wrong, and if we did not do something at home to stop the rottenness which corrupted the Army and the public service we should soon lose our Empire. I said that everyone told me the same story about corruption, but what I wanted were definite facts. Could he give me specific instances of corruption of which he could speak first hand? "Certainly," he replied; and then he began to speak.

[*Westminster Gazette.*

The Head and Front of His Offending. Latest portrait of the British Lion in his War Department Capacity.

"Write down an as you like; I don't mind—in fact, I should rather take it as a kindness.

"If you don't do as the others do you'll get no orders."

This, in brief, is the story he told me. He gave full particulars as to date, place, person and figures. Nor do I think he would have the least objection to repeat his statement on oath before the Commission: "In Cape Town, after the war had been running for some months, it was absolutely impossible to get a Government order for the supply of military stores except by acquiescing in what was neither more nor less than a robbery of the taxpayer. We stood out as long as we could, but ultimately we had to give in. Otherwise we might as well have shut up shop. There was no concealment about it. Everything was done in the most barefaced manner. Our first experience was in the matter of supplying canvas mangers for the horses in the field. We had the first order for" (I think, but I do not remember the exact figures which he repeated to me) "15s. a manger. When we tendered a second time we quoted the same price. We received an intimation that our tender would be accepted if we raised our quotation to 20s. 'You will get your cheques all right,' we were told, 'and you can account for the 5s. afterwards.' We protested, and refused. We did not get the order. Worse still; for a whole month we did not get a single order of any kind. At the end of the month I went up to the Castle and asked the clerk who looked after the tenders why we had no orders for a whole month. 'Come, come, Mr. ——,' said the clerk, 'you surely need not ask that. You know as well as I do why you are not getting any orders.' 'I really

don't,' I replied. 'Were our goods not satisfactory?' 'Oh, that's not it,' said the clerk; 'you know that well enough.' 'But why?' I persisted. 'Well, if you must be told,' said the clerk, 'if you will be so stuck up and won't do as the others do, you won't fare as the others fare, that's all.' Then I replied, 'Do you mean to tell me that that is the only way in which business can be done here?' 'It is the only way,' replied the clerk, 'and if you don't like it you will get no orders.' I capitulated then."

How the Trick was Worked.

My fellow traveller then went on to describe in detail two other transactions in which the same *modus operandi* was used. "The British Army," he said, "used enormous quantities of black pepper. Tenders were asked for two tons at a time. We tendered, quoting a price which left us a fair profit. We received an intimation that our tender was all right, but the price must be raised about 33 per cent. We protested, shrugged our shoulders, and did as we were told, and got the contract, accounting for the excess afterwards in the usual way. The same thing happened with jam. It was all wrong no doubt. But no business could be done with the Castle excepting on these terms." I asked if it would not be possible to expose and punish those guilty of these frauds. He shrugged his shoulders. "Most of the firms who went into the business were created for the occasion. They have now disappeared. Books and entries are all destroyed. You can do nothing as to the past. But after the war was over the same kind of thing went on. There were mountains of stores piled up outside Cape Town. They were literally given away to firms that had a 'pull' without giving us a chance of tendering for them. The nominal price was not enough to cover the cost of the boxes in which the goods were packed. The stores were all right, for they were sold retail by our rivals at prices with which we could not compete." When I was in the Free State I found the same kind of roguery going on, only there the excess charged, which went into the officers' pockets, was 50 per cent.

How Mr. Balfour Treated the Scandal.

The scandalous roguery which turned South Africa into an Imperial Thieves' Kitchen was less scandalous than the way in which Mr. Balfour treated the grave revelations of General Butler's Report. He acted exactly as the French General Staff acted in the case of Dreyfus. General Butler was treated almost to the same abuse as Colonel Picquart. For months the Government suppressed the facts, allowing the *Daily News* and the *Times* to be severely mulcted in damages and costs because they had ventured to call attention to some of the facts, which the Butler Report more than confirmed. When at last the Report was extorted from Mr. Arnold-Forster he issued it with a prefatory minatory warning that the matter was still *sub judice*. This, however, did not prevent the press of all parties from exploding with indignation. When Parliament reassembled Mr. Balfour met the House of Commons by a series of shuffles and shirks which disgusted most of his own party. He was driven from pillar to post by the pressure of the Opposition, and after indignantly refusing to appoint a statutory commission, with power to call witnesses and take evidence on oath, he finally climbed down and grudgingly conceded at last what he ought spontaneously to have offered at first. The Chairman of the Commission is to be Mr. Justice Farwell, but its effective force will probably be found in Sir Taubman Goldie, Lord Esher's most effective second on the Elgin Commission, and Sir Francis Mowatt, the ancient bulldog of the Treasury. Sir Robert Reid moved a vote of censure on the Government, which, after one day's more or less perfunctory debate, was rejected by a majority of 74. There is nothing the present majority is not ready to vote to avert the dissolution in which it will disappear. They would vote, if need be, that Charles I. cut off Oliver Cromwell's head, if the affirmation of the historical fact were to entail the loss of their seats.

The Doomed Ministry.

The bye-elections continue to register with unvarying regularity the condemnation which the nation has pronounced upon an administration that bears upon its shoulders the damning burden of the South African War. It is a foregone conclusion that the constituencies will reject every Unionist candidate who did not at last election poll a majority 40 per cent. in excess of the Liberal poll. The only interest is to be found in the rise of the Liberal poll above that figure. Since Mr. Balfour shamelessly set to work to defy the verdict of the country, the increase in the Liberal poll has been more than 40 per cent. Up to and including Brighton election the average rise of the Liberal poll was 30 per cent. at all bye-elections since the war, and the average drop of the Tory poll was 7 per cent. Since Brighton there has been a progressive improvement. Whitby, Chichester, and East Finsbury all show that the Liberal increase and the Tory decrease have been much heavier than the general average of the past three years. The poll in

East Finsbury was very interesting, inasmuch as it showed that London will return a majority of Liberal members next election. If the Liberal majority had been only 300, it would have shown that London was only improving at the same rate as the rest of the country. But as the majority is 768, it confirms the lesson of Mile-End, Woolwich, Dulwich, and Lewisham, which show results in the shape of an improvement of the Liberal position about twice as good as those registered in the rest of the country.

The Fall of M. Delcassé.

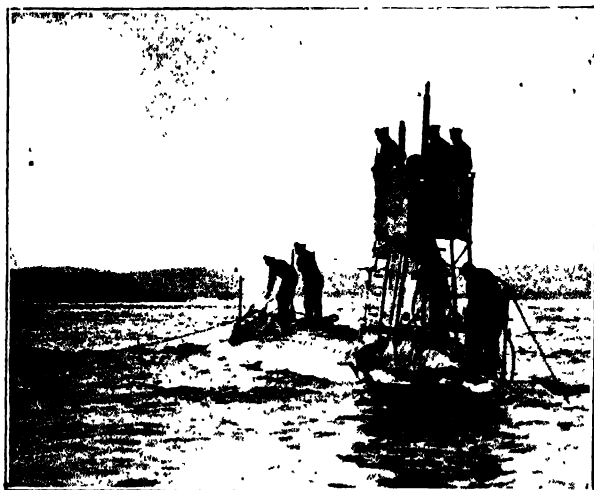
M. Delcassé, who was the Foreign Minister of the Franco-Russian alliance rather than the Foreign Minister of France, has fallen. His resignation was one of the by-products of the Japanese victories. As for the moment there is no longer a Russia in being, M. Delcassé was clearly out of place at the Foreign Office, so he has gone and M. Rouvier has taken his place. A prodigious pother has been raised over this very simple transaction. Dr. Dillon and others see in M. Delcassé's disappearance the reduction of France to the position of a vassal state to the German Empire. The fact is, that a majority of the French people are heartily glad to be rid of M. Delcassé, whose hankerings after the pacific penetration of Morocco found no echo among the French peasants. Lord Rosebery objected almost as *Athanasius contra mundum* to the Anglo-French Agreement, which lured France on to a policy of adventure in Morocco just as the Anglo-Japanese treaty tempted Japan to make war on Russia. In the case of Morocco we merely said that we would not stand in France's way if she cared to do anything in Morocco. In the case of Japan we pledged ourselves to stand in anybody's way who came to the help of Russia. In both cases our precious agreements put the fat in the fire. I don't believe for a moment that Germany contemplated war with France over Morocco. But the situation created by M. Delcassé's failure officially to communicate the Anglo-French Agreement to the German Empire, left the door open through which the Kaiser was prompt to step as soon as he saw France's ally was flat on her back.

More Entangling Alliances.

The net outcome of the episode, which seems now in a fair way to be settled by M. Rouvier's sacrifice of M. Delcassé and the acceptance of the German plan, a conference on Morocco, is that our Jingoes are clamouring for a defensive alliance between England and France. This is the first step The next is to insist that we must train all our adult population to shoot. Sir Conan Doyle maintains that they could not be better employed on Sundays than by practising how to kill their fellow-men at 600 yards—in order that, as Mr. Boulger suggests, we should be able to send 500,000 men to fight on the plain of Chalons against the invading Germans. Then we are told we must renew, strengthen, and extend our treaty with Japan. The fact is that Mr. Chamberlain's propaganda in favour of preference has excited against England a wide-spread feeling of distrust which it will take more than a couple of alliances to dissipate. Nor will it mend for the better until the next General Election shows that there is no more chance of our adopting Preference than of invading the moon.

The New Speaker

The House of Commons, last month, took to itself a new Speaker. Mr. Gully's health had broken down, and he retired with a peerage and a pension of £4,000 a year. He cannot be said to have been a great Speaker. He had too much of the legal mind to suit the post, where the supreme quality is a sense of justice united with simple common sense. Mr. Gully also erred in being too facile a tool in the hands of an Administration whose chief object has often been to gag the House



Photograph by] [*Russell.*

The Right Hon. J. W. Lowther (New Speaker of the House of Commons) and his family.

rather than to assist its deliberations. His successor, Mr. J. W. Lowther, is the first Conservative Speaker the House has known for many a long year. He was a good Chairman of Committees. Possibly he may restore some of its lost liberties to the House of Commons. Blocking motions, with or without his assent, ought to be removed from the permissible tactics of avoiding debate.

Another Submarine Disaster.

We have been very unlucky of late in our submarines. On June 8th Submarine A 8 left Plymouth for exercise. She had hardly got outside the harbour when she suddenly sank. She was not submerged when the accident happened. Four of her crew who were on deck, including Lieutenant Candy, who was in command, were saved. All those who were below died. An explosion took place as the boat went down, and some of the crew were burned. It is believed they lingered in agony for nearly twenty-four hours. When the boat was raised they were all dead. It was stated in the House of Commons that each successive accident increases the number of volunteers who are anxious to risk their lives in submarines. It is to be wished that the Admiralty would give these boats decent names. A boat with no name of its own, but only a letter and a number, might be excused committing suicide.

Her last voyage: Submarine "A 8" leaving Plymouth.

The Assassination of M. Delyanni.

After completing his fourscore years, M. Delyanni, the Prime Minister of Greece, was stabbed to death at the door of the Chamber on June 13th. The assassin, a desperado who had been sentenced to eighteen years' penal servitude for the murder of his wife, declared that he had killed the Prime Minister because he had shut up the gambling-houses. M. Delyanni was the Grand Old Man of modern Greece. He entered public life fifty years ago, was Foreign Minister in 1862, and since that date has been one of the most conspicuous statesmen of Athens, whether in or out of office. He represented Greece at the Berlin Congress in 1878, and was responsible for the disastrous war with the Turks in 1897. This led to his downfall. But, like our own G.O.M., he always kept popping up again, and in 1904 he became Prime Minister, a post which he held till his death. He died a poor man, a martyr in a good cause.

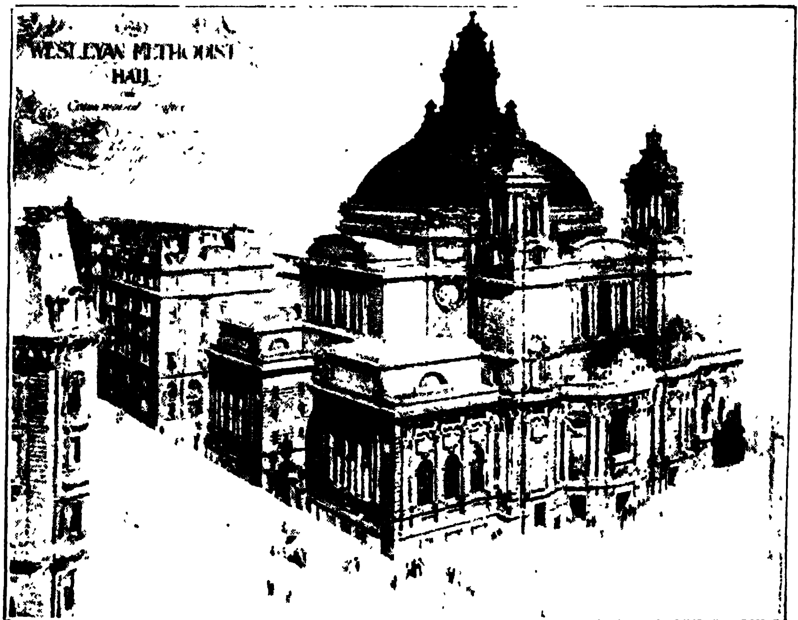
The Progress of Esperanto.

While the statesmen and rulers of the world are busying themselves with the making ready for war and with levying war, the idealists and the despised humble folk who still indulge in dreams of the reign of peace continue to labour on in obscurity. But they are like the invisible insects which rear the coral reefs. Among these toilers for the future an honoured place must be accorded to those enthusiasts who have found in Esperanto a simple and



Dr. Zamenhof.

convenient key-language for the human race. Next August a Conference of Esperantists from all lands will meet at Boulogne to welcome the inventor of Esperanto, Dr. Zamenhof, of Warsaw. It is easy to sneer at Esperanto, especially if you have never studied it, and it is natural for the insular Briton to maintain that English ought to be the language of the planet. But anyone who has ever had any experience of the difficulty of holding a really International Conference must regard with high esteem and gratitude the genius who has succeeded in framing a purely artificial, absolutely logical and consistent key-language which enables men of all languages to talk easily together in a *lingua franca*. Many attempts have been made to construct a key-language. None of them has achieved anything approaching to the success of Dr. Zamenhof, either in framing the language on the simplest lines or in securing its adoption by so many different peoples. The Conference at Boulogne, which will last a week, begins on August 5. It promises to be one of the most interesting International Conferences of the year. I hope to be there, and shall be glad to see as many of my friends as may find it possible to attend.

The Revival in Wales.

Mr. Evan Roberts has last month been holding immense open-air meetings in Anglesey. There is no abatement of the religious fervour of the Welsh, and the magnetic influence of Mr. Roberts over the multitude is as great as ever. The accompanying photograph, taken by Mr. R. Lloyd-George, the young son of the famous Welsh leader, shows Mr. Evan Roberts and the Rev. John Williams, the Chrysostom of Wales, seated. Standing between the two is Mr. Lloyd-George himself, who has been much impressed by the simplicity, the sincerity and the fervour of the Revivalist. An effective answer to those who maintain that revivals leave no lasting results behind them is afforded in London just now by the preparations that are made to erect the Wesleyan Methodist Hall on the site of the old Westminster Aquarium. The building, which will be conspicuous enough to challenge attention, will cost £140,000. Not one stone would have been laid upon another in this great Hall but for the outbreak of the revival of the eighteenth century under the preaching of Wesley and Whitefield. That revival at least has had some lasting results.

A View of the Wesleyan Church House and Assembly Hall about to be erected on the site of the old Westminster Aquarium.

The designs of Lanchester and Rickards, of 1, Vernon Place, Bloomsbury, have been accepted. The imposing dome, 170 ft. high, and the two towers each 130 ft., flanking the main entrance, form the chief features of the design. The great assembly hall on the first floor will seat 2,550. The estimated cost of the building is £140,000.

CURRENT HISTORY IN CARICATURE.

'O wad some power the giftie gie us,
To see ourselves as ithers see us."—BURNS.

THE royal marriages of the last month have afforded the courtiers of the press an opportunity of paying graceful compliments to the newly-married couples. The marriage of the popular daughter of the Duke of Connaught with King Oscar's grandson has afforded *Mr. Punch* with a theme for a cartoon by Mr. Partridge, which I reproduce here. The Royal and Imperial wedding in Berlin is handled more gingerly by the German wits. They confine themselves chiefly to making fun of the butchers, who have a traditional right to head the marriage procession, or to setting forth the difficulties which spectators had to overcome to see the show through the serried ranks of policemen. One artist happily contrasted marriage processions in ancient times with those of to-day, when every window is let for solid gold and every stand bristles with Kodaks.

The Viking's Bride.

(*After the well-known picture by Herbert Gandy.*)

[The marriage of Princess Margaret of Connaught and Prince Gustavus Adolphus of Sweden took place on June 15.]

The catastrophe which overwhelmed the Russian fleet was not too tragic to arrest the somewhat spiteful wit of the German cartoonists. *Simplicissimus* publishes a characteristic set of line-drawn caricatures of the admirals concerned. In this connection note the very clever cartoon, reproduced from *Life*, of President Roosevelt as the North American Continent.

Mr. Gould, as usual, is well to the fore. The Butler Report afforded him a pleasant variation upon the eternal fiscal question (see pages 8 and 9). This month, I think for the first time, Mr. Balfour figures as a sphinx. Disraeli was the first of *Mr. Punch's* sphinxes. Mr. Chamberlain has been a sphinx in Mr. Gould's cartoons before now; but Mr. Balfour as the sphinxy-phone is altogether novel and quite up to the level of the best. Mr. Chamberlain as "Miss Josephina" is just a trifle too haggard even for such a political corpse as the reviver of Protection.

There are two striking cartoons based upon our relations with France and with Japan. The bellicose nonsense written by many of our newspapers, which seem to regard the *entente cordiale* with France as a means of menacing Germany, is happily hit off by the *Silhouette's* representation of the infant *entente cordiale* as a bad-behaved military child with a great sword by his side. *Simplicissimus* represents Miss Britain turning the cold shoulder upon the little ally Japan in order to flirt with her new French beau. The figure of Britain as a typical English "Mees" is as novel as the old hag Albion is familiar.

Foreign caricaturists have let King Edward alone for a while. But this month's *Ulk* cannot resist the temptation of contrasting the comfortable rotundity of our Gracious King with the spindle-legged lankiness of King Leopold.

Puck's suggested design for a frieze in the new Palace of Peace at the Hague is cruel, but slightly out of date. Russia should surely not have been represented as kicking Japan, nor England kicking Germany. It is rather the other way on in both cases. There is another *Puck* this month, a new paper having been started in Tokyo under that name. It has some clever cartoons, the titles of which appear also in English.

La Silhouette.] [Paris.

MR. H. RIDER HAGGARD, J.P.

(From a photograph taken in the "Review of Reviews" office by E. H. Mills.)

Character Sketch.

COMMISSIONER H. RIDER HAGGARD.

"The Rhodes Trustees, with whom the suggestion of the inquiry originated, and by whom Mr. Lyttelton has been asked to nominate a Commissioner, have made a grant of £300, including all travelling expenses, to meet the cost of the inquiry."—*Colonial Office to Mr. H. Rider Haggard, January* 31, 1905.

"BOOM!" goes the roar of a great gun. The windows of Holly Bush rattle in the casement. I get up and go to the balcony. Far away, near the Spithead forts, there is a bright flash of flame, then off the western end of the Isle of Wight there leaps to the sky a fountain of silver spray as the projectile strikes the sea. A little later another deep roar shakes the glass in the windows as the laggard sound-wave strikes upon the ear. It is only target practice with the big naval guns. Each shot represents an expenditure of twenty pounds. Bang! There goes another twenty! Before I rise from the desk £500 has been blown into the air. Necessary expenditure, no doubt. Togo's victory showed that accuracy of aim is the dominating fact in naval battle. No one grudges the money needed to train our gunners for war against hypothetical foes. But it would seem that when it is necessary to make an inspection of the methods necessary for carrying on the war against starvation, misery, and physical degradation, the Treasury cannot spare a penny-piece. For the big gun—money galore! For the Commission to examine into and report as to whether General Booth has after fifteen years proved that he has found the way out from Darkest England—not a farthing, unless it can be obtained from the Rhodes' Trustees! That is the pass to which things have come with the intelligent governing class of this country. Let us thank heaven that their deficiencies are, to a slight extent, supplemented by the public spirit of the Rhodes' Trustees.

Three hundred pounds, it must be admitted, is "dirt cheap" for a six-thousand-mile trip by an Imperial Commissioner and his staff round the new world. So cheap, in fact, that it is obvious Mr. Rider Haggard or somebody else must have supplemented this slender dole out of their private purse. It is to be hoped that the next Parliament will change all this, and that in dealing with the condition of the people question, our new rulers will not grudge the pence necessary to ascertain the facts, while they allow millions of pounds to be frittered away in such Imperial thieves' kitchens as that which our present Government established in South Africa.

The publication of Mr. Rider Haggard's report upon the Salvation Army Colonies in the United States coincided very closely with the publication of General Butler's report as to the sales of Army stores in South Africa after the conclusion of the peace. The two documents are eloquent in themselves, and still more eloquent in contrast. The one records how, with the scantiest of resources, the Salvation Army has painfully but victoriously demonstrated the possibility of planting out surplus labour on surplus land. The other shows how the other kind of Army muddles away, by such processes as that of selling hay at 11s. per 100lb. and buying it back at 17s. 8d., millions upon millions of pounds worth of stores, with no other result than that of enriching a handful of unscrupulous rascals. If the money flung away by the corrupt and fraudulent methods of our Military Administration had been invested as a loan on good security for the purpose of colonising starving British workmen and their families upon the fertile land of Canada, not a penny would have been lost, but 100,000 persons of the hard-working classes would have received a good start in life, and a British colony would have been united by 100,000 fresh human ties to the mother country. The ways of transgressors are hard. But seldom has the Devil dealt out worse measures to his dupes than those by which he has rewarded the infamies of the South African War. This, however, by the way. Mr. Rider Haggard has thus come to divide with General Butler the distinction of being the man of the month. As I published a Character Sketch of General Butler in the REVIEW in January 1900, and republished it in "Coming Men on Coming Questions," I must this month devote the Character Sketch to Mr. Commissioner H. Rider Haggard. The Rider Haggard who figures for the present as a Commissioner, and who, it is to be hoped, will be our first Superintendent of Land Settlements, has hitherto been known as Rider Haggard of South Africa, Rider Haggard the novelist, and Rider Haggard the agricultural economist. Before considering his latest avatar I may briefly glance at each stage of his development in turn.

I.—RIDER HAGGARD THE SOUTH AFRICAN.

Mr. H. Rider Haggard is British-born, although he began his career in South Africa, and his forbears came from Scandinavia. He is a Norfolk man, the son of a Norfolk man, and of a literary mother, who brought him into the world on June 22nd, 1856, at Bradenham Hall in Norfolk. He married in 1880 a Norfolk lady and heiress who brought him Ditchingham House, his present residence. His South African career began in his teens, when in 1875 he went out as secretary to Sir Henry

Bulwer to Natal. He had but little notion in those early days that South Africa was for the next thirty years to be the cockpit of the Empire. He was in at the beginning of it. Sir Henry Bulwer soon gave place to a much more masterful spirit. In 1877 Rider Haggard was transferred to the staff of Sir Theophilus Shepstone, who, on April 12th, annexed the Transvaal. Sir Bartle Frere had arrived at Cape Town on April 4th, and Sir Theophilus acted upon direct instructions from Lord Carnarvon. The whole story, from the Shepstone point of view, was told in 1882 by Mr. Haggard in his book "Cetewayo and His White Neighbours," which, although that view is not mine, contains, it must be admitted, prophecies that have been remarkably fulfilled. He believed, and probably believes to this hour, that Cetewayo and his Zulus would have eaten up the Transvaal if we had not annexed that territory. Subsequent experience throws considerable doubt upon this theory; but it was held in all good faith when, on May 24th, 1877, Mr. Rider Haggard, on Shepstone's behalf, hoisted the Union Jack over Pretoria, thereby formally inaugurating the prologue of the long and bloody tragedy which has drenched South Africa with blood. When only twenty-two he was appointed Master of the High Court in the Transvaal. Lord Milner's Kindergarten never contained quite so young a member as the Master Rider Haggard. In that capacity he used to go on circuit, travelling in ox-wagons over the veld for hundreds of miles. He had to cut down costs, to inaugurate a new system of practice, to fight and control a singularly motley collection of lawyers "with a past," and generally to assist in the administration of justice. On one occasion even he had to hustle a drunken hangman into hanging a Zulu chief.

Rider Haggard was at Pretoria when the news of the fatal fight of Isandhlwana reached the town. By some method of native telepathy, the report that "the redcoats lay like leaves upon the plain" reached him there twenty hours before the express which brought the news from Natal. Rider Haggard joined the Pretoria Horse, a body of English gentlemen who volunteered for service against the Zulus. He was elected lieutenant and adjutant, but the Pretoria Horse never reached Zululand. They had something else to do nearer home, for the Boers had risen in revolt, and for some time Rider Haggard was kept busy in keeping the Boer camp under observation. He does not appear to have had any actual fighting to do. Afterwards he bought an estate, and started farming in the Newcastle district of Natal.

At the end of 1879 he went home to marry Miss Margitson. After the wedding in 1880 he returned to Natal, and no sooner had he reached Maritzburg than he heard that the Boers had risen, in earnest this time, and the first Boer war had begun. Not expecting any early collision between the opposing forces, Rider Haggard went out duck-shooting on his estate, and when so engaged heard the distant roar of the guns from the battlefield of Lang's Nek. He was so near to the seat of action that he heard the sound of the firing at Majuba as he was sitting on his verandah. After Majuba the Boers swarmed over the countryside. He and his young bride slept with loaded rifles by their side, and six horses were kept under saddle in the stables. When it was decided to abandon the Transvaal the Convention with the Boers was signed in his house. Rider Haggard was so disgusted with what he regarded as the cowardice of the surrender, that he packed up his belongings and departed from the country in which, he maintained, no self-respecting Englishman could care to live. This was in 1880. On his return to England he began to study for the Bar. In 1882 he published his first book, "Cetewayo and His White Neighbours." He was only twenty-six, and the publishers were slow to recognise the capacity of the young author. It was only on his paying £50 down towards the expense of its production that he induced Messrs. Trübner to bring it out. He got the money back after long days by his share in the profits, but at first it fell flat.

This was not his first literary venture. When only twenty he contributed an account of a Zulu war dance to the *Gentleman's Magazine*, and when twenty-one he described in *Macmillan* a visit to the Chief Secocœni. In this paper, or another written about that time, he had roundly accused the Boers of being dirty, and their women of being fat. The article got back to South Africa, and created much irritation amongst the Boers. This irritation added so much to Sir Bartle Frere's difficulties in maintaining the peace that Rider Haggard was severely wigged by the High Commissioner.

II.—RIDER HAGGARD AS AUTHOR.

In the *Idler* of April, 1893, Mr. Haggard tells the story of his early adventures in the field of literature. He was from a child distinguished for a vivid imagination. His first essay in letters was a purely imaginary description of an operation at a hospital. He had never witnessed an operation, nor crossed the door of a hospital. But he won the prize all the same.

His first novel was published in 1884. That was "Dawn." Five hundred copies were printed, 450 were sold, and the net profit accruing to the author was £10. The copyright, however, reverted to him after the first year, and "Dawn" has been worth many ten pound notes ever since. His second novel, "The Witch's Head," was more successful. It was in its way a historical romance, for he worked into it a vivid description of the defeat of the British troops by the Zulus at Isandhlwana. He made £50 out of "The Witch's Head." Literature did not seem to offer him any rich rewards. He devoted himself to his legal studies, when one fine day an idea occurred to him which extinguished all chance of his success at the Bar by making him famous as a novelist. The

thought struck him that he might have the knack of writing stories for boys. He tried his hand, and "King Solomon's Mines" was the result. Its success was immediate and immense. But he became so famous as the romancer who wrote "King Solomon's Mines" that no one hereafter would trust him with a prosaic brief. Mr. Haggard is a prodigiously rapid writer. He wrote "She" in six weeks, including in that period two weeks spent in reporting divorce cases for the *Times*, as *locum tenens* for an absent friend. "She," the most popular of all his stories—I think we sold over half a million copies in our penny edition—was begun without any idea in the mind of its author but one—that of an immortal woman. The story grew, like Topsy, under his pen. On its appearance it was hailed with enthusiasm. It shares with Sherlock Holmes the first place in popularity, and like Sir Conan Doyle, who had to resuscitate Sherlock Holmes, so in response to the impatient calls of innumerable readers, more imperious even than "She who must be obeyed," the immortal queen is with us once more in the story of Ayesha, which is now running through the *Windsor Magazine*.

In the new story the scene is transferred from the recesses of Central Africa to even more inaccessible fastnesses in Central Asia. The hero, who is the reincarnation of Kallikrates, passes with his friend Holly through sixteen years of inconceivable hardships and miraculous adventures in their search for She who must be obeyed. When at last they find her near an active volcano, they discover that access to her is barred by another woman, the reincarnation of the Princess Amenartas, who lured him away from the service of the goddess in ancient Egypt. I will not say more about the romance, which is appearing in serial form in the *Windsor Magazine*, and which will not be completed till September, than that Mr. Haggard likes it even better than "She."

It is often complained that Mr. Rider Haggard's stories are too "bluggy." They teem with tales of slaughter grim and great. His defence is that they interest the reader and never do any harm. There is more evil to be learned, he says, from the newspapers than from any of his gory novels. Who knows how much of the taste for bloodshed to which the newspapers minister was not developed by the perusal of "King Solomon's Mines," "Allan Quatermain," or "She"?

In order to write "Eric Brighteyes," one of his favourite novels, he visited Iceland, and on his return he had the good fortune to be shipwrecked. Good fortune, I say, for he survived and was the richer for an experience. He went to Mexico to work up local colour and inspiration for "Montezuma's Daughter."

One of the most interesting of all his stories was fact and not fiction. I refer to his wondrous tale of how he received in dream either a telepathic message from his dying dog Bob, or a visit from the ghost of his dead dog Bob. He sent the story, properly certified, to the *Times* of July 21st, 1904. Mr. Haggard tells the story of the dream as follows:—

On the night of Saturday, July 9th, I went to bed about 12.30, and suffered from what I took to be a nightmare. I was awakened by my wife's voice calling to me from her own bed upon the other side of the room. As I awoke, the nightmare itself, which had been long and vivid, faded from my brain. All I could remember of it was a sense of awful oppression and of desperate and terrified struggling for life such as the act of drowning would probably involve. But between the time that I heard my wife's voice and the time that my consciousness answered to it, or so it seemed to me, I had another dream. I dreamed that a black retriever dog, a most amiable and intelligent beast named Bob, which was the property of my eldest daughter, was lying on its side among brushwood, or rough growth of some sort, by water. My own personality in some mysterious way seemed to me to be arising from the body of the dog, which I knew quite surely to be Bob and no other, so much so that my head was against its head, which was lifted up at an unnatural angle. In my vision the dog was trying to speak to me in words, and, failing, transmitted to my mind in an undefined fashion the knowledge that it was dying. Then everything vanished, and I woke to hear my wife asking me why on earth I was making those horrible and weird noises. I replied that I had had a nightmare about a fearful struggle, and that I had dreamed that old Bob was in a dreadful way and was trying to talk to me and to tell me about it. Finally, seeing that it was still quite dark, I asked what the time was. She said she did not know, and shortly afterwards I went to sleep again and was disturbed no more.

On the Sunday morning Mrs. Rider Haggard told the tale at breakfast, and I repeated my story in a few words.

Thinking that the whole thing was nothing more than a disagreeable dream, I made no inquiries about the dog and never learned even that it was missing until that Sunday night, when my little girl, who is in the habit of feeding it, told me so. At breakfast-time, I may add, nobody knew that it was gone, as it had been seen late on the previous evening. Then I remembered my dream, and the following day inquiries were set on foot.

On Thursday, the 14th, the body of the dog was found floating in the Waveney, over a mile away. On Friday two platelayers informed Mr. Haggard that the dog had been killed by a train. Bob's collar, broken and torn off, was produced, and on Monday afternoon one of the men saw the body of the dog floating in the water beneath an openwork bridge over the river, whence it drifted down to where it was found.

Carefully weighing the evidence, Mr. Haggard concludes that the dog must have been killed by an empty train from Harleston a little after eleven o'clock on the Saturday night, as no trains run on Sunday, and that it is practically certain that it cannot have been killed on Monday morning. Mr. Haggard says:—

If its dissolution took place at the moment when I dreamt, this communication must have been a form of that telepathy which is now very generally acknowledged to occur between human beings from time to time and under special circumstances, but which I have never heard of as occurring between a human being and one of the lower animals. If, on the other hand, that dissolution happened, as I believe, over three hours previously—what am I to say? Then it would seem that it must have been some non-bodily but surviving part of the life or of the spirit of the dog which, so soon as my deep sleep gave it an opportunity, reproduced those things in my mind, as they had already occurred, I presume, to advise me of the manner of its end or to bid me farewell.

III.—MR. HAGGARD AS AGRICULTURAL ECONOMIST.

At the General Election of 1895 Mr. Haggard contested unsuccessfully the East Norfolk division in the Unionist interest. He pulled down the Liberal majority, but he was roughly handled by rowdies, who imagined they were helping the Liberal cause by assaulting the friends of the Unionist candidate. His defeat was largely due to the calumny that he only paid his labourers nine shillings a week. His electioneering experiences were not happy, and they seem to have effectively cured him of any ambition to enter the House of Commons. He took the keenest interest in the local administration of his district. It was owing to his action many years ago that the children in the local workhouse were allowed to have unskimmed milk until they reached the age of five. The farmers on the Board were scandalised by such extravagance, but the babies got their milk by a majority of one. Mr. Haggard has not a very high opinion of the administrative efficiency of rural district councils. Their bye-laws are often framed expressly for the purpose of bringing grist to the mill of the local tradesmen, and when their jobs are exposed there is no limit to the petty persecution to which they stoop to take it out of the man who has spoiled their game.

Mr. Haggard is devoted to the land, and he is probably one of the most intelligent and lucid writers on agriculture of our time. Both farming and gardening have in him an enthusiastic student. His two books, "A Farmer's Year" and "A Gardener's Year," are full of the fascination and the flavour and the fragrance of rural life.

Mr. Haggard has a garden at Ditchingham, near the Waveney, on the road between Norwich and Bungay. It includes a kitchen garden of three-quarters of an acre, a flower garden, with lawns, a pond, a shrubbery, and glasshouses, of an acre and a half together, and an orchard of one acre, which successfully supports sixty standard apples and plums, a hundred pyramid pears, a hundred and eighty pyramid apples, and vegetables. He grows everything, from cabbages to orchids. He has a gardener, an assistant, an odd man and an occasional labourer; he is a thoughtful, patient and hard working gardener himself. His former head gardener, who had been with him for many years, had apparently never heard that his master was a distinguished author, and kindly excused Mr. Haggard's zeal to exhibit at a local show on the ground that he "supposed that like other gentlemen you would like to see your name in print for once." Mr. Haggard has another garden on the sea coast, at Kessingland, in Suffolk, where he has raised the beach twelve feet in height in five years by sowing marum grass. He is a delightful gossiper about his garden, and very interesting and lucid in his description of his adventures as a farmer.

But his *magnum opus*, a work to which he devoted several years of almost incessant labour, is his masterly survey of "Rural England." In order to present an accurate picture of the exact condition of our agricultural districts to-day, he travelled all over the land, interviewed everybody, and embodied the result of his observations in two of the most interesting fact-crammed surveys of contemporary England that have ever been published. Mr. Haggard is a keen observer, full of sympathy with the agricultural class, to which he himself belongs, and much too good an Englishman to fold his hands in despair. He saw clearly enough that Protection was impossible, and he confined his suggestions to proposing what he believed to be practicable. To save our people from deteriorating physically it was necessary to check the depopulation of the rural districts. He insisted that the remedy lay in the multiplication of small holdings, in people's banks, and in the establishment of an agricultural parcel-post. He denounced fiercely the conversion of land that could profitably carry men, into a wilderness dedicated to game for the amusement of a few plutocrats. He said:—

> The agricultural interest had at present three great necessities—first, a lessening of the burdens upon land; secondly, an extended system of co-operation among producers; and, thirdly, cheap carriage. He wanted the present parcel-post system to be extended, so that packages up to 100lb. in weight should be carried. These packages should include agricultural products of every kind. If the railways would not play their part it would be necessary to employ large motors to compete with the railways. If his proposals were adopted, thousands of persons who could not now support themselves by agriculture would be able to make a living on the land. The proposed extended parcel-post would also be a general advantage, as it would be available for the tradesmen as well as for the farmer.

He spoke strongly as to the need for decent houses for the people. Although he is a Conservative he is no friend of the brewers, who, he maintains, have the British public by the throat. He believes County Councils are a great success, but that Rural District Councils are corrupt, and Parish Councils are dead. When Mr. Chamberlain started the Preference cry, which Mr. Balfour countered by his plea for Retaliation and no taxes on food, Mr. Haggard was one of the first, I think the very first, to point out that for the agricultural classes Retaliation and no food taxes was suicide. "Give us a thorough-going tax on all agricultural produce imported from abroad or give us nothing." And as even Mr. Chamberlain recoils from such a programme, Mr. Haggard accepts the alternative with grim satisfaction.

IV.—MR. HAGGARD AS AN IMPERIAL COMMISSIONER.

Mr. Rider Haggard's latest achievement has been to visit the United States as an Official Commissioner for the British Government, "to inspect and report to the Colonial Secretary upon the conditions and character of the agricultural and industrial settlements which have been established there by the Salvation Army, with a view

to the transmigration of suitable persons from the great cities of the United States to the land and the formation of agricultural communities." "Some analogous system," Mr. Lyttelton thought, might be applied with advantage to "transferring our urban populations to different parts of the Empire." It is not difficult to discern the genesis of this idea. The suggestion emanated from Lord Grey, who, a year ago, was immensely impressed by hearing Commander Booth Tucker describe what the Salvation Army had accomplished in their farm colonies. "You may have your Commissioner," Mr. Lyttelton seems to have replied, "if you will pay his expenses, for the British Imperial Government has not a sixpence to spare for such trivial questions as those affecting the welfare of millions of our poor." Thereupon the Rhodes trustees voted the sum of £300, which, at a guess, must have almost covered one-third of the travelling expenses of the Commission, and Mr. Rider Haggard was sent on his journey. It would appear that for several months he was expected to give the whole of his time and to meet the balance of the expenses of his mission. It was a pretty large indent upon the patriotic self-sacrificing spirit of the private citizen; but Mr. Rider Haggard, who writes novels in order to pay for his sociological efforts on behalf of the country and the poor, rose to the situation. He took his daughter with him as a private secretary. Few things, by the way, are pleasanter to read in his final Report than the following paragraph:—"It (my gratitude) is due also to my daughter, Miss Angela Rider Haggard, who acted as my private secretary throughout my mission, and was of great assistance to me."

In two months he travelled over six thousand miles by train. He found that President Roosevelt had read his "Rural England," and was intensely interested in the object of his mission. The President (he says) is one of the clearest visioned and most able statesmen that he ever met. He does not report his confidential talks with the President, but he does report his conversation with Mr. Wilson, the Secretary for Agriculture, who entirely approved his views of the possibility of mitigating human misery and carrying out colonisation by the combined agency of the Government funds and the waste forces of benevolence. Note, among other interesting things said by Mr. Wilson, that the telephone has destroyed the greatest objection to the farming life in the States: –

He remarked also (and this is a curious circumstance) that the establishment of the telephone in every house had done a great deal to keep people on the land, as it helped to destroy the sense of isolation and loneliness, and generally to make life more convenient and interesting. Thus, he pointed out, that after a day's work the women could gossip with each other over miles of wire, who in former days might perhaps rarely see a visitor.

Mr. Haggard visited Philadelphia to see the way in which the vacant lots of town sites are utilised as gardens for the poor, who can be ejected at ten days' notice, but who pay no rent and are assisted with seeds and tools by local philanthropists. After this preliminary canter he struck off across the continent, suffering much from the overheated sleeping cars in which Americans seem to prefer to be stewed alive. He saw the President of the Mormons at Utah, and examined their system of "small holders." He devoted most of his time to the two Salvation Army Farm Colonies proper at Fort Romie, California, and at Fort Amity, Colorado. He subsequently visited their Inebriates' Home and Training Colony at Fort Herrick in Ohio. Then striking across into Canada he got the promise of a land grant of 360 square miles of good land, with more to follow, from Sir Wilfrid Laurier, when he was the guest of Lord Grey at Ottawa. Everywhere he was entertained and feasted and interviewed. Everywhere he found a friendly welcome and a practically universal consensus of opinion on two points. First, that the colonisation of the unemployed could be undertaken on a business basis, and, secondly, that the Salvation Army were the people to make it a success. Even Sir Wilfrid Laurier, who is a Roman Catholic, is at one with all others of all religions and of none as to the capacity and usefulness of the Salvation Army.

As the net result of his interviews and investigations, Mr. Haggard drew up a scheme which he strongly urges the Government at home to adopt and to act upon without delay. He thus summarises the suggestions which he brought home with him:—

(1) That the interest of a loan, or loans, of an amount to be fixed hereafter, should be guaranteed by the Imperial Government, or by the Imperial and certain Colonial Governments jointly, if that is thought desirable and can be arranged.

(2) That the Poor Law Authorities in the large cities of Great Britain should be approached in order to ascertain whether they would be prepared to make a *per capita* contribution for every selected family of which the burden was taken off the local rates.

(3) That a permanent officer should be appointed by the Imperial Government, to be known as the Superintendent of Land Settlements, whose duties and responsibilities I have sketched out above.

(4) That the Salvation Army, or any other well established and approved social, charitable, or religious organisation, should be deputed to carry out the work of selecting, distributing, and organising the settlers on Land Colonies anywhere within the boundaries of the British Empire, who should remain in charge of such Organisation until all liabilities were paid.

(5) That no title to land should be given to any colonist until he had discharged these liabilities, on which he should pay 5 per cent. interest and 1 per cent. sinking fund, recoverable in an agreed period of years.

(6) That the possibility of establishing similar Colonies in the United Kingdom should be carefully considered.

(7) That, if these suggestions are approved, a Bill, to be designated the "National Land Settlements Act," embodying and giving life to them, should be laid before Parliament.

In elaborating these suggestions he proposes that 7,500 persons should be sent out- or 1,500 families —to occupy the 360 square miles of fertile Canadian land promised as a free grant by the Canadian Government. He thinks that they could be planted out at a cost of £200 per family. This would require a loan of £300,000, which the State could raise at three per cent. and make a profit by charging them

five per cent. plus one per cent. sinking fund, which would enable them to become owners of an unencumbered freehold in thirty-three years.

Mr. Haggard thus sets out the argument by which he enforces the acceptance of his recommendations:—

It is my profound conviction that the future welfare of this country depends upon whether or no it is possible to retain or to settle upon the soil a fair proportion of its inhabitants. Upon that soil men and women grow up in health, and become furnished with those sober and enduring qualities which have made the greatness of our Nation in the past, who, if they are relegated to the unwholesome conditions and crowded quarters of vast cities, must dwindle in body and change in mind.

Nor is this all, since in these cities, as statistics and experience prove alike, the families are smaller than those that are born upon the land. Children there are called, and, indeed, often are, "encumbrances." More of them die in infancy also, and of those who grow up, many, at any rate in the second generation, are of a stuff so different that except for the accident of their common speech they might well be supposed to belong to another race.

How is it possible, indeed, that children should be born in adequate numbers, or, if born thrive, in the crowded slums of London or in the tenement houses of New York, and how can that people remain great and powerful whose supply of healthy children is curtailed? If these are lacking, all the merchandise of the seas and all the treasures of the earth will not supply their place.

Therefore, if the future safety of their countries is to be made secure against obvious and disastrous contingencies, in my humble judgment one of the chief aims of the Governments of the highly civilised white nations should be to keep population upon the land; to multiply the numbers of those modest rural homes where men and women desire offspring for their own sakes and to share their labours and their plenty.

An Interlude in an Interview.

(Mr. Haggard patiently submits to a double ordeal—that of the interviewer and the photographer.)

This, it seems to me, can best be done by turning to practical account the public Credit and the vast forces of Benevolence; by using these powers to counteract, at least to some extent, that tendency towards race-ruin, a product of our western culture, whereof the end must be a progressive national weakening and depletion which, if unchecked, may well bring about national defeat at the hands of those ruder peoples of the World that remain land-dwelling and agricultural, and again, as in past ages, culminate in national despair and death.

He appends detailed reports upon each of the Salvation Army colonies, including Hadleigh. Speaking of the results of his investigations, after alluding to the fact that the Salvation Army had to buy their experience by a net loss in starting the two colonies of £10,000, he says:—

Outside of this slight failure of finance, which will, I believe, be recognised as temporary, accidental, and easy to be avoided in future enterprises, the two experiments seem to me to be eminently successful, and to demonstrate, in the case of Fort Romie, that indigent people of the agricultural labourer class can be settled upon land and there do well, and in the case of Fort Amity that such persons can even be taken from towns and yet prosper.

Mr. Haggard ridicules the idea that he proposes to endow the Salvation Army. I have already quoted the terms of his recommendation, which includes "any other approved and responsible religious, charitable, and social organisation," but the Salvation Army at present holds the field. Mr. Haggard's utterance on this subject should be quoted in full:—

The finding of these city folk (who are eager to go back to the land); the selection from among them, and the watching of those selected for a while before final choice of them is made, are difficult tasks. Indeed, if all this had to be done through officials of any sort it would, in my opinion, and, I may add, in that of President Roosevelt, be an impossible task, or at the least so costly as to be out of the question. As it happens, however, a Body exists to which this matter is easy, that, moreover, is willing to undertake it for nothing, merely as part of what it considers to be the duty which it has towards suffering and bewildered humanity.

I allude to the Salvation Army, a charitable and philanthropic institution, which I have found even better known and more respected in the United States and in the Dominion of Canada than it is in the British Isles. This vast organisation is, I am authorised to say upon its behalf, able and willing to make the selection of suitable settlers to any extent from among the poor of the cities of Great Britain, conducting their operations under the authority and direction of an Imperial officer, appointed, as I have suggested, to control them.

Further, if only the necessary capital be found, it is prepared to move these selected persons to settlements to be established at places chosen anywhere within the borders of the British Empire. There it will provide them with skilled instruction in the local agriculture, and with the counsel and assistance needful to beginners in every path of enterprise, which will be furnished to them by means of trained officers stationed in each colony, and receiving only the small remuneration that the Salvation Army pays to its active members for their support.

This is a high tribute and one which is thoroughly well deserved.

It is objected by some that it would be better to colonise the deserted fields of England rather than to carry off our best bone and sinew to the Canadian wilderness. On this point Mr. Haggard says:—

The criticism may be advanced that there is no need to go to distant Colonies in order to place such a scheme as I have outlined in operation; that its benefits, at any rate, should not be confined to outlying portions of the Empire, as there is nothing to prevent their application at home.

With such a criticism I am myself in great sympathy. I shall, therefore, be glad, if I am so directed by His Majesty's Government, to prepare a separate memorandum upon the possibility of the establishment of rural Colonies in the United Kingdom, by the aid of the same machinery which I have suggested as suitable to the case of their establishment overseas.

The question now arises, what is to be done?

The first thing to do is for the Local Government Board to instruct Mr. Haggard to undertake forthwith to prepare a separate memorandum upon the establishment of rural colonies in this country.

When that is being done, the Department, in consultation with the Colonial Office and the Treasury, should draw up a National Land Settlements Bill, placing the business of colonisation under a special department under a permanent official to be known as the Superintendent of Land Settlements. This Bill should be passed into law as speedily as possible. It would do a thousand times more good than the Aliens Bill will do harm, and that is not a little.

The Hon. Clifford Sifton, a Canadian who, when in office, did more for Canadian immigration than any man, declares that he regards Mr. Haggard's scheme "as an embodiment of the truest and best form of Imperial patriotism, because it is building for the future by helping to give a solid British basis to the population of our Great West." Writing to Mr. Haggard, he says:—

I sincerely hope that if the matter takes serious shape you will be able to take an active part in the management. No one can carry out such a plan so well as the man who has conceived it and actually tested it by personal observation.

Sir Wilfrid Lawson, speaking on behalf of the Canadian Government, and Commander Booth Tucker concur. Writing to the Commissioner, the latter says:—

To our colonists themselves, I can assure you, as well as to our managers, your visit has been an inspiration and encouragement, and I sincerely hope that the cause of colonisation may long continue to enjoy both the guidance of your experienced hand and the advocacy of your eloquent pen and tongue.

What more need is there to labour the point? The scheme is business-like, sound and ready. The agents are waiting. The appointment of Mr. Rider Haggard as Superintendent of Land Settlements should be gazetted to-morrow.

Mr. John Butler Burke,

The young Irishman whose discovery, made at the Cavendish Laboratory, Cambridge, of the action of radium on soup jelly suggests the production of a "cell," or "spontaneous generation," or the (apparent) origin of life.

Impressions of the Theatre.—IX.

TWO STUDIES OF MODERN PLUTOCRACY.

(17.)—"THE WALLS OF JERICHO," AT THE GARRICK.

LAST night, at the little Congregational Chapel which it is my wont to attend at Hayling, I heard an excellent sermon from the text: "And Lot pitched his tent towards Sodom." And as I listened I could not help remembering Mr. Sutro's play which I had seen for the first time a few days before. "The Walls of Jericho" is an idiotic title, suggested apparently by a single sentence emphasised by a brutal pun. The play is not based upon any episode in the Book of Joshua. It is a dramatised version of the history of Lot.

The story of the play is so familiar by this time—it was the two hundred and forty-ninth performance that I witnessed at the Garrick—that it seems somewhat absurd to run over it, however briefly, at this time of day. As, however, most of my readers have never seen Mr. Sutro's successful drama, I will briefly indicate its salient features. It opens in our modern Sodom, in the ballroom of the Marquis of Steventon, in which our latter-day Lot, Jack Frobisher, finds himself very much out of place. Jack Frobisher, formerly Fighting Jack of Queensland, where he had been a builder of cities, a tamer of water-courses, the subduer of the wilderness, has made his millions, and has been drawn like a moth to the candle by the glitter and the glamour of the Cities of the Plain. When I saw Jack the part was played by Mr. Sydney Valentine—in Mr. Bourchier's absence—and he was made up singularly like another colonial millionaire, Mr. Abe Bailey, of South Africa, who fortunately has as yet eluded the vulgar fascination of the Smart Set. When Jack Frobisher, still in the prime of life with money to burn, arrived in England, he lifted up his eyes and beheld fashionable English society, and saw it as seemed to his patriarchal prototype the plain of Jordan when he saw that it was "well watered everywhere, even as the garden of the Lord, like the land of Egypt as thou comest out of Zoar." And, in this also resembling Lot, Jack Frobisher ignored the fact that "the men of Sodom were wicked and sinners before the Lord exceedingly." Not the men only, else had he escaped scatheless. For Jack Frobisher, like the sons of God in a still earlier age, beheld the daughters of men that they were fair, and he was married for his millions by the Marquis of Steventon to his daughter the Lady Alethea, who plays the *rôle* of Lot's wife with much spirit and vivacity.

The play opens with a scene in the ballroom of the noble marquis, a doddering old knave of a decadent aristocrat, with no more morality in the soul of him than there is money in his purse. He is the typical guinea-pig, the caricatured Marquis of *Reynolds'* newspaper. And the smart set which frequents his mansion in Mayfair is drawn in much the same fashion. In its exaggeration, its banality, its vulgarity, its vice, it is English society as Mr. Sutro has seen it in the columns of *Reynolds'*. In the midst of this frivolous throng, in which the Lady Alethea is flirting with the foremost, as Lot's wife should, Jack Frobisher is profoundly miserable. He loves his wife, and, strange to say, she also loves him, although, in the midst of the profoundly corrupt social circle in which she spends her life, she plays with fire, gambles at bridge, and encourages the attentions of a vulgar young rake, Harry Dallas by name. Frobisher is sick of being sponged upon by all impecunious hangers-on of the noble family into which he has married. His interests are in the big, work-a-day, practical world, in philanthropy, in real things, whereas, despite his mansion in Mayfair, his country house, his Scotch deer forest, and his yacht on the Solent, he feels he is among mere butterflies and the "small gilded flies" who model themselves closely upon the insects, as Shakespeare described them. Lot has bitten into his Dead Sea apple, and, as it has been since the world began, he finds it full of ashes and bitterness. The harlequinade of the cake-walk, and the pseudo-smart chaff of the smart young men and over—or under—dressed women go on before our eyes for a season, and then enters to Jack Frobisher another Colonial millionaire in the person of Hankey Bannister. They were chums in Queensland, where Bannister was down on his luck. But Bannister strikes gold in America, and now he, too, is drawn into the vortex. Despite the warnings of Frobisher the new-comer must needs pitch his tent towards Sodom. And to him also comes the temptation to which Frobisher succumbed. For the impecunious old Marquis has still another daughter to dispose of to the highest bidder. Lady Lucy Derenham is a pretty young thing, who is about as innocent as the heroine in "The Visits of Elizabeth." She is in love with her cousin, as such creatures are in love, but she sacrifices her lover instantly when she has the chance of catching the millionaire. Bannister succumbs at once to the wiles of the matchmaking Marquis and his innocent *ingénue*, and when the play ends they are going to be married and to live unhappily ever after.

The companion of this young lady is a clergyman's daughter. She never appears on the stage, but her fate dominates the action of the drama. She has been seduced by Lord Drayton, the son of the Marquis. Full of indignant horror at the thought

that a woman could so disgrace herself, this guinea-pig Marquis and his *entourage* of demi-reps turn the poor girl out of doors, to go to the devil if she pleases. In the society of Sodom one woman more or less thrown to the wolves does not matter. But the author of her misfortune is profoundly upset by the ruin he has brought upon a woman to whom he was really attached. The girl finds shelter with Lady Westerby, a lady who also had a past which has been condoned by a subsequent marriage with millions, and Lord Drayton seeks counsel with Jack Frobisher. The Colonist tells him there is only one thing to be done, and that is to marry the girl. But the lad is as penniless as his bankrupt sire, so Frobisher offers him £3,000 and a farm in Queensland if he marries. As he is fond of the girl, and very penitent for having done her wrong, he marries, and we see him no more.

Then the social volcano erupts. The Marquis of Steventon is almost speechless with indignation at the dishonour done to his noble family by such a *mésalliance*. His daughters join in the chorus of amazement that their brother could have done such an awful thing as to marry a girl whom he has seduced. For a moment Jack Frobisher weakens under the storm. But being encouraged to assert himself by Lady Westerby, who tells him her story and adjures him to boss his wife instead of allowing her to run wild, he nerves himself to the task. He determines to be master in his own house. So we have a new and modern variant of "The Taming of the Shrew." Lady Alethea is no shrew, only a spoiled beauty, who has hitherto twisted "her dear Jack" round her finger, but who now discovers that she has found her match. He pays her gambling debts, but forbids Dallas her house Dallas, it may be observed, having gone just a little too far in having kissed the Lady Alethea against her will just before the arrival of her husband. Then the Marquis of Steventon, full of strut and fume, comes upon the scene and denounces in his funny doddering fashion the unheard-of insolence of this Colonial who has dared to interfere in the affairs of a noble family, by advising his son and heir to marry a woman who has disgraced herself. Then Jack Frobisher lets go, and the house--especially the gallery--is thrilled with his denunciation of the rottenness of Modern Society, with its wives who won't breed, its mothers who won't suckle their children, and whose men spend their time in making love to each other's wives. "He speaks a piece of his mind, he does," and the Marquis, inarticulately vituperative, metaphorically shakes the dust off his feet against his rebellious son-in-law, and departs raging. Jack Frobisher has had enough of it. He will flee from Sodom while yet there is time.

But he reckons without Lot's wife. Lady Alethea refuses to go. He is stern of mood now and resolute of purpose. He will go alone—no, not alone, for he will take with him their only child. Her father being a man of Sodom to the rotten core of him, encourages her in her determination to remain at home. There are to be heavy marriage settlements, and the ideal of the Smart Set seems likely to be realised—a well-endowed wife in Mayfair and a husband at the other end of the world. If Mr. Sutro had been true to the story of Lot, the curtain would have fallen upon the irrevocable separation. Lot's wife would have become a pillar of salt, or, in other words, Lady Alethea would have definitely cast in her lot with the Smart Set of the Cities of the Plain. But he relents, and at the very last moment—at fifty-nine minutes past eleven o'clock—Lot's wife decides to fly with him, and the curtain falls upon the re-united pair. "We have to thank you for this, Lady Westerby," says Hankey Bannister. "No," says that good lady, "do not thank me—thank God!" Upon which pious tag, which jarred somewhat, the curtain falls.

And where, it may be asked, do the walls of Jericho come in? They only come in once, in the last act. Bertram Hannaford, an impecunious sayer of smart things, is ridiculing Jack Frobisher behind his back for believing that the wickedness of Modern Society will fall flat when he blows a blast upon his trumpet, like—"Like the walls of Jericho," says the fast daughter of a Bishop, whose episcopal ancestry is necessary to explain such a phenomenal acquaintance with the Bible—"When the people shouted, and the walls of Jericho fell down flat. But the walls must have been jerry built in those days."

The moral of the play is good enough. The acting was clever, but the play as a whole, with its veiled suggestions of social revolution, gave me somewhat the same impression as if I were listening to the "Marseillaise" played on a muffled barrel organ.

(18.)—"BUSINESS IS BUSINESS," AT HIS MAJESTY'S.

At the Garrick we had the spectacle of the virtuous millionaire rising incorruptible over the blandishments of a corrupt aristocratic society. At His Majesty's we have a companion piece, in which we are shown the vulgar millionaire demoralising society by his wealth. The two plays balance each other. Both are dramatic sermons on the text: "The love of money is the root of all evil." And although the moral is good, the plays are both bitter and unpleasant to the taste. Both, also, are caricatures. It may be necessary to exaggerate to produce a popular effect: but surely in both plays the artist might have laid on his colour with some instrument more delicate than the bill-sticker's brush. Whatever the merits of these studies of plutocracy, subtlety cannot be claimed for either. The stage, instead of being a mirror true to nature, is rather, as I have complained before, a magnifying and distorting thing like the convex and concave glasses in the Gallery of Illusions.

"Business is Business" is a play adapted from M. Mirbeau's "Les Affaires sont les Affaires," but its literary origin need not concern us here. Its topical origin is much more recent, and is distinc-

tively twentieth century London. The play is an attempt to place on the stage an odious combination of the worst qualities of all our recent conspicuous samples of modern plutocracy. The play itself is a mere pedestal upon which stands the figure of Isidore Izard, the typical modern millionaire. To create this sinister and yet not ungenial monster, Mr. Sydney Grundy seems to have taken Mr. Barney Barnato, Mr. Whitaker Wright, Mr. Hooley, and Sir Alfred Harmsworth, to have selected from each some salient characteristic, and then, having welded them all together into one gigantic personality, he presents the product to us as Mr. Isidore Izard. Mr. Barney Barnato supplies the early adventures of the hero in his mountebank days; Mr. Whitaker Wright supplies the estate and the lake, with its billiard-room under the water; Mr. Hooley his benefactions to the Church, and Sir Alfred Harmsworth his mania for creating and acquiring newspapers.

Isidore Izard is, however, not a person. He is a caricature. And the other people are not persons, save the wife—whom I think I have seen in real life, although even here too the grotesque note is far too persistently sounded—they are mere foils.

The story of "Business is Business" is tragical enough; it has been described as the bitterest tragedy of the season. But it is written for the most part in a vein of the broadest farce. The presentation of Professor Gruggh, the electrical engineer, as an exaggerated caricature of the conventional German of fifty years ago is as coarsely farcical as anything in a Christmas pantomime. The central figure, Isidore Izard, "I. I.," is overdrawn. The first act, indeed, is grotesque caricature. No man who had been shrewd enough and capable enough to build up a great fortune, after having been twice bankrupt and having done six months' hard, could have been quite so self-complacent an ass as Isidore Izard. No doubt it was cheap enough fooling for him to fling pocketfuls of money to a crowd, and to adjure them "Don't cheer me, my friends. Cheer the cause!" and then immediately afterwards to tell his friends and family that he had no idea as to what the cause was. But the man himself would not have played the fool quite so artlessly as that. That, however, is not the chief fault to be found with the first act. The author deliberately piles up one monstrosity of callousness upon another, until you feel that the whole thing is untrue. Izard's ruthless destruction of all singing birds on his immense estate, his brutal bullying of the baronet whom he employs as his steward, his wild anxiety about his sick cow, his callous indifference to the welfare of his injured workman—it is piled on too thick. Mr. Sydney Grundy and Mr. Tree between them appear to have forgotten the old saying that it is possible to paint the devil too black.

There is something of the quaint simplicity of the melodrama of the barn in "Business is Business." The conventional villain who excites the wrath of the gallery is a villain all over from the crown of his head to the sole of his boots. There is villainy in his every word, treachery in every gesture. It is necessary to print in very large capitals when you have to capture the attention of the groundlings. Hence a persistent, insistent iteration is allowable when the wandering Thespian makes his appeal to the rustic audience. It is necessary to shout out very loudly, even to scream it out at the top of your voice, "I am a villain, a monstrous villain; do you understand? Make no mistake. Oh! I am a thrice damned villain. I am THE villain of the piece, and don't you forget it." That is all very well in a booth at a country fair. But is it quite so necessary to labour a point with such damnable iteration at His Majesty's Theatre?

Isidore Izard was at least a human being. His wife, a good housemother of the Jewish type, was devoted to her husband. Their daughter was idealist enough to give away all her dress money to the poor, and to fling herself into the arms of a poor chemist. Izard was also devoted to his only son, a miserable young whelp, whose extinction by a motor-car—which is now the popular method of cutting short undesirable careers on the stage—is almost the only satisfactory episode in the play. The story is simple enough. When the play opens, mother Izard and her daughter are found sitting at the entrance to the Crow's Nest—the millionaire's palace in the Surrey hills The mother, always sighing for the days when they lived in a little house, and had only one servant, knits or crochets with the ceaseless energy of the female of her type. Her weakness is an inability to grasp things. Although she is the wife of a millionaire, she is perpetually dreading that there may not be enough food in the house for the guests whom Isidore is always bringing down without warning. The daughter, who is reading and sighing, is in love with one Hubert Forsyth, a chemist in her father's employ. It is difficult to say whether she is more to be pitied in having such a vulgar bounder for a father or such a wooden stick as a lover.

Presently the blast of the motor is heard approaching, and a real motor-car (supplied by Messrs. C. S. R. and Co., address ——see programme) drives up, amid the cheers of the crowd, who are enthused at so much a head. Isidore, full of vulgar animal energy, salutes his wife, introduces his guests the German zany, Herr Gruggh, who feigns not to know English, but who was perfectly well known to Isidore Izard as a professor of English at a German university, and one Deevish, a lawyer from Lincoln's Inn Fields. These worthies, who are treated with scant courtesy, which is no more than they deserve, have a proposition to make by which they hoped to net millions with the aid of the mighty financier. To the group at the entrance there comes the steward, Sir George Tarrant, Bart., whom Izard addresses with a brutality that would cause any ordinary steward to throw up his stewardship on the spot. But all cringe and bow. You

see the initial letters "I. I." everywhere. You hear Izard perpetually crying "Hi! Hi! Hi!" with the monotony of a corncrake. He points out "my golf links"—he does not play golf—"my billiard-room under my lake," "my game preserves," "my park," and finally "my horizon." A cow is ill. He telegraphs for the President of the Royal College of Physicians, and by way of first aid he administers a bottle of rum to the invalid. This does not take place on the stage. The animal dies. Then the dinner guests begin to arrive, and a pretty motley group they are—all more or less grotesques, including the clergyman and all the toadies of the countryside. Isidore is the vulgar monarch of the vulgar world over which he reigns. He shows them conjuring tricks in reminiscence of his Barney Barnato days, talks familiarly to all and sundry, and finally vanishes with his guests, escorted by gorgeous flunkeys, in to dinner.

The second act is chiefly devoted to the discussion of the financial projects submitted by Gruggh and Deevish to Izard for his approval. To at least one-half of those present the discussion of the details of the financial proposition must have been absolutely meaningless. What was clear enough was that it was a case of diamond cut diamond, and Isidore was the sharper diamond of the two. Their mineral rights in Derbyshire and their potential water-power for generating electricity, he speedily divined, were worthless without the consent of the lord of the manor, one Bradshaw, which they had not obtained, but which he at once set about to secure. What was much the most obvious feature of the second act was the continual lighting up by Isidore of a full-length portrait of himself, painted at a cost of 3,000 guineas, and set up over the mantelpiece. Always, at every pause in the conversation, Isidore would walk to the fireplace and switch on the electric lights, which showed up more conspicuously his self-satisfied, smiling face. It was a trick illustrative of the boundless egotism of "I. I." But that characteristic need hardly have been roared at you as if by megaphone every five minutes.

His son, an odious young creature, is the apple of his father's eye, and the culminating note of the tragic in the play is the announcement that he has been killed within an hour after leaving his father's presence. This stroke of adverse fortune follows close upon a previous shock in the discovery of his daughter's marriage with the penniless chemist, just after he had succeeded in securing a penniless Earl to consent to allow his son to marry the girl. The Earl of Heathersaye is a much more dignified peer than the Marquis of Steventon, but he is driven to the same expedient by the same pressure of the need of money. As the Marquis sold his daughter, the Earl was ready to sell his son. The fact that Isidore had done his six months' hard sticks in the Earl's throat; but needs must when the devil drives, and he capitulates only to find his alliance scorned by the daughter of the man whom he fears and hates. The best passage in the play is that in which Isidore reminds the Earl that the Church and the charities did not in the least mind taking money, no matter how it had been obtained. The news of his son's death brings on a paralytic stroke, in the midst of which he recovers his wits sufficiently to foil the roguery of the brace of sorry scoundrels who were hoping to use him to feather their own nests. "I. I." achieves this last triumph, and then staggers to the door to confront the corpse of his only son. Vanity of vanities, all is vanity! "I. I.," "I. I." Isidore Izard points the same old moral as King Nebuchadnezzar.

The Historical Drama at Sherborne.

AFTER TWELVE HUNDRED YEARS.

"To chant the fame of Sherborne are we come,
And to her laud and honour all men press."
Opening Chorus of Pageant.

THE town of Sherborne, Dorsetshire, has been standing upon the brink of twelve hundred years, and looking before and after her as she stood. The result has been last month's pageant, the charm and scenic beauty of which was hardly realised except by those who witnessed it.

Everyone who has ever seen the Oberammergau Passion Play has always marvelled that so small a village could produce so sublime a spectacle. And, though it is not intended to institute any comparison between Oberammergau and Sherborne, for that could hardly be made and must be misleading, yet it may truly be said that those who went in the middle of last month to the little ancient town on Salisbury Plain marvelled at what it had to show them. There are, however, two points of similarity between the Bavarian village and the Wessex town. Both pressed into their service people of all classes and ages; and in both the Chorus chants much of the narrative. Here, however, all real resemblance ends.

The Sherborne pageant celebrated the one thousand two hundredth anniversary of the founding in 705 A.D. by Saint Ealdhelm of the town, bishopric, and school of Sherborne. It was intended to be not merely a reminder of the town's historic past, but an earnest of

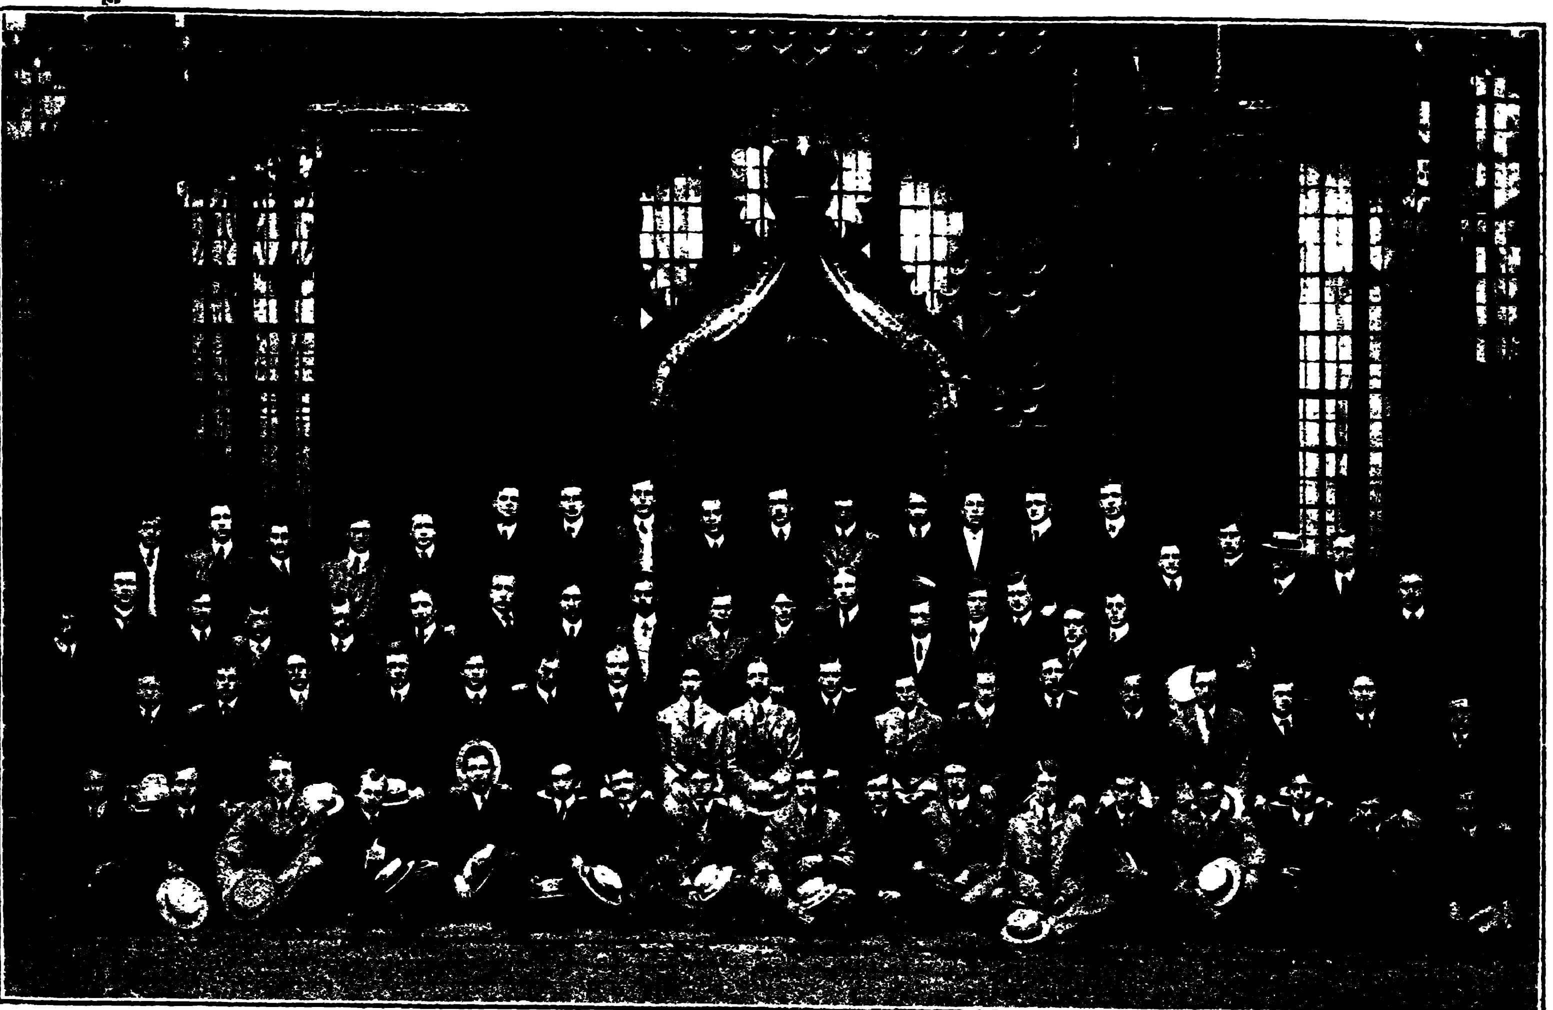
EPISODES IN THE HISTORICAL PAGEANT AT SHERBORNE

renewed, vigorous life to come, so that the place on the tablets of whose history were engraved so many famous names might not sink into indifferent insignificance. To write the words of the Pageant and to direct it Mr. Louis Parker was chosen, not merely as an ex-master of Sherborne Public School, but because he was, indeed, one of the few men in England who could have done it. Another ex-master of Sherborne, Mr. James Rhoades, contributed the connecting narrative choruses, one song, and the final Triumph Song. Anyone and everyone in Sherborne made the dresses, except certain ones of costliest silks worn by ladies of high degree and their attendant dames; Mr. Beerbohm Tree lent the armour; and anyone and everyone in Sherborne, from the Rev. Canon Westcott, Head Master of Sherborne School, and certain of the county folk near, down to the shopkeepers and other townsfolk of Sherborne, and nearly all the boys of the school, did the acting, to the number of over seven hundred in all. Three honorary secretaries were not too many to undertake arrangements for the accommodation of the crowds of visitors who wished to spend a few days in the quaint, old-fashioned town; and it is pleasant to think that the enterprise was more than successful. Performances had to be repeated several times oftener than was expected; every one of the 5,300 odd seats was booked always, while a good many hundreds were on the grass in front of the stand.

The pageant was like nothing ever before attempted. Its author calls it a historical folk-play. It really is a splendid panoramic and dramatic representation of a selection of the most famous historical events in the life of Sherborne Town. To a certain extent, also, it of necessity reflects the history of England from the time of the re-introduction of Christianity to the half-pagan Britons, who had almost forgotten what it meant, down to the founding of the school by Charter under Edward VI.

The old town, dominated by its Minster, and in whose winding streets are still many half timbered houses, and still more the actual scene of the pageant—the natural outdoor stage on which it is acted—are ideal for such a purpose. No more perfect or more spacious stage could have been found than the fresh, green grass in the grounds of the very castle where Sir Walter Raleigh, as represented in the pageant, did long ago bring his lady; no setting could have been more fitting than the old ivied ruins of the cloisters, keep, and hall of the very castle which Roger of Caen, a Bishop of Salisbury, is shown in the pageant as founding. Away to the left is an ivy-covered gatehouse, part of the castle ruins, through which Sir Walter Raleigh's courtly Elizabethan figure comes riding with his stately lady and retinue. Away to the right, from beneath tall trees, up a grassy bank, and from behind the ruins, come Benedictine monks, warlike Danes, Kings and Queens with their trains of courtiers, and morris dancers in scarlet and Lincoln green. And across the lily-covered pond, in the same grounds, is the very castle which Raleigh partly built.



One after another the stirring scenes of Sherborne's history are recalled. Saint Ealdhelm, with his disciples, enter and found the town of Scir Burn—the clear stream, Sherborne. One hundred and forty years later the townsfolk fight with scythes and defeat the Danes. In 860 A.D. the lovely Queen Osburga, with Ethelbert and her son Alfred, a beautiful boy, enter and witness the death of Ethelbald; and Alfred, according to the tradition, is entrusted by the Queen to Bishop Ealhstan, to be taught at Sherborne School. William the Conqueror, magnificent and imposing in full armour, is seen imperiously ordering the see of Sherborne to be removed to Sarum; Roger of Caen ceremoniously lays the foundation stone of the castle, while the quarrels of the town and the monks, the founding of the ancient almshouse, and the ultimate expulsion of the monks all pass before the audience. Robin Hood, Maid Marian, Friar Tuck, Little John and the morris dancers, all in scarlet and Lincoln green, dance as in Merry England of old. A herald enters: "Oyez! Oyez! Oyez!" and to the blowing of trumpets reads the New Charter of Sherborne School of Edward the Sixth, by the Grace of God, Defender of the Faith, and the boys of Sherborne School to-day rush in with a great shout. Then comes the most exquisite scene of all—Sir Walter Raleigh's entrance on horseback, with his wife and attendant ladies and gentlemen on horseback. And then:—

> Down the ocean of the ages, over seas that broke and boiled,
>
> . . . .
>
> We have tracked the good ship Sherborne to the haven of her rest.

In the wonderful colour scheme of the final picture, a stately, graceful figure raised on a pedestal symbolises Sherborne, while on her right stands her daughter, Sherborn (shorn of its final e), Massachusetts, draped with the Stars and Stripes—truly a graceful compliment to the American people.

Then, to the March in "Tannhäuser," the whole glorious company of historical personages marshals—Saint Ealdhelm, and his monks; the Britons and the Danes; Ethelbert, Osburga, and the child Alfred; past Bishops of Sherborne and their monks; the great Conqueror and his knights in armour; Roger of Caen and all the townsfolk of Sherborne; Robin Hood and his merry men all; the morris dancers and maypole dancers; the tottering old almshouse inmates; the knights, trumpeters and heralds; the esquires and pages in scarlet, white, and gold; the boys of Sherborne School; Sir Walter Raleigh, his stately lady, and their attendants; and, finally, Britannia, a magnificent figure. The Old Hundredth is sung and the National Anthem, and of Sherborne truly it might then be said:—

> With twelve hundred years beneath her, and the bend of Heaven above,
>
> Down the ocean of the ages, lo! we launch her forth once more.

Interviews on Topics of the Month.

XVII.—FROM AGENT-GENERAL TO HIGH COMMISSIONER: THE HON. W. P. REEVES.

Last month, after many months of uncertainty, Reuter's Agency cabled the welcome news, welcome to all who have the interests of New Zealand at heart, that Mr. Reeves, the Colony's Agent-General in London since 1896, had been offered and had accepted the post of High Commissioner, created by Act of the New Zealand House in November last year. He is a New Zealander by birth.

Photograph by] [*E. H. Mills.*

Hon. W. P. Reeves.

"The real significance of the appointment of a'High Commissioner for New Zealand," said Mr. Reeves, when I called upon him at 13, Victoria Street, "is that the people of New Zealand feel that their Agent-General must not be narrowed into a representative of trade only, but must adequately represent their interests in London, especially in view of the steadily increasing importance of these interests. Clearly the idea of a commercial agent whose sphere of action would be merely confined to business matters is not at all acceptable to them."

"That is," I interjected, "they want not a mere Consul, but someone who shall represent them more after the manner of a diplomatist accredited by a first-class Power. Do I understand that the more dignified position of High Commissioner will carry with it any considerable modification or extension of the functions of the old Agent-General's Department?"

"It is rather the extension of already existing departments than the addition of new ones which is contemplated," replied Mr. Reeves. "The work of this office has doubled since I came here in 1896, as is shown by documentary evidence; and it constantly increases. The heaviest division is still the finance, and the execution of the very numerous orders of our different departments. Then last year we sent out two thousand assisted emigrants, suitable persons, each with at least fifty pounds capital; or, if I thought they were not likely to get work at once on landing, I insisted on their having more capital. A third-class passage by any direct line to New Zealand now costs an assisted emigrant only ten pounds, the Government and the steamer companies making up the balance.

"We shall continue, as before, endeavouring to correct misleading statements about New Zealand by speech and in the press; and a certain amount of advertising the Colony will be done. As you know, we had last year a successful exhibition in Liverpool; we are having one now in the Crystal Palace; and we are going to have another, chiefly of frozen meat, in Earl's Court.

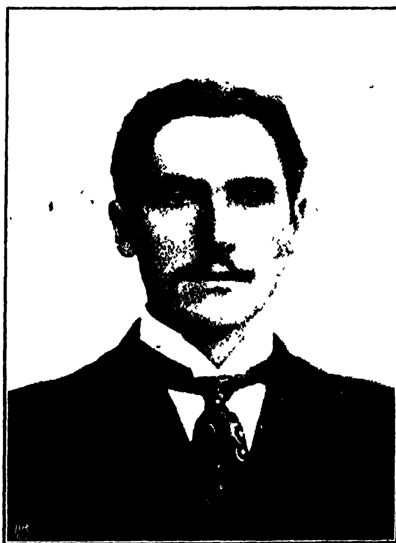
"I shall continue to take the greatest interest in and follow every detail of our Produce Commissioner's work. The Produce Commissioner consults with me daily, and works under my direct personal supervision. You cannot, of course, demand that a High Commissioner shall himself be able to judge whether a box of butter is up to standard, but he must take interest in details of trade and commerce, even though his chief work is more likely to be financial and diplomatic. For instance, he will have to attend conferences, such as the present Pacific Cable Conference, and possibly the coming Shipping Conference, called to consider the effect of recent Australasian legislation on shipping interests.

"I do not think it likely that it will be insisted on as a *sine quâ non* that the New Zealand High Commissioner shall be a native of the colony, though the kindly feeling of New Zealanders to one another will always prompt them to be glad when such a post falls to one of their own sons. But it is essential in any case that he must be a man able to speak and write with effect, a man with long experience and thoroughly trained and versed in the politics, public affairs and departmental business—financial especially—of New Zealand."

I suggested it was possible that so far-sighted a man as Mr. Seddon, taking, as he undoubtedly does, the keenest interest in Imperial politics, may have had in view in appointing a High Commissioner for the colony the probability of an Imperial Council shortly becoming a fact, so that when it did come New Zealand should have someone in London of sufficient status adequately to represent her interests.

Mr. Reeves agreed that this was not unlikely, though he had no authority to speak for Mr. Seddon. He was doubtless in much better health than he had been a year or eighteen months ago, and thus felt it his duty to stick to New Zealand, if he could, and not

leave his party in a Colony where, in spite of opposition, he has undoubtedly enjoyed the confidence of a majority for thirteen years.



"What is really your idea of an Imperial Council?" I asked Mr. Reeves.

"A Council always in existence, but of course not necessarily always sitting, consisting of the Colonial Secretary and, I hope, the Secretary of State for India, with the Colonial Premiers. Probably also it would be found advisable to attach to it the High Commissioners and Agents-General of the Colonies. If not on the Council, they would at least always be experts at hand to advise, obtain and furnish information, and consult with their Governments whenever any troublesome Imperial questions arose."

Such an Imperial Council Mr. Reeves has long held, in common with others who closely watch Imperial movements, to be one of the chief changes which the future, even the near future, must bring about.

XVIII.—THE NEW LONDON DAILY: MR. FRANKLIN THOMASSON.

IN the North Country the name of Thomasson has long been familiar in men's mouths as household words. It has been a synonym for staunch Liberalism, the munificent support of public causes, and the highest standard of personal honour and business integrity. When it was announced that Mr. Franklin Thomasson, who has for a dozen years past conducted a great business in Lancashire, had decided to found a first-class penny London daily paper, North Countrymen felt that the son was in the true line of succession to his honoured father. For the man who ventures a fortune in the cause of Liberal journalism would be a public benefactor at any time, but this is emphatically the case in times like those when the Isidore Izards of journalism are day by day extending their octopus tentacles over the British Press, and converting once independent organs of public opinion into mere gramophone attachments warranted to repeat, like so many metallic parrots, whatever nonsense may be dictated from headquarters.

Mr. Franklin Thomasson.

(Founder of *The Tribune*.)

I lunched just after Midsummer Day with Mr. Franklin Thomasson and Mr. W. Hill at De Keyser's Hotel, and heard from their own lips the story of the genesis of what, although still in embryo, promises to become one of the foremost newspapers of the world.

"I had an interest in the *Daily News* at one time, as you may remember," said Mr. Thomasson, in reply to my question as to how it was his attention was turned to journalism, "and my experience, although slight, led me to wish to have a newspaper. It was my idea at that time that my father might have taken over ·e *Daily News*, but it did not commend itself to him, ' the paper passed to Mr. George Cadbury. When reduced to a halfpenny, and a similar reduction ·rice of the *Daily Chronicle* left the Liberals [illegible]nny daily, I conceived the idea, after my ·of embarking in the enterprise of founding a new penny Liberal paper in London. About the same time I was brought into communication with Mr. W. Hill, who, I found, had worked out a scheme for the kind of paper I was thinking of. We put two and two together and *The Tribune* will be the result."

"Do you intend to edit the paper yourself?"

"Oh, dear, no; I am not even to be a member of the staff. I shall be a kind of *Deus ex machina*, to be invoked if matters should ever get into a snarl, but as a rule I hope I shall be as little of a nuisance as possible."

"What appointments have you made?"

"At present we have not made sufficient progress to enter into details of organization. We have a great deal of ground to cover, premises to take, machines to lay down. Meantime we are inundated with applications."

"We have had a thousand letters, one-third of which consisted of applications for editorial appointments," said Mr. Hill, "and many of them from very good men. There is sufficient journalistic capacity to staff two new papers without interfering with anyone."

"Have you decided upon the shape of *The Tribune*?"

"The size of the sheet will be that of the *Daily Telegraph*: the number of pages will vary, under and above sixteen, as the pressure of matter varies; the quality of the paper equal to that of the best penny daily paper in existence."

"Now for the distinctive features of *The Tribune*. Will you publish a programme, for instance?" I demanded of Mr. Thomasson.

"Well, we shall be a Liberal paper, a sane, sober, serious organ of public opinion. But we are to be first and foremost a first-class responsible news sheet. We intend to have the best of the news, the first of the news, and the bulk of the news. Although we shall be a Liberal paper, without phrases, we shall

be an independent Liberal organ, giving a loyal and reasoned support to the Liberal party in or out of office. We shall adopt the policy of the open arena for all sections. Fair play for all, the open door, and the best news service in London these are our watchwords; a paper which Conservatives will have to read unless they wish to get left, but a paper which will, in season and out of season, maintain the sound traditional principles of Liberalism to which the country has now returned, and which, after its recent direful experiences, it is not likely to desert in a hurry."

"Do you expect to come out before the General Election?"

"Tell me when the General Election will take place, and I shall be able to answer that question. We shall not worry or hurry, and we expect to issue our first number at the beginning of next year."

"I need not ask whether your Liberalism will be stalwart. Milk-and-water tepid Laodicean Liberalism is not possible to either of you?"

"We are not going in for any wild-cat politics. We have our views of course. But we shall walk soberly and quietly. We are for Home Rule of course. And equally of course we are for Woman's Suffrage. I do not see how any one can pretend to be a Liberal who is against it."

"Right you are," I exclaimed, "that is axiomatic. And I need not ask if you are for Free Trade, and against the twin devils Militarism and Protection."

Photograph by] [*Russell and Sons.*

Mr. William Hill.

"Of course. We shall find our place in the van on all political and social questions. But the chief point that we hope to make is that when men and women come down to breakfast they shall feel that they are not qualified to answer the question 'What's the news?' until they have seen *The Tribune*."

"Wherein do you think the penny *Tribune* will be differentiated from the halfpenny papers?"

"As the *Morning Post* and the *Daily Telegraph* are differentiated from the *Daily Mail* and the *Daily Express* so will *The Tribune* be differentiated from the *News*, the *Chronicle*, and the *Leader*. We think that the Liberals, who, it is now evident, constitute a great majority of the people, need an organ which appeals to those citizens who are not satisfied with a swift glance at the bold headlines of a newspaper broad-sheet or the mere tit-bits of miscellaneous happenings all over the world. We intend to make *The Tribune* not solely the best news sheet in London, but a sober, steady, resolute leader of public opinion, which will lead not only by expressing its own opinions, but by furnishing its readers with authentic materials for the formation of their own judgment."

"Foreign correspondence?"

"Will be a special feature. And what we shall do for foreign capitals we shall do also for the great provincial centres in our own country."

"Do you propose to publish a serial?"

"Not unless we can get a first-class serial that will be very different from most of the serials which appear in the daily press at present."

"And illustrations?"

"Only when they illustrate news. We are not proposing to start a picture gallery. We are primarily a newspaper, and illustrations will be used when they help to enable the reader to understand the letter-press."

"Will you have any provincial branches?"

"At present we do not contemplate such an extension of our work. We shall concentrate upon *The Tribune*. When that is a success we may launch out. But not till then."

"Where do you expect to set up your offices?"

"Bouverie Street, probably."

"When you are in your premises," I said, "I will come and have another talk."

"By all means," said Mr. Thomasson, "and then we hope we shall have something more definite to tell you than is possible to-day. At present we must of necessity confine ourselves to generalities."

"Till then, *au revoir*."

XIX.—THE SALVATION ARMY AS COLONISER: COMMANDER BOOTH TUCKER.

"KEEP your eye on Booth Tucker," said Lord Grey to me just before his departure for Canada. "That man has a born genius for colonisation."

So when Mr. Rider Haggard's Report on the Salvation Army colonies came out I telephoned to headquarters, and in a few minutes Commander Booth Tucker greyer than when I first met him fifteen years ago, and wirier, but mellower and riper, and more genial than ever—came into the sanctum at Mowbray House.

"I congratulate you, Commander," I exclaimed, "upon the first-class certificate which Commissioner Rider Haggard has granted the Salvation Army as a colonising agency."

"It's very good, isn't it?" said the Commander simply. "You see, Mr. Haggard took pains to see things for himself. He brought the eye of the practised expert to bear upon things as they actually are; he took no end of trouble, and you see the result. I travelled with him over part of the ground, and I must say I was immensely impressed with his careful and exhaustive method of examination. Nothing seemed to escape him. No detail was too trivial to be overlooked. Naturally we are all very pleased that, as the result of all that, he should have declared that the Empire could not do better than entrust us with the work."

"Then you saw a good deal of Mr. Haggard? What do you think of his scheme?"

"I think that he has drawn up the first definite business-like proposal for dealing on a large and scientific basis with the most serious problem of the day."

"Yes, but he imposes a tremendous responsibility upon the Army?"

"To which the Army is prepared to respond," said the Commander. "We are prepared to undertake to any extent that is humanly possible the application of the scheme, both in selecting suitable immigrants here and in planting them on the land. We are prepared loyally to work in with the Imperial and Colonial authorities, charging them solely actual salaries and out-of-pocket expenses"

"Beware! Beware!" I cried. "It is Constantine's fatal donatives over again. The Church is allying itself to the State, and the State is endowing the Church."

"No such thing," said Mr. Booth Tucker. "To act on that objection would be to subject the Salvation Army to a positive civil disability by refusing to allow its members to undertake to perform a secular service to the State because they belong to a particular religious organisation. We shall not receive a red cent for religion or for the souls of men. Only we do not see why you should grudge us out-of-pocket expenses for time and labour spent on the saving of their bodies."

"Do you mean to say that you would not be just like every other religious body that can get State support, viz., use its official connection to the advantage of its religious creed?"

"Deeds speak more loudly than words," said the Commander. "We have 11,000 persons in our social institutions in the United States. Many of these are Catholics. Most of the others are nothingarians. Not a priest nor a Freethinker has ever complained that we have brought any pressure to bear upon any body to join the Salvation Army. The pressure we do bring to bear upon them is to do right and to live according to their conscience."

"Well, that's a good showing," I said. "Now to turn to another side of the subject. Are there enough people ready to go out to the colonies if this scheme is put through?"

"I think that there are five millions, say a million families in this country, who would go to-morrow if the way was clear. They would not be missed here; they would all be immeasurably better off over yonder. Of course I do not propose even to try to take any such number. We are sending over 3,000 a year already, entirely off our own bat. And it is much better to begin on a small scale."

"How do your immigrants turn out?"

"Very well indeed. We have a very small percentage of failures. And I shall perhaps surprise you when I say that our experience goes to show that the man without money makes a better average colonist and a better average settler than the man with money."

"But is that true of city people? Would they go on to the land?"

"Most of our colonists in America were city people, taken from San Francisco and Chicago. The people of the cities are hungering for the opportunity of getting out of it. They are discovering there are no homes in the slums. And domicide is homicide. There are thousands who are wanting to get back into the country."

"And the city men work?"

"Yes, some who did not know a plough from a harrow have done very well. We plant an experienced man as a pace setter and object-lesson in the midst of a number of others. They soon learn."

"What, in a nutshell, is the formula of colonisation?"

"The landless man to the manless land. Put the waste labour of the world on the waste land by means of the waste capital, and thus convert this trinity of waste into a unity of production, convert misery into prosperity, and regenerate Society by renewing the health, the vitality, and the energy of our people."

"And that can be done?"

"Yes, under leadership. We said we could do it when the General published 'In Darkest England,' fifteen years ago. You have now the unanimous admission of everybody in the New World, from President Roosevelt and Lord Grey downwards, that we have indeed found The Way Out."

A Little Homily upon a Well-known Text

DEDICATED TO THE REV. DR. TORREY BY W. T. STEAD.

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."—*Jesus*.

THE LITTLE HOMILY.

IN the description given by Jesus Christ of the Day of Judgment, He is careful to explain that men will be divided at the last day of account not by what they said about God, or what they professed to believe about His Son, but by the way in which they acted towards each other. That is the evidential test. None of us has seen God at any time. It is nearly nineteen centuries since the Ascension. But we, all of us, live all our time among our fellow-men. And the supreme word of the Gospel is that our Lord regards every one of us, especially the weakest and the worst of us, as His *alter ego*, His representative, and whatever of good or ill is done to us, He regards as if it were done to Him. The practical working test to be finally applied to all of us is not what have we said or professed to say as to our faith in Christ, but how has our real faith in Him manifested itself by our treatment of the least of these His brethren. If we have been unjust to them, uncharitable to them, unkind to them, then it is entered to our debit, not as injustice, uncharity, and unkindness to Brown, Jones, or Robinson, but as injustice done to Jesus, uncharity and unkindness shown to Him. This, it will be said, is a truism. But it is a truism the truth of which is too seldom recognised when the time comes for its practical application.

WHY THIS HOMILY WAS WRITTEN.

I HAVE been led to deliver the above little homily because of a long correspondence which I have had this spring with the Rev. Dr. Torrey, of the Torrey and Alexander Mission, concerning the characters of two well-known Freethinkers—Thomas Paine of the "Age of Reason" and Colonel Ingersoll, the famous American orator.

ARE "INFIDELS" HIS BRETHREN?

This correspondence, of which I shall have more to say presently, raised continually in my mind during its progress the question whether "infidels" are regarded by our Lord as included among the least of these His brethren. It seems to me that they have at least as much right to be numbered in this category as the criminals in our gaols and the homeless tramps, to whose hunger and thirst and nakedness we are bidden to minister as we are bidden to minister to Christ Himself. If this be so, then I would put it kindly but with all earnestness to many good people, whether in their method of treating the unbeliever they may not be mishandling our Lord Himself. It is perfectly legitimate to denounce false doctrine and to pillory its teachers, but is it right to repeat lies about them?

HOW THE QUESTION AROSE.

The correspondence with Dr. Torrey came about in this wise. When Dr. Torrey was at Liverpool two years ago he appears to have committed himself to some variant of his favourite thesis—that infidelity and immorality are Siamese twins. He was thereupon challenged by a Liverpool Freethinker to say whether Darwin, Huxley, Tyndall, Haeckel, Morley and Bradlaugh were all immoral men. Dr. Torrey says that he "could not honourably dodge the question." He evaded it by riding off on a side issue, changed the venue to one where he thought he was on sure ground, and attacked the moral character of Tom Paine and Colonel Ingersoll. The exact words which he used on that occasion were not stenographically reported; but, again to use his own phrase, "The main facts stand." He attributed wickedness to his opponents, as he was careful to explain to a correspondent, "for the simple reason—in practical experience, by the confessions of countless men, I have found that immorality lay at the basis of their infidelity, and that when they give up their immorality they get that clear vision of truth that enabled them to see there is a God, and that the Bible is His Word."

He attempted to cover Tom Paine and Colonel Ingersoll with moral obloquy in order to discredit their judgment of the Bible. Such, at least, was the explanation which he gave when challenged on the subject in a letter written by him on October 20th, 1903, from Mather's Hotel, Dundee, to Mr. James, of Liverpool.

THE CHARGES AGAINST PAINE AND INGERSOLL.

I should probably have known nothing about this if there had not been put into my hand, as I was entering the Albert Hall on the opening day of the mission, a small but very effective pamphlet entitled "Dr.

Torrey and the Infidels," written and published by Mr. G. W. Foote, the well-known editor of the *Freethinker*. The challenge was clear and precise, and it was a few days later emphasised by Mr. Blatchford in the *Clarion*. Do the Christians of London, it was asked, condone or tolerate the libelling of Freethinkers as a legitimate method of Christian propaganda? As I had taken part in welcoming Dr. Torrey to London, I felt it my duty to clear myself, certainly, and Dr. Torrey, if possible, from so scandalous an imputation.

The particular immoralities which he laid to the door of these two eminent American Freethinkers, in support of his thesis that infidelity and immorality are Siamese twins, were understood by his catechist to be adultery in the case of Paine and assisting the circulation of obscene literature in the case of Ingersoll. What Dr. Torrey said in order to support his charge that Paine was indulging in immoralities after the usual fashion of Freethinkers, was to refer to what he described as "the commonly believed outrageous action" of Thomas Paine in "taking another man's wife with him to France and living with her." As to Ingersoll, he appears to have endorsed and repeated the statement of one Dixon, who had libelled Ingersoll by asserting that he was "paid by the publishers of obscene literature in America to support them in polluting the minds of youth."

THE TRUTH ABOUT PAINE.

Dr. Torrey was most unfortunate in thus condescending upon particulars. Mr. G. W. Foote, the editor of the *Freethinker*, in the pamphlet I have just referred to, at once pointed out that in both cases the falsehood of the accusation thus revived by Dr. Torrey had been demonstrated in American Courts. The "commonly believed outrageous action" of Thomas Paine in living with another man's wife was shown to have been the kindly hospitality shown by an old man of sixty-seven to the refugee family of his French benefactor. The only man who had ever imputed a shadow of obloquy to Paine in this connection went into the witness-box after Paine's death and solemnly swore that there was no foundation for his calumny. The over-zealous publisher who had repeated it was found guilty, in a criminal action, of slandering Mme. Bonneville, the "man's wife" in question, and was mulcted in a fine which was reduced to a minimum because, in the opinion of the jury, the libel appeared in a journal published in the interests of the Christian religion! Dr. Torrey, as will be seen from his letter quoted below, is very well aware that the charge of adultery was not only unproved, but was clearly disproved to the satisfaction of a Christian jury; yet in his zeal against the Freethinkers he could not resist the temptation of charging Paine with indulging in immoralities, adducing in proof of this accusation his "outrageous action" in "taking another man's wife to (or from) France and living with her."

COLONEL INGERSOLL AND OBSCENE LITERATURE.

The case about Colonel Ingersoll is, if possible, even stronger, because it is so recent, and the matter is one of Court record no farther back than 1893. The American law authorising a Post Office official to decide what is and what is not obscene literature places an arbitrary authority in the hand of an unknown censor which would not be tolerated for a moment in Great Britain. The Comstock law, as it is called, is so obviously capable of abuse that from time to time men who hold the faith which Milton held in the liberty of the press have protested against such absolute power being lodged in the hands of any official. If, at this moment, this unknown bureaucrat were to decide that the Song of Solomon and Shakespeare's poems were obscene, anyone who sent a copy of the Bible or of Shakespeare through the post would be liable to be sent to gaol on the charge of using the mails for circulating obscene literature. In a recent case which led to the tragic death of a friend of my own, the judge expressly refused to listen to any evidence as to the morality of the book in question. When the Post Office, he ruled, had decided that any publication was obscene, the function of the Court was limited to ascertaining whether or not an attempt had been made to send that book through the mails. This law arms a Post Office official with absolute power to place whatever publication he pleases on a far more terrible *Index Expurgatorius* than that of Rome. Its existence in a free country is a temporary anomaly and an intolerable anachronism. Colonel Ingersoll and the Freethinkers of America wished to amend the law. But Colonel Ingersoll was so extremely puritan in his detestation of obscenity in any shape or form that he actually resigned his vice-presidency on the Comstock Law Reform Committee because the majority wished to go farther than he thought desirable in forbidding any tampering with mail matter. He declared that he yielded to none in his desire to stamp out obscene literature. All that he desired was to prevent a law aimed at obscenity being abused so as to curtail the legitimate liberty of discussion.

HOW HE WAS LIBELLED.

His position was perfectly clear. Nevertheless, a Reverend Mr. Dixon did not hesitate to declare that Ingersoll was paid by publishers of obscene literature to support their efforts to pollute the mind of American youth. Upon this Ingersoll's patience gave way, and he brought his libeller into Court. Dixon in his defence did not even try to justify his charge that Ingersoll was paid by vendors of obscene literature, beyond referring to the well-known fact that Ingersoll had publicly advocated the amendment of the Comstock law, and was a notorious infidel.

So far, therefore, from the action of Ingersoll in this matter justifying any imputation upon his morality, the facts show him to have taken a very high moral line on the question. Ingersoll's own character is on

record. He was a Freethinker, an eloquent, audacious, profane, atheistic blasphemer. But he was not an immoral man. He did not aid and abet the circulation of obscene literature. His family life was one of idyllic purity and felicity, and so far from being an advocate of unlimited license in the circulation of obscene literature, he severed himself from his own colleagues and associates rather than follow them in advocating a liberty which he feared might tend to pollute the mind of American youth.

WHY I WROTE TO DR. TORREY.

Paine and Ingersoll were the two typical and conspicuous Freethinkers who were singled out by Dr. Torrey as notorious examples of the intimate and necessary connection which prevails between immorality and infidelity. It seemed to me absolutely unthinkable that Dr. Torrey could have publicly brought such foul accusations and insinuations against two such well-known public men, except in sheer and honest ignorance. Believing this, I ventured in all kindliness of spirit to call Dr. Torrey's attention to the fact that he had inadvertently done a gross injustice to Paine and Ingersoll, and appealed to him to take an opportunity of putting himself right with the public by making a generous *amende* to the character of men whom he had libelled, I was sure, unwittingly and in all good faith. To my intense surprise and regret Dr. Torrey did not respond to my appeal in the spirit in which it was made. It was only after a prolonged correspondence that I was able at last to extract from him a statement published below, which appears to be the nearest approach which Dr. Torrey is able to make towards an *amende honorable* to the man upon whose moral character he had cast so unwarrantable an aspersion.

DR. TORREY'S "STATEMENT."

Writing on Saturday, May 6th, Dr. Torrey set forth the reasons why he did not think it necessary to repeat the charges which he had actually made against Paine. But when on Monday the letter was brought to him to sign, he added the following postscript, which I reproduce, as he insists, exactly as it is written, although, as will be seen, three-fourths of it has nothing whatever to do with the only point which was in controversy, viz.—Did Dr. Torrey suggest that Paine lived in adultery with another man's wife, and, if so, was it true? Dr. Torrey now admits that this was not true; but he implies that when he charged Paine with living with another man's wife, he did not mean to suggest adultery! Upon that statement it is unnecessary to comment. Here is the voluminous postscript just as it was written:—

P.S.—Since dictating the above on Saturday and waiting for it to be brought to me to-day (Monday), I have decided that perhaps the shortest and simplest way out of the whole matter is to make a full and explicit statement of the charges made against Mr. Thomas Paine, which I believe to be true and to which I referred. I do this with great reluctance, for I cannot do it without showing Mr. Thomas Paine's character in a very unenviable light; but if you are honest you will have to bear me witness that I only do it under an extreme amount of compulsion exercised by yourself. In my letter of April 17th I said, "I am not willing to go into what I have reason to believe to be true, for I cannot do it without reflecting upon his character, and that I am not willing to do unless driven to it." I seem to be driven to it at the present time. I will try to make the statements so full and explicit that there can be no evasion or misrepresentation by enemies, if you see fit to put this letter into their hands.

The number of charges made against Mr. Thomas Paine by those who have sought to expose his character are seven. There are others, but I think it will be sufficiently full to state these seven.

1. That Thomas Paine on two occasions was dishonourably discharged from his office in the Excise.

2. That the cause of his discharge was, that while he himself was an Excise officer, that he at the same time himself dealt in and smuggled tobacco, and secreted thirty pounds entrusted to him by the Excise men.

3. That he put away his lawful wife without giving any explanation of the cause of his trouble with her, and afterwards on several occasions lived with the wife of another man, who followed him from France on his return to America, and that at his death he did not leave his property to his wife, who was still living, but did leave it to this woman and her children.

4. That his relations with this woman who followed him from Paris were positively immoral and licentious, and that, furthermore, his relations with her were immoral while they still lived in France, and that one of her children, "Thomas," had the features, countenance and temper of Paine—the implication, of course, being that he was Paine's son.

5. That while in Paris, about the time of publishing "The Age of Reason," he fell into habits of excessive drinking, that these habits were continued through a number of years, and that after his return to America resulted in unpleasant manners and dress. That this, along with other things, caused many of his old-time friends to withdraw their society from him.

6. That because George Washington, who in earlier days had been his friend and had shown him much kindness, felt compelled to withdraw his support from him in these later days, Paine accused Washington of treachery, and wrote a long and bitter attack, trying to besmirch Washington's military career, as well as his policy as President.

7. That Paine tried to stir up an invasion of England by Napoleon, and subscribed 100 livres in 1789 toward a descent upon England; and that again in 1804 he was rejoicing in the hope of such an invasion being made.

These are, perhaps, the principal charges that have been made against Paine. My opinion about the charges is as follows:—

Charge 1. Proven and undenied, a matter of record.

Charge 2. I do not think that this is proven. The charge is made by Oldys, one of the commissioners, but it does not appear in the official document. As far as the first discharge is concerned, the record is that he was discharged for neglect of duty by entering in his books examinations which had not been actually made; and as far as regards the second discharge is

concerned, the official document states simply that he had left his business without leave and gone off on account of his debts.

Charge 3. The third charge is, as far as I know, not denied by anyone who has ever investigated the matter at all carefully. It is sometimes obscured, or not mentioned by his defenders, but I know of no one who has written intelligently on the subject who has denied it--not even those whose defences of Paine have most distorted the facts, to give them a colouring favourable to Paine.

Charge 4. I don't regard as proven. Cheetham, who made the charge that Thomas had the features, countenance and temper of Paine, was sued for libel by the woman in the case, and she obtained a verdict against him. Of course, this does not prove that the charge was not true, for it is oftentimes impossible to prove to the satisfaction of a jury charges that may be true, but certainly sufficient evidence for regarding the charge as not proven. In support of the charge it is urged that Carver during Paine's lifetime wrote Paine a letter demanding the payment of moneys due him from Paine, and in the letter insinuated similar charges against Paine's character, and that Paine did not sue Carver for libel, but paid the moneys claimed; but even this does not prove that Paine was guilty. Many a man who is conscious of perfect innocence does not feel called upon to sue a man who makes false charges against him for libel. Furthermore, it is said that Carver did not stand by his charges when the libel case against Cheetham was tried. This, of course, does not prove that they were not true; but it certainly throws a suspicion upon them. It is further urged in proof that Paine's relations with this woman were not immoral, that her husband afterwards came to New York, where he and his family were reunited. This, of course, does not necessarily prove anything, especially in the light of the fact that this reunion was after seven years of separation, and after Paine's death. It is said, however, that his political relations in France were such that he could not get away until then; but this is exceedingly doubtful, as there was a constant going and coming during those years, even by persons who had been known as Republicans. It may be said that this charge against Paine has not been disproven; but no man is under obligations to disprove charges against them. It is the obligation of those who make the charges to prove them, and to my mind this particular charge against Paine has not been proven, and we are bound to believe him innocent of this particular charge until it is proven. The fact that Paine himself slandered George Washington, slandered the Bible and men of the Bible, and sought to bring bloodshed upon his native land, is not sufficient reason for believing insufficiently supported statements against him.

Charge 5. The fifth charge is admitted to be true by Paine's defenders as well as by his enemies. Some of them seek to obscure the fact, but are forced to admit it before they get through. For example, one writer who writes in defence of Paine says, "The special charges of drunkenness made by Cheetham and Carver are discredited by this proof of their character," and further on says, "Carver afterwards confessed that he had lied as to the drink," but this very writer further down says, "It is admitted, however, that the charge of drinking was not without foundation," and further on gives positive proof of the drinking habits of Thomas Paine at different periods of his life. In point of fact, Paine himself confessed to his defender, Rickman, that he had fallen into excesses in Paris. Mr. Moncure Conway, Paine's ablest defender, thinks that this refers solely to a few weeks in 1793, but his publisher, Chapman, at the trial in 1792, spoke of Paine's intoxication. It was "rather unusual," he says, for Paine to be drunk, but, he adds, that when drunk, he was given to declaiming upon religion. Ten years later, in 1802, a similar account of an after-dinner outburst upon religion is given by Paine's friend, Henry Redhead Yorke, who visited him in Paris, and speaks also of the filthy state of his apartment. In 1808 Paine's weekly supply of rum was three quarts. It is suggested, in order to explain this away, that he "appears to be kept alive by stimulants during one of his illnesses, and his physical prostration may account for the stimulants and for some of the slovenly habits." Joel Barlow, while saying that Paine had been neat in his dress "like a gentleman of the old school" at one period of his life, still seems to indicate "the belief that Paine's habit of drinking had excluded him from good society during his last years."

Charge 6. This charge is unquestionably true.

Charge 7. The seventh charge is unquestionably true.

Here, then, is the state of the case as regards Mr. Thomas Paine, as I understand it. It certainly leaves him in a very unattractive light, and shows him as an altogether unlovely man. But in spite of his erratic thinking, his utter unreliability as a statesman (one of his admirers has recently written of him as a "great statesman"), and his very reprehensible conduct, it is only justice to Paine to say that at an important crisis in the American Revolution a pamphlet by him played an important part in heartening the revolutionists, and if the separation of America from England was a good thing, then part of the credit for it belongs to Paine, though probably no such important part as he and his friends have claimed for him. He seems to have very much over-estimated his services, but they were not small. Furthermore, it is due him to say that he anticipated many of the so-called results of what its advocates delight to call "the new views of the Bible." If the destructive criticism of to-day, represented by the Graf-Wellhausen school of criticism, is true, and a real advance in Biblical knowledge, it is not more than fair to admit that on this point Paine was about a century ahead of them, for many of the points they most emphasise are found in Paine's writing. In fact, at a great religious congress in America, Rev. Dr. Howard Osgood, Professor at Rochester Theological Seminary, read at the Congress a statement of the positions held by these advanced critics, and then appealed to them and asked if it was not a fair statement of their positions. They replied, "Yes," that it was. Then he said, "I have been reading verbatim from Thomas Paine's 'Age of Reason.'".

Now, as to what I said about Paine at Liverpool. It is contained in the third charge given above, and which is proven. I think I may have also referred to the fifth charge, which is also proven; but it is a long time ago, and I am not sure on this latter point.

Now, in regard to the letters which it is alleged I wrote to

Mr. Cain and Mr. James. Even if I had written these letters—even if I had written the letter to Mr. Cain, which you, after having made so much of, have been unable to produce, the question in it is warranted by the facts in the case. In point of fact, intelligent infidels do not deny that Paine, after having put away his lawful wife, lived with another man's wife. It is true that it was not in France that he lived with her; and one of the reasons why I suspect the letter has not been written by me, nor dictated and signed by me, is because of the preposition "to." I don't think I have ever written or dictated that Thomas Paine took another man's wife with him "to" France. My thought has been that the woman came from France; and if I had written the letter, I do not think that I should have made such a slip; and if I had signed a letter dictated, I think I should have noticed this. Of course, it is a secondary point and of no consequence in the real issue, whether it was in France or whether it was in America; but it makes me doubt whether the letters are authentic letters from me, either written by me or dictated by me and signed. However, I have gone into the matter at length above—have let you know what I did say and have given you my grounds for saying it. As what I said was true, of course I cannot retract it, though I had no desire, as you have abundant proof, to make these statements again about Paine, true as they are. You have compelled it. If you feel called upon to publish this statement, I must insist that you publish it in full, and then there can be no misunderstanding, and such a long correspondence will not be necessitated again. If you question the truth of the charges which I have said were substantiated, I can tell you where to find the material to prove they are true.*—Sincerely yours,

(Signed) R. A. TORREY.

I have printed the only passages that bear upon the question under discussion in larger type and have underlined the decisive words. I say nothing about the self-satisfaction with which Dr. Torrey thinks he has shown Paine to be "an altogether unlovely man." The doubts which Dr. Torrey tries to throw upon his letters to Mr. Cain and Mr. James are mere quibbles of no importance. The letter to Mr. Cain was put into type and destroyed, the letters to Mr. James are in the possession of Mr. Foote, and can be produced. The authenticity of all the letters is indisputable. They bear "Dr. Torrey, his mark" on every line.

The moment I received this long and irrelevant disquisition about questions which I never raised in any shape or form, I wrote to Dr. Torrey saying how glad I was that at long last he had seen his way to repudiate the accusation which every one believed he had brought against Paine, and suggested that all that was necessary to put matters straight was that he should authorise me to publish the substance of the lines underlined above. This he refused, and insisted that if any reference was made to the matter in public, I should publish his statement in full. The responsibility for the publication of this statement lies at his door. In his own interest I deprecated it, but repeated efforts to induce him to accept the simple alternative having failed, I have no alternative but to bow to his decision. If any of my friends or of Dr. Torrey's should question the patient persistence with which I laboured to extricate Dr. Torrey from the difficulty in which he had entangled himself, or of the reality of his repeated refusal to be helped out of the mess, the correspondence in full lies at Mowbray House, and can be seen privately by anyone who cares to inspect it. The publication of the whole correspondence has been strongly urged upon me by my friends, and has been even more vehemently deprecated by the friends of Dr. Torrey. I have no objection to place myself at some disadvantage, seeing that thereby I save Dr. Torrey from appearing at a worse disadvantage still.

THE CASE OF COLONEL INGERSOLL.

With regard to Colonel Ingersoll, Dr. Torrey insisted that his charge was true because it was a matter of Court record. On referring to New York for copy of this record, it was discovered that the case had never been tried to the end, as in the preliminary stages the attempts made to defend the libel were either dismissed by the Court as immaterial or were manifestly inadequate to justify the accusation. Colonel Ingersoll having proved that there was no substance in the charge against

* It is beside the purpose of this little homily to enter at length into the various controversial questions raised by Dr. Torrey in the above statement. Mr. Moncure Conway has dealt with the whole subject once for all in his classic biography of Paine, and to that book I must refer my readers. I was in no way concerned with the general "loveliness" or otherwise of Paine's character. I only wished to persuade Dr. Torrey to admit that no one is warranted in suggesting or asserting that Paine lived in adultery with another man's wife. This, after infinite difficulty, I have succeeded in accomplishing, although, unfortunately, I failed to induce Dr. Torrey to express his regret that he had used language which could only, and as a matter of fact did undoubtedly, lead all who heard it to believe that he was charging Paine with adultery. "Living with another man's wife," when alleged as an instance of immorality, could only have one meaning, especially when it is emphasised by being placed in juxtaposition with his putting away of his own wife and his leaving all his property to the other woman.

Paine married twice. His second wife and he parted, no one knows why. No one even among Paine's worst libellers suggests that she had any reason of complaint against him. As for the other accusations, some are trumpery, others nonsensical, and none of them material to the main issue. If at one time of his career Paine drank more than was good for him, he but followed the example of the greatest statesmen of his time. To drink each other under the table was the custom in the best English society a hundred years ago, and Paine at his worst never drank as heavily as Pitt and Fox and most of their contemporaries. That Paine criticised Washington for leaving him in the lurch in Paris is true, and no one can blame him for doing so. As to Paine's stirring up Napoleon to invade England in 1789 (*sic*) by a subscription of 100 livres, that may or may not be true; but it does not prove that Paine was immoral. If Paine entertained hopes that the French would invade England, he shared the sentiments of many distinguished Englishmen of that time. That he rendered yeoman's service to the American Revolution is to be remembered by Englishmen with gratitude. For George III. was in the wrong and George Washington was in the right, and so say all of us to-day. As to his anticipation of the results of the Higher Criticism, that also should be placed to his credit. But all these are mere side issues.

him, was not vindictive enough to persist in the action. He had cleared his character, and he did not care for money damages. When I drew Dr. Torrey's attention to this and asked him to say simply yes or no to the question whether he was prepared to make the necessary *amende* to Colonel Ingersoll's memory, I received no answer.

METHODS OF BARBARISM IN RELIGION.

I have no wish to press hardly upon Dr. Torrey. He is an earnest man who has done, and I hope will continue to do, much good work. In my pamphlet on the Torrey-Alexander Mission I have gone out of my way to commend his work, to excuse his narrowness, and to secure for him a cordial welcome to London. I undertook the correspondence with the friendliest intentions, hoping to get him out of a mess into which he had blundered, as it seemed to me, in sheer ignorance. It is therefore with no personal animus that I am using this correspondence to illustrate the necessity for a little more of Christian charity, to say nothing of the secular virtues of justice and veracity, in our dealing with those who reject the Christian faith. Is it not time that the practice of slandering the unbeliever in the interests of the true religion was recognised as lying outside the frontiers of legitimate warfare? The Hague Conference, when it defined the laws of war, put a veto upon asphyxiating shells, expanding bullets, and the dropping of explosives from balloons. It seems as if the time had come to call a new Hague Conference of the Churches to place under a solemn interdict of the Christian conscience all attempts to prejudice the criticism of infidels by impugning their morality.

A CRUCIAL TEST.

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." If the character of Jesus Christ were to be treated with the same malignant desire to represent Him as "an altogether unlovely man," Dr. Torrey would be the first to exclaim in pious horror against the injustice, the lack of charity, and the malevolence which strains every point and revives every accusation, even when they are admittedly untrue, in order to place someone's character in "a very unattractive light." Yet if it be true that our Lord regards every action done to the least of these His brethren as if it were done to Him, what must He think of this polemic against Paine and Ingersoll? Is it probable that He would regard these uncharitable imputations and suggestions of false charges against these brethren of His as justified, or excused, or condoned, because they were professed unbelievers? Surely this is unthinkable.

PUT OUR LORD IN THE FREETHINKER'S PLACE.

Let us see how we should like it if some Sadducee were to deal with the character of Christ as Dr. Torrey has dealt with the characters of Paine and Ingersoll. A Mohammedan sent me a book some time ago in which the character of our Lord was mishandled much in the same fashion, and a very pretty mess he made of it. According to the teaching of the Scripture Christ was a man tempted in all points even as we, and being touched with a feeling of our infirmities, is pre-eminently capable of sympathising with those whose trials and temptations He shared. If so, He must take a peculiar, intense, sympathetic interest in the hard measure meted out to pioneers, heretics, blasphemers and atheists. Long before Dr. Torrey put Paine and Ingersoll through the mill of unjust and slanderous aspersion, the Dr. Torreys of the Sanhedrim put the Man of Nazareth through the same ordeal. If a fellow-feeling makes one wondrous kind, our Lord must feel exceptionally kindly towards these victims of Pharisaic zeal. For Paine and Ingersoll are assailed by the same weapons, subjected to the same aspersions, and misrepresented in the same merciless fashion as He was assailed and misrepresented by the orthodox of His time, and in their case, as in His, it was all done with the best motives from zeal for the truth of God. It was to "get right with God," according to their ideas of God and His chosen people, that the High Priests and Pharisees crucified Jesus, and the animus of their successors in our time against the blasphemers of to-day is still as keen. As the body of the heretic is safe from their attack, they take it out of his reputation with all the more vehemence.

DR. TORREY'S METHOD APPLIED TO JESUS CHRIST.

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Let us see, then, how it would look if it were done unto Christ as it has been done unto Paine and Ingersoll. If a heathen, or Moslem, or Freethinking controversialist were to adopt Dr. Torrey's method, we should have a result somewhat like this:—

The following is a full and explicit statement of the charges made against Jesus of Nazareth, which in His time were believed by many to be true. I make these charges with great reluctance, for I cannot do it without showing the character of Jesus in a very unenviable light.

The number of charges made against Jesus of Nazareth by those who have sought to expose His character are seven. There are others, but I think it will be sufficient to state these seven.

1. That Jesus was a man of uncertain parentage brought up in a disreputable neighbourhood, who was without honour in His own country, and who wandered abroad without visible means of subsistence, or even a place in which to lay His head.

2. That He was known to have held communications with the Devil in the wilderness, and was popularly believed to have cast out devils by His intimacy with Beelzebub, the prince of the devils.

3. That He was a winebibber and a glutton in His personal habits; that He paid little regard to the Sabbath day, or to the washing of hands; and that He publicly avowed a preference for publicans and harlots to the orthodox and respectable Pharisees and the scribes learned in the Holy Law of God.

4. That He was constantly in the company of publicans and sinners, and that He did not refuse the affection of loose women,

one of whom made a public scene by a shameless demonstration of her love.

5. That His affectionate relations with these women gave rise, in the profane history of later times, to grave imputations upon His character, and led some of His followers to omit from the Gospel record the story of His refusal to condemn a woman taken in the very act of adultery.

6. That He constantly spoke evil of the constituted authorities in the Church; on one occasion He created a public riot by attacking vested interests in the Temple, and made Himself so intolerable a nuisance in Jerusalem that the constituted authorities were obliged to arrest Him and send Him for trial.

7. That He was tried three times: (1) before the Sanhedrim, (2) before Herod, and (3) before Pilate, and, by their judicial verdict confirmed with enthusiastic unanimity by the populace, He was executed as a blasphemer against God's Holy Law, and for treason against the Roman Empire.

These are, perhaps, the principal charges against Jesus of Nazareth. My opinion about these charges is as follows:

Charge 1. Proved and undenied—a matter of record.

Charge 2. I do not think this is proven. The charge is made, and it was no doubt believed at the time, but such superstitions need not seriously occupy our attention at this time of day.

Charge 3. On this point I would prefer to leave my judgment in suspense. But I must admit that He was not a total abstainer. He claimed to have miraculously added to the supply of wine at a wedding feast. His conduct was such that it was popularly said of Him, "He hath a devil, and is mad." His saying about the publicans and harlots is on record.

Charge 4 is, as far as I know, not denied by anyone who has ever investigated the matter at all carefully. It is sometimes obscured, or not mentioned by His defenders; but I know no one who has written intelligently on the subject who has denied it not even those whose defences of Jesus have most distorted the facts to give them a colouring favourable to Jesus. The incident referred to is on record. The woman actually washed His feet with her tears as He sat at table, and dried them with the hairs of her head.

Charge 5 I don't regard as proven. No such imputation was ever brought against Him by His contemporaries. But His affectionate relations with such women were certainly not in accordance with the ethical principle which later found expression in the apostolic injunction to avoid the very appearance of evil. And even if not criminal, it was open to misconception, and therefore deserves our severest condemnation. Nevertheless, although I have blamed His intimacy with a woman of notoriously immoral character, I do not think that His guilt has been actually proven. This being the case, the fact that Jesus was a blasphemer who had the presumption to make Himself equal with God does not justify us in accusing Him of an offence the proof of which is not legally complete.

Charge 6. True and not denied. It is a matter of court record.

Charge 7. Also undisputed. He was executed by the Roman authorities put in motion by the highest and best representatives of the Jewish nation, and the sentence was immensely popular. He was crucified as a malefactor between two thieves. All this is on official record.

Here, then, is the state of the case as regards Jesus of Nazareth as I understand it. It certainly leaves Him in a very unattractive light, and shows Him as an altogether unlovely man. But in spite of His erratic thinking and His utter unreliability as a teacher, and His very reprehensible conduct, it is only justice to Jesus to admit that at an important crisis in the history of Israel He foretold the destruction of the Temple, and so may have helped to bring it about. If the final dispersion of the Jews and the extinction of their nationality was a good thing, some small share of the credit should be put to His account. Furthermore, it is due to Him to say that He anticipated many of the so-called results of what its advocates delight to call the new views of the Bible. If the so-called advanced thought of the present day is true and a real advance in Biblical knowledge, it is not more than fair to admit that on this point Jesus was about nineteen centuries ahead of our advanced thinkers, for many of the points they most emphasise are found in the sayings of Jesus. In fact it is sometimes difficult to distinguish some of the utterances of Jesus of Nazareth from the latest statements of the socialists, rationalists, and advanced thinkers of our time. Especially in His leniency to the Sadducees, and His harsh, violent, and persistent denunciation of the scribes and Pharisees, He could hardly be outdone by the most advanced Freethinkers of our day.

"WHY THIS OUTRAGE?"

Of course, this grates horribly upon every devout reader. That is why I print it. I want it to grate. And why? Because it enables us to feel something of the pain and the sorrow which Christ must feel when He sees how Dr. Torrey and his kind deal with the least of these His brethren. If it is right to treat Paine and Ingersoll in the harsh, carping, uncharitable, malevolent fashion illustrated in the above letter, then it is equally right to apply the same method to the character of the Founder of our Faith. That, at least, was His declaration: "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

THE REAL JESUS.

But I have another reason still for printing it—which is altogether independent of this particular controversy. When I submitted the proof of this article to some pious friends—notably to a well-known clergyman of the Church of England—I was overwhelmed with entreaties not to publish it on account of the injury which such a statement *à la* Torrey of the case against Jesus of Nazareth would do to the young and to the weaker brethren. These remonstrances convinced me that the publication of these charges is absolutely necessary, if only in order to recall to the minds of His own followers in what guise their Lord in His divine wisdom deemed it best to reveal Himself before the eyes of men. They have so idealised and adored the Deity in Christ that a sharp reminder of the kind of man He appeared to be causes them to feel as one of them wrote to me—*e.g.*:—

A SOLEMN REMONSTRANCE.

Forgive me for writing in plain Saxon terms, for I do not know that I have ever in my life seen words put into print so calculated to demoralise the public mind, and to turn them away from real gospel truth, as those in which you formulate (as from the enemy's side, of course) charges against the character of Jesus Christ our Lord and Saviour.

Surely it will occur to your mind, if you re-read your sermon, that you are putting into the minds of your readers things so diabolical, so horrible, I must even say blasphemous, as to uproot the very foundation truths of Christianity in many minds, and make them think of Jesus Christ in a manner that not even His most determined enemies could wish to represent Him. . . . Surely the words *suggestio falsi* must occur to your mind, and should warn you, as a public writer of name and repute, against publishing language so demoralising as to be worse than the Atheists have ever published. I humbly pray you, as a Christian man, to withdraw these terrible ideas from the public gaze. I cannot tell you what I have felt in reading them, and if a man of my age and Christian experience think them so bad that I cannot think I can ever remove them from my brain, what think you will be the result when you send them out wholesale to the young and inexperienced? I solemnly declare in the sight of God that I believe if these things go out broadcast you will have done more to injure the Christian cause than any other man in a Christian generation.

THE REAL GOSPEL OF THE REAL CHRIST.

Any doubt that I may have entertained as to my duty disappeared on reading this impassioned plea. I am very sorry to pain any man; but this letter makes it quite unmistakably clear that its earnest and pious writer has never before had even a glimmering notion of the kind of man Jesus of Nazareth deliberately chose that He would cause Himself to appear before the eyes of His contemporaries. He decided to manifest Himself not as a respectable, orthodox, conventionally pious citizen, but as a man of no repute, who consorted with publicans and harlots, and was put to death as a blasphemer. Surely, with all reverence, it must be admitted that He knew His own business better than respectable clergymen like my correspondent, who actually imagine that the mere printing of things said of Jesus by His contemporaries will "uproot the very foundation truths of Christianity in many minds." On the contrary, I am lifted up with a glad hope that the printing of these things may at long last open the minds of conventionally pious folk like my correspondent to the fact that when our Lord set about rooting Christianity in the mind of the human race He decided that it was necessary for Him to live a life, the inevitable and indisputable result of which was to cause the good, respectable, orthodox people of His day to say those things about Him which, when my correspondent sees them in cold print, seem so "diabolical, so horrible and so blasphemous." After this they may go on to discern more clearly than they have ever done what "real gospel truth" really is—as Christ conceived it and set it forth when He was a homeless wanderer, despised and rejected of men.

I do not need, I hope, to make formal protest against the inevitable slander that I am placing Paine and Ingersoll on the same level with our Lord. Everyone who reads this homily knows that I do no such thing. I only claim them as the least of His brethren, and as such entitled to the same just, truthful, charitable treatment that Christ Himself had a right to expect when He manifested Himself to us as a man among men. To denounce this as profane seems to me to prove that my critics have never realised the truth of the incarnation, and by their lack of understanding deprive the Christian Church of its most effective appeal to the heart and reason of mankind.

INFIDELITY AND IMMORALITY.

As to the general thesis to which Dr. Torrey clings with such pathetic tenacity—the alleged connection between unbelief and immorality—it is only necessary to say this: we may believe most firmly that the loss of the supernatural sanction for morality will, in time, tend to immorality. But that is a very different thing from suggesting, as is so often done, that all infidels are immoral men, and that if they abandoned their vices they would become orthodox Christians. As a matter of fact, men and women also—who, as the result of much searching of heart, have regretfully come to believe that the old doctrine taught them at their mothers' knees is no longer tenable, are often found to be more punctiliously moral in their private lives than multitudes of Christians. They have lost all else, and they cling the more passionately to the ethical remnant of their early faith. It is, indeed, so marked, this lofty morality of many Freethinkers, that Mr. Kegan Paul, writing in the interests of the Church of Rome, did not deny it. He admitted it, and sought to explain it. The Freethinker of to-day, he said, is like a rosebud severed from its parent stem and taken indoors. It blossoms sooner, and is a beautiful rose in the vase while its fellow rosebuds left on the bush have not ventured to reveal their beauty to the outside air. But, said Mr. Kegan Paul, the rosebud that is severed from the parent bush bears no seed. The Freethinker may be morally faultless, but he is too often the mule of ethics that engenders nothing. He seldom has, and his children still more rarely have, the propagandist fervour, the zeal for souls, the instinct of conversion that enable the Christian Church to survive as a power for righteousness for century after century.

A PARTING WORD.

I have done. If, in attempting to apply what seems to me to be the plain and manifest meaning of the teaching of Christ to the question at issue between Dr. Torrey and the Freethinkers, I have done any injustice to Dr. Torrey, I stand condemned in my own eyes and convicted on the principles which I have applied to him. But I am not conscious of having set down aught in malice, and I have suppressed much that others have urged me to publish. I have said enough to clear myself from all complicity in what seems to me an un-Christlike way of preaching Christ. It is not a case of preaching Christ and Him crucified, but of preaching Christ in such a way as to crucify Him afresh and put Him to open shame.

LEADING ARTICLES IN THE REVIEWS.

THE WAR TO GO ON: DRY LIGHT ON THE PRESENT SITUATION.

THE *Fortnightly Review* this month publishes two articles on the present situation in Russia and Japan which throw a ray of clear, dry light upon the fond hopes that have been entertained as to the prospect of peace. The result is disillusion. Each of the writers of these articles is well qualified to speak concerning his own side of the subject.

TRUTH ABOUT JAPAN'S DEMANDS.

MR. ALFRED STEAD, who has invariably shown himself to be well informed as to the calculations and aspirations of Japan, makes a statement which is absolutely fatal to any chance of peace.

INSISTENCE ON THE INDEMNITY.

He says that the Japanese, who, as yet, have not occupied any Russian territory, are absolutely determined to insist on an indemnity of at least £100,000,000. Not only so, but we are further told that when the peace negotiations were set on foot, Japan was assured that there was no question of her giving up her essential demands, including the indemnity:—

The one vitally essential point is the question of the war indemnity, which the Japanese are determined to have from Russia, and which is a bitter pill for the Russians to swallow. For Japan it is a *sine quâ non* that Russia shall treat with her on an absolute equality, wiping out for ever the contemptuous "little yellow monkeys" epoch. It is for this reason that so much stress is laid upon the payment of an indemnity, openly acknowledged to be such and not concealed under specious pretences and make-believes.

Lustige Blätter.]

The European Ox and the Japanese Frog.

The frog is puffed up with pride, as in Æsop's fable; but what if he doesn't burst after all?

The fact that no Power has ever yet been paid an indemnity which is not in occupation of its enemy's territory seems somewhat strangely to be overlooked by the Japanese.

THE JAPANESE TERMS.

Japan has only modified her terms of peace in one article. She may waive her demand for the interned Russian warships. The terms of Japan are now as follows:—

The absolute evacuation of Manchuria by the Russians, and the handing back of the provinces to China; the cession to Japan of the Russian lease of the Kwantung Peninsula, with possibly a reversion to the conditions of the peace terms after the Chinese War; the cession of the entire Manchurian railway to Japan, and its handing over to an international company; the Russo-Chinese Bank to be regarded as a Government concern, and all its concessions disallowed; a free hand for Japan in Korea, and no Russian interference; the transformation of Vladivostok into a commercial port, and the prohibition of dockyards or Naval stations in the Far East. The island of Sakhalin is to be ceded to Japan, together with fishing rights along the coasts of the Ussuri Province and Kamschatka. Russia must pay an indemnity of at least £100,000,000, and this sum may increase if the war be prolonged.

Mr. Alfred Stead remarks, with unconscious irony, "The moderation of Japan's demands is their most remarkable point!"

A NEW MONROE DOCTRINE FOR JAPAN.

In addition to these "moderate demands," he warns the European Powers to prepare to take a very back seat in the Far East:—

Japan's paramountcy, after the recent sea-battle, carries with it as an inevitable corollary the proclamation of a new Monroe Doctrine for Eastern Asia. Just as the United States has taken the American hemisphere under her wing to protect it against European aggression, so Japan will take the Asiatic Powers which are still independent, and give them her support to progress along their own lines. The new Monroe Doctrine will not be formally declared; the case of Russia in Manchuria is a clear enough sign-post to the world. Hands off China, Korea, and Siam is the watchword of the day, and Japan is able to enforce her Monroe Doctrine more efficiently than can the United States. Germany is safe in Kiao-chau, but it would be well not to try and absorb the Shantung province. The new Monroe Doctrine may well be equally as annoying to Europe as is the attitude of the United States to South America, but it

is in no manner to be construed into a world menace. It is simply a matter which has to be accepted, and in the future there will be a new and strange morality observable in the dealings of the Great Powers with Far Eastern nations.

"New and strange," no doubt, but whether it should be called morality or immorality is open to question.

THE EXPECTED INDEMNITY.

In the *Nineteenth Century* Mr. Eltzbacher out-Herods Herod by making out the following bill which Japan will present to Russia :—

The minimum of Japan's actual expenditure for the war and the financial losses which she has suffered through the war are as follows :—

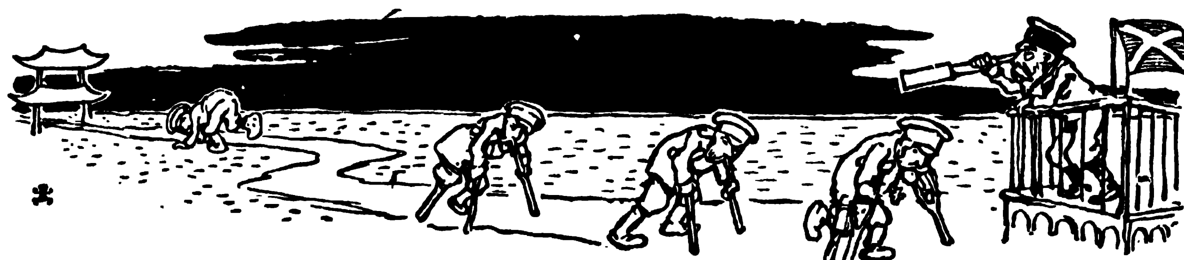
Moneys raised for the war by loans and otherwise	£116,500,000
Compensation for partly and wholly disabled cripples and for widows and orphans . ..	30,000,000
Compensation to civil population for damages suffered through mobilisation, loss in trade, etc.	15,000,000
Wear and tear of war material, liquidation of the war, and various expenses.	20,000,000
Total	£181,500,000

The foregoing sum of £181,500,000 appears to be the minimum which Japan may be expected to claim from Russia, provided the war be immediately brought to a close. But Japan is perfectly entitled to demand considerably more than her war expenditure. The German war in France cost Germany £64,000,000, and she charged France £200,000,000. A hopeless war is a very costly luxury, even for the richest country, and Russia should remember that every day adds about £500,000 to the bill which Russia will eventually have to pay to Japan.

TRUTH ABOUT THE RUSSIAN SITUATION.

THE well-known writer "R. L." contributes to the *Fortnightly Review* a letter from St. Petersburg, which enables us to form some idea as to the futility of the expectation so confidently indulged in by the Japanese champion, that Russia is resigned to the inevitable.

NO CHANCE OF PEACE.



"R. L.," writing concerning the prospect of peace, tells us that—

Hope has outstripped faith. While there is no party whatever in Russia which desires peace at any price, there is no party which believes that Japan will offer acceptable terms. The attitude of the Liberal Party changed on the day Mr. Roosevelt's message appeared. Since the battle of Mukden it had clamoured loudly for peace, and, as the Tsar's advisers seemed stubborn on war, no reservation was made as to terms. When peace glimmered on the horizon, all was subordinated to the question, Would Japan offer bearable terms? The anti-war newspapers one and all hinted at impossible humiliations, and, like the Reformers' Congress just concluded at Moscow, began to talk of making the continued war, rendered inevitable by Japan's greed, a national affair.

Though the Ministers and official advisers of Nicholas II. have been in favour of peace since the fall of Port Arthur, it is known that only two have the courage to advise payment of the price which peace entails. M. Witte, and the supposed maker of the war, the Viceroy Alexeieff, who, after vainly offering his resignation, now says boldly that there is no more Far East so far as Russia is concerned, and that the dream, dissipated as the result of his own support of MM. Besobrazoff, Abaza and Co., must be abandoned for ever. The pessimists argue that the very nature of Russian Governmental ways militates against peace. The war, they say, can be continued, though inefficiently, by inertia, whereas the conclusion of peace demands wits and wills.

The autocracy, we are warned, is still tough. The loss of the fleet produced no serious effect in Russia :—

Those who regarded the victories of Japan as providential machinery for dragging the Russian people along the painful road of emancipation have not been much encouraged by the latest development.

Jugend.] [Berlin.

The Tsar on the Tower.

Stoessel in the front, then Grippenberg and Niebogatoff, and behind Kuropatkin, walking backwards, the only thing he can do.

THE PROGRESS OF LIBERTY IN RUSSIA.

What is still more remarkable in "R. L.'s" letter is the evidence it affords that, despite all drawbacks and difficulties, the Russian people are, under the firm but tolerant sway of General Trepoff, establishing the foundations of liberty. I commend the following passage to those who are hopeless of any change for the better in Russia. The writer, remember, is by temperament a pessimist. But even he is constrained to say :—

Russia, despite temporary set-backs, has marched farther during the last six months than during the preceding forty years. In practice, the Press has secured a large measure of freedom. Though the Press Commission has not yet finished its work, and though M. Buluigin, working behind its back, has practically secured for himself unrestricted power to suppress any newspaper, the written word is freer than it ever was before save under the brief *régime* of Prince Sviatopolk-Mirsky. The newspapers of St. Petersburg and Moscow boldly discuss Constitutional projects, denounce the bureaucracy, publish official secrets, and discount the appointments and dismissals of Ministers, going even so far as to reprint a story made in Germany that certain Russian Ministers were to be put on trial for offences in con-

nection with the war. The right of public meeting, though forbidden both by law and by administrative precedent, has similarly been acquired in fact. Liberty of conscience, unlike these other liberties which have been taken practically by *force majeure*, now exists by law. To crown these the Government has been obliged to hurry on the project of national representation promised in the Buluigin Rescript of February 18th. An entirely new Russia has sprung into being.

A PESSIMIST'S OPTIMIST PREDICTION.

The mass of Liberals in Russia, he tells us, are united in demanding what they call "a New Zealand Constitution":—

It is easy, no doubt, to assume that Russia is now entering upon a death-struggle from which the Tsardom must either emerge triumphant or be swept into the abyss. But it is hard to discern anywhere the factors likely to operate in that dramatic way. Revolution, of course, is a possibility. But what may be predicted with much more safety is a long-drawn-out struggle in which, as the mass of the people, still asleep, awake to civic ideas and consciousness of power, the Tsardom, realising its increasing weakness, will make concessions, each grudged and unsatisfactory, but all in the end amounting to the full Constitutionalism which the most advanced political parties now demand.

GERMANY AS DIABOLUS.

THE WHOLE CREED OF THE GERMANOPHOBISTS.

THE *National Review* for July once more sets forth the faith that is in it as to the essentially diabolical nature of the German Empire. In the "Episodes of the Month" and in a paper on "British Foreign Policy" by A, B, C, etc., we have an exposition of the Germanophobists' creed, which takes as its starting-point the assumption that the German Empire is the very devil. That this is not too strong a phrase will be admitted by the editor, who himself uses the word "devilish" to describe the foreign policy of Germany.

"WHO FILLS THE BUTCHER'S SHOP WITH LARGE BLUE FLIES?"

To Germany's sinister influence is, of course, attributable the fall of M. Delcassé. That is an old story. But it is a novelty to learn that it was the German Bismarck who is responsible for the fall of Mr. Gladstone in 1885! Bismarck, we are told,

was anxious, in 1885, to drive the late Lord Granville from the Foreign Office. His efforts, owing to the pusillanimity of Mr. Gladstone, were successful. His persistent hostility to Lord Granville induced Mr. Gladstone and his trembling colleagues in the inner circle of the Cabinet to welcome that defeat in the House of Commons in 1885, which enabled them to escape from the responsibilities of Government. For years past the intrigues against M. Delcassé have been guided by German diplomacy.

It was probably the German Emperor who lured the Norwegians into revolt. It is admitted that this is a matter which "it will be difficult to prove for the present." But

the Kaiser certainly has his eye on the splendid, and, to England, menacing harbours on the Atlantic coast of Norway.

It is also insinuated that Germany wanted to interfere in the Boer War:—

During the war in South Africa tentative efforts were made to form a coalition against this country, but the temper of the nation and the strength of the British Navy paralysed the malignity of the statesmen and rulers engaged in those sinister intrigues. The history of those cabals has not yet been entirely revealed.

The Japanese war is all Germany's doing. The Russian Government,

acting under German advice and dominated by sinister influences at St. Petersburg, instead of following the counsel of England, chose to adopt a policy of adventure in the Far East.

WAR WITH GERMANY CERTAIN!

A, B, C tells us that "however much we may moan and groan, war is ultimately certain to break out between Germany and England unless Germany gives up her attempt to acquire naval supremacy, or unless the old spirit of the English nation passes away":—

The plain English of that matter is that besides maintaining the Navy in its present condition England must possess a highly efficient and adequate Army which should be relatively as powerful an instrument of war as the army which Wellington commanded in the South of France in 1814 and to which he bade farewell at Bordeaux.

THE KAISER'S PLAN OF CAMPAIGN.

When the Kaiser went to Morocco it was the first move towards war with England:—

It is all-important for Englishmen to appreciate the critical international situation deliberately created by Germany, because although in the first instance fire has been opened upon France, who will probably prove to be fully able to take care of herself, there can be little doubt but that Great Britain is the ultimate objective of Kaiser Wilhelm's present campaign. In a word he seeks to force France into a fighting alliance with Germany against Great Britain, who is to be compelled to provide "compensation" to the former Power for the lost provinces of Alsace-Lorraine, while Germany as the predominant partner of the combination is to acquire our "place in the sun" of which we are deemed utterly unworthy by the modern Charlemagne.

EGGING RUSSIA ON TO WAR WITH ENGLAND.

Was there ever such a Devil in all the world? The Oracles of the *National Review* go on to assert:—

We do not yet know the whole story of the efforts of the Wilhelmstrasse to turn the critical situation created by the war to account; but we may be sure they were ingenious and insidious. At the crisis of the North Sea outrage the German Emperor was confident of achieving his purpose. He did his utmost to inflame that incident; indeed, there are solid grounds for believing that he exhorted the Tsar, by telegram, to resist British pretensions, and pledged himself to uphold the Russian cause in the event of a conflict. If Germany supported Russia, how could France remain neutral? That was the argument in Berlin.

REJOICING IN RUSSIA'S OVERTHROW.

But although the Kaiser failed in this intrigue, in which he was ignorantly but diligently supported by most of the Germanophobist papers in this country -

As a European Power, Germany desired that Russian military power should perish in Manchuria, and at once rid her of the nightmare of "a war upon two fronts," and enable her to bring France to heel.

"THE EUROPEAN BULLY."

Kaiser William keenly awaited the psychological moment at which he could safely step forward as the European bully. The hour struck with the battle of Mukden, which reduced Russia to the position of a *quantité negligeable*. Morocco was selected as

a suitable field for the display of German power, not only over France, but also over Great Britain and Russia.

By an elaborate press campaign he twice brought about the resignation of M. Delcassé:—

M. Delcassé's second resignation (June 6th) was accepted. Cabinets are not composed of heroes; but we must remember, in justice to the French, that this devilish plot had been craftily contrived, and that the mass of the nation had not been educated up to regard Morocco as a vital interest.

Germany revelled in her triumph, and the promotion of the Imperial Chancellor, Bulow, from Count to Prince on the same day as the resignation of M. Delcassé, was regarded as measuring the triumph of German over French diplomacy.

HIS DESIGNS UPON HOLLAND—

Not content with the partial success of his efforts in converting France into the humble vassal of Germany, this wicked man has his eye upon Holland:—

The methods used for the destruction of Dutch independence will be difficult to meet. The first proposal which has been already made is that there should be a Postal Union between Germany and Holland; this to be followed in due course by a Customs Union; and finally by a Naval Convention.

—AND ON CONSTANTINOPLE.

A Prince von Donnersmarck, who is represented as a mouthpiece of the Kaiser, thus lets another cat out of the bag:—

The *dernier mot* of the question raised by Germany will not be uttered at Fez or in Paris. Russia, frustrated of her hopes in the Far East, is henceforth going to turn her ambitions towards Constantinople. It is there that the real piece, of which the Morocco incident is but a prologue, will be played. The protagonists will be Russia, Germany, and England. A great nation like France may find in this formidable conflict of interests the opportunity of reviving her glorious military and diplomatic traditions. The moment is therefore ripe to subordinate everything to the army and navy;

i.e., a French army and navy under German control.

A still more terrible mouthpiece, Dr. Ochtsemann, who sailed the seas with the Kaiser, explained to the *Temps* that:—

Morocco was "a mere incident in the general *ensemble*, which extended far beyond the affairs of the Sherifian Empire," and comprised such questions as the subject of neutrality at sea. "Will France and Germany, who are in an identical position towards England, maintain their former regulations and get them recognised? Or will they accept those of England, which will be tantamount to rendering a war in distant seas impossible for them?" Morocco was a mere starting-point. "What we all want in Germany is an understanding, a *rapprochement* with France."

That is to say a *rapprochement* based on an anti-English alliance.

WANTED, A GREAT ANTI-GERMAN LEAGUE.

The problem for England, therefore, is how can she restrain the dangerous tendencies of Wilhelm II.?—

In the first place, there are Prussia's partners in the German Empire, such as Saxony and Bavaria, and in the second place, Germany's allies in the Triple Alliance, viz.. the Emperor Francis Joseph and the King of Italy. Will they not intervene and save Europe from the Potsdam Peril, which is an infinitely greater menace to the well-being of the civilised world than the Yellow Peril, the Anglo-Saxon Peril, or the various other spectres which have been conjured up by a diseased imagination? Great Britain's attitude has been clear and unequivocal throughout the Morocco crisis, and it is satisfactory to know that German efforts to misrepresent British policy in Paris have recoiled upon their authors. France has loyally fulfilled her engagements regarding Egypt, and we shall do no less concerning Morocco, and we are inclined to believe that the present manœuvres, so far from separating England and France, will only tend to consolidate the *entente cordiale*. If there be any constructive statesmanship in Europe, we should see the formation of a great League of Peace embracing all those nations who do not covet their neighbour's goods. The crisis calls for combination. If may be France's turn to-day, but it will be our turn to-morrow. Every capital in Europe, from Christiania to the Hague, from the Hague to Madrid, from Madrid to Budapest, and from Budapest to St. Petersburg, is jointly and severally interested in policing the devouring ambitions which centre in Potsdam.

What a pity it is the *National Review* does not add Prophet Baxter to its staff. It is evident that the great red dragon of the apocalypse can be none other than the German Empire.

MATERIALISM DETHRONED BY SCIENCE.

BY MR. W. H. MALLOCK.

IN an ingenious and subtle paper in the *Contemporary Review*, entitled "From Matter to Mind," Mr. W. H. Mallock revels in demonstrating with infinite pains that Science has demolished the ancient Materialism of which it was supposed to be the chief priest. He points out that—

In proportion to the completeness with which we assent to the doctrine that the mind is material, it will become evident that conversely matter must itself be mental. If mind be organised matter, matter must be unorganised mind.

It is impossible in the brief space at my disposal to follow his exultant exposition of the fallacy of Herbert Spencer's hypothesis. But the following sentences afford some idea of the drift of his argument. He says:—

It is reasonable, on the most strictly scientific grounds, and according to the evidence of the driest of our scientific thinkers, to regard the religious instinct, taken in connection with the other faculties of man, as supplying a possible clue to the hieroglyphics of the physical universe.

Religious "need" as the mind-side of certain physical combinations, may thus become, as it were, the Rosetta Stone of the universe, by whose aid the heart as well as the intellect of man will gradually spell out the secret of its personal relation to the whole.

Again he says:—

What is the primary fact to which Science has at last conducted us? To a substance (ether) which is at the same time alike in all its parts, and yet exhibits in the similar parts innumerable varieties of behaviour. The moment we carry our simplification of causes to its completion, and apply our conception of homogeneity to the universe taken as a whole, our Science confronts us with a contradiction in thought, which is just as absolute, and indeed of just the same kind, as that which exists between the doctrines of determinism and free will in theology. Therefore the fact that two beliefs are incompatible, so far as our own reason is concerned, does not and cannot prove that they may not both be true; for if it did, the logical conclusion would be that, since everything involves a contradiction, nothing exists at all. Thus, he contends, Science is forced by its own principles to liberate religious thought from some of its logical difficulties, and at the same time to unite with it in regarding the physical universe as ultimately a mental, an appetitive, and an intellectual fact. We have an extended omnipresent cause which, though everywhere absolutely alike, produces with its like parts a multiplicity of different effects.

RUSSIA: "GHOST, GHOUL, DJINN, ETC."

THE FANTASTIC RHETORIC OF MR. CONRAD.

THE *Fortnightly Review* gives the first place to an article by Mr. Joseph Conrad, entitled "Autocracy and War," apparently published for the purpose of affording a signal illustration of the superlative nonsense a clever writer can render readable. It is overdone, however. The first few pages seem plausible, the middle provokes incredulity, and the end of it makes one marvel that such inconsequent folly can find a place in a first-class Review. If Mr. Conrad had merely confined himself to abuse, no matter how intemperate, of the Russian system of government, it would have been the ordinary kind of invective which profits nothing, and proves, if possible, even less.

INDICTING A WHOLE NATION.

But nothing will content him but that he must take up his indictment against the whole 100 millions of fellow human beings who were born subjects of the Tsar. He declares that

> An attentive survey of Russia's literature, of her church, of her administration, and the cross-currents of her thought, must end in the verdict that the Russia of to-day has not the right to give her voice on a single question touching the future of humanity.

Most people would have thought, until they read this oracular utterance, that Tolstoi's voice was listened to with more respect throughout the whole round world than that of any of Mr. Conrad's own countrymen, but, of course, they would have been mistaken. But Mr. Conrad's authority to speak with such dogmatic assurance would be increased if we had any evidence that he has made "the attentive survey." Presumptuous ignorance, brawling unashamed in the market place, and displaying the phylacteries of the Pharisee, is never a pleasant spectacle, and Mr. Conrad ought to be ashamed of himself. Note that Dr. Dillon, in the current *Contemporary Review*, remarks that, "Genuine love of peace and a large capacity for altruism may be hoped for among the contributions of the Russian people to the common stock of culture."

A DANIEL COME TO JUDGMENT INDEED.

Mr. Conrad sets himself in the first part of his essay to prove, not merely that Russia is temporarily crippled, but that she has never been strong. All the ablest statesmen in Europe, including Napoleon and Prince Bismarck, despite his epigram on his ring, who have regarded the Muscovite Colossus as a formidable reality, were fools and blind. The mighty Empire of the North, against whom five nations went to war in 1854, which for generations has been the bugbear of our Russophobists, and which even in its infancy shattered the Grand Army of Napoleon, is only "a fantasy of a madman's brain, . . . a figure out of a nightmare seated upon a monument of fear and oppression." What a pity it is that European statesmen had not Mr. Conrad to explain to them, with his wisdom, how farcical were their fears! Even now, when Russia is defeated by land and sea, Mr. Balfour and Lord Kitchener are pouring out more and more millions to defend India against this phantom which, even before the Japanese war, was a cipher. Clearly, Mr. Conrad should call at Downing Street without delay.

"GHOST, GHOUL, DJINN, OLD MAN OF THE SEA." (THRICE.)

The style of this fervid hot gospeller can be seen from the following passages :—

> For a hundred years the ghost of Russian might overshadowing with its fantastic bulk the councils of central and western Europe sat upon the gravestone of autocracy, cutting off from air, from light, from all knowledge of themselves and of the world, the buried millions of Russian people.
>
> This dreaded and strange apparition, bristling with bayonets, armed with chains, hung over with holy images, that something

Puck] [Tokyo.

Our Warlike Cabinet Ministers.

> not of this world, partaking of a ravenous Ghoul, of a blind Djinn grown up from a cloud, and of the Old Man of the Sea, still faces us with its old stupidity, with its strange mystical arrogance, stamping its shadowy feet upon the gravestone of autocracy, already cracked beyond repair by the torpedoes of Togo's fleet and the guns of Oyama, already heaving in the blood-soaked ground with the first stirrings of resurrection.

Then, again, Nicholas I. and Nicholas II., he tells us, have fallen victims

> each after his kind, to their shadowy and dreadful familiar, to the phantom, part Ghoul, part Djinn, part Old Man of the Sea, with beak and claws and a double head, looking greedily both East and West on the confines of two continents.

Yet a third time he repeats his ghoulish refrain, when in the last sentence he says :—

> For the use of those who gaze half-unbelievingly at the passing away of the Russian phantom, part Ghoul, part Djinn, part Old Man of the Sea, and wait half-doubting for the birth of a nation's

soul in this age which knows no miracles, the once famous saying of poor Gambetta, tribune of the people (who was simple and believed in the "immanent justice of things") may be adapted in the shape of a warning that, so far as a future of liberty, concord, and justice is concerned: "*Le Prussianisme—voilà l'ennemi!*"

THE LOGIC OF THE ALARMIST.

This last declaration brings us up with a round turn. All through the article we were bidden to exult in Japan's victories, because the Japanese campaign has fulfilled "its true mission, which was to lay a ghost. It has accomplished it. The task of Japan is done; the mission accomplished: the ghost of Russian might is laid." But at the end of the article we are bidden to tremble because the disappearance of the Russian Ghost, Ghoul, Djinn, Old Man of the Sea, etc., leaves the German, very real, rapacious, eagle master of the situation. Mr. Conrad declares that Germany—

is a powerful and voracious organism, full of unscrupulous self-confidence, whose appetite for aggrandisement will only be limited by the power of helping itself to the severed members of its friends and neighbours.

Russia weakened down to the second place, or Russia eclipsed altogether during the throes of her regeneration, will answer equally well the plans of German policy—which are many and various and often incredible, though the aim of them all is the same: aggrandisement of territory and influence, with no regard to right and justice, either in the East or in the West; for that and no other is the true note of your *Welt-politik* which desires to live.

The disappearance of the Russian phantom has given a foreboding of unwonted freedom to the *Welt-politik*.

But if "Le Prussianisme" is the enemy so far as a future of liberty, concord and justice is concerned, we should wring our hands in despair rather than fling up our cups in triumph over the exorcism of the Russian Ghost, Ghoul, Djinn, Old Man of the Sea, who, however shadowy a nightmare, did exercise a salutary check upon the German *Welt-politik!* So obvious is this that in another paper in the same review even Japan is represented as sharing the anxiety of England, France, and the United States that her victories should not so disturb the international equilibrium as to make Germany supreme. "Russia's weakness has been sufficiently demonstrated, yet she can be of value in restraining the much more pressing danger presented by the Germans."

TO ARMS! TO ARMS! YE BRITONS.

WHAT THE RUSSIAN DEFEATS COST BRITAIN.

THE magazines are full of articles setting forth the enormously increased expenditure which the collapse of Russia entail upon the allies of Japan. Russia being down, the equilibrium of Europe is destroyed. It is true that we are now spending £50,000,000 a year more upon our Army and Navy than when the Liberals left office, but, to believe the alarmists, we must spend still more if we do not intend to become German vassals.

INCREASE THE SHIPBUILDING VOTE.

Mr. Robert Machray, in the *Nineteenth Century*, declares that:—

for every two German battleships three British battleships at least should be built, though four would be much better. The stationing of a British Fleet in the North Sea, strong enough to defeat and destroy any German Fleet which could be opposed to it, is vital to the very existence of Great Britain, for a defeat at the hands of Germany would inevitably lead to the prompt and comparatively easy landing of a German Army in Scotland or the North of England, and against it we could hardly hope to prevail.

INCREASE THE ALLOWANCE FOR MAINTENANCE.

Sir William White, in the same Review, says:—

When the capital value of the fleet was about one-third that of the completed ships we now possess, it was found necessary to spend about one million annually on repairs and maintenance, and there was reason for thinking that amount insufficient. From 1887 to 1898 the capital value rose from thirty-seven millions to ninety-seven millions, and the aggregate first cost of completed ships rose in about the same ratio, but the annual expenditure on maintenance only varied from about one million to one million and a half.

It is obvious that with the great increase in the fleet and in the cost for maintenance it is no longer possible to devote anything like the same amounts to new construction in the dockyards.

DRILL EVERY SCHOOLBOY.

The Duke of Argyll in the same periodical insists:—

We must make the most, not the worst, of the mixed mob of soldiers, trained and untrained, that we possess. We can at all events educate more officers, and we can, without offending the constituencies, make our artillery far more formidable.

What can we do more? Perhaps the answer may be found for the immediate future in the introduction of drill and miniature rifle-ranges in all schools which may be influenced by Government action and Government grants. The boys like drill, and Volunteer corps have long been popular among the boys of most of the large public schools. Why should there not also be tactical classes—good military instruction—and a field day occasionally with the Regulars of the district?

Cooking, camping, marching, shooting, and the practice of drill can all be taught if an hour a day be given.

MAKE READY 500,000 MEN TO HELP FRANCE.

Mr. Demetrius C. Boulger declares that Germany

is girding up her loins to crush France whilst Russia is too crippled to come to her aid, and before the British people fully arouses itself to the necessity perhaps of sending half a million men to support the French at Châlons.

The Belgians mostly fear that in any war the temptation to the French to move down the Meuse Valley and secure a fair field for offensive operations from Liége may prove irresistible. The dominant wish now is to keep out the French instead of the Germans, as in 1870 and 1875. This desire is increased by the conviction that whilst a treaty with Germany would deter the French from crossing the frontier, a similar arrangement with France would not restrain the Germans, and might very probably impel them to commence an invasion.

There are, however, many well-informed persons who are convinced that a secret treaty was concluded, seventeen or eighteen years ago, between these neighbours as a consequence of the belief referred to that England might no longer be implicitly trusted.

How, then, can England act expeditiously and effectually for the preservation of peace? There is one course that, if taken promptly, may ensure it, and our influence, properly exercised, might avail to secure its adoption. The peace of Europe may be saved, not in Paris or London, but in Vienna. The restraining influence of the Austrian Emperor may effect what no other agency could accomplish. The essential preliminary for any action by Austria would have to be an assurance from this country that it would not swerve a hair's breadth from its determination to stand by France and all those who sought to restrain the German Emperor by word and deed.

GERMANY AND ENGLAND IN WORLD-POLITICS.

A GERMAN PAN-ISLAMISM.

IN *La Revue*, of June 1st, Alexandre Ular has a long article on the subject of German World-Politics and the Mussulman World, in which he sets forth the German idea of World-Politics, and especially a German Pan-Islamism.

THE CINDERELLA OF EUROPE.

The World-Politics of the Great Powers, to which humanity already owes four immoral and bloody wars, is, he says, a German invention, if not of the thing, at any rate of the name. By its nature it is the most dangerous sport. To conceal her antipathies and the idea of conquest which dominate her, Germany voluntarily poses as the Cinderella of Europe, pretending that she is lamentably frustrated on every occasion in her efforts "to develop naturally" by her crabbed neighbours, whereas all she aspires to is "a little spot under the sun," a place, however, where her happy rivals—notably England and France—are already in proud possession.

Is the world big enough for two Englands? In this simple question is resolved the problem before Germany, and it is this general idea, this conviction that, sooner or later, the world will prove too little for two Englands, which must be borne in mind in considering Germany's World-Politics in its present pacific and economic form. What Germany is endeavouring to do is to create her "Indian Empire" in China and her "Egypt" in Mesopotamia.

THE PROTECTOR OF THE FAITHFUL.

The power of the British from Cairo to Delhi, continues M. Ular, rests entirely on the more or less amicable relations of Britain with the Mussulman world, and the consolidation of the immense British Empire extending from the Sahara to the Himalayas can only be possible when England has induced the Mussulman world to accept her as her real protector. The decline of the power of the Sultan is, therefore, to England's interest, and, in consequence, it is stated England has clandestinely supported all the revolts and all the struggles for independence of the various peoples under the uneasy Turkish yoke. The risings which for years have made the Arabian peninsula the theatre of incessant wars give England to hope that one day the Holy Cities of Islam will be released from the rule of the Sultan. In view of this event England is accused of being engaged in the most astute intrigues to get the Khedive recognised as the protector of the Holy Cities, so that the Sultan may lose what remains to him of his religious authority, to the profit of England, who would thus direct the Khedive. The realisation of such a scheme would indeed enable England to view with tranquillity the machinations of her rivals, and English influence in Syria, Asia Minor, and Mesopotamia would soon kill the glorious future of the German Empire with her plan to extend a commercial artery from Rotterdam to the Persian Gulf by way of Constantinople.

BRITISH AND GERMAN RIVALRY.

Whether the Kaiser is in sympathy with the Sultan and his Government is doubtful, but the enormous advantage which friendly relations between Germany and Turkey would give the Teuton Empire over the Anglo-Saxon would be a sufficient excuse for the friendship of the Kaiser with the Sultan. But it must not be forgotten, it will be essential for the maritime route of Germany in the Eastern Mediterranean not to be absolutely at the mercy of her rivals. When the importance of this question has been admitted, it will be evident how inauspicious to the aspirations of German World-Politics is the intrusion of another Power than Germany even into the interior of Morocco. The Moroccan problem, in fact, is as great from the German point of view as the Turkish problem. The real question at issue, however, is not Morocco, but Turkey, Egypt and India; not the Maghzen but Islam; not Tangiers but the Mediterranean; not France and Germany, but the question of leadership pending between Germany and England.

How incompatible are the dreams of the two Powers is only too manifest. England is fighting arduously against the aspirations of Germany in the Islamic world, and every day Germany sees the edifice of her dreams totter more disastrously. But she is protesting against her exclusion from Morocco, she is counselling the Sultan in Arabia, she is working for the unification of the Mussulman world, and she will rise against the English occupation of Kouéyt on the Persian Gulf.

THE HOME RULE MOVEMENT IN ARABIA.

A FORMER Consul, writing in *La Revue* of June 1st, has a note on the National Movement in Arabia and the decline of French influence in Asia Minor.

AN ASIATIC ARAB EMPIRE.

For some time the attention of the world has been attracted to a national Arab movement in Asia Minor, and a short time ago the Supreme Committee of the National Arab Party addressed a manifesto to the Arabs and the Foreign Powers declaring that it is now desirable for the Arabs to shake off the Turkish yoke and found an independent Arab Empire which should include all the Arab countries of Asia, extending from the valley of the Tigris and Euphrates to the Isthmus of Suez, and from the Mediterranean to the Gulf of Oman.

FRANCE'S OPPORTUNITY.

The writer thinks this the psychological moment for the French to turn their thoughts to Arabia instead of choosing this very time to abandon almost entirely their religious protectorate in Asia Minor, thus leaving the field free to all other nations. France ought at once to endeavour to regain her influence in this part of the Mediterranean, where, he asserts, she has many friends and warm partisans, and a name universally

respected. It is not a question of war or armed conquest, but simple pacific penetration.

Syria and Mesopotamia, he continues, are on the second route to India, and a few great canals in connection with the railways would make these countries remarkably prosperous. He feels certain that for years the English have been intriguing in the Persian Gulf and in Arabia, but the policy of Lord Curzon does not seem to have met with favourable results. In the extreme hinterland of Aden the people, he is sure, would never accept British rule.

HOW FRANCE LOST EGYPT.

The principal organisers of the Arab Patriotic League are supposed to be in Europe, but it may safely be affirmed that the Arab National Party is in close relations with the Arabs of Asia Minor, and a happy moment has been chosen for issuing the manifesto. Now is the time for France to act in Asia Minor and in Arabia. To-morrow it will be too late, and what happened in Egypt will be repeated in Asia. It is all very well to cry out against England's action in Egypt; it was the abstention of France which forced England to act and reap the advantages of her action. France ought not to let Morocco hypnotise her. The monopolies and the markets in Arabia are reserved for the European States which will come to the aid of the Arab nation. England, no doubt, hopes to be remembered, but France has claims quite as good. Meanwhile, the French Catholic protectorate may pass into other hands, and the awakening of the Arab nation may bring disastrous consequences to France if she does not recognise the situation and endeavour to profit by it.

THE MASSACRES OF CIVILISATION.

THE EXTERMINATION OF THE NATIVE AUSTRALIANS.

CAPTAIN H. V. BARCLAY, who for the last twenty-eight years has been employed in surveying Northern Australia, contributes to the *Australasian Review of Reviews* for May a very sad but very important paper describing the doom that has befallen the natives of the Northern Territory, north of the Macdonnell Range, in a fertile region capable of carrying thirty million sheep.

THE ABORIGINES AS THEY WERE.

Such is, Captain Barclay says -

the country in which the Central aborigines have for untold generations resided, a bold, active, intelligent people, who may well be termed the Highlanders of Australia in comparison with the coastal tribes or those inhabiting less favoured parts of the continent. Here they must have had happy hunting grounds indeed, until disturbed by the ever fatal advance of the white man, which seems certain to improve them off the face of the earth unless prompt steps are taken to ameliorate the condition of the remaining remnant. Looking back a quarter of a century, strong tribes existed where now there are but a few isolated, and too frequently childless families to be found, and, sad to relate, this unhappy state of affairs is co-existent with the advent of civilisation, in the diluted form in which it has percolated through to these far distant regions.

No person having acquaintance with the Australian blacks in their native state can fail to be impressed by their invariable kindness to children. During my experience I have never seen a blow given, nor yet heard an angry word, and I am assured by many persons who have resided amongst them for years on the stations that this is ever the case. Surely an enviable trait in the character of these wild children of nature.

THE INVASION OF CIVILISATION.

The cause of their rapid diminution and physical degeneration is undoubtedly due to their contact with the white man. Central Australia has been inundated by three distinct waves of "civilisation" which have left their traces only too plainly behind. The first occurred during the construction of the overland telegraph line, when the country in the vicinity of the line was overrun by an army of labourers, bullock-drivers, and camp followers, who appear to have worked their own sweet will so far as the aborigines were concerned.

The second advent of "civilisation" came with what was known as "The Ruby Boom," in 1887-88—a heterogeneous mob of prospectors, navvies, runaway sailors, spielers, Afghan camel men, in short, all who could be tempted with the glittering prospect of realising speedy fortunes by the simple process of picking up precious stones in abundance.

Lastly, the Arltunga gold boom in the Macdonnell Range caused a fresh influx of the adventurous, bringing in its train, as usual, a large floating population, which, mushroom like, appears on these occasions to spring into being from nowhere, and to return whence it came with equal celerity.

What could a mere handful do in the face of a floating population scattered broadcast over thousands of square miles, without means of communication other than arduous journeys with camel or horse? The consequence was unbridled licence and immorality, resulting in the communication of hereditary diseases to the aborigines, which spread in all directions amongst them, owing to their own laws compelling the men of each tribe to take their wives from certain others sufficiently removed in relationship. It is remarkable, and perhaps providential, that the native women now are usually barren.

WHAT SHOULD BE DONE?

The remnant can hardly be saved, although a few find employment on the farms, where—

in some cases the women act as boundary riders also, and, I am informed, do the work better than the men, being more careful.

The official "protectors of aborigines" have been unremitting in their efforts to improve the status of the people in their charge, and have been successful in abating many of the worst phases of the Aborigines question, but the means at their disposal are ridiculously small when it is remembered that the aborigines are the real owners and possessors of the land.

Captain Barclay suggests that—

the Government should place a fair supply of rations, such as tea, sugar, flour, and good tobacco, at the disposal of the station representatives for distribution when, owing to shortage of water or food, they are reluctantly compelled to fall back on the resources of civilisation.

The trifling cost might with propriety be defrayed by Government setting apart a reasonable proportion of the rental derived from the lands of the people whom they have ousted without recompense.

Were this done, and every capable and willing white *woman* (and there are many such to be found in Central Australia) appointed a "Protector of Aborigines," armed with all the powers conferred by law, the existing abuses would rapidly disappear, and "White Australia" no longer have cause to fear comments from the civilised world on the treatment accorded to their black fellow-countrymen at least, so far as Central Australia is concerned.

THE *Sunday at Home* has an editorial on a Sunday in Madrid, with portraits of the Protestant pastors in that city; a paper on Malta, "The Land of the 'Barbarous People,'" who showed St. Paul "no little kindness"; and one on the Canal-boat population in London.

WHY DELCASSÉ FELL?

(1) BY M. DE PRESSENSÉ.

IN the *Nineteenth Century* M. de Pressensé explains, from the French point of view, why M. Delcassé fell. He says:—

What we cannot forgive in M. Delcassé is not to have known his mind, not to have chosen between a policy of friendly talk and a policy of silent indifference, and to have maladroitly given pretext and occasion to what we call in France a *querelle d'Allemand*. When the crisis came, when Wilhelm the Second went to Fez and talked big, it was not too late to put him in the wrong, to take back the interrupted method of negotiations, and to free the way to peaceful action in Morocco.

M. Rouvier promised, first, the immediate return to neutrality in Indo-Chinese waters, and we got it; secondly, the immediate opening of friendly conversation with Germany; but here he was, and we were too, baulked by the obstinacy of his colleague.

I do not think English opinion would have tolerated for an hour a Minister who, without offering any denial, any explanation, any answer, before the only legitimate instance, Parliament, after having left the head of the Government to save him by making specific promises in his name, should have immediately taken up his intrigues, should have put into use in a most dangerous crisis the force of inertia, and should have secretly got the tribe of officious journalists and of sympathetic correspondents to trumpet his greatness, to traduce the policy of his critics, and to serve his obstinacy. Time went by. No progress was made. The advocates of M. Delcassé proclaimed that it was all the fault of Wilhelm the Second, and everybody was tempted to believe it. All at once it was discovered that, while Germany without doubt brought "no milk of human kindness" to sweeten the negotiations, it was M. Delcassé who deliberately persisted in keeping silent.

A question was threatened in the House, it was put to him in the Cabinet. Brought to bay, he let the secret out. This small man was mad enough to look serenely, even joyfully, on the fearful prospect of a great Continental war on such a pretext. Facts came out. It was proved that, not satisfied with imperilling the peace of the world by putting under his feet the orders of Parliament and the instructions of his colleagues, he negotiated secretly with the Vatican at the time when relations were broken and when France was engaged in divorcing Church and State.

Such unforgivable mistakes are surely sufficient reason for the dismissal of a politician.

(2) HOW THE GERMANS REGARD IT.

Mr. Austen Harrison, the son of Mr. Frederic Harrison, who is Reuter's Agent at Berlin, sends to the same *Review* the German view of the French Minister's fall. He says:—

M. Delcassé had ended by flouting Germany; Morocco was about to become a French colony, America was pro-English, and the Spanish plans had proved abortive. England had quite recovered her position in the world. This was the plight of Germany when suddenly the collapse of Russia was revealed to Europe. With consummate skill the Emperor William gauged the situation, and acted accordingly. He went to Morocco. In one day he completely changed the whole military situation.

For the plain fact is, German military opinion no longer fears France. Moreover, from the most martial people in Europe the French have become eminently industrious and peace-loving. Their fighting zest has gone.

All this the German Emperor was fully aware of. He immediately began to browbeat France, who, it must be admitted, was in a very delicate position. Gradually the situation grew worse. Germany continued silently arming, but still M. Delcassé showed no sign of relenting, and things rapidly drifted into a dangerous state of tension. The crisis came suddenly. About the time that the bride of the Crown Prince was making her state entry into Berlin, the German Government was officially informed of certain movements of French troops near the frontier; regiments had been brought up to their full strength, and officers' leave had been stopped. The reply of Germany was practically an ultimatum. For a couple of days the situation was really critical. Germany demanded that the massing of troops on the frontier should cease, or it would be regarded as an unfriendly act; and to her great relief the long-wished-for reply was ultimately flashed across the wires. M. Delcassé was to retire. All immediate danger was averted. Count Bülow was elevated to the dignity of Prince, and by sacrificing M. Delcassé France proclaimed to the world her peaceful proclivities.

For the continuance of M. Delcassé in office would have forced France to face the eventuality of war with Germany, who, whether bluffing (as some suppose) or not, gave France clearly to understand that further evasion on her part to enter into negotiations with Germany regarding Morocco would jeopardise the peace of Europe. And so France decided to meet Germany half-way. That is the reason and the meaning of M. Delcassé's fall.

THE HOHENZOLLERN WORLD-EMPIRE.

THE OVERLORDSHIP OF GERMANY.

THE ecstasies with which our Jingoes hailed the defeat of Russia are proving shortlived. That the effacement of Russia means the ascendency of Germany has been rudely brought home to many of them by the dismissal of M. Delcassé at the bidding of the Kaiser. Dr. Dillon, in the *Contemporary*, moralises upon the consequences of the paramountcy of Germany *more suo*. He is bitter and sarcastic, but there is the usual substratum of truth in what he says. Dr. Dillon tells us quite frankly:—

The effective barrier to Germany's policy of aggression has been swept away, and with it one of the mainstays of the world's peace. And to remedy that state of things ought to be the primary aim of our foreign policy in the present and in the future. The Hohenzollern World Empire is no longer a mere dream. Politicians note with amazement how suddenly that ambitious aim, long scoffed at as chimerical, has come to be reckoned with as one of the contingencies of the near future.

Europe will henceforward be policed and watched over by Germany, and the only contribution she will expect from her *protégés* is that they shall adjust their foreign policy to her interests, which are, of course, those of peace. But what they must be prepared for is the intermeddling in every international and even purely national question, not merely of the German Kaiser or his Government, whom we are wont to look upon as lovers of peace, but also of the Prussian War Party whose aims the Kaiser and his Government are said to disavow, deprecate and act upon.

If one may judge by the present temper of the French Chamber, henceforth no Secretary of State for Foreign Affairs will be tolerated in France whose policy or person is disagreeable to the German Kaiser, the German Chancellor, or the German War Party.

Whenever the differences between France and Germany are settled, and they will probably be solved diplomatically by the representatives of the two interested Powers, Southern Morocco will, it is alleged, be ear-marked for the Fatherland.

It is more difficult to remove Germany's grievance against England. For—

the main interest of Germany was, is, and will be, the perpetuation of the immemorial feud between England and France. To end that once for all would be to do Germany a permanent and a vital injury. That, it is affirmed, is the standpoint of the Kaiser's Government.

Our Jingoes, in short, have exchanged the rule of the Russian King Log for that of the German King Stork, and we wish them joy of their bargain.

NEW ZEALAND AND ITS DEPENDENCIES.

By an Ex-Governor.

The *Journal of the Royal Colonial Institute* for June prints the Earl of Ranfurly's paper on this subject, which, although there is nothing very new or striking in it, nevertheless presents the best and most up-to-date summary of the past history and present conditions of the Colony that has yet appeared. New Zealand moves so fast, and its experimental legislation so alters affairs there, that it needs to be written up afresh every year or two. Lord Ranfurly, certainly one of the most successful and popular Governors the Colony has had, touched very little on anything but hard, demonstrable facts in his paper. During his seven years' administration, which ended last year, trade increased continuously and steadily. In every respect they were years of fatness. Tonnage of vessels entering the ports rose from 687,000 to 1,100,000, and that of vessels clearing at the ports rose even more in proportion. Bank deposits rose from £14,290,000 to £19,000,000, and those in savings banks (Government and other) from 5½ to 8¾ millions:—

Lean years (says Lord Ranfurly) may come, but so far there appear no signs of bad times. The Colonists are extending the range of their industries, creating new ones or developing old ones which had received too little attention. The increase in the total value of exports is due not only to the wool and frozen meat trade, but also to industries of recent origin or of recent development in the islands, the dairy industry being one of the principal assets in this respect. In old times, when wool alone was the export, a fall meant disaster; now New Zealand is not dependent on the one commodity.

The Government not only owns but works the railways, telegraphs, and telephones; it owns wide tracts of land; purchases compulsorily, if necessary, large estates, cuts them up into small holdings, and grants leases in perpetuity to settlers, to whom it will also lend money at low interest. Life assurance is within the scope of its energy, and about half the assurance business of the Colony is effected through Government agents. A Tourist Department is maintained with offices at the principal centres, where the sportsman may learn on the best authority and without cost the most suitable spots for fishing, shooting, or stalking; this department has several hotels, which have been erected and opened for the benefit of the traveller.

By way of more closely uniting New Zealand to the mother-country, Lord Ranfurly suggests, not preferential tariffs, but wider and better teaching of history—a system of lectures on the empire and the men who have made it, suitable for boys and girls of fifteen or sixteen.

In the discussion on the paper, Mr. T. A. Coghlan called attention to the "extraordinary position" that in twelve years New Zealand had paid off debts to outside investors (the everlasting "living-on-borrowed-capital" argument of those who wish to discredit the Colony) to such an extent that borrowed money is now but an insignificant part of the country's accumulated wealth. While this repayment was going on, the value of property increased 50 per cent., that is, from 150 to 222 millions. "This achievement," concluded Mr. Coghlan, "is a notable one for a population whose numbers are still considerably short of a million."

INTERNATIONAL LABOUR LEGISLATION.

The most important article in the *Correspondant* of June is one in which Léon Polier studies the question of International Protection of Labour down to the Berne Conference.

The writer thinks the idea of international protection of workers is in a fair way to be realised. Last year France and Italy signed the first labour treaty, and the recent Berne Conference of delegates from the leading nations with a view to make more uniform all national labour legislation is another step in the right direction. The writer endeavours to show what has already been done, what is going to be done, and what may be expected in the future from such a movement.

A WORKING MAN'S INITIATIVE.

Logically, the first appeal in favour of an international agreement for the protection of labour ought, he says, to have come from England, for it was here that the first factory legislation was organised. The first to move in the matter was a French workman, Daniel Legrand, who in 1841 pleaded for an international conference. His request was unheeded, and in 1857 he appealed to the Cabinets of Berlin, Vienna, St. Petersburg, Paris, and Turin. He said:—

An international law dealing with industrial labour is the only possible solution of the great social problem of giving to the working class the moral and material benefits desirable, and this in such a way that the workers shall not suffer thereby or competition among the worker of these countries be in any way injured.

SWITZERLAND TAKING THE LEAD.

Meanwhile others had taken up the question. In 1855 two Swiss cantons, Glaris and Zurich, saw the necessity of a uniform system of factory legislation in the chief industrial States of Europe. For a time, however, they would be satisfied with intercantonal legislation in Switzerland alone. Modest as this proposal seems, it took over twenty years to put it into execution, and it was not till 1878 that a federal regulation of factories was established.

THE KAISER'S CONFERENCE.

Nevertheless, the idea continued to grow, Switzerland still playing a leading part. In 1890 the date of an international conference to be held at Berne was fixed, when suddenly the German Emperor issued his famous manifestoes, making his own the Swiss proposal, and inviting Switzerland to take part in a conference, after having received from her an invitation in the same sense previously. The Berlin Conference had a tremendous programme, and as a practical result various reforms were described as "desirable." Later, congresses were held at Zurich and Brussels in 1897, and at Paris in 1900, and an International Association for the Legal Protection of Labour, as well as an International Bureau at Bâle, was finally founded. The Association, adds the writer, is due to private initiative.

"THE SPOILS OF OFFICE."

THIS is the title of an entertaining paper by Mr. Michael MacDonagh in *Longman's Magazine* for July. The spoils of office, he asserts, do not account for Governments of to-day clinging tenaciously to power; salaries are still the same as in 1831, when the present salaries of Ministers were fixed. Responsibilities, however, have immensely increased, and are likely to continue increasing.

There are sixty-two political offices, with total salaries of £158,581 a year. The highest salary is £5,000, but only seven of the sixty-two posts command it. The others range as low as £334 a year.

The Prime Minister receives no salary as Prime Minister, his position being unrecognised by statute law. But he usually holds some other State office, with nominal duties, but having a salary, generally that of First Lord of the Treasury, which has a salary £5,000 and an official residence in Downing Street. Lord Salisbury made a new departure in being Secretary of State for Foreign Affairs as well as Prime Minister; but Mr. MacDonagh thinks it unlikely that such herculean labours will ever be undertaken again.

Then there are the Junior Lords of the Treasury, whose duties were once wittily defined as "to be always at St. Stephen's, to keep a house, and to cheer the Ministers." The Chief Whip's is also a post unknown to the law; therefore he usually fills a sinecure post, "Parliamentary Secretary to the Treasury," drawing £2,000 a year.

One of the busiest Ministers receives but a moderate salary—the President of the Board of Trade, who receives £2,000 a year. But probably his department will be reorganised, and a Minister of Commerce appointed, at £5,000 a year, a Secretary of State's salary. Another busy Minister is the President of of the Local Government Board, getting £2,000 a year. The Chief Secretary for Ireland, the most hard-worked Minister, perhaps, in the Administration gets £4,425, the corresponding official for Scotland receiving only £2,000, but having infinitely less worry and work. Mr. George Wyndham, when he was Chief Secretary for Ireland, told the House that owing to the exacting demands of Ireland on his time he had had no holiday for six years. The most highly paid office in the Administration, however, is that of Lord Lieutenant of Ireland, the salary being £20,000, with an allowance of well on for another £3,000, an official residence in the Phœnix Park, and apartments in Dublin Castle.

The three sinecure posts are those of Lord President of the Council, Lord Privy Seal, and Chancellor of the Duchy of Lancaster, all at £2,000. The duties attached to the Royal Household officials are always more ceremonial than exacting. The Master of the Horse receives £2,500; the Master of the Buckhounds, at £1,500, has been recently abolished; each of the seven Lords in Waiting has £702 a year; and the Mistress of the Robes, generally a duchess, £500. The one unpaid Minister is he who has to pay the rest—the Paymaster-General.

Besides these salaries, there are the pensions, ranging from a first-class pension of £2,000 down to £800, besides the ex-Lord Chancellor's pension of £5,000, and certain others. Gladstone, during his last term of office, was anxious to abolish all these political pensions, but was deterred from doing so by the reminder that it would be ungracious to cut off benefactions when the bestowal of them was passing from him, though he had used them freely while that bestowal was within his reach.

At present Mr. MacDonagh says that two opposite tendencies may be observed in the conduct of national affairs. We insist that the public service is discharged as cheaply as possible, for it is to be done efficiently; and we constantly clamour for the enlargement of the sphere of State activity.

Gladstone was a most economical Minister, but, he said, "I had rather take my official money than anything I receive from land, for I know I have earned every penny of it." John Bright, on the other hand, felt a kind of shamefaced compunction when the cheque for his official salary was paid. Generally speaking, Mr. MacDonagh insists that if Ministers cling to office in times of party stress, it is not because of the emoluments of office.

A DESIGNER OF GREAT GARDENS.

THE most generally interesting paper in *Scribner's Magazine*, which, by the way, is beautifully illustrated, is on the great French designer of gardens, Le Nôtre, illustrated by views among the terraces and parterres of Chantilly, Vaux-le-Vicomte, Versailles and other gardens attributed to this famous contemporary of Le Grand Monarque. The Tuileries Gardens in their present form were laid out by Le Nôtre; and remains of his work are to be seen in the famous terrace at St. Germain. A characteristic of his work was the *parterre de broderie*—that is, beds filled with coloured sands and earths, all the year through, instead of the natural colours of flowers during a part of the year only. The writer concludes her article as follows:—

> Although Le Nôtre's life was a long and a busy one, he could not possibly have designed all the gardens with which his name is now associated, more or less correctly. The list is an astounding one, ranging as it does from Aranjuez and La Granja in Spain to Wilhelmshohe and Oranienbourg in Germany; from the Villas Albani and Pamphili in Rome to Hampton Court and Kensington Gardens in England. But directly or indirectly he is responsible for the spirit of all these designs, as he created a school of outdoor art, which, modified and adapted to suit various conditions and climates, spread over the civilised world, and is the foundation of all the landscape art of to-day. It was he who first released gardens from their mediæval swaddling clothes, widened their narrow borders, did away with their childish decorations of fantastically clipped trees, and made them instead dignified parts of a splendid whole. To some people his gardens do not now seem attractive, on account of what is called their severity and coldness, but we must remember that they were entirely appropriate to the places for which they were designed, and perfectly fitted for their uses, and are consequently artistically admirable.

RAILWAY TOWNS.

In the *Windsor Magazine* for July Mr. Charles Grinling's article on this subject gives many facts not generally realised. In England the best known railway town is probably Swindon, where are situated the Great Western Railway locomotive, waggon and carriage works—sixty years ago a mere village, now a corporate town of 50,000 inhabitants, 13,000 of whom are directly employed by the G.W.R. Company, who pay wages at this, their chief centre, amounting to £16,000 a week. Everyone has heard of the G.W.R. Swindon Mechanics' Institute, whose newspaper reading-room Mr. Grinling considers probably the best of its kind in the country.

THE G.W. CAPITAL.

Everyone has also heard of the G.W.R. Swindon employés' annual trip, which usually takes place in July, and "is the biggest thing in the way of excursions done in this country":—

By the generosity of the railway company, there are free trains in all directions, and everybody who can possibly leave home joins in the trip. Last year no less than 23,145 persons took part—13,401 adults and 9,744 children. There were three trains to Weston-super-Mare, five trains to Weymouth, three trains to London, one train to Winchester, one train to Birkenhead *viâ* Worcester and Chester, and another to Manchester *viâ* Birmingham and Crewe, three trains to South Wales, and four trains to Exeter, Newton Abbot, and Plymouth, making a total of twenty-one special trains in all leaving Swindon between 4 a.m. and 7 a.m. on that eventful July morning. Some of the passengers returned the same day, others stayed away as long as a week, and all travelled free, provided they conformed to the regulations and used only the trains specified in the programme.

There is also an enormous children's *fête* given by the railway company in the park which they presented to Swindon. A small admission charge is usually made for this, but the company provides cake to the amount of three tons and other refreshments free.

THE L N.W. TRIO.

The London and North-Western Company has three centres, or "railway towns"—at Crewe for locomotive and steel works; at Wolverton, Bucks, for carriage works; and at Earlestown, Lancashire, for waggon shops. Crewe in 1846 numbered only a few hundreds; now it is over fifty thousand. The Crewe Mechanics' Institution is well known, and the London and North-Western directors recently provided a fine electrical engineering laboratory. Hospitals and dispensaries are also part of the activities of the great English railway companies for the benefit of their employés, to say nothing of savings banks. The London and North-Western Savings Bank, for instance, pays 3½ per cent. on sums up to £500, and 2½ per cent. on sums over that amount, besides receiving deposits so small as one shilling.

SOCIAL AND EDUCATIONAL CENTRES.

Educational and social institutes similar to the ones already described are to be found at Wolverton and Earlestown (London and North-Western Railway), at Derby (Midland), at Stratford (Great Eastern), at Eastleigh and Nine Elms (London and South-Western), at Horwich (Lancashire and Yorkshire), and elsewhere. An interesting feature in connection with the Great Eastern Works at Stratford is the provision of a dormitory for the use of drivers and firemen who have come from a distance and require rest before returning to their engines. This dormitory, which is lighted throughout by electricity, is capable of accommodating, in separate cubicles, fifty men at one time, and it has had over 245,000 bed-occupants up to the time of writing. There are also bath-rooms, a smoking and reading-room, dining-room, kitchen, and clothes-drying-room. Mess-rooms, it should be stated, are provided at all large railway works, where the men can get their midday meal cooked and eat it in comfort.

BACK TO THE COUNTRY.

Eastleigh, the London and South Western centre, is one of the youngest railway towns; and when this company has transferred all its stock from Nine Elms to the country, the Great Eastern will be the only large railway company with its plant works near London, and even these works, Mr. Grinling thinks, must soon be removed from Stratford to a country centre. The G.E.R. Mechanics' Institution at Stratford is one of the best in the country.

THE CRY FOR CANALS.

In the *Economic Journal* for June Mr. W. M. Acworth takes up the proposals, carried in a large number of Chambers of Commerce, urging the Government to take over the canals and to work them in the public interest. He says that in these discussions the fundamental question whether railway or canal has the lower cost of carriage is overlooked. He maintains that the evidence shows that there is no traffic which can be carried on a barge canal as economically as on a railway. To spend money on canals implies an economic waste. As a commercial undertaking a canal cannot compete with a railway. Against the common charge that canals have been strangled by the railway companies, the writer says that in all cases known to him it was not the railway companies which sought to buy but the canal companies which insisted on being bought. In cases where railway companies own both railway and canal, they would surely not leave the canals unworked if they could make a profit out of them. Against the precedent of French and German canals, traffic on which is vastly increasing, Mr. Acworth says that in those countries the trader pays only the actual cost of carriage. The Government receives no interest for its scores of millions of capital, and it spends out of the general taxation millions annually on canal maintenance. In the United States, however, he boldly says that economic forces having had free play, canals are not only dead, but buried, and no one is left to lament their death. A first-class barge canal, he avers, is not cheaper to construct than a first-class railway. A railway train costs ten times as much as a canal barge, but it does ten times as much work in the year. The railway is not impeded by want of water in summer, or frost in winter, or lock and bank repairs. A new railway means new facilities of all kinds. A new canal means only slow merchandise traffic. This is the economic case against canals, and he hopes that it may be answered before any action is taken.

SOME SOCIAL REFORMS.

BY SIR OLIVER LODGE.

THE *Contemporary Review* publishes as its first article Sir Oliver Lodge's presidential address delivered to the Social and Political Education League last May. It is a little diffuse at the beginning, but it contains good stuff. Sir Oliver Lodge is hopeful. He declares that—

Never were all classes so permeated by the spirit, not the phrases, but the essential spirit, of brotherhood and co-operation; never was there such universal recognition of the beauty of the spirit of real and vital Christianity, far above the differences and dogmas of the sects.

CONQUER YOUR ENVIRONMENT.

Sir Oliver's starting-point is that man must be master of his fate:—

What we have to teach, throughout, is that in no sort of way is man to be the slave of his environment. No longer is he to adapt himself to surrounding circumstances, changing colour with them as do the insects and plants. It is not himself which is to suit the environment, but he is to make the environment suit him. This is the one irrefragable doctrine that must be hammered into the ears of this generation till they realise its truth and accept it. To maintain that the grimy and soul-destroying wretchedness of human outcasts, that death by starvation and the transmission of disease by ignorance and dirt and sin—to maintain that these are permanently decreed Divine ordinances, otherwise than as the necessary outcome of neglect and mismanagement, is essential blasphemy.

THE LAW OF INHERITANCE.

There is another matter that may have to be considered some day—viz., the law of inheritance; whereby a person can acquire a competence and live luxuriously without necessarily doing a stroke of work of any kind all his life. It is not an easy problem how to regulate inheritance, indeed it is a supremely difficult one; but the idea that life is intolerable without some inherited background or cushion of property, the idea that people may live without working and yet without disgrace, is responsible for much incompetence and some misery. All should have leisure, but then also all should work. No one should be idle, completely idle, save on pain of starvation or the disciplinary drill of prison.

THE OWNERSHIP OF LAND.

I cannot help thinking that the custom of allowing absolute ownership of land to individuals, instead of to communities, is responsible for a good deal. To me it is somewhat surprising that it is quite legal and ordinary for a person to be able to sell a portion of England for his own behoof. If ownership of land is permitted by law, the owner should be a trustee, not a parasite.

POOR LAW REFORM.

The great social organisations called workhouses and gaols might be manufactories of human beings, hospitals, as it were, for the ills and warpings, not of body, but of mind and character, receptacles for refuse and converters of it into manhood and womanhood. Workhouses should not only be institutions for maintaining the impotent and aged in fair comfort, as at present, but also for dealing efficiently with the able-bodied of weak character; and so try to convert it into an instrument of instruction and discipline and organisation for those mental and moral invalids who are unable or unwilling to organise their own lives. Why should Society set upon weak people and try to crush them into hopelessness and rebellion? By placing the people on land, on unreclaimed or unfertile land calling out for labour, under skilled supervision, they might, I believe, be made self-supporting before long.

THE REFORMATION OF CRIMINALS.

Whatever may be the case with paupers, concerning the criminal class I am perfectly certain we are doing wrong. We are seeking to punish, not to educate, stimulate, reform. Punishment is not our function. We think it is, but it is not. Prisoners should be put under industrial conditions, and should be organised into useful members of Society. Nor do I believe that the trade-union leaders would object to this, if it were properly presented to them, any more than they object to evening technical rate-aided schools, municipal educational institutions, and other machinery for swelling the ranks of the competent and the trained and the respected artisan.

HOW MONEY-LENDERS CAN EVADE THE LAW.

IN an article on Working-Class Money-Lenders, in *Chambers's Journal* for July, Mr. William Diack shows how usurers can manage to evade the law, the female money-lender being quite as successful as the male. The following case occurred at Liverpool:—

The worthy dame in question was a fishmonger. One of the conditions on which she lent money was that the applicant for a shilling loan was compelled to take also a shilling's worth of fish, thus owing the money-lender two shillings. The actual value of the fish received, however, never exceeded eightpence or ninepence, while, if quality was taken into account, they were seldom worth so much.

If a loan was applied for on Friday, and the applicant did not want fish, the money was given on condition that it was paid back at the rate of one shilling and twopence per shilling on the following day. On all other days, however, the borrower was always compelled to take the fish, which, according to one statement made at a public inquest, "were sometimes so bad that they had to be thrown away."

Here, it will be observed, the exorbitant profit on the fish takes the place of interest. In a legal sense, the money was lent without fee or reward, but the victims of the system knew well that, by being compelled to pay an oppressive price for fish that they did not want, the money-lender received a substantial return on the various sums which she advanced.

THE BROWNING BETHANY HOMES.

FIVE days last month brought much unsought and unexpected good to the Robert Browning Settlement, Walworth. The proposals of the Cambridge University Free Church Union to enter into co-operation with the Settlement in the service of Walworth were heartily accepted. A number of Cambridge men are now in residence, and are being most heartily welcomed by the people of Walworth. On the same day an offer made by the Slade Trustees (kinsfolk of the founder of the Slade Lectureship of Art and the Slade Scholarships at Oxford and Cambridge) of a twenty-one years' lease at a nominal rental of a newly-built Working Men's Club at Brixton, with a substantial sum towards its furnishing, was also accepted by the Settlement, which undertakes the conduct of the club.

Three days after, a promise was received of £1,000 for the provision of six cottage homes for aged single women, to be called the Browning Bethany Homes. The same afternoon a friend, hearing of this promise, offered the free gift of a site for ten such cottages in a beautiful and salubrious region of Surrey. There will thus be four sites awaiting cottages as yet unprovided. Are there no readers of the REVIEW OF REVIEWS who would like to supply one or more of these cottages? What more beautiful way of showing respect to aged father or mother than by erecting a cottage to their memory which shall bear their name, and be a home for the declining years of the aged poor? Donations for this purpose will be gladly received by the Warden, F. HERBERT STEAD, Browning Settlement, Walworth, S.E.

THE SCIENCE OF EMPLOYMENT.

UNDER the heading, "The Search for Men," Mr. H. J. Hapgood details in *Harper's* the pains and methods taken by employers to secure the right kind of managers. These methods are so carefully considered and carried out as to constitute something of the nature of a science. The three types of ability most in demand are the ability to organise, direct and manage, the ability to create new markets, and the ability to supervise detail work and to invent devices for saving labour and time. The business world is seeking for men who can achieve results :—

The keen competition among employers for high-grade men is shown by the frequent changes that are always being made in responsible positions. No sooner does a man make a satisfactory record than rival employers begin bidding for his services. The market value of such men has risen with the demand. . . . It is a common expression among large employers : "I would rather pay 10,000 dols. than 1,000 dols. to a man," and they mean it. . . . The question of salary becomes a secondary consideration when employers see the man that they want.

The most successful of the large companies no longer leave the securing of employés to chance :—

The heads of a number of large corporations say that they give more attention to surrounding themselves with the proper kind of men than to any other of their numerous duties. Many companies maintain at considerable expense employment departments, whose duties are to watch for and employ high-grade men. These departments keep an elaborate card-system record of all the men who were ever in the employ of the company, and of all men who apply for positions, and also in some cases a complete concise record of the earning ability and salaries paid to men in the employ of competitors. The successful general manager knows through this department where the most capable men in all lines of work are to be found, and what it will cost to secure them when they are needed. Several agencies have sprung up within the last few years that make a business of this very work of keeping in touch with the available material in all lines of work, and claim to be able to supply, at any time, "the right man for the right place." Many large concerns, with a far-seeing policy, are now employing every year a fixed number of college, university, or technical-school graduates, taking young men of good education and teaching them every detail of the business, and developing them into the type of managers that they will need five or ten years hence.

Still more significant is this fact :—

Some successful firms have a private ledger in which is kept a record of every man, and every dollar that is received by the company is credited to the account of the man who earned it, so that the non-money earners can be promptly picked out and discharged, and the valuable men retained, with proportionate increases of salary.

It would be interesting to know what the relation of the amount earned by each employé is to the amount actually paid him. The writer concludes :—

As stated above, however, the demand for exceptionally good men is always greater than the supply. To satisfy this demand schools of commerce and special courses have been established in many of our great universities. Schools of practical teaching have been instituted by the big insurance companies and other large corporations, and every effort is being made to hasten the growth and development of men who can step into the responsible positions.

Never in the world's history has there been such a demand for ability as there is to-day.

"NAUSEATED WITH GOLD."

THE EFFECT OF THE NEW GOLD SHIP.

"THE world is not only going to be saturated with gold, it is going to be nauseated." This startling announcement occurs in a paper on "Gold Ships and their Cargoes," which Alexander Del Mar contributes to the *Engineering Magazine.* The writer prophesies that as ten years ago the world's annual yield of gold was half a million dollars per diem and to-day it is a million, within the next ten years it will be two millions. This is to be the result of the new machine. He observes that gold is the most widely diffused of all the metals, and that wherever there are or have been goldfields the new dredge will be at work. He thus explains this wonderful invention, which is beginning to move over the abandoned placers of California, and in a few years will move over the placers of Siberia, Brazil, and Peru, to gather up their wealth :—

The Gold Ship is a dredge, which floats in a pond of its own making, a pond which accompanies it wherever it chooses to go, and which enables it to move over the land in any direction. Thus imbued with volition, it advances to the point of attack, scoops up the gravel, subjects it on its decks to the action of riffles, undercurrents, and amalgamation—indeed, to any desired process, whether mechanical or chemical and then, having exhausted it of its gold, casts the gravel behind, and keeps on advancing, until the field before it is sifted and treated from surface to bed rock. As the ground can be thoroughly tubed and sampled beforehand, this process lifts gold mining from the category of speculative enterprises to that of a manufacturing business. . . . Hand labour never touches the poorer portions of a placer, and from the richer portions it rarely succeeds in winning more than from a half to two-thirds of the gold ; whereas the dredge gets it all. If we include Spain and Egypt, which still abound in rich placer fields, to say that there are several thousand millions of golden cargo in sight awaiting the Gold Ships, is no extravagance.

These dredges cost from 35,000 to 50,000 dollars each. No. 1 Gold Ship in California yielded a profit of about 128 per cent. on the entire capital invested. Gravel containing so little as 5 cents to the cubic yard will pay to work, and yield a sure profit of $33\frac{1}{3}$ per cent.

IN PRAISE OF CRICKET.

"WHY I have played Cricket" is the subject of a symposium by some prominent men in the *London Magazine* for July.

Mr. Alfred Lyttelton, the Colonial Secretary, believes that cricket and outdoor sports "provide an admirable training for the battles of life." Mr. John Burns says cricket is the only luxury which does not enervate.

Colonel Rawson writes :—

I know that if I have a job requiring pluck and dash, I choose a polo player ; one requiring quick initiative, a yachting man ; but for long, hammer-and tongs, patient, persevering work, *I will take no one else but a cricketer* in command..

Major-General Baden-Powell warns young cricketers against overdoing games at the expense of more serious things in life.

THE WEIRD WELSH LIGHTS.

THE EVIDENCE OF TWO EYE-WITNESSES.

THE following communication has been sent me by the Rev. Llewellyn Morgan, Congregational Minister of Harlech, in North Wales. It would be interesting to know whether the Society for Psychical Research has bestirred itself either to verify the facts or to suggest any explanation :—

THE EVIDENCE OF THE REV. LLEWELLYN MORGAN.

I can corroborate the report of the "lights" seen in this neighbourhood, and which Mrs. Jones, Egryn, reports. I have been an eye-witness to these "lights" on more than one occasion. I must candidly confess when I heard of them first I did not believe; but at last I had to believe my own eyes. Perhaps an instance or two besides what you have read in the papers may be of interest to your readers.

One night in January on coming out of a prayer-meeting in the Congregational Chapel, half a dozen or more saw a strange phenomenon—high up in the firmament a dazzling, white light, like a triangle, appearing for a few seconds fixed in the same place, and disappearing. One of the party holds the first Open Scholarship in Science for three years at Aberystwyth University, and another was my wife. Yet I was not satisfied after hearing their testimony. But my turn came at last. I was one of five gazing at the two balls of fire near the same place where they appeared before—namely, between the railway and the shore. These two balls of fire (which seemed about half a mile up in the firmament) consisted of more than one kind of light. The centre of each ball was white like an electric light. Encircling this was a deep red light emitting brilliant sparks. These two balls were coalescing into one large ball, illuminating the moor for a long distance, then as if vanishing from sight, but to reappear the second and third time for ten minutes or quarter of an hour. This took place about 11.30 in the night. I happened to be with Mr. Beriah Evans, Carnarvon, on the night, reports of which have been given to the world by Mr. Evans himself. I can testify to the truth of the report.

The night on which I am going to relate my experience again was Saturday, March 25th, 1905, when Mrs. Jones, of Egryn, was conducting a service in a C. M. Chapel at Llanfair, a place about a mile and a half from Harlech, towards Barmouth. My wife and self went down that night specially to see if the light was accompanying Mrs. Jones. At Llanfair, 9.15 p.m., on a very dark night, we saw two balls of fire ascending from one side of the chapel. After that we walked back and fro passing the chapel, and waited for nearly two hours without seeing any light near. But we saw it twice in the distance of Llanbedr; this time it appeared brilliant, ascending to the sky amongst the trees where the well-known Rev. Charles Edwards, R.C., lives, brother of the late Principal Charles Edwards, Bala. Distance from us about a mile. About 11 p.m., when the service Mrs. Jones was conducting was terminating, two balls ascended, exactly from the same place and of the same appearance as those we saw first. When Mrs. Jones's carriage had just passed us on her way home, two brilliant lights tinged with blue appeared on the road within a yard of us. In a second afterwards another very large ball of the same colour, brilliantly tinged with blue light, appeared in a field on the right-hand, by going from Llanfair to Barmouth, between the railway and the sea. This appeared twice. These were so brilliant that we were dazed for a few seconds. I shall never forget this experience. Distance between us and these lights was about 150 to 200 yards, ascending a few yards above the ground; and what is still more strange, in a few seconds after these disappeared another ball of brilliant light ascended from the woods where Rev. C. Edwards lives, and immediately afterwards, in a field on the right-hand to the main road, three balls of fire appeared to us from a distance, while two of them split up in several pieces, whilst the middle one remained unchanged. We returned home, having left this phenomenon in the sky, after watching for quarter of an hour.

Perhaps I should say that I had an intense desire this night to see the light for a special purpose. I prayed for it, not as an idle curiosity, but as a sign personally to me. Some would ridicule this idea, and say it was a mere coincidence. I will not quarrel with them. To me it was a direct answer. I have strong faith in prayer.

On the following week after this experience I was taken ill for a few weeks, having contracted a bad cold this night in the damp air. It seems the lights were seen several times during the following fortnight. Mrs. Morgan saw it several times, along with others. One young man told me he could not make it out, as he had never seen any light similar to it. We see it often at Harlech. I have seen it reported that the lights appear only with Mrs. Jones. This is a mistake, because it is seen apart from Mrs. Jones. But it is only fair to say that no one had noticed it here before Mrs. Jones had been on her mission the first time—*i.e.*, last day of the previous year, 1904. It could be seen in the neighbourhood the following week, and ever since. So late as last week we have seen it. I have related what I have seen personally. No one can do away with the light, but what is the cause I do not profess that I know.

MRS. MORGAN'S TESTIMONY.

I enclose the experience of Mrs. Morgan along with Mrs. Jones at Pwllheli. They were staying the night at West End, Pwllheli, with some friends. Their friends had seen strange lights since the revival broke out in January there, and very soon afterwards they heard about Mrs. Jones and her light. So they were very wishful to see Mrs. Jones and to hear her, and curious to see the lights mostly when Mrs. Jones was at Pwllheli.

Wednesday, March 15th.—Mrs. Jones was conducting services there that evening. After service we went after supper to a sitting-room in the attic. Company from fifteen to eighteen. There were two windows to the room. We had no lights. We were singing mostly to pass the time, and watching to see the lights through the window. We waited for about an hour or so before we saw any. But what we saw first we were not satisfied. We wanted to see it plainer and nearer to us, as the friends at Pwllheli had seen it nearer, seeing the lights jumping to the roof of a little Methodist Chapel in West End, etc., so they knew where to look and show us. But presently we saw what they had never seen before. We saw two balls of fire, one red and the other lighter, jumping back and fro. Very soon afterwards we saw a cross of light. As soon as that came another cross jumped on the right side, another again on the left, so it was three crosses by now, the middle one standing still in the middle and the others moving back and fro, and dozens of the globe shape in the back of the crosses, some of them flying to the right-hand side of the middle cross till it had gone quite red. I was very much frightened. I didn't want to see any more. Very soon we departed, and I went to bed about four o'clock in the morning. Following night we went to Llanbedrog. We didn't see any light before going to chapel, but after service I asked Mrs. Jones, "Have you seen the light?" and she said, "No." If I don't make a mistake, I think it was on the third lamp. There was some little light flickering there, and Mrs. Jones said, "That's the light." Following night we were at Rhoslan. We didn't see any light. Saturday I was returning home to Harlech, and Mrs. Jones to Egryn. That's my experience with Mrs. Jones. I have seen the lights heaps of times in different shapes, etc., but this Saturday, after our united prayer meeting, I saw a glorious light in the sky, Saturday, March 18th, like a cross. I and two Miss Griffiths next door, we stood at the front and watched it till it faded away, about ten minutes. They both went into their house, and one of them was rather nervous. In less than a couple of minutes we heard most beautiful singing, like a large choir with different voices. They heard it in their house, and I heard it in mine, and we three went to the front for the first, thinking that a prayer-meeting was being held in the street. We went to see; all was silent; mostly the villagers in bed—it was half-past eleven. But ever since then I don't feel nervous. What the lights are is more than we can say here. I will say, like my husband, they are here, and have been through the last month. We do not see them but very scarce now. My husband and myself saw it last night on the moor.

WOMEN ON THE WOMEN'S MOVEMENT.

BY MONA CAIRD AND LADY GROVE.

THERE are two capital papers in defence of the woman's movement in the *Fortnightly Review*, replying to the recent pitiful performances of Lucas Malet and other women writers.

"PRAY KNOCK ME DOWN AND TRAMPLE UPON ME!"

Mrs. Caird, who entitles her paper "The Duel of the Sexes," remarks somewhat bitterly that—

It is a curious and discouraging fact that the women who have profited most by the "woman's movement," those whose genius has enabled them to avail themselves to the full of the increased opportunities it would fain offer to all, have, nearly without exception, risen up to decry it and their sex with singular rancour and contempt.

That is an exaggeration, although no doubt it was true of the late Queen. Mrs. Caird thinks it true of Mrs. Craigie, Lucas Malet, and Miss Robins, of whose "Dark Lantern" she says:—

It is a powerfully written modern version of the repellent old story of Patient Griselda, with the difference that the mediæval ruffian is by many degrees less of a bully and a coward than his almost inconceivable twentieth-century prototype. Our old friend Rochester is a polished, delicately-refined person beside him!

The popularity of this "pray knock me down and trample upon me" doctrine rouses the dark fear that emancipation may have come too late, that the servile nature in-bred for so many generations may have become so ingrained that the sex-slave hugs her chains.

TWO TENDENCIES OF THE MODERN WOMAN.

Mrs. Caird, however, plucks up her courage and recognises two remarkable features in the development of the modern woman:—

On the one hand we find the shrinking from the maternal function in varying degrees of intensity; on the other a desperate and overwhelming desire for it, quite regardless of the proprieties.

The orthodox mother, who has no tenderness for any children except her own, is a prey to a blind animal instinct which is gradually being idealised:—

Why may we not dare to imagine maternal love growing in the direction of the *human*, depending more and more on personality, less and less on the accident of bodily relationship? May not the civilised woman come to love the *child* rather than her own flesh and blood; its soul rather than her *self*!

Maternal love at present is a projection of self-love. The difference between a stepmother and a mother marks the difference which ought not to exist between a truly maternal love of the helpless child and a merely selfish love of her own child.

AN INDIVIDUAL LIFE FOR WOMEN.

Mrs. Caird protests against the attempt to re-establish the old fetich to which has been sacrificed the individual life of the woman for the husband, the family, and the race, inflicting deep injuries on all three:—

Happiness for men and women in close relationship it has rendered scarcely possible; it has made of them strangers and secret enemies; friendships between them it has so hampered and hunted that they have generally relinquished it in sheer discouragement; love it has handcuffed and dragooned till the wild thing has drooped and died, an old, old tragedy of how many a "happy home"! And as for the family and the race, they have shared in the misfortunes of their founders.

In the good time that is coming we are to change all that. Already the finer psychic sense is aware of a spiritual union more ideal and divine than that of which the poets have dreamed. With which cryptic utterance I leave Mrs. Caird and turn to Lady Grove.

LADY GROVE ON NATURE'S AFTERTHOUGHT.

Lady Grove is a disciple of Professor Lester F. Ward, who proclaims that the male is a mere afterthought of Nature. Woman is the primary, the original sex, and therefore naturally and really the superior sex. She also swears by Mrs. Stetson's "Woman and Economics," and adopts the heresy that the race is over-sexed. That may be true of the raw material; but of sex in its higher developments it is the very reverse of truth. Woman has now awakened to a consciousness of the fact that her true mission, hitherto unconsciously pursued, is to humanise the male. Lady Grove speaks with no uncertain sound:—

By desiring to maintain the subjection of women—a state incidental to racial progress established in order to raise the male to a position of equality with the woman—these people are in very deed enemies to their own kind; moles crawling in benighted regions of their own making, unconscious of the beautiful world above and around them. They are the fools who whisper in their hearts "there is no God." Who has not noticed that it is always the least virile and manly amongst the men who are so bent upon "keeping women in their proper place"?

QUANTITY VERSUS QUALITY IN CHILDREN.

As for President Roosevelt's insistence upon large families, Lady Grove asks:—

Is not the quality rather than the quantity of children the thing to be aimed at? If, then, by improving women's status the breed improves, as improve it must, is not this preferable to the "plenty" in their present very mixed condition? Has no one sufficient imagination to see in their mind's eye a race that would be incapable of breeding this mass of "undesirable aliens" who are tossed about from shore to shore, welcome nowhere, and a curse to themselves?

THE EXTRAVAGANT ECONOMY OF WOMEN.

There is a third paper in the same Review, brightly written, but hardly of such serious import as the two others, entitled "The Extravagant Economy of Women," by Mrs. John Lane. She says that "it takes the great, splendid masculine spendthrifts in high places to glorify the world with treasures of priceless art." Women never have money, and so they make the extravagantly reckless economies, saving a penny at the cost of a pound. Especially does she condemn the rage for chiffons and the family joint. She says:—

If the Englishwoman would only take to the chiffons of cooking instead of the chiffons of clothes! It is an extravagance to cook badly; it is an extravagance to buy things because they are cheap; it is an extravagance to waste time in doing what someone else can do better (if one can afford it).

Mrs. Lane is a very lively writer whose contributions always add to the gaiety, if not of nations, certainly of the periodicals.

HOW THE POSSESSING CLASSES OPPOSE PROGRESS.

A PROFOUNDLY thoughtful paper on the possibilities of popular progress appears in the *University Review* from the pen of Mr. J. A. Hobson. After repudiating the idea that economic forces alone supply the motive power of progress, he finds the most conclusive evidence of the growing power of popular ideas and sentiment in the fact that the vested interests base their defence more and more on appeals to the supreme court of reason and of morals.

THE MOST PRESSING REFORMS.

He grants, indeed :—

Before a really effective demand for the higher forms of wealth, the nobler means of life, can be evoked, sufficiency and security of the material basis of personal efficiency must be won. Economic reforms must take precedence in time; problems of housing and of food, of regular remunerative employment, of access to the land, of greater leisure, of ease and comfort in old age, everywhere stand as barriers to a higher life for the people. Now the real solution of every one of these practical problems involves a successful attack upon vested interests; economic liberty can only be won by the razing of the fortresses of monopoly.

But he maintains :—

What the present pressing interests of progress demand is the organisation of the intelligence and moral energy of the people for the definite work of economic reform by the overthrow of vested interests and the establishment of economic equality of opportunity, within the nation.

THE PROTECTIVE SOCIOLOGY OF VESTED INTERESTS.

This leads to a very subtle and interesting exposure of the new tactics of defence adopted by the possessing classes with a view to prevent the organisation of popular intelligence. They divert attention to the need of individual moralisation, and argue that "If enough individuals separately win salvation, Society is saved." Or they foster the combative, competitive instincts of the lower nature of man. Mr. Hobson, observing the influences exercised by the possessing classes over universities, churches, parties, press and literature, traces the improvisation of the "sociology of the vested interests." The individual struggle for existence is imported straight from biology; but the biological conception of mutual aid or conscious co-operation is ignored. The stress is laid on the individual character, its self-reliance and self-sufficiency, while suppressing the fact that no individual living in society is capable of self-support. Crude orthodoxy is invoked to make a man content with his place in this world and occupy his thoughts with bright hopes of another, or he is lulled to apathy by mysticism, Hegelianism or evolutionary determinism. "From these sources are derived modern theories of Oligarchy, Protection, Militarism, Imperialism, Property and Charity, chief buttresses of the present order."

THEIR "SPIRITUAL MERCENARIES."

Mr. Hobson is hard upon what he calls the spiritual mercenaries of the vested interests. He says :—

Though these grave professors, right reverend fathers, right honourable statesmen, and sagacious editors may not know it, the finances which support their institutions are derived from rents, monopoly profits, and other forms of unearned income, and they will fight with such intellectual and spiritual weapons as they can wield for defence of the social-economic order which sustains them.

Nevertheless, these subtle defences are held by Mr. Hobson to be ineffectual. Modern capitalism makes directly for moral democracy. The large city life imposed by modern industry bears fruit in a clearer civic consciousness and co-operation. "Justice is a great ally." While his "methodology of progress" asserts a priority in time for economic reforms, he insists that the actual initiative is drawn from the domain of moral character and intelligence.

THE UNIVERSITIES AND LABOUR.

THE *University Review* opens with a paper on "University Settlements," by Canon Barnett. He maintains that :—

A settlement in the original idea was not a mission, but a means by which University men and workmen might by natural intercourse get to understand one another, and co-operate in social reform.

He urges that what is needed is the democratising of the old Universities and the humanising of the working men. The Universities need what the working men can supply, just as the working men need what the Universities can supply. The Universities have the knowledge of human things. If they were in touch with the industrial classes they would be constrained to give forth the principles which underlie social progress, and at any rate guide the nation to remedies which would not be worse than the disease. Knowledge without industry is often selfishness. Industry without knowledge is often brutality. Working men have energy, honesty, fellow-feeling and habit of sacrifice, but as a class they have not knowledge of human things. Canon Barnett adds :—

The working class movement which is so full of promise for the nation seems to me likely to fail unless it be inspired by the human knowledge which the Universities represent.

Settlements, by promoting friendship between University men and working men, may help towards this goal. Canon Barnett traces the result of their influence in educational reform and improved local government. But as to the effect of Settlements on Oxford and Cambridge, he says :—

There does not seem to be much change in the attitude of these Universities to social reform, and they are not apparently moved by any impulse which comes from workmen.

The Canon closes by saying that "Social reform will soon be the all-absorbing interest, and the method by which industry and knowledge may co-operate has yet to be tried, and one way in which to bring about such co-operation is the way of University settlements."

Is lawn tennis a manly game? Mr. Eustace Miles discusses this question in the *Young Man*, and gives an answer which, on the whole, inclines towards the negative.

THE MODERN ITALIAN DRAMA.

MISS HELEN ZIMMERN, writing in the *Cornhill*, says that until comparatively recent times Italy had no modern dramatists, now, however, she has many, of whom, at all events to English people, D'Annunzio is by far the best known. But several less known dramatists paved the way for him, and, says the writer, "even now, when he has achieved world-wide success, it is permissible to doubt whether he has real dramatic talent . . The fact remains that he revolutionised the modern Italian theatre."

TASTE FOR HISTORY AND RHETORIC.

Italian taste in drama seems to be entirely unlike English. Problem plays, after the manner of Ibsen and his school, find no favour with Italian audiences, whereas historical plays, pronounced dull by a Northern public, appear greatly to please them.

This taste originates, perhaps, in the classical traditions of the Italians. Appeals to antiquity find an echo among every class of playgoers, and, curiously enough, this response is, if possible, keener in the lower than the upper social ranks, for the lower classes in Italy, save perhaps a section of very advanced Socialists, still feed upon the splendid records of their national story.

Didactic plays, on the other hand, the public will not stand. They laugh, they hiss, they talk, they call the curtain down. And an Italian public is the most critical and merciless in the world. Not even an old favourite can save a situation. As in music they will not tolerate a false note, and without pity whistle a trembling *débutante* or a worn-out artist off the stage, so at the play they will not endure being sermonised, instructed, or bored. Only what bores other nations does not bore them, and *vice versa*. Thus they will listen for hours, and with the most rapt attention, to what a northerner would call empty flight of rhetoric; they will applaud to the echo interminable speeches of richly coloured words and rolling periods, regardless of the fact that when reduced to plain speech they contain few ideas, and are compounded chiefly of "words, idle words," sufficient if they are musically woven and tickle the sensitive and innately true ear of the Italian. Hence in part the great and overwhelming success achieved by Gabriele d'Annunzio, understood by few foreigners, to whom too much of the work of this undoubted genius seems "full of sound and fury, signifying nothing."

THE CHIEF DRAMATIST.

D'Annunzio, with his *Leitmotif* of lust, blood, love, and brute force, blent with ardent patriotism, a keen appreciation of Nature and exquisite art, began his dramatist's work when foreign influence on the Italian stage was paramount, and at once pressed into his service the very actress to whom much of the foreign corruption was due—Duse. His first great success was the play whose name is always associated with that of Duse—"La Gioconda"; his next, "La Gloria," was hissed off the stage at Naples, in spite of its extreme originality of conception and treatment. Then came "Città Morta,"

a play that was criticised according as his audience could overlook the unpleasant fundamental episode, which was obviously introduced as a challenge to common morality, being in no sense an integral necessity to the action or to the harmony of the play. But on this point there is something hopelessly twisted in D'Annunzio's mind, which must prevent him from ever attaining to the highest greatness.

His next play, "Françesca da Rimini," excited the whole intellectual world of Italy, though it had to be adjusted before the critical Italian public would have it. In his latest play, the "Figlia di Jorio," the writer thinks D'Annunzio "has touched his theatrical high-water mark," horrible as is the fundamental tale.

Of course, so successful a dramatist has many imitators, and, says Miss Zimmern, "in pointing them to higher dramatic ideals than those of mere amusement he certainly has done good work." Unfortunately, however, his followers have all his violence, his over-fondness for blood, thunder, and crime, without his redeeming features; so that the Italian drama of to-day cannot, as yet, be said to hold up the mirror to Italian Nature.

THE IDEALIST LEADER.

There is, however, one Italian dramatist whose works, the writer thinks, will far outlast D'Annunzio's "magnificently worded but immoral fireworks." Italy has been touched with the revival of Idealism, that turning of attention to spiritualism which is having such an effect in modern France; and the leader of this movement is L. A. Butti, a man as yet hardly known outside Italy.

Several other young dramatic writers are gaining vogue who do not seem to show D'Annunzio's decadent and morbid characteristics—Roberto Bracco, a disciple of Ibsen and Hauptmann; Giuseppe Giacosa, a light comedy writer; Rovetti, who takes historical subjects; and Praga, whose amusing plays always draw large audiences. The writer's final conclusion is that—

One thing is certain. No other nation has a modern drama so full of high classical aspirations, so remote, as a whole, in its essence, from the trivial humdrum of life, so desirous to take its auditors outside the daily routine of existence.

A PLEA FOR THE STUDY OF LOCAL HISTORY.

MR. RAMSAY MUIR contributes to the *University Review* a wise and cogent plea for the study of local history. He urges:—

Not until a man's city has become a personality to him will he be ready to think, dream, and work for it; and it is from an intelligible picture of its past development that he will most easily obtain a vivid and understanding knowledge of its present condition. Every city, every county, therefore, should have a clear popular story of itself, so written that the ordinary citizen would be able to read it with pleasure, and to derive from it some connected and logical ideas. . . . I would go further and say that there should be school books on local history in every school. By the use of local history in schools we may in the first place hope most easily to cultivate the historical imagination of children. . . . In the second place we may certainly hope by this means to lay, in the schools, where it can best be laid, the foundations of a reasonable civic patriotism.

He applauds the Victoria County histories as a great and heroic attempt, but urges that the collection, preservation, and interpretation of all documents of local history in all parts of the country should be taken over by provincial universities. A school of local history has been working successfully in Liverpool for some time.

ZOLA'S METHOD OF WORK

How "L'Assommoir" was Written.

The opening article in *La Revue* of June 15th is devoted to Zola's Method of Work. Madame Zola has placed all Zola's manuscripts, notes, and materials generally (ninety volumes in all) for his colossal work in the Bibliothèque Nationale, and since these are now public property, the writer of the article, H. Massis, has studied them in the hope of arriving at a more perfect conception of the individuality of their author.

Of all contemporary novelists, says H. Massis, Zola was the most popular and yet the most differently judged. He had sincere admirers, friends, and disciples. His detractors also were numerous, including almost all the critics and the educated public. On the pretext of analysing or studying his work innumerable articles have been written to condemn his novels and deny his talent. Either he was badly understood, or perhaps there was a general desire to misunderstand him. His success, nevertheless, was very great.

ZOLA'S NOTEBOOKS.

To-day Zola belongs to history, and the writer thinks it is time a serious effort was made to separate the spirit and the real meaning of his work from the confused mass of theories of his system. It is a surprise, however, to find that the Notebooks, instead of disclosing the theorist, the experimentalist, and the scientist, show us only an artist who worked very much like other artists, with as much imagination, insight, and personal genius. After summarising what Dr. Toulouse has already written on Zola's method of work, the writer begins a study of "L'Assommoir" in the light of the new documents, and in the extracts quoted from them he endeavours to discover some of the means by which Zola obtained his effects, and such artifices of composition and technique which the simple reading of the novel cannot reveal.

GENERAL PLAN OF THE STORY.

The manuscripts relating to "L'Assommoir" form two volumes, the first containing the editorial work, and the second being the "dossier." The analysis and the extracts given refer to the second. It may be noted that the volume runs to 233 folios, and is divided up into nine sections, giving first the general plan, and then a more detailed plan of the work; notes on alcoholism; notes (with plans) of the streets, quarters, cabarets, etc.; the characters; notes taken in the "Sublime" of Denis Poulot; notes on wash-houses, washerwomen, zinc-workers, etc.; general sketch; and miscellaneous notes, newspaper cuttings, etc.

It was in 1868 that Zola decided to write the novel, and with that end in view he went to live in the Rue Saint-Jacques to observe the life of the people and families ruined by alcohol. He made a brief sketch of his impressions, but the work was not undertaken till ten years later. A study of his notes shows that he had collected a mass of materials before he knew exactly how he would utilise them.

A STORY OF REAL LIFE!

The following quotations from the Notebooks will give an idea of Zola's method:—

The novel should be like this—in a word, give an absolutely exact picture of the real life of the people. Neither flatter or blacken the workman.

As to the title, Zola thus reasons with himself:—

If I call the book "The Simple Life of Gervaise Macquart," the chief character should be simplicity itself. A story of reality from day to day without complications. Few scenes, absolutely nothing romantic. Pure facts, but giving the whole life of the people.

THE HEROINE.

He also converses with himself on the heroine:—

My Gervaise Macquart is to be the heroine, the woman of the people. It is her history I propose to write.

Here follows an outline of Gervaise's history, and then Zola jots down what he will do with her. Next, he reflects on her character and temperament, taking care to give particulars of her hereditary and personal antecedents before the action of the book begins. He says:—

She is to be a sympathetic figure. Temperament tender and passionate. She took drink because her mother did so. At Paris she is a new Gervaise. She no longer drinks, she loves Lantier and is devoted to her children. At work a beast of burden, but a tender nature. An excellent woman at bottom, which education might have developed. Each of her qualities turns against her; work brutalises her, her tenderness leads her to extraordinary weaknesses, etc.

DRAMATIC ENDING.

Then secondary characters have to be found to help to make the story. Many of them are to live in the same house.

More details of the characters, then a first attempt at a plot, including the ending, with reference to which Zola says:—

The end is the most important thing. All the characters must appear. Gervaise must be the principal and central character, and as it is her life I am writing, I must make of her a sympathetic woman, and show every one working consciously or unconsciously for her ruin.

But I want to keep to the simplicity of facts, and yet be very dramatic and very touching.

THE PSYCHOLOGIST.

Finally, in this brief sketch, Zola takes up politics and distributes political opinions among the different characters. In the next section details of all the characters are given. Judging from his notes, H. Massis does not think him a very delicate psychologist. His sensibility was limited, and he never analyses the finer sentiments. He sees rather than penetrates, observing striking traits, silhouettes, types, attitudes. But he notes with vigour the particular and salient characteristic which will make each personage live a picturesque, outward life, and render him exceedingly conspicuous. In these character-sketches, which are full of details not published in the book, though Zola drew his conclusions from them, we have the key to all the characters.

OUR CHIEF FOREIGN LARDER: ARGENTINA.

Two articles in the magazines deal with the extraordinary progress and possibilities of Argentina. In the *American Review of Reviews* Mr. John Barrett, formerly American Minister to Argentina, writes of that country as the "wonderland of South America." He thus summarises his description:—

Argentina is as large as half of the United States proper, and covers 1,200,000 square miles; it has a growing population of only 5,000,000, but an annual foreign trade of $450,000,000, or $90 per head; it is located in the south temperate zone, and is a "white man's country"; it is a great agricultural land, and its products are similar to those of the United States; it possesses extraordinary mining possibilities in the Andes; it has a seabord, indented with many harbours on the Atlantic, of 1,500 miles, and is drained by the extensive navigable River Plate system; it is gridironed with up-to-date railroads; its government and constitution are similar to those of the United States. Buenos Ayres, the capital, has a population of one million, and is one of the most beautiful and prosperous cities in the world.

A NEW AND COMPOSITE RACE.

He speaks highly of the Press of Buenos Ayres, which would be a credit to the leading American cities. More important is his description of the new race reared in that favoured clime. He says:—

Argentina is becoming the home of a new, forceful, energetic, and ambitious race. In other words, it would seem as if the blending of the original Spanish blood with that of the other Latin races, like the Italians and the French, together with an intermingling of English, Irish, and German strains, in a wonderful climate and in a new country, was evolving a people with the best characteristics of all these. The men average large of physique, quick of action, and clever of mind. The women are graceful, bright, and possessed of a remarkable finesse of manner and spirit, and they hold into maturity their early beauty like the women of the northern temperate zone. In these descriptions I refer to the higher grades; the so-called lower classes are uniformly healthy and vigorous, with average mentality. The statistics of 1903 showed 1,000,000 foreigners in Argentina in a total of 5,000,000. Of these, 500,000 were Italians, 200,000 Spaniards, 100,000 French, 25,000 English, 18,000 Germans, 15,000 Swiss, 13,000 Austrians, and the remainder of many nationalities.

In the *Economic Journal* Mr. Walter T. Layton writes on the relation of Argentina to our food supply. He shows that it is one of our chief sources of wheat and our largest producer of fresh meat. Of frozen and chilled meat Argentina sent us in 1904 155,000 tons as against 120,000 from the United States, and 90,000 tons from New Zealand. Of frozen and chilled beef the United States sends fifty five per cent., and Argentina forty per cent., only five per cent. coming from other countries.

125 ANIMALS KILLED EVERY MINUTE.

The rapid growth of the meat trade has developed new and expeditious methods of despatch:—

Animals are sent by train from the prairie to Buenos Ayres, where they are received into one of the great freezing works, killed, cleaned, and frozen at the rate of 400 an hour. There existed in 1903 fifty-six such establishments in different countries, capable of dealing with 180,000 animals a day. Of these, seven, with a killing capacity of 54,000, were in Argentina. Although the execution is rapid and painless, the slaughter of animals on such a vast scale is appalling to think of. One hundred and twenty five animals killed every minute of the day and night!

OUR GROWING GRANARY.

The wheat trade has grown with marvellous rapidity. In 1884 the Republic imported wheat. In 1904 it surpassed the United States as a source of supply of wheat to Great Britain. The quantities received by Great Britain in 1904 were: From British India, 5,940,000 quarters; Russia, 5,490,000 quarters; Argentina, 5,000,000 quarters; United States of America, 4,400,000 quarters; Australasia, 2,400,000 quarters; Canada, 1,450,000 quarters. In 1903 the inhabitants of Argentina were sending us more wheat per head than any other country. This progress has been made with most defective farming over a small area. Only ten million acres were under wheat in 1904, out of a possible eighty millions. Of the total interest paid to this country by foreign governments more than fifty per cent. comes from America, and twenty-five per cent. from Argentina—about ten times as much per head as is paid by our own dependency of India. Mr. Layton considers that for our food supply in the future we must not look much longer to the United States. Canada is not yet ready to take their vacant place. Australia is liable to dry seasons. Russia and Argentina are the only countries which may be relied upon to supply our growing needs. Of the two, imports from Argentina would be less liable to interruption from war.

HOUSEHOLD TRAINING: SHOULD IT BE COMPULSORY?

HANS ESCHELBACH, writing in the June number of *Nord und Sud*, makes a novel suggestion with reference to women and household training.

The writer reminds his readers that in Germany every healthy man is obliged to devote some years to military service; in short, every young man receives a certain training in the art of war, and is expected to sacrifice his life on the battlefield should the necessity arise. Now he suggests that young women should make some sacrifices too for the good of the State, but in this case it would be in the cause of peace. He also believes his scheme would be of great benefit to the women themselves during the whole of their lives.

The State, he says, must proclaim the compulsory service of all women for training in the domestic arts. In the first year housekeeping in all its branches should be practically studied, and the second might be devoted to instruction in the bringing up of children, sick-nursing, and other useful subjects. There should also be regulations, uniforms, etc., to correspond in some measure to the regulations in the military service, and the State should be prepared to spend as much on the women as it now spends on the men.

A SCHOOL FOR BRIDES-ELECT.

In the *English Illustrated Magazine* for July there is a description of a school for brides-elect, which Miss Edith Hendrickson has established at Logan, in Pennsylvania. Its motto is "How to make a man happy," and the students of man's happiness are taught how to cook, how to market, how to sew, how to entertain, etc.

THE RUSSIAN POLES OF TO-DAY.

Their Grievances and their Hopes.

Mr. David Bell Macgowan contributes to the July *Century* a very interesting account of Russian Poland as it is to-day. He calls his article "The Future of Poland"; but it is more important for what it says as to the present state of the country. He quotes the following statement of the Polish case against Russia from the mouth of a professional man who is an influential member of the National Democracy.

THE GRIEVANCES OF THE POLES.

Why should Poles be loyal? he asked:—

Though only one-twelfth of the population of the Empire, we are now, December, 1904, supplying forty per cent. of the troops in Manchuria. Our land taxes are eight times as high as in Russia. The railway tariff on grain is seventy-five copecks from Odessa to Warsaw; it is ninety-two copecks from Lublin, Polish town on the same line of railway, and only a fifth as far as Odessa. This is to give the Russian grain-producers a market at our expense. Here is the Report of the Department of Control for 1899. Any other year would serve as well. The revenues derived from the ten provinces of Poland are stated as 135,000,000 rubles. Of this sum 37,000,000 was transferred to the imperial treasury, 48,000,000 was expended for the army and the public debt, and only 47,000,000 was allotted to the support of the civil government and for civilising agencies in Poland.

WHAT THE POLES WANT.

The National Democracy refuses to recognise the obligations of tripartite loyalty. We want future independence, like Hungary. For the present we demand the recognition of national rights, while remaining in the Russian Empire. This is the programme of the immense majority of the Polish people. The National Democracy is the chief agency for the instruction of the people, particularly the peasants and artisans, in history and geography. It circulates immense numbers of newspapers printed in Galicia. There are special organs for the educated classes, the peasants, the school-children.

"Everything in Poland that is worth while is an evasion," I was told by a leading barrister. "Everything is done by stealth or bribery, everything takes a side turn. The educational energies of the people are wholly directed in illegal channels. There are educational institutions whose existence is unknown to the government. Inspectors are employed on regular salaries. Young ladies who do not teach are frowned upon in good society."

WHAT THE POLES ASK FOR.

Last year the Poles were invited to state what they wished to obtain from the Government of Russia:—

A delegate meeting of one hundred and five persons assembled in the home of a nobleman, under the chairmanship of the Catholic Bishop of Warsaw, and adopted a long memorial for presentation to Prince Mirsky. It closed by making the following demands:—

1. The use of the Polish language in the schools, courts, and public offices.
2. The appointment of Poles to all public offices.
3. Self-government on an elective basis in town and country, with the retention of the existing commune, or "gmina."
4. Freedom of conscience.

Such were the minimum demands of all the parties, excepting the Social Democrats, the "Bund," and the "Proletariat," as another Radical Labour party is called. Many of the Liberals and National Democrats were disposed to add a fifth clause: a National Diet and an autonomous Government subordinate merely in matters of Imperial concern to the authorities of St Petersburg.

The demands of the Lithuanian Poles, made about the same time in petitions to Prince Mirsky, were therefore for the rights of a minority population. They ask to be allowed to talk Polish freely, to hold schools in Polish at private expense, to conduct their worship free of molestation, and to own land and engage in business on the same terms as other Russian subjects. In other words, they ask for the same privileges that German subjects and residents of the empire already freely enjoy.

WHAT HAS BEEN GIVEN THEM?

The Editor of the *Century* appends to Mr. Macgowan's article the following note:—

Since the above article was made ready for the press, the Tsar, in a rescript issued May 16th, 1905, removed many of the restrictive ordinances from which Poland has suffered. Permission to introduce the Polish and Lithuanian languages into the primary and secondary schools is granted; the assemblies of Polish nobles are re-established; the purchase of land by Catholic peasants is permitted; and these measures, it is understood, are to be followed by local self-government through the zemstvo. Should these reforms be put in force, the result will mark a complete reversal of Russian policy in Poland.

THE SEPARATION OF NORWAY AND SWEDEN.

A Suggested Arbitration.

Mr. E. John Solano, writing in the *Monthly Review* on "Scandinavia in the Scales of the Future," lays stress upon the danger that Germany, by way of creating bad blood between Briton and Slav, may encourage Russia to seize the northern seaports of Norway. The Norwegian littoral, he points out, is more than ever tempting to Russia now that she is driven out of the Pacific. He hopes that Norway will not sever the union with Sweden:—

If the Norwegian people have finally decided on separation, the situation is indeed hopeless. But if they are truly desirous of maintaining the principle of the Union—which their Ministers have stated to be the case—and, at the same time, determined to vindicate, peacefully, their right to stand as an independent sovereign State—there is one practical way for the attainment of both of these ends. They have now declared that the issues with Sweden are international not domestic. Then, through the present admirable and conciliatory attitude of Sweden, they may, without loss of dignity or prestige, follow the precedent of other independent States, and propose to seek final arbitration upon the issues with Sweden—from a friendly and trusted foreign ruler, with a view to preserving the principle of the Union in whatever form it may be both possible and acceptable. For such an office King Edward VII. of Greater Britain may well be preferred, both by reason of his relationship to the future Queen of Sweden—who would have been the joint-queen of Sweden and Norway—and his reputation as an advocate of peace. Such an arbitrament would further set the seal of Britain upon the essential condition of the future safety of Scandinavia—the Union, to which she gave her sanction when, through her fleets and armies, she gave peace to Europe a century ago. This suggestion—if all others fail—is at least worth the attention of Scandinavian statesmen.

"A Danish Observer," writing in the *American Review of Reviews*, says:—

There will be no war—no attempt to force Norway back into the Union. All good Scandinavians will hope that another form of union may be found—possibly an alliance including the third Scandinavian nation, Denmark—more likely to promote the happiness in peace and war of the three sister nations of Scandinavia.

HOW SPONGES ARE GATHERED.

IN *Harper's* Mr. C. W. Furlong gives an interesting sketch of the Greek sponge divers of Tripoli. It is a striking picture of the perils by which the sponge is obtained for us. We are told that "out of the seven hundred scaphanders (divers equipped with helmet and tube) working on this coast, from sixty to a hundred die every year, and sooner or later hardly a man escapes from divers' paralysis." The greatest danger is in the rapid ascent, producing sudden relief of pressure. A partially paralysed diver recovers the use of his limbs again on descending. These divers work for six months in the year, from April to October, from sunrise to sunset, generally on a rough sea and under the scorching rays of an African sun. During the winter months they spend most of their time ashore in their island homes. The experienced diver will receive from £40 to £120. To make their profits, or to pay their way, "the captains are obliged to treat the divers with great severity, and hire overseers who devise most brutal means of forcing them to fish at any cost." The hot air from the desert, heated by friction in the air pumps, ought to be cooled with water, but is frequently pumped down at an excessively high temperature. If his haul is unsatisfactory, the diver is sent down and kept down, in spite of his protests. The writer thus describes the descent of a diver, Pteroudiz:—

I followed his sinking form, as the last glint of his shining helmet, radiating shafts of refracted light in all directions, disappeared into the oblivion of the mysterious depths, where every ten metres equalled another atmospheric pressure. Crawling along the bottom, taking care not to wrench the weights from his feet, which would cause him to turn head downward, he searched among the wonders and beauties of the semi-tropical sea-garden, and when he found a colony of the reddish-brown Tripoli sponge, signalled to the overseer, whereupon the spot was buoyed. Discarding among others the few black and worthless male sponges, he selected only the marketable ones, the best of which he gathered from the rocks. Sometimes the shadowy form of a huge shark or dogfish glided dangerously near him.

Suddenly Pteroudiz made his appearance at the surface, the water rolling off his helmet and shoulders as from some great amphibious creature; and the bag of dark, heavy sponges, dripping and streaming with ooze and sea water, was hauled aboard.

So much for the divers. As for the sponges:—

As soon as the sponges are brought aboard they are thrown in heaps on deck near the scuppers, where the barefooted sailors tramp and work out the ooze; then, strung on lines, they are soused over the side, and trail overboard some ten hours during the night. To break and separate from them shell-fish and other parasites, they are beaten with heavy sticks on deck or on the reef rocks off Tripoli; and after being well soaked in the sea again, many are bleached by being immersed in a tub of water containing a certain solution of oxalic acid, from which they emerge a yellowish colour, care having been taken to avoid burning them.

IN *Westermann* for June there is an article by Friedrich Fuchs on "Animal-Painting in England." The work of Landseer comes in for a good deal of notice, and reproductions of his well-known pictures figure among the illustrations. The same number contains an interesting article on Japanese metalwork, contributed by Oskar Münsterberg.

WHAT CREATURE SHOULD I PREFER TO BE?

A NATURALIST'S SYMPOSIUM.

IN the July *Pearson* there is a symposium on a novel subject. The editor, while watching the movements of a squirrel one day, thought he would give a good deal to be able to spend one day at least in the squirrel's skin. Then the idea occurred to him to discover, if possible, into what creatures other people would like to be transformed if they had the power given them to inhabit the body of any other creature than man. He therefore asked a number of naturalists, "What Creature should I prefer to be?" for the purposes of the present article.

I WOULD BE A DRAGON-FLY.

Four writers have selected animals—Mr. Louis Wain the elephant, Sir Henry Seton-Karr the lordly stag, Mr. E. Kay Robinson the ape, and Mr. H. A. Bryden the springbuck.

Mr. Sydney Buxton envies the old trout, and the Rev. Theodore Wood would be transformed into a dragon-fly for the following reasons:

The life of a dragon-fly is a romance of two worlds. It begins in the water; it ends in the air.

Both as a grub and as a perfect insect, the dragon-fly is an incarnation of speed. It glides swiftly and smoothly and easily through the water, and still more swiftly and smoothly and easily through the air.

Both as a grub and as a perfect insect the dragon-fly is an incarnation of power. It is lord and master of the pond, lord and master of the air. Its only rivals are other dragon-flies, with which it rarely meets.

The only drawback that I can see is the shortness of a dragon-fly's life. But, if short, it is unquestionably a merry one.

I WOULD I WERE A BIRD.

A well-known writer on natural history is Mr. George A. B. Dewar. He would choose to roam from flower to flower as the purple emperor among butterflies, or be a kestrel among birds. Mr. Richard Kearton, who loves all birds, would elect to be a robin. Mr. S. L. Bensusan would change places with the cuckoo; Mr. Robert Morley would be a chicken were it not for fear of scientific feeding, and so he elects to be a robin, which has nothing but the cat to fear; Mr. Fred Whishaw, after rejecting a great many creatures in turn, decides in favour of the capercailzie, and Mr. J. A. Owen and Mr. Oliver G. Pike would like to live the life of the skylark.

MR. W. R. LETHABY, who writes the opening article in the *Burlington Magazine* for July, gives an interesting account of the English Primitives and their work in the Painted Chamber, or Chamber of St. Edward, at Westminster. For centuries these paintings were lost to sight. In 1800 a few were discovered, but were soon covered up with whitewash and blue paper. In 1819 they were again brought to light, to be again soon obliterated; and in 1834 the chamber and its paintings were destroyed by fire. A careful account of them, however, was published by the Society of Antiquaries: the text by John Gage Rokewode being supplemented by drawings and coloured engravings by C. A. Stothard. They represent the labours of the twelve months, such as mowing, reaping, Biblical stories, the virtues, etc.

THE DRAMATIC SEASON OF 1905.

The Triumph of Shaw.

In *Blackwood's Magazine* the writer of "Musings without Method" describes the dramatic season now drawing to a close as "a triumph for the French and Mr. Bernard Shaw." Of the two he thinks Mr Shaw's the greater triumph That Mr. Shaw is the fashion no one can deny, but whether his worshippers understand him is another question From the fact that they generally laugh in the wrong place *Blackwood's* reviewer surmises that they do not understand him. They prate of the "Shavian Philosophy,' but the writer admits himself unable to discover this much-vaunted philosophy

> Mr Shaw, if only he knew it, is a dramatist first and last He interprets his characters, not in the terms of this or that dogma, but in the terms of the stage He has a gift of construction which no living playwright can surpass, and this gift is far higher and rarer than an easy traffic in false doctrines The true reason of the world's misunderstanding of Mr Shaw is not far to seek He is an ironist, often subtle and sometimes profound And the world does not like irony, and takes an irrational revenge in believing all the silly things that Mr Shaw says about himself and Shakespeare

Coming to the French plays the writer says that method, alike in acting and writing, is their great glory, and method can lend a distinction even to mediocrity French plays may be, and often are, deficient in character, but they are finished The English stage knows neither moderation nor discipline the French actor must know both Until we make the discovery that Nature is an insecure guide, and can only be interpreted through the medium of art, we may despair of improvement The amateur is the curse of the British stage, and until he is got rid of hope of betterment is small, and the writer takes the view that there is little hope of getting rid of him We do not really love the drama Those of us who go to see Coquelin do so largely to show that we know French! The popular taste may be well gauged by the extreme popularity of "Leah Kleschna,' a melodrama of which the writer gives a scathingly humorous account In spite of Mr Shaw and French plays he is not hopeful of the future

PARADOX AND PRETENCE.

Mr. Chesterton's "Heretics" is subjected by the writer of "Musings without Method" in *Blackwood's Magazine* to a severely scarifying criticism, almost in the style of Macaulay when his wrath was aroused Mr Chesterton is one of the new generation kicking at the door, and his last book is another shout to attract attention Of the making of paradoxes there is no end, and it is a form of wit "not beyond the reach of the youngest aspirant' "To make verbal paradoxes is a mechanical trick which a monkey might learn in a week." "A good bush needs no wine,' one of the "Heretics" witticisms, will doubtless be hailed as a masterpiece of ingenuity. *Blackwood's* reviewer simultaneously calls a spade a spade and the above phrase "nonsense" Mr. Chesterton chatters without his book; he is a blunderer always, and touches few subjects which he does not confuse. It is not his habit to produce any proofs of his statements, and hasty generalisations his soul loveth. And he rattles on from false premisses to insecure conclusions, with the air of a man who has accomplished a noble and useful task.

In short, clearly the writer considers Chestertonism as a vice and he rejoices that in Paris there are still a few poets who esteem the practice of their art of greater importance than the inculcation of a trite morality. Such a periodical as the new French quarterly *Vers et Prose* would be impossible in England

THE HUNDRED BEST BOOKS.

Lists by Lord Acton and Mr Shorter

In the *Pall Mall Magazine* for July Lord Acton's list of the Hundred Best Books is printed, with comments by Mr Clement K Shorter

Since it would be impossible to quote the list of books here, some idea of its character may be gleaned from the following remarks of Mr. Shorter concerning it —

> It indicates the enormous preference which on the whole Lord Acton gave to the Literature of Knowledge over the Literature of Power to use De Quincey's famous distinction With the exception of Dante's "Divine Comedy," there is practically not a single book that has any title whatever to a place in the Literature of Power, a literature which many of us think the only thing in the world of books worth consideration Great philosophy here and high thought, while now and again we find the least important book of a well known author

THE "HAMLET" TEST

In conclusion, Mr Shorter gives his list. He excludes living writers, and, in explanation of the principle which has guided him in naming a hundred books with which to start a library in the departments of Poetry, Fiction, History and Essays, etc, and Biography and Autobiography, twenty-five works to each, says

> Surely Dante's 'Divine Comedy' and Bunyan's "Pilgrim's Progress" had a universal appeal That universal appeal is the point at which alone guidance is possible There are great books that can be read only by the few, but surely the very greatest appeal alike to the educated and the illiterate, to the man of rich intellectual endowment, and to the man to whom all processes of reasoning are incomprehensible.
>
> 'Hamlet' is a wonderful test of this quality It "holds the boards" at the small provincial theatre, it is enacted by Mr Crummles to an illiterate peasantry, and it is performed by the greatest actor to the most select city audience It is made the subject of study by learned commentators It is world embracing. Are there in the English language, including translations, a hundred books that stand the test as 'Hamlet' stands it?

P. de Lanzac, writing in the June number of the *Revue Générale*, has an article on Russia and the Revolution in Belgium in 1830 At first sight the hostility of the Tsar Nicholas I to the events of 1830 in Belgium seems strange, but, according to the writer, the Tsar's intervention arose out of his convictions regarding the principle of authority, and he believed it to be his duty to oppose in any part of Europe all ideas of independence.

THE PHILOSOPHY OF STILES.

MR. J. HARRIS STONE, who contributes a charming article on the subject of Stiles to the *English Illustrated Magazine* of July, draws attention to the many kinds of stiles to be found, and he proceeds to describe and illustrate some of the types by his own photographs.

THE PERFECT STILE.

The first type described is the perfect stile of the prosperous man. Mr. Stone writes :—

Show me your stiles, and I will tell you what sort of man or woman you are. The spick-and-span stile, of two-inch well-planed planking throughout, with a wide top-rail and conveniently arranged steps, proclaims the man of tidy habits, thoughtful of the comfort of others, considerate in all things. He is probably fond of the good things of this life, very prosaic, desirable as an acquaintance, with few friends.

His fields around are like himself—well kept and preserved. Artistic weeds, wild flowers, and shadowy trees are not favoured on his lands. . . .

THE STILE OF DESOLATION.

In his second type Mr. Stone goes to the stile which "eloquently spells ruin." He says :—

Nettles grow unheeded around it, with their antidote, dock-leaves, adjacent; the trees embower it till it is difficult to locate it as a boundary, and the structure itself is dilapidated. The steps are broken—or even are not. The top bar is in fragments, the other rails faulty. The fields around are uncultivated and obviously neglected.

Agriculture in this country has for years past been going to the dogs; here it has gone. The mortgagee is merely waiting to seize the land for his loan at two-thirds of its value, and he naturally cares nothing for stiles. It is a saddening picture, to be frequently seen in Essex and many other counties.

CENTREPIECES OF RURAL SCENERY.

From these two extreme types Mr. Stone easily turns to the ideal stile, describing it as follows :—

And then there is the stile not too faultlessly perfect, but just sufficiently practical to fulfil its purpose, while appealing at the same time to the artistic eye, and beguilingly causing the wayfaring man or woman to linger awhile. The surroundings, perhaps overhanging trees of beech, birch or elm, are not tonsorially treated at stated periods, but bounteous Nature is allowed to revel at her own sweet will—to riot, in short, as she delights to do—and the stile becomes the centre piece of a picture characteristically English or Irish, as the case may be.

Such stiles, adds Mr. Stone, "suggest an owner of an artistic temperament, easy to get on with, indolent perhaps, but delightful company."

THE IRISH TYPE.

In Ireland, we are told, the deliciously inconsequent stile is to be found :—

There are no common stiles in Ireland (continues Mr. Stone). They are all uncommon—very. They turn up in completely wrong places. Where they are obviously wanted you don't find them. Where you do find them in Ireland they are clearly not needed by you, or any one else, in the locality.

Philosophers may suggest they are built to aid the sentimental emotions, to stimulate contemplative faculties, or even, perhaps, by their very cussedness, to evoke wicked objurgations.

At Inniscrone, near Ballina, for instance, there is a stile at the extreme end of a wall which ends abruptly on a common. Similar amusing instances of stiles by the side of gateless apertures are common all over Ireland.

THOMAS EDISON.

THE ARCH INVENTOR.

FROM an article in the *World's Work* on the Modern Profession of Inventing, we gather much interesting information about the greatest of inventors, Edison :—

To see him shuffling through his great laboratories, head bowed, hands in pockets, the flaccid flesh of his face falling in loose rolls beneath a skin unearthly white, his hair unkemptly combed whichever way it pleases to fall, his eyes focussed miles away, except when he flashes into some one else's a look of instant understanding, his whole appearance, except for the eyes and the humorous yet grim mouth, is that of a slovenly, muscleless loafer. Yet this is the man who, eating practically nothing, and exercising not at all, works often for thirty-six hours without sleep, falls unconscious from exhaustion on bench or desk, and wakes to work again, sometimes for a week without undressing; electrical with mental energy; marvellous in the power of his inventive imagination.

HIS VALUATION OF TIME.

An inventor, according to Edison, usually lacks the bump of practicality. It is this bump, in fact, which he considers chiefly differentiates him from the common or garden inventor :—

In the practice of his profession Mr. Edison has to save time. There is a pretty well developed suspicion among his assistants that his deafness is largely a ruse to avoid hearing things that he does not care to pay attention to.

To Mr. Edison, time is so valuable that he does not waste it even by taking account of it. Time to him is only the chance to get things done: and no matter how long it takes, they must be done. In his office safe there is carefully locked away a £550 Swiss watch, given him by a European scientific society. It is never used.

HIS VORACITY IN READING.

Once, it seems, Edison wanted to study a part of the mechanism of typewriters :—

"Have a model here next Tuesday of every typewriter made," he said to one of his assistants. "Have each company send an expert to explain their machine. And get me out all the books in the library about this piece of mechanism."

Monday evening the assistant called Mr. Edison's attention to a stack of books several feet high, and reminded him of the appointment next day.

"Send the books up to the house. I'll look them over to-night," said Mr. Edison.

The next morning he appeared at the exhibition, and so thoroughly had he read the books that he frequently corrected the experts' explanation of how their own machines worked.

Edison takes out an average of one patent every two weeks. At present he is experimenting with chemicals used in batteries, improvements on his Portland cement, and in his storage battery, and other ideas that he still keeps to himself.

FERDINAND LABAN has added one more item to the literature of "Hamlet." In the June *Nord und Süd* he interprets the ghost as something objective—a real ghost in fact. No dramatist, he thinks, would ever call a spirit out of the grave into the real world merely in order to reveal a crime which would otherwise have remained a dead secret. The ghost is no hallucination, but represents a piece of metaphysical reality with a place to fill among the real persons, and the poet introduces it into his serious play as something objective for every one who cares to see.

THE SECRET HISTORY OF THE BERLIN CONGRESS.

By the late Lord Rowton.

In the *Nineteenth Century*, Mr. A. N. Cumming publishes statements made to him by Lord Rowton in 1898, as to the secret history of the Berlin Congress which he attended as Lord Beaconsfield's private secretary in 1878. Lord Rowton told Mr. Cumming the old story of his telegram ordering a special train to convey the British plenipotentiaries back to London, in order that they might declare war against Russia if four specified concessions were not made by Russia. One of the four, and one which was regarded as the most important of all, was the right of the Turks to garrison the Balkan fortresses, a demand which Lord Beaconsfield was prepared to go to war to enforce. It was conceded, and never a Turkish soldier has ever ventured to occupy the Balkans! Yet for this illusory and worthless stipulation we were within an ace of plunging into a colossal war! The only new item of information is the very characteristic story as to how Prince Bismarck interfered.

PRINCE BISMARCK'S INTERVENTION.

Lord Rowton tells the story as follows:—

A few yards from our hotel I met Prince Bismarck driving in an open carriage. He stopped it and asked me where Lord Beaconsfield was. I told him that he was in the hotel, and Prince Bismarck asked: "Can I see him?" "Yes," I replied. Then he pulled out his watch and said: "Look here, at the present moment it is twelve minutes to four, and I am due with my Prince at the Palace at four o'clock. I wish to see Lord Beaconsfield, and I shall go up to him, but I wish you to come to us at five minutes to four sharp, and announce to me the exact time." We went along to the hotel, and I showed him up to Lord Beaconsfield's room. Punctually at five minutes to four I knocked at the door. When I went in the two were talking about the horribly bad paving of the Wilhelmstrasse. I begged their pardon, and told Prince Bismarck that it was five minutes to four. He bowed and thanked me, and I left the room. In two minutes the door opened, Prince Bismarck came out, got into his carriage, and drove away. He would reach the Palace punctually at four o'clock. I went in to Lord Beaconsfield and apologised for having intruded. He said, "Don't mention it, my dear Corry; you no doubt had a very good reason for what you did. But a very curious thing occurred. The moment after you left the room Bismarck turned sharply to me. We had been talking on indifferent subjects before, but now he said: 'Lord Beaconsfield, do these four points really represent England's ultimatum to Russia?' And I said, 'Yes, they do.'"

Next day the Russians conceded all the four points:—

We subsequently discovered that my telegram to the stationmaster at Cologne had been promptly transmitted to Prince Bismarck. He thereupon saw that Lord Beaconsfield was in earnest. He knew, and this we did not discover until a good deal later, that, as a matter of fact, the Russians had received orders from the Tsar, practically to submit to anything rather than go to war with England. He knew that, but we did not.

HOW LORD BEACONSFIELD PLANNED THE WAR.

It was often maintained at the time that Lord Beaconsfield could never have been so criminal and so mad as to meditate war with Russia. But Lord Rowton maintained that all his "plans were ready then for fighting Russia, and had been thought out for the previous two years." I remember hearing Admiral Hornby's version of the state of readiness the British fleet was in in 1878 as the result of these precious plans. As for the Army, the less said the better. But Lord Rowton went on: "You forget that we should at that time have had the Turks as our allies, fresh as they were from a by no means unsuccessful contest with Russia." "Fresh" is a fine word to describe an ally whose capital lay in the hollow of Russia's hand, and a by no means "unsuccessful contest" is a curious description of a campaign in which they had been totally defeated both in Europe and in Asia. "In addition, it is almost certain that Austria would also have joined us in fighting the pretensions of Russia." "Almost certain" is good! Yet on such chances Lord Beaconsfield was willing to plunge unprepared into a gigantic war.

IS THE "FOURTH OF JULY" THE WRONG DATE?

The relentless investigations of historians apparently prove that the anniversary of American Independence falls, not on the 4th, but on the 2nd of July. So, at least, Mr. P. L. Haworth puts the matter, writing in *Harper's* on "The Real Fourth of July." He says that when the decisive resolution was taken up on the 2nd all the States excepting New York voted to accept it:—

Thus, on the 2nd day of July, 1776, the independence of the Thirteen United Colonies from the throne of Great Britain was definitely decided upon. The 2nd, and not the 4th, may be called the true date of the separation. We could with propriety celebrate the "Fourth" two days earlier.

He quotes a letter dated the 3rd of July, 1776, by John Adams, then a representative of Massachusetts in the Continental Congress, which runs:—

The day is past. The 2nd of July will be the most memorable epoch in the history of America. I am apt to believe that it will be celebrated by succeeding generations as the great anniversary festival. It ought to be commemorated as the day of deliverance by solemn acts of devotion to God Almighty. It ought to be solemnized with pomp and parade, with shows, games, sports, guns, bells, bonfires, and illuminations, from one end of this continent to the other, from this time forward, for evermore.

The writer adds:

The popular fancy, however, seized upon the 4th, the date of acceptance of Jefferson's more dramatic declaration of the reasons for the separation, as the proper day to celebrate.

The debate on the document continued until the afternoon of the 4th, but the oppressive warmth of the weather, and the hungry flies that swarmed thick and fierce from the adjoining stable, made the deputies feel that "treason was preferable to discomfort," and they agreed to the Declaration without further amendment. The actual signing of the document by Congress took place on the 2nd of August.

Defenders of the traditional celebration may argue that the final agreement on the 4th of July, rather than the general resolution passed on the 2nd, should fix the anniversary.

THREE COLONIAL GOVERNORS.

LORD CROMER, LORD MILNER, LORD CURZON.

MR. HAROLD SPENDER contributes to the *Leisure Hour* for July a biographical sketch of Lord Cromer and his work. He opens his article with a little picture of Lord Cromer's life at Cairo to illustrate the simplicity which, he says, has been the secret of his successful rule in Egypt. Mr. Spender writes :—

A FAMILY PARTY AT THE ZOO.

"If you want to see all the sights of Cairo," the English resident will tell you, as soon as you reach the Nile from Port Said, "you must go to the Zoological Gardens on Sunday afternoon and see Lord Cromer."

After you have seen the lions feed, admired the chimpanzee, and talked to the cockatoos, you will go and drink tea at the Pelican Island. Then, if you keep your eyes open, you will soon see the great sight.

A little family party—father, wife, nurse, and child—come strolling along. There is no state no escort, no footmen, no Consular "Cavasses" sparkling in gold and white. It is just a little middle-class party out for their Sunday afternoon—enjoying the holiday and the sunshine, gazing at the strange animals—immensely concerned and interested in the baby. The man is grey haired, but still keen eyed, strongly built, and bronzed of face. He seems more anxious about the baby than either the mother or the nurse.

You are often told by the followers of other schools that the only way to govern the East is by display. Lord Cromer knows the East quite as well as any man; but he has chosen the way of simplicity.

HIS LIFE AT CAIRO.

Lord Cromer's house is an old-fashioned mid-Victorian mansion, and his official study is a high, rather sombre chamber. Lord Cromer's mode of life is thus described :—

The whole morning he devotes to seeing the "Advisers." In the afternoon he drives out with his wife and child. After six o'clock he is accessible again to any person with a claim to see him.

He is, in fact, the hardest-worked man in Egypt. He can only keep the work going by becoming the servant almost the slave—of duty.

To do all this work at his age, Lord Cromer has to live the simplest possible life. Since his severe illness a few years ago he never dines out. His young wife, a sister of the Marquis of Bath, and a Thynne, dines out for him, and busily looks after the whole social side of his life. He himself goes to bed early and rises early.

As one result of Lord Cromer's reforms the population of Egypt, Mr. Spender says, increased by 43 per cent. between 1882 and 1897, that is to say, it rose from seven millions to nearly ten millions.

IMPERIAL COLONIAL POLICY.

In the June *Velhagen* Dr. Hans Plehn has an article on "three of the most important personages of political England," namely, Lord Cromer, Lord Milner and Lord Curzon.

The writer describes Egypt, South Africa and India as the great centre of Britain's Imperial interests, for her economic and political position depends largely on them, and in all three her position either has been or seems to be more or less endangered by other Powers. He notes that the British colonial governors have a much freer hand than the German colonial administrators. He refers to Mr. Chamberlain as the first English Colonial Secretary who was at the same time a great statesman, the distinguishing point of his administration being his choice of men to fill the most responsible posts. When he went to the Colonial Office he began a colonial policy in the Imperial sense, and thus gave Cairo, Cape Town and Calcutta a much greater significance, while the three men who have held office in these three possessions have embodied an important part of England's Imperial politics.

Biographies of each of the three Governors are added, the writer being careful to note that Lord Cromer and Lord Milner are both partly of German extraction.

ENGLAND'S SHARE IN TOGO'S VICTORY.

MR. ARCHIBALD HURD, writing in the *Fortnightly Review*, remarks that "to the British people the achievement of the Japanese Fleet in the great battle in the Sea of Japan is of peculiar and intimate interest. An Admiral who received his early professional training in England, and who served afloat in British men-of-war, has won the greatest naval victory in history—not excepting Trafalgar with men-of-war constructed almost exclusively in British shipyards, and using as weapons of offence guns and torpedoes similar to those employed by the British fleets and squadrons. Admiral Togo's chief of staff, Captain Shimamura, like many of his colleagues, served in the British Fleet, and he had the good fortune to be one of Rear-Admiral Percy Scott's pupils in gunnery. Years ago, when Japan was adopting Western methods, she was the pupil in naval matters of Admiral Sir Archibald Douglas, now Commander-in-Chief at Portsmouth, who was director of the Imperial Naval College at Yeddo, and had round him a devoted band of British naval officers and men. In later years, in fact almost down to the opening of the war with China, Rear-Admiral John Ingles was lent by the Admiralty to the Japanese Government as naval adviser. While the Japanese authorities were shaping their systems of training and administration on British models, orders were despatched to British shipbuilding yards for men-of-war, and in every respect the young Navy was given the hall-mark 'made in Great Britain.' The triumph of the Mikado's Fleet small, but homogeneous surely reflects some lustre upon the British Fleet."

The manner in which both the gun and the torpedo were employed points to long and persistent training in which officers and men profited by all the assistance to be obtained from the mechanical contrivances of Rear-Admiral Percy Scott; they adopted the "spotter," the loading-tray, and other appliances before even the British Admiralty had done so. They have their reward in the most complete naval victory recorded in history. This unique success was achieved by the use of instruments made in England on the same principles as those mounted in the British Fleet, and, in view of the recent "scare" as to British guns, the battle of the Sea of Japan must be consolatory to the British public. The Japanese by their triumph have given a testimonial to the heavy guns of the British Fleet which should set at rest any fears which may have been aroused.

IRELAND'S SALVATION AT LAST: IN HER BOGS!

In the *World's Work* Mr. R. J. Lynn describes a recent invention which may at last make it possible to utilise the wealth in Irish bogs, in other words, to produce peat fuel as a paying commercial undertaking.

TREASURE WORTH A THOUSAND MILLIONS.

This is proposed to be done by an invention using electricity for releasing the water from the peat:—

The discovery of a substitute for coal in abundance cannot fail to have a widespread effect. Experts calculate that Irish bogs are capable of turning out 50,000,000 tons of fuel per year for a thousand years, and if this were sold at the moderate figure of 5s. per ton it would bring in £12,500,000 a year. When this sum is multiplied by a thousand it will be seen that Ireland is richer in undeveloped resources than is sometimes imagined. At present Ireland pays to Great Britain something like £1,000,000 a year for coal, but with the utilisation of the bogs it will be possible to keep this money at home, and, in addition, to add considerably to the national income.

AN IDEAL FUEL.

Already at Athy a peat fuel producing plant is being erected, with which it is hoped that fuel as good as the best Welsh coal may be put on the market at a third the cost:—

Quite a number of advantages are claimed for this fuel. In the first place it is practically smokeless, and its use should help to lessen the smoke nuisance which has now become so serious in many cities. The importance of a fuel in the Navy which would take up less space than coal and produce no smoke cannot be over-estimated. It makes no clinker or cinder, deteriorates but little by keeping, does not crumble by handling, and has a high calorific value. Another important consideration is the amount of space that will be required for the storing of this fuel in railway trucks, ships' holds, or bunkers. Ordinary coal takes on an average 40 cubic feet for a ton and weighs 55 lb. per cubic foot. The electric peat fuel takes about 34 cubic feet to the ton and weighs 66 lb. per cubic foot.

OTHER PROPERTIES OF PEAT.

The extent of the Irish bogs is almost as great as that of those in the German Empire, and the prospect of exhausting them seems very remote. Moreover, it is thought by a great authority that they will reproduce themselves in fifty to a hundred years. And, again, peat bogs do not yield fuel only:—

The use of peat powder as a disinfectant is on the increase in Germany and other Continental countries. It is used for packing fruit, preserving ice, and it also makes a splendid covering for hot-water pipes. Peat molasses as a food for cattle is another industry which is coming to the front.

THE practical philanthropy that pays is illustrated afresh, in the *Magazine of Commerce*, by a sketch of the care shown of their workpeople by Messrs. Jardine, manufacturers of lace-making machinery, Nottingham. Club-rooms, mess-rooms, baths and recreation grounds are provided for employees, who also participate in a profit-sharing scheme, and are given special inducements to attend classes at the University College. A feature is the giving of prizes of £1 to every youth in the works who gains his certificate of proficiency in the Robin Hood Rifle Volunteers, and another £1 on his obtaining a badge for marksmanship. The firm has its own rifle club and range.

HUMOURS OF TURKISH CENSORSHIP.

IN a recent number of the *Quiver* Mr. Watson Dodge describes his experiences with the missionaries in Macedonia. He mentions two incidents, which have a symbolic as well as humorous significance. He says:—

Early in the year a selection of passages from the Bible appropriate for Easter, was sent to the censor with a request for permission to print the texts on Easter cards for distribution in Armenia and Macedonia. Nothing was heard of the application for some time, and it is probable that no reply would ever have come if one of the missionaries had not called on the censor in person. The missionary was greeted like a long lost friend (that is typically Turkish). The missionary pressed his business. The apparent meaning and every hidden meaning of every verse had to be explained at length, a short sermon had to be preached, in fact, about each line of every text. The censor passed most of the passages, but stuck at "Love one another." Such precepts, if followed by the people, or even by the European Powers, would end the Turk's day in Europe.

The other story concerns a suspicious telegram:—

The Turk is no fool, and yet his unparalleled suspicion often makes him act with absurdity. Mr. Bond, of the Mission at Monastir, once had an amusing experience. A reunion of the missionaries in European Turkey was to take place at Philippopolis in Bulgaria, but because of the condition of the country at the time the staff at Monastir elected to remain at its post and did not attend. On the day of the meeting Mr. Bond sent a telegram to the assembly reading, 'Greeting in the name of the Lord.' The telegraph clerk accepted the message and the payment. Three days later a police officer called at the mission. He talked about the weather for so long that Mr. Bond was obliged to ask him his business. He had come to ascertain who this Lord was. Mr. Bond explained to him at length. The Turk seemed to understand, but still he asked if the Lord was a Russian or an Austrian. "No," the missionary replied, "He was a Jew." The Turk went away, but called again the next day and asked if Mr. Bond would kindly put his statements in writing for the commanding officer. Mr. Bond obliged the policeman with a brief statement as to who the Lord Jesus Christ was. But the telegram was never sent, nor was the money ever refunded.

THE chief distinction of the *Young Woman* for July is Miss Hulda Friederichs's sketch of the Countess of Aberdeen and her work. She describes her ladyship as occupying the greatest and most influential political position of any lady in the land. A talk with Lady Huggins, the eminent astronomer, tells of a woman's work in the world of stars. Miss Dora M. Jones's sketch of Swedish women is quoted elsewhere.

Macmillan's for July is chiefly notable for two historical papers, one by Mr. Ballantyne descriptive of Turgot, whose personal purity and honesty stood out conspicuous in the pre-Revolution era, and David Hannay's account of peculiar incidents in the history of the Spanish Bourbons. Mr. C. S. Walker contributes some curious notes on the growth of our language, among which may be mentioned the derivation of 'nice' from the Latin *nescius*, ignorant.

'Camp Life in Palestine' is the title of the opening paper in the *Sunday Magazine* wherein the Rev. Ernest Dowsett describes a six days tour of 120 miles in the Holy Land. "Holiday Camps for Schoolboys" are described by Mr. Basil Mathews, and those meaning to visit the West of England this summer may like to consult the little article on 'The Oldest Church in England,' an ancient Saxon church at Bradford-on-Avon.

PARTIES IN MACEDONIA.

In a recent number of *La Revue* the place of honour is accorded to an article on the Position of Parties in Macedonia, by Deputy Messimy, who endeavours to set forth the programmes of the various parties in Macedonia, hoping thereby to mix a little truth with the contradictory, confused, and often exaggerated telegrams sent every day from Sofia, Athens, Belgrade, and Constantinople to the great journals of Europe.

How shall the various nationalities in Macedonia be classified? M. Messimy asks. According to race, language, religion, or party? A classification according to race or language is almost impossible, he thinks, especially as the Ottoman administration will have nothing to do with any but its own; but it must be remembered that though all administrative officials must transact their business in the Turkish language, they do not therefore belong to the Turkish party. The same remark may be applied to the Greek language, the language of the clergy; the Greek-speaking clergy and teachers do not necessarily belong to the Greek party.

A more precise basis of distinction is furnished by religion, for it accords more closely with the real formation of parties in Macedonia. M. Messimy distinguishes the following six parties in Macedonia to-day:—

The Turkish Party.
The Albanian Party.
The Greek Party.
The Bulgarian Party.
The Roumanian Party.
The Servian Party.

The four last-named parties are kept up and subsidised by a national propaganda. In addition, there is the action of Austria to take into account.

M. Messimy concludes with a note on the *rôle* of Europe. Austria, he says, is practically the ruling power in Macedonian politics; her influence is even felt in Albania, where she has established a religious protectorate on behalf of the Catholics. Europe, in accepting Austria and Russia as civil agents, seems to expect these two powers to play a preponderating part in the pacification and control of Macedonia. One thing is certain: while Russia is engaged in a war which is absorbing all her powers and all her resources, Austria will know how to take advantage of the opportunity thus afforded her.

England and France have a great *rôle* a policy of progress and reform. Let France maintain her influence in the Levant and continue attentive to the events which disturb the Near East, let her never forget that her greatness consists in lending assistance to the oppressed, no matter what may be their race or their religion.

The July number of the *Girl's Realm* prints for the first time an account of the cruise of Princess Charlotte of Wales on board the sloop *Zephyr* in 1814, taken from the Diary of Richard Jelbard, an officer. In a short interview, Madame Sarah Grand advises girls to take up lecturing as a career, and she gives many useful hints on the subject.

A Possible Prime Minister?

In *C. B. Fry's Magazine* for July the outdoor man whose portrait and sketch appear is Mr. Walter Long. It is mentioned that he has been described as the only man in the House of Commons who looked physically fit and efficient. The writer proceeds:—

It is beginning to be asked by students of the situation: Is the clever, the adroit, the cunning, the skilful, the compromising statesman the best servant of the State? Do we need at the head of our commercial empire a philosophical mind, admirable at weighing evidence, skilful in effecting compromises, but paralysed and powerless for decision in cases of emergency? Would it not be better, on the whole, even at the sacrifice of a little adroitness and some rather brilliant legerdemain, to have at the head of our State a bluff, hard-headed, plain-speaking, straight-talking gentleman, capable of saying what he means, and determined to get sooner or later every iota of his demands? Would not such a man have more respect in Europe than the *dilettanti* of latter-day diplomacy, and would he not be far more at home to bind up all classes of the community in one vigorous and agreeable whole? . . . It is possible that he may be Prime Minister of England. He stands to-day for the fearless, outspoken, hard-riding, clean-living, right-thinking Englishman of the shires. He is the squire in Parliament. Of diplomatic *finesse*, of philosophical straw-splitting, of forsenic cunning, he has none.

Some Schoolboy Essays.

In the *Century* for July Miss Agnes D. Cameron, Principal of South Park School, Victoria, British Columbia, gives the following gems of the unconscious humour which a jumbled association of ideas often produces in the schoolroom. She says:—

Around the great striking figures of history the small boy weaves curious answers. "Moses' mother pitched his little cradle within and without with pitch and left him there in the pool of Siloam. But when the daughter of Solomon got the green leaf from the dove she hastened and brought food convenient for him, and the babe crowed thrice and grew up in her court."

I treasured the above answer for ten long years before I found one worthy to go with it. Here it is: "When Moses and Aaron went up to the Mount of Olives to prey, Moses threw a deep veil over his face, and, being drawn up in a fiery chariot to heaven, cried aloud in a still, small voice that he was the Prodigal Son."

Again: "King Alfred burned the neatherd lady's cakes. He amused himself with Roman candles, but was an untiring man to study: he translated the Fables of the Saxon Church and was afterward made the poet laureate. Queen Victoria called him the Beautiful Pearl of her Dominions, and sadly mourned his early death."

McClure's Magazine for June contains Helen Keller's "Apology for Going to College," which one would not have thought needed an apology; and an interesting, rather colloquial paper on "Typhoid; an Unnecessary Evil," by Samuel H. Adams. The writer agrees with the distinguished sanitarian whom he once heard say, "Give me a few million dollars and the power to enforce the laws, and I'll make any city in the world typhoid-proof." He would do so by guaranteeing an absolutely pure water supply. The amount of typhoid which is not traceable to bad water is, Mr. Adams thinks, a negligible quantity. The article is calculated to make a visitor to the States refrain from drinking water, even under the direst necessity.

THE AUSTRALASIAN REVIEW OF REVIEWS.

THE *Australasian Review of Reviews* for May is much exercised over the vague phrases of Mr Reid and his persistent refusal to say what he means in his anti-socialistic campaign

GOOD ADVICE FOR MR REID

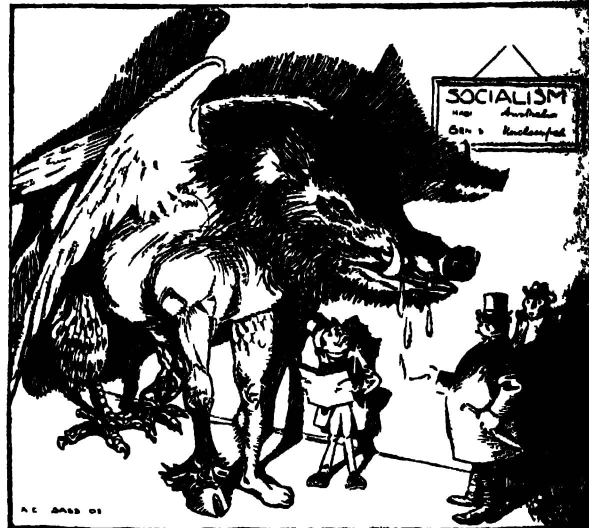
As a matter of fact, what Australia wants is what New Zealand has got, and if Mr Reid would only leave off

Sydney]

Sir George Reid's Unsuccessful Strategy

attacking a vague something which exists only in the minds of some of the most rabid of the Labour Party and define his terms he would find that his work was ended and that the sooner he made way for a new Progressive Party in real earnest to compass true reform and get the eternal political ferment stopped and the country at rest, the better would it be for the whole Commonwealth

HITTING BELOW THE BELT



It would appear that Dr Torrey's summary method with infidels finds favour with the anti-Socialists in their campaign against the Labour Party Mr Reid and others reiterate with tiresome monotony that the Labour Party desires the destruction of the marriage tie and of family life and some of the organs of the Press devote columns of space to its constant repetition while public speakers of both sexes keep up the proclamation of the farce The Labour Party has repeatedly stated that the sanctity of the home is as dear to it as to other members of the community, while the character of the members of the Labour Party in Parliament gives the lie to such a supposition One has only to look at the character of Mr J C Watson and his colleagues to know that the statement is a ridiculous subterfuge that is as unworthy of his opponents as it is untrue. Taken as a bo[dy] the Labour Party in the Federal Parliament will comp[are] with any party in the world for clean living and hi[gh] moral ideals

PROHIBITION IN NEW ZEALAND.

The Rev Father Hays—the Father Matthews of ou[r] time—is campaigning in New Zealand The fight again[st] strong drink increases in vigour every week, in preparati[on] for the great conflict in December next Never before [in] the country's history has such a phalanx of forces ma[r]shalled itself Certainly the results of No License in t[he] electorates that have won it are such as to justify oth[ers] in trying the experiment Police cells are almost emp[ty] If all the country were under No License, and the resu[lt] equal to what they are in No License districts, the[re] would be 10,000 fewer arrests in the country in one ye[ar] for drunkenness alone to say nothing of other crimes co[n]sequent upon the drink evil Truly New Zealand [is] solving the problem of the Liquor Trade through Lo[cal] Option

A PROPOSED ANGLO-AMERICAN CONVENTION.

Mr Deakin has received from the Transatlan[tic] Society of America a communication which has made [a] little stir amongst Friendly Societies here The lett[er] which is a circular one seeks information as to t[he] desirability and possibility of holding a Conventio[n] National and International, of representatives of orga[ni]sations or individuals who might be interested in helpi[ng] to still further promote friendly relations between citize[ns] of the United States and subjects of the British Empi[re]

Melbourne Punch]

And the p... are still asking What is it?"

and other kindred nations. The social and economic bonds which now exist could most advantageously be greatly strengthened entirely apart from all political considerations. Reference is made appropriately to the active organisations, newspapers and individuals, powerful and aggressive, all decidedly opposed to the cultivation of such friendly relations."

OTHER ARTICLES.

The veteran missionary, Dr. Macgregor, advocates an arrangement with France whereby we should acquire the whole of the New Hebrides. Senator Staniforth Smith, who has just walked across New Guinea, reports that the Germans are undoubtedly ahead of us in industrial expansion, and the facilities they afford intending settlers.

THE CONTEMPORARY REVIEW.

THE July *Contemporary* opens with an excellent article on Social Reform by Sir Oliver Lodge, and closes with a characteristic effusion by Dr. Dillon on the triumph of Germany, both of which I notice elsewhere, as well as Mr. Mallock's able essay, "From Matter to Mind."

A PEN-PICTURE OF LORD ROSEBERY.

Mr. John Howley, in an ably-written paper entitled "Family and Faction," maintains that the governing families govern England, and that Labour is powerless. Labour "sees not the one thing needful ere he can grasp the throttle-valve of State: the Second Ballot. Until that trivial reform comes the enfranchised workers must remain but stokers, to toil under the orders of well-born engineers."

At the close of this article occurs the following masterly pen-picture of Lord Rosebery:—

Chaste in achievement, incontinent of phrase, he preaches an efficiency he does not embody. A very Chrysostom of the commonplace, he ever illuminates the obvious and is the abiding providence of tired scribes gravelled for leaders, feeding them with facile text and matured wit. Grateful editors wax titanically tympanic whenever it pleases him to discourse of Shakespeare and the musical glasses. Too arrogant to obey, too fretful to command, too diffident to lead, too confident to be led, he stands apart, an enigma to himself and a stumbling block to others. He is undoubtedly the best hurler; he remains resolutely on the ditch. A sympathetic irritant, a gentle blister to his party, he strews not lilies but the briar rose in the path of progress. Around the noble edile flit dim Fabian shades, to shape the whisper of the polis and point the way for Labour with middle-class index. But will Labour heed?

LIGHT IN OUR PARLIAMENTARY DARKNESS.

Mr. H. W. Massingham, after discoursing on the disastrous inroads upon the power of Parliament due to that unconstitutional minister, Mr. Balfour, gives us in a postscript the following gleam of hope:—

Happily, we seem on the eve of a reaction from the decline of the Parliamentary power in England. And the reaction has assumed a very significant form. This is the increase of the power of the Public Accounts Committee, which was especially created to examine the appropriation of Supplies. Its chief officer is the Comptroller and Auditor General, who, with a large staff, audits all the Government's accounts, and is responsible, solely, to the House of Commons. Through the work of this body the scandal of the South African Contracts was brought to light. Its powers are very great. It can disallow items of expenditure, and thus throw the entire financial scheme of the Executive out of gear. It is in the extension of such examining committees, and in their power of reporting to the House, that the ancient Parliament of England may regain the supreme force which it seems to have lost. A second source of recovery is the re-assertion of the Speaker's function, in independence of the Executive.

EGYPT REVISITED.

In a brief paper describing what has been done for female education of late in Egypt, Sir Edmund Verney gives the following comforting account of progress on the Nile:—

Having visited Egypt at intervals since 1869, I have been greatly impressed this winter with its changed aspect. There are more life and movement everywhere; more flocks and herds in the fields; more boats on the river; in the country, once so silent and deserted, are long processions of camels and donkeys, and the population has enormously increased. The standard of comfort among the fellaheen has risen with the higher prices they get for all their produce. In Cairo the police have none of the arrogance of Eastern officials; they are quiet, civil, and admirably disciplined. The engineers employed on the irrigation works are alert and enthusiastic with the traditions of English gentlemen. The social revolution will be complete when it has reached the families of the upper classes; when the English tongue and English literature find their way into Egyptian homes the seclusion of women is doomed.

THE REVIVAL OF GEORGIA.

Mr. Alexander Ular bids us hope for great things from the rebellion in Georgia:—

It is to be remarked here that those who have a clear insight into the complexity of the problem want the Russian Empire to be dissolved into a federation of autonomous national States. And the Government is well aware that this tendency in Transcaucasia is one of the greatest dangers for Tsarism even in Russia. In a future Caucasian federation, as part of the Russian federal State, Georgia is bound to take the predominant place. She alone enjoys a stable organisation; she alone has a well-defined territory; the Georgians alone have a home country of their own.

OTHER ARTICLES.

Mr. J. K. Snowden, writing under the title of "Corn Law Memories," makes us shudder at the remembrance of the horrors through which England passed under the Corn Law. Constance L. Maynard describes "A Farming Holiday," and the Rev. G. S. Streatfeild discourses wisely and well on Christianity and Social Service.

THE COSMOPOLITAN.

THE *Cosmopolitan* for June is largely taken up with attractively illustrated papers on Society Amateur Actresses and on Clowns and Clowning. One writer discusses what John D. Rockefeller, Junior, could do with the millions which he must presumably some day inherit, and concludes that not until he reaches sixty odd years will he have any real appreciation of philanthropy by making money instead of giving it away. An article with the amazing title "The Modern Robin Hood" deals with Sullivan, the Tammany Boss. This delightful, smug-looking person, we are told, "has been bootblack, newsboy, pressman, saloon-keeper, undertaker, State senator, Tammany leader, congressman. He is a natural captain of men. Physically he is big—six feet tall and wide as a door. His face is round and wise and moonlike, and he would look like the late Colonel Ingersoll if there were more dome to his head. Mr. Sullivan does not do right; he does good. Mr. Sullivan can walk through any business door in New York, whether it be a Morgan's, a Vanderbilt's, a Gould's or a Rockefeller's, for there is none beyond the pinching power of Mr. Sullivan. This is not a caricature, but a likeness. In finale, Mr. Sullivan never tastes tobacco, never touches liquor, never breaks his word."

THE FORTNIGHTLY REVIEW.

THE *Fortnightly* for June is a first-class number. I have noticed the articles on the war, Russia, and the position of women elsewhere.

A WAIL FOR WAR WITH THE AMEER.

Mr. Angus Hamilton is in sore travail of soul because Mr. Balfour forbade Lord Curzon to launch us upon another Afghan war. Some people are incorrigible. Does not the ancient sage say: "Though thou brayest a fool in a mortar, yet will not his foolishness depart from him"? How true it is may be seen from the following demand for war:—

Half measures are no longer expedient, and steps should be taken at once to extract from the Amir of Afghanistan his compliance with our very just demands. There is no doubt that the present time is more opportune for such action than it is ever likely to be again. The risk of Russian intervention at this juncture is of the slightest, while the trained troops of India would inflict a salutary and very necessary lesson upon the armed rabble of Afghanistan.

Of course the mission was a folly. But to have followed up its failure by war would have been a crime.

MR. ANDREW LANG ON JOHN KNOX.

Mr. R. S. Rait endeavours to put in a plea in defence of Mr. Andrew Lang's somewhat slipshod and irreverent handling of John Knox, the founder of modern Scotland. Mr. Rait says:—

Mr. Lang's summing-up of his character may almost satisfy Knox's most fervent worshipper: "That Knox was a great man; a disinterested man; in his regard for the poor a truly Christian man; as a shepherd of Calvinistic souls a man fervent and considerate; of pure life; in friendship loyal; by jealousy untainted; in private character genial and amiable, I am entirely convinced. In public and political life he was much less admirable; and his 'History,' vivacious as it is, must be studied as the work of an old-fashioned advocate rather than as the summing-up of a judge." Of whom among Knox's contemporaries could an impartial student write in terms like these?

MR. FRED HARRISON ON "LYCIDAS."

In "A Morning at the Galleries" Mr. Frederic Harrison empties the vials of his wrath upon the "Lycidas" in the New Gallery. He tells his artistic friend that "if I had come here alone I should have taken it for a scraggy youth in an ungainly attitude—a sort of naked man 'Friday,' startled by the footprints of cannibals on the shore." A testy amateur of the old school then takes up the ball, and this is what we read:—

"You call that scarecrow Art?" he said. "Why, it is a mere cast from a very ill-shapen pugilist. And the attitude is only fit for a Fiji Islander's wooden idol. . . . Just look at those saucers above the collar bones. The arms are those of an Egyptian mummy, and can anything be more spidery than those skinny thighs and calves? . . . He is a type of ugliness. He is a mere cast, or facsimile, of an emaciated bruiser, with his four limbs stuck apart like a child's doll undressed. Look at his flat splay feet, the corns on his long toes, and the bunion of his right foot joint. Look at him from behind, and you will see a big letter W stuck upon a pair of tongs. . . . There is neither symmetry, nor balance, nor centre of gravity about 'Lycidas.'"

THE MARQUIS OF LANSDOWNE.

The article by F. St. John Morrow under this head is eulogistic. But surely the editor might have seen to it that something less slovenly and unintelligible than this was afforded us as an explanation of Lord Lansdowne's Agreement with France:—

In the Anglo-French Agreement of last year he bartered for definite obligations and advantages, certain inchoate rights in Egypt and Morocco, in Newfoundland and West Africa, Siam, Madagascar and the New Hebrides, the exercise of which provided a fertile source of friction between Downing Street and the Quai d'Orsay.

To give away rights and to accept in exchange obligations is too much like the method of buying and selling exposed by the Butler Committee.

OTHER ARTICLES.

Mr. Spender recalls in an article entitled "How it Strikes a Contemporary" how blind everyone was to the significance of the German national movement in 1866. No English statesmen realised the existence of Bismarck, and Lord Salisbury anticipated war from the only quarter where any attempt was made to secure peace. Mr. Gribble describes the earlier stages of Francis William Newman's phases of Faith, and Mr. J. E. Fraser writes on the beginnings of Religion and Totemism among the Australian aborigines. There is a strong touch of human nature among the adult males of Tierra del Fuego, who dress themselves up as spirits of the woods and the clouds and the rocks, as they find these bogeys "a strong moral aid in dealing with refractory wives and wilful children." When the boys become men they are introduced to the bogeys, who "turn out to be members of their own family. Any boy or man who betrays the secret is quietly put to death; and the same fate overtakes any woman who is suspected of knowing more than is good for her." Possibly England was peopled from Tierra del Fuego.

THE ECONOMIC JOURNAL.

THE *Economic Journal* for June has in it much that is of interest to the general reader, besides abstruse papers intelligible only to the expert. Mr. Acworth on British canals and Mr. Layton on Argentina and our food supply have been separately noticed. An anonymous writer discusses the economic effects of prohibiting the importation of lean stock which can be fattened on the farms of this country. He proves that this legislation has not diminished the Canadian trade with this country, nor has it raised the price of beef. On the other hand it has kept out disease. Professor John Davidson discusses at length the intricate problem of the financial relations of the Dominion of Canada and the federated provinces. Professor Chapman pleads that manufactures are not so unstable internationally as Mr. Cunynghame suggests. The notes and memoranda on current topics contain much that is of value. Jiuchi Soyeda, writing from the Japanese Treasury, is very optimistic as to the effect of the war on Japanese trade. The war, he says, has caused scarcely any disturbance in the general economy of the country. There is a remarkable increase in foreign trade, international commerce, banking, wages, rate of interest, postal deposits, and bank savings. Labour is well employed; distress or depression is nowhere to be seen. The reviews are, as usual, a feature of great value. Professor Davidson speaks in high but qualified praise of Dr. W. Cunningham's "History of English Industry," the new edition of which he describes as virtually a new book.

THE *Canadian Magazine* opens with a paper on "Winnipeg in 1904," the city of 100,000 having almost doubled its population in the last two years. In a paper on "Public House Trusts," Mr. R. E. Macnaghten discusses the possibility of applying the principles of Earl Grey's scheme to Canada; and concludes that nowhere are the difficulties to be faced greater than in England, and often they are less.

THE NINETEENTH CENTURY.

THE first five papers in the June *Nineteenth Century* are devoted to the consequences of "The Collapse of Russia." There are two papers dealing with the national defence. These, together with Lord Rowton's "Secret History of the Treaty of Berlin," are noticed elsewhere.

THE FINANCIAL CASE FOR HOME RULE.

Lord Dunraven, writing on the financial burden of Ireland, quotes official statistics which prove

that Ireland, with the same population approximately as Scotland, is blessed with 2,691 Government officials in comparison with 942 in Scotland, and that the total payment in Ireland for Government officials amounts to over £1,000,000 per year, while in Scotland the gross outlay is less than £300,000. Ireland has, as compared with Scotland, the privilege of entertaining many more Government officials and of paying a good deal more per head for them.

He does not, like Mr. Redmond, draw the moral that Home Rule is indispensable, but he goes so far as to say—

To insist on burdening Ireland with a system of government the most expensive in the world, the most irresponsible and the least reflective of the wishes of the people of the country; to refuse to allow public opinion to be brought to bear upon departmental administration, to deny the people the right to make economies and to devote the proceeds to the needs of the people and the development of the country, appears to me a policy fatuous and irrational, and incompatible with the democratic spirit of the form of government under which we live.

THE UNEMPLOYED PROBLEM.

Mr. Isaac H. Mitchell maintains that the Trade Unions do more for the out-of-works than the Government Bill proposes to accomplish. He suggests that—

It would surely be cheaper and better for public authorities to spend money for extra labour cost in winter than spend large sums on extra Poor Law costs, or even on farm colony work. Notwithstanding regulation, notwithstanding an intelligent anticipation of bad times and the pushing forward of public works, it is conceivable that still there would be those wanting work who could not obtain it. To supply this need the Government Bill might be useful, but without the better regulation of present employment, which would aim at making the hours of labour, and not the number employed, the elastic part of our productive system, the Government Unemployed Workmen Bill will be as disappointing in its results as its machinery is likely to prove dangerous in its operation.

OTHER ARTICLES.

The Rev. Dr. Jessopp gossips pleasantly about one Samuel Kerrich, rector of Dersingham in the eighteenth century. Mr. St. Clair Baddeley writes of The Sacred Trees of Rome. His list includes the fig, the myrtle, the laurel, the white thorn, the Cornelian cherry tree, the lotus, and the verbena. The Bishop of North Queensland describes the founding of the Church of England in Australia. Mrs. Corner-Ohlmutz describes a strange scene of exorcism which she witnessed in Ceylon. It seems to have been a genuine case of diabolical obsession. The title Heathen Rites is misleading. How would a Christian have dealt with the possessed girl? Mr. W. F. Lord writes about a forgotten British Ambassador, Count St. Paul, who represented this country in Paris on the eve of the American Revolution. Mr. Herbert Paul writes on the Butler Report.

IN the *Quiver* for July Mr. F. M. Holmes tells how missionaries are trained at the C.M.S. College at Islington and the Livingstone College at Leyton. Mr. D. A. Willey describes the palatial Club erected for boys at a cost of £20,000 in the city of Fall River, Massachusetts.

THE MONTHLY REVIEW.

THE *Monthly Review* for July is pre-occupied with questions of Imperial defence. "J. C." argues in favour of carrying the principles of the blue water school to their logical development. He wou'd dismantle the coaling stations, and place them under the charge of the Navy. In future these

defences would require a very small garrison; some gunners, a section for the searchlights, and a company or two of infantry to furnish patrols. If we reorganise our defences on these lines we shall gain for our field army a large proportion of the 31,000 men now employed on longshore duties.

He is followed by another anonymous writer, who argues that such a change is outside the pale of practical politics. Mr. A. W. A. Pollock pleads for more effective military training. Mr. Cope Cornford draws from the Japanese naval victory that Britain wants more trained bluejackets. Mr. Arthur Clay, defending the methods of the Charity Organisation Society in dealing with underfed scholars, refers to the experience of the Tower Street Board School. Before 1897 sixty dinners on four days of the week were given without investigation. Since 1897

relief has only been given after complete knowledge of the home circumstances has enabled the Committee to judge of its necessity, and of the kind of relief required adequately to remove the distress. The result of the change of system has been that friendly communication with the parents showed their ability and willingness to feed their children.

In the past year only four children were fed.

Among the other articles are Mr. Aflalo's exultation over the cessation of pigeon-shooting at Hurlingham, Mr. Arthur Symons' essay on Gustave Moreau, a paper on John Davidson as a Realist, and an article on the patriotic Duke of Sermoneta.

THE EMPIRE REVIEW.

MR. EDWARD DICEY discusses, in the July number of the *Empire Review*, the prospects of peace in the Far East, and warns the public against taking too sanguine a view. He does not think peace is in sight yet, the preliminary Note of President Roosevelt notwithstanding.

In a second article Mr. Dicey expresses his satisfaction at having diagnosed accurately the result of the ministerial crisis in France, whereas nearly all other writers in the British press held that M. Delcassé's position was too strong to be materially affected by external opposition. He thinks M. Delcassé's influence was bound to decline with the decline of the might of Russia. The situation with reference to Morocco, again, was, according to Mr. Dicey, the result of M. Delcassé's domineering policy, and he is of opinion that the removal of the Minister has simplified matters.

The Rev. Clement F. Rogers takes up the question of Free Meals for School-children; Theory and Practice. He advocates thorough methods of dealing with it:—

Since the main evil does not arise from mere lack of food, it cannot be met by free dinners. It is, of course, obvious to anyone with real knowledge of the lives of the poor, that if a child is insufficiently fed, a little soup two or three times a week cannot possibly make any difference at all. By playing with the question in this way real remedies are prevented, and the sufferings of the children prolonged and increased.

Each case must be considered by itself. It may be necessary for the family to be dealt with by the guardians, or for the law to be invoked, or personal dealing may cure the evil; but in all cases the work should be thorough, and the aim to secure the child 365 dinners, as well as breakfasts and teas, each year, and not merely two or three a week.

THE NATIONAL REVIEW.

THE *National Review*, which has now attained a circulation of 7,000 per month, is always interesting, if only because it is the fanatical organ of Germanophobia in this country. The current number is fully up to the mark in this respect, as may be seen by a reference to the summary in our Leading Articles, under the heading "Germany as Diabolus."

"JAPAN'S TRAFALGAR."

The best article in this number is Mr. H. W. Wilson's description of "Japan's Trafalgar," which is illustrated with diagrams, and is a very picturesque, readable, and apparently accurate account of the great naval battle. I note that Mr. Wilson disposes of the popular delusion that the Russians had the stronger fleet. The Japanese had what he calls a paper advantage of 53 per cent. in material strength. They could fire three times as many heavy projectiles per minute as the Russians, and in hitting power, he maintains, the Japanese had an advantage of five or six to one.

THE MIND OF A CHILD.

Mrs. Katharine Tynan publishes some quaintly diverting "Glimpses into the Mind of a Child," a boy of four to seven and a half. During these years she jotted down any of his sayings she thought worthy of preservation. He was, she says, "clever, overwrought, nervous, and turbulent," yet tenderly affectionate, with the saving grace of humour. A few of his sayings (age four to five) we quote: –

I came into the world, mamma, because I loved you so much.

When I say I'll be good, does God know whether I'll be naughty again or not?

Why is there such a fuss made over ladies? God doesn't like ladies better than gentlemen.

FREEMASONS IN FRANCE.

Dr. William Barry naturally takes no lenient view of French Freemasons. Englishmen hardly realise how entirely unlike they are to Freemasons in their own country. According to Dr. Barry, the 25,000 French Freemasons intend to rule France, and are actually on the way to do so—a rule which will be anti-military and highly anti-religious, or, rather, anti-Catholic. "*La carrière ouverte aux talents*" is coming to mean that Masonic candidates alone are eligible for Government appointments. M. Coombes is, of course, a Mason, put into office, says Dr. Barry, by Masons. Masonic influence has been all for the suppression of religious budgets and orders; and the education afforded by the Lodges is deplorably inferior to that given by the Catholic teaching institutions, which did undoubtedly answer a demand. The schoolmaster and the soldier the Lodges have resolved to make their own. Their insistence that education shall be free, compulsory and secular means nothing less than the elimination from French training of belief in God, with the country finally divided into Catholic Helots, without authority or influence, and Freemason masters in possession of all power and all honours. The Lodges have an organised spy system, of which Dr. Barry gives a marvellous account, and which is, he asserts, the source of much of their power.

ADMINISTRATIVE REFORMS AT ETON.

A writer who has already evidently been banged on the head for mildly suggesting some possible improvement in Eton administration, now again mildly suggests a few reforms, especially that there shall be some suitable hospital accommodation and a proper gymnasium. At present cases of pleurisy and pneumonia even have to be treated "in a boy's own wretched little rabbit-hutch of a room," the present Sanatorium being obviously insufficient. There is nowhere to send a boy with a broken thigh, for instance, unless to Eton Workhouse or Windsor Infirmary. Many of the houses he considers not at all up to the mark in point of sanitary arrangements, bathroom accommodation and other matters. He also suggests various modifications in the teaching curriculum—two hours less Greek, for instance, in the week, and a little about the geography of the Empire—a subject "lamentably neglected."

OTHER ARTICLES.

Mr. Reeves reviews Mr. Wells' last book under the title "The Expansion of Utopia." A worker who served under Colonel Morgan takes up the cudgels for that officer and roundly declares that nothing so inhuman, malignant, and un-English has ever before figured upon the lists of our State papers as General Butler's report. Major-General Barrow contributes an elaborate paper on Army Reform on National lines. "A Student of History" defends the system of reserves so fiercely assailed by Mr. Amery in the *Times* History of the War. Mr. J. Parker Smith, M.P., explains from the point of view of a Tariff Reformer why the Colonial Preferences were given up.

THE CENTURY.

THE *Century Magazine* for July is an exceptionally interesting number. The article on the Future of Poland is noticed elsewhere. The paper on the early history of the Electric Railway is very carefully written and intelligently illustrated. Mr. Melville Stone's account of the Associated Press is full of information. He says that the Associated Press succeeded in reporting the proceedings of the last conclave day by day to the wonder of the world:—

Laundry lists sent out with the soiled linen of a cardinal, and a physician's prescriptions sent to a pharmacy, proved to be code messages which were deciphered in our office.

The magazine opens with a copiously illustrated account of the Secession Movement in German Art by Mr. Albert Kinross. Mr. Richard Whiteing's description of the great chateaux of Touraine is continued. The story of Perry's opening of Japan is retold, and there is an interesting paper on Princess Mathilde. The fiction is as copious and as good as usual.

THE UNIVERSITY REVIEW.

OF the June number of the *University Review* it may shortly be said that it is worthy of its university readers. Mr. Hobson's subtle discussion of the possibilities of popular progress, Mr. Ramsay Muir's plea for local history, and Canon Barnett's study of university settlements claim separate notice. The Rev. J. Hope Moulton treats of Free Churches and the Universities, and reports from his experience of the theological faculty in Manchester University that, though belonging to various Churches, its members have never had a single difference of opinion grounded upon Church lines. It has been proved not only possible but easy to treat theology like other sciences, and establish tests for knowledge alone. He pleads for a similar advance in the older universities, and hopes that from the universities will come an influence and a movement to establish the new era of universal tolerance. The university notes from home and abroad form a valuable feature of the magazine.

THE WORLD'S WORK AND PLAY.

THE summer number of the *World's Work* is lighter in character than usual. The frontispiece is a photograph of "Jimmy" Lowther, and a special portrait of Edison also adds interest to the number.

CARAVANING AS HOLIDAY SPORT.

Mr. Clive Holland remarks in his paper on "Caravanning for Pleasure" that "gentlemen and lady gipsies," although increasing in number, are still not common. He estimates the actual cost of a van, with sleeping accommodation for four people, at from £250 to £600. Suitable horses will cost 35s. to £2 10s. each a week on hire, sometimes more. Their keep will be at least £1 a week each, and thus we arrive at a cost per month of a van of something like £40, not including the cost of putting it up in fields or inn-yards, at 3s. a night. Incidental expenses, such as tolls, repairs, etc., may be put down at another £4 or £5, while living expenses he estimates at about 15s. a head, minimum estimate. Does he mean per month? for if so this is very low; while per week it is high, especially as cost of all drinks is excluded.

DOGS AS POLICEMEN.

Mr. J. E. Whitby describes the training of police dogs in Belgium, a country where for various reasons the number of bad characters is very great, characters so lawless and desperate and so expert in the use of death-dealing weapons that the use of the dog as a limb of the law is a necessity: –

Begun originally at Ghent, where a canal-threaded district, docks, and outlying market gardens offer dishonesty a constant temptation, the success of the experiment has carried the idea like some good seed to other countries, as well as to many Belgian towns; and as the capital, Brussels, has by far the largest brigade of these strange police officers, it is this particular branch which shall be described here.

A police dog must learn to jump walls, scale hoardings, swim rivers, and even climb ladders. They are of the Belgian sheep-dog breed, black, rough-coated, handsome animals. In four years their use has immensely reduced burglaries in Brussels.

THE UTILISATION OF "CLINKER."

Mr. W. Meakin, writing of "Towns where nothing is wasted," describes the use which is made of "clinker," *i.e.*, refuse which has passed through the destructor and been purified by fire, in making excellent mortar, concrete slabs for paving, and even for the walls of workmen's dwellings. Leeds, Sheffield, Bristol, Birmingham, Nottingham and Wolverhampton are among the towns with large patent destructors, mostly with steam producing plants for generating electricity, all of them using, or hoping to use, their "clinker" so as still further to lessen the charges on the ratepayers. Liverpool has used its clinker in part for making concrete for constructing workmen's dwellings.

OTHER ARTICLES.

Mr. Eustace Reynolds-Ball describes a run which he took on one of the G.P.O.'s motor parcel mail-vans from Brighton, 10.45 p.m., to London (Mount Pleasant), 4.30 a.m. Mushroom farming is suggested as a possible British industry, M. Edouard Charles describing his visit to the mushroom farms at Malakoff, near Paris. There are several other good papers, though none of great importance.

THE Rev. H. H. Jowett, of Carr's Lane, is the subject of a very laudatory sketch in the *Young Man*.

BLACKWOOD'S MAGAZINE.

Blackwood's for July is a Scotch number. Sir Herbert Maxwell writes on "The Gentle Art of Blazon," a plea for heraldry, as a far more interesting hobby or study than, for instance, stamp-collecting, especially as heraldry has a profound historical interest, and stamp-collecting, being only recently possible, can have none.

A delightful paper deals with the life of "A Highland Gentleman," one Evander MacIver, of Scouric. His reminiscences quoted contain certain of his judgments on distinguished men of his day. John Bright appears as a disappointed sportsman—"the most uncouth, ill-tempered man I had ever met in his rank." Sir William Harcourt comes off even worse; but Mr. Gladstone "was a most pleasing, agreeable man in society," and, unlike Sir William, did not strike the Highland Gentleman as in the least elated by his reputation. It is a delightful picture of past times, when gentlemen remembered and cherished their Latin all their lives, and Catullus and Martial were their friends and companions. The gracious lady who was for fifty-six years the wife of this Highland Gentleman, "with snow-white hair and clear light-blue eyes," was "one of the kindest and most fascinating of Highland ladies, who, in spite of being the mother of eleven children, felt impelled to mother every young man who came within her ken." Now she would be more likely to want to flirt with him.

Eighteen pages are devoted to "Auld Reekie," by one who seems to have Edinburgh's associations at his fingers' ends. It is Edinburgh of the past before it had extended itself in lines of "unlovely villas, anathematised by Ruskin and Louis Stevenson," that is chiefly described, the writer, indeed, not bringing his chronicle beyond the last years of the eighteenth century, "the last Scottish century."

The present state of education in Scotland is destructively criticised; the Scottish Education Bill, the writer thinks, cannot arouse enthusiasm, "but in so far as it seems to open the way to greater freedom, it deserves support." He sums up Scotch education of to-day by saying:

The present educational arrangements in Scotland tend to degrade the Universities to the position of professional seminaries, while at the same time the children of the working classes are taught the elements of a University education.

Comparing Drake's strategy in 1588 and Togo's in 1905, a writer thinks that the present Russo-Japanese war does but confirm, with added emphasis, the lessons taught by the Armada campaign, especially the necessity of being able to assume the offensive on land and sea without delay: –

In their maritime aspect these two wars bear a striking resemblance. In both cases the possibility of war had been foreseen for some years, and active preparations had been in progress for some months previous to the outbreak of hostilities. Russia underrated the power of Japan, as did Spain that of England, and equally failed to make adequate preparations in time. On the other hand, Japan was better prepared than was England in 1588. Not only was her navy more ready, but her army was equally so, and added to her sea-power a strength which it is difficult to overestimate.

THE *Quiver* describes the Church of Palo Alto, erected at a cost of £100,000 in the centre of the Leland Stanford University, which, in its turn, cost seven million sterling. Half of the expenditure on the church was due to the decorations in mosaic and glass. The cost of the university and church was borne by the widow of the Senator to whose memory the whole was erected.

THE NORTH AMERICAN REVIEW.

THE *North American* for June 15th is not a particularly attractive number to the English reader, although it is a good average number.

THE AMERICAN MAN AND THE AMERICAN WOMAN.

Mr. Henry James, in his third paper on "Impressions on Re-visiting New England," makes some curiously suggestive remarks upon the evolution of the sexes in America. Mr. James says:—

No impression so promptly assaults the arriving visitor of the United States as that of the overwhelming preponderance, wherever he turns and twists, of the unmitigated "business man" face, ranging through its various possibilities, its extraordinary actualities, of intensity. Nothing, meanwhile, is more concomitantly striking than the fact that the women, over the land—allowing for every element of exception—appear to be of a markedly finer texture than the men, and that one of the liveliest signs of this difference is precisely in their less narrowly specialised, their less commercialised, distinctly more generalised, physiognomic character. It is, at all events, no exaggeration to say that the imagination at once embraces it as *the* feature of the social scene, recognising it as a subject fruitful beyond the common, and wondering even if for pure drama, the drama of manners, anything anywhere else touches it.

Puck] [New York.

Canal Business is Business.

[illegible]—"I'll buy Yankee goods."
[illegible]RICAN CONSUMER—"Aw, why d[illegible] buy it! [illegible] be a patriot!"

CAN THE PANAMA CANAL PAY?

No, says Frederic C. Penfield, not until America builds up a trade with South America. At present that trade is in English hands, although the Germans are creeping in. Mr. Penfield says:—

Our canal can never pay until we enter as shipowners into competition with Europe's trading nations, and these possess a material interest in th Suez undertaking. The commercial fleet at present under the American flag could not pay a tenth of Panama's operating expenses.

The way to compel the canal to pay *indirectly* is to make it incidental to the development of a mighty commercial marine, that will carry American products to present foreign markets, and to new markets, under the Stars and Stripes.

IS THE BRAIN THE MIND?

Not at all, says Dr. J. Sanderson Christison:—

There is no invariable parallelism between brain condition or form and mental phenomena, such as should and would exist if the mind were a mere product of the brain. And, in thus demonstrating the separability of mind from brain, we have also demonstrated the unity or individuality of mind; for we are all aware that our present mental activity is inseparable from our past experiences, however dead our feelings may be to remote events. Memory is thus seen to be not only the basis of mental growth, but the sign of an indissoluble power making for a purpose that knows no end. Between the mind and the brain there is only a conditional or cultivated correspondence. It is merely the relationship of master to servant, the mind proving itself the rightful master by its demonstrated ability to substitute one servant for another and still retain its own integrity.

THE REGULATION OF EMIGRATION.

Mr. J. D. Whelpley, in a paper which gives a very careful account of the emigration regulation of various European countries, says:—

If all the countries of Europe should enter into an agreement to restrain emigration by requiring official approval of the price at which a ticket could be sold, as is now done individually by Italy, Hungary, and Austria, the result would be most beneficial, not only to the countries now losing population, but to the countries attempting to raise the standard of admission. Nearly every European country now compels an emigrant to secure a passport or some other form of identification paper before leaving; transportation interests are now quite generally restrained from inciting emigration; and, in many countries, such as England, Italy, Hungary, and Russia, economic or political evils which have the effect of driving people from their homes are recognised and no inconsiderable effort is being made to remedy them. These influences are working to the good of all concerned.

A PLEA FOR THE INDIANS IN SOUTH AFRICA.

Colonel F. G. Stone writes briefly but bitterly concerning the storekeepers' agitation against the importation of coolies from India into the South African colonies. The scum of Europe may come, and welcome. For it is white and not very capable. But the Indian, who has better education, civilisation and breeding, is barred out because of his skin:—

The outcome of all this cry for a "White South Africa" is the maintenance of a South Africa under a system of rigid protection in favour of the storekeepers and Kaffirs; in truth, a black man's country, if ever there was one. And such a black man!

THE FUTURE OF THE AMERICAN NEGRO.

Senator Newland discusses the San Domingo question with a large outlook, which includes the suggested transplantation of the whole of the American negroes to Cuba. He says:—

Here we have in the Caribbean Sea islands of unsurpassed fertility of soil and richness of resource, admirably adapted to the black race. The expense of removal would be light. The ability to secure individual homes for each family would be within reach. The process of readjustment would have to be a gradual one, for the immediate segregation of the black labour of the South would cause industrial disturbances of serious consequences; but, if the colonisation of the negro is possible, it could not be accomplished under more favourable conditions, and we could easily afford the expenditure if in the near future

a policy could be inaugurated which would preserve this country for all time for the white race.

What the Southern States could do if deprived of their coloured citizens Mr. Senator Newland does not say.

HOW SPURIOUS PICTURES ARE FORGED.

A "Paris Authority" warns purchasers of pictures, alleged to be by the great masters old and new, which are sold at the Hotel Drouot, that in many cases these pictures are impudent forgeries. The business of manufacturing these frauds is systematised and lucrative:—

Here is an instance of what used to be done about the year 1880. A certain dealer in Paris bought one picture by each of the following painters: Corot, Daubigny, Diaz and Theodore Rousseau. Engaging a clever copyist at a salary of 1,000 francs a month, and providing him with a house and garden in the country, he set him to work to copy each picture twenty-five times, slightly varying the subject in each case. The hundred copies were produced in ten months, during which time, according to agreement, the painter saw no one save his servant. All these copies were sent to the United States and sold as originals from the collections of this or that well-known Parisian.

OTHER ARTICLES.

Miss Robb, a lady now occupied in the career of womanhood, indignantly vindicates the character of Tennyson's King Arthur from Miss Magruder's attack. Mr. Bascom advocates the adoption by America of the New Zealand tribunal for settling labour disputes. Mr. Brander Matthews glorifies technique, and Count Lutsow contributes an interesting account of Stendhal.

THE OCCULT REVIEW.

THE *Occult Review* for July contains a destructive bit of criticism of automatic handwritings by Miss Bramston. According to her, the majority of automatic writings are the dramatic expression of the imagination of the unconscious mind. But she admits occasional instances of prevision which are absolutely incompatible with her theory, and she forgets the explanation that discarnate intelligences are compelled to use the mental material of their mediums as mortals are compelled to be content sometimes with an imperfect typewriter. Miss Bramston would spell an ordinary English sentence quite differently if she were doomed to use different typewriters in each of which certain letters were missing. Mr. Alfred Fellows's paper on the "Evidence for Ghosts" is disappointing, although his conclusion is sound:—

The man who does not believe in ghosts because he has never seen one, or treats all ghost stories as mere lies or meaningless hallucinations with or without some striking coincidence, should nowadays be treated kindly but firmly as an intellectual troglodyte, and given to understand that his views cannot be accepted in the twentieth century by those who are capable of seeing the light when it shines on them.

Miss Goodrich Freer writes on Moslem Amulets. She tells the following story of the Evil Eye "on the excellent authority" of the daughter of Dr. Schick, the archæologist:—

A Moslem, credited with the Evil Eye, was speaking of his faculty, and instanced that he could bring about that the flesh of a camel which was being driven along the distant slopes of the Mount of Olives should be sold that very day as meat in the market. Those present, doubtful that his evil glance could really extend to so great a distance, encouraged him to attempt to realise his boast. He stared fixedly at the beast, uttered the sound known as *shah-ka*, the Arabic expression of admiration, exclaimed, "Cursed be thou! How fat thou art, O camel!" and the beast stumbled and fell!

When a heavily laden camel falls in Jerusalem it usually breaks its leg, and is slaughtered.

THE ATLANTIC MONTHLY.

THE *Atlantic Monthly* for June contains no article of special interest for English readers except the first, a paper entitled "Gay Plumes and Dull," in which Mr. John Burroughs runs his head against too wide an application of the Darwinian theory of the protective colouration of animals. This theory, he considers, has been greatly over-applied. When the bird itself seems to act as if it were protectively coloured, as do the grouse tribe, for instance, it may be safely assumed that it is protectively coloured. But Mr. Burroughs certainly does bring forward a great array of facts to prove his contention that the application of this theory must not be made universal. The neutral greys and browns of the animal world, the tints generally considered most highly protective, are the result of the law or tendency of Nature to be generally adaptive and harmonious—a tendency to get rid of strife, discord, and violent contrasts, and to adjust every creature to its environment. The *bizarre* forms and gorgeous colouring prevalent among semi-tropical or tropical birds and insects he considers "clearly the riot and overflow of the male sexual principle—the carnival of the nuptial and breeding impulse," like the cock or sham nests of the male wrens. It is not even, in his view, female selection that accounts for the bright plumage of the male birds, but "the inborn tendency of the masculine principle to riot and overplus." This same tendency, according to the writer, accounts for the males of polygamous birds being so much more strongly marked than the females. What a naturalist might say to the paper I do not know, but he would certainly read it with interest.

C. B. FRY'S MAGAZINE.

THE July number maintains the characteristic combination of an almost encyclopædic survey of current sport with quick human interest and out-of-door breeziness. Mr. Walter Long is described as an outdoor man and as a possible Prime Minister. There is a facetious symposium on the question "Is Golf an Old Man's Game?" in which the answer generally appears to be "Not principally or exclusively." Mr. Fry continues his "Points in Batsmanship," with illuminative pictures of right and wrong attitudes. Mr. Hugh Trumble writes on the bowler and his art. Mr. E. W. Tinmis investigates, with the aid of profuse diagrams, the subtle mathematical question, why a lawn tennis ball curves one way in the air and another after it bounces. Mr. R. C. Lehmann tells the story of the Leander Club, and infers from various documents that it must have been started between 1815 and 1820. Its triumphs at Henley are vividly portrayed. May Doney describes the Dartmoor man under the title of "The Freeman of the Moor." Anent village sports, the proposal is made that every village should have provided for it a Morris tube shooting range, which requires no more than the space of thirty-five yards. Leonard Fleming, describing country cricket in South Africa, mentions the singular fact that the wicket pitches are made by cutting away the veldt and then filling the place with crushed ant-heap, with ants and gravel mixed. It appears that ant-heaps, when broken and crushed and mixed with water, make wonderfully hard floors. Most of the tennis courts are thus prepared. In the current survey the Australian cricketers naturally bulk large, as also do the Queensland lady swimmers, who can swim five miles.

THE CORNHILL MAGAZINE.

FAR the most important article in the *Cornhill*, that on the Modern Italian Drama, is separately noticed. Mr. E. H. Pember, K.C., contributes some personal reminiscences of Lord Grimthorpe, whose chief characteristic seems to have been ruggedness, alike of mind and body. A strong and good man, with unessential faults and essential fine qualities, is the opinion of his forty years' friend. The Rev. Canon Ellacombe contributes a charming paper on roses—roses red and roses white—from the earliest mention of the flower to the present day. The third of the delightful papers, "From a College Window," deals mainly with books and the right reading of them, from the least dogmatic point of view. One of the many summer holiday articles that always appear about this time is an account by the Vice-Provost of Eton, of a voyage on the Moselle, starting at Treves, and following almost unbeaten tracks.

THE GRAND MAGAZINE.

THE July number of the *Grand Magazine* is nothing like so good as some of its predecessors, no article being of special importance or unusual interest. The one astonishing feature of the magazine is the announcement that a story by Mr. Barry Pain, "The Night of Glory," which has some of the characteristics of good French short stories, was refused by every editor to whom he sent it. He wondered why, and so, certainly, will many another. The editor of the *Grand Magazine* is to be congratulated on having published it at last.

REGISTRY ROGUES.

Mr. G. Sidney Paternoster, a recognised expert on the subject, exposes once more, and there is much need for it, the frauds of registry offices, both for servants and for clerks, governesses, etc. It is safe, he says, to conclude that any registry which advertises in the name of a servant from a presumably private address is fraudulent: and the same may generally be said of an agency which insists on a booking fee before giving any servant's name. At present it is astonishing how easy it is for rogues and swindlers to call themselves a registry office and to batten on the public's ignorance and credulity; and how difficult it is to punish them fittingly. Bogus advertisements brought in, in one recent case, 774 five-shilling fees in a very few weeks. The municipalisation of registry houses the writer thinks at present outside practical politics, as being too Socialistic a measure; but the licensing of such businesses is quite feasible; and if the London County Council gets powers to control registries from Parliament this year, next year "will see the beginning of the end of the fraudulent registry office in the Metropolis."

Mrs. Charlotte Perkins Gilman, in her paper on "False Idols," tells women that, in her opinion, they are morally as well as physically the inferiors of men; they are not really even more unselfish than men.

IS THE ARMY WORTH JOINING?

The debatable question raised this month is whether or not the Army is worth joining. To this replies first a recruiting sergeant, who says:—

> The overwhelming mass of evidence goes to prove that the Army is without a rival as a career for a young fellow willing to work hard and to go straight. "Do well by the Army, and the Army will do well by you," is what I always tell those I enlist, and I am convinced that I am right when I say this.

A private, however, thinks that:—

> If you want to work like a horse, live like a pig, to be ordered about by everyone you meet, to swelter in unhealthy climates, and finally to return to civil life when your best days are over with absolutely no prospects, then by all means join the Army.

"Ignota" tells of the methods resorted to by "aristocratic poachers," titled folk who desire to increase their income by trade without losing caste. The most popular aristocratic trade seems to be millinery, touting and breeding delicate and dainty pet animals coming next.

THE INDIAN WORLD.

THE second number of this plucky attempt to create a *Review of Reviews* for the Indian world reached me last month. On the cover is an outline map of the Kingdom of Asoka, as described in the Inscriptions and in the engraved Edicts. The character sketch is devoted to Debendra Nath Tagore, who was the eldest son of the man who, with Ram Mohan Roy, founded the Brahmo Somaj. He died this year at the age of eighty-eight. The books reviewed are Sir Alfred Lyall's "Life of Lord Dufferin" and Krishna Deb's "Early History and Growth of Calcutta." The first place in the magazine is given to an article by "A Retired Anglo-Indian," in which he pays a tribute alike to the *Indian World* and to the Indian Empire. The second article is devoted to the discussion of what should be done for the protection of the ryots, or, as it is spelt, "the Raiyats." The following is a list of the leading Indian reviews reviewed:—The *East and West*, the *Hindusthan Review*, the *Calcutta Review*, the *Indian Review*, the *Malabar Quarterly Review*, and the *Mysore Review*. The editorial notes are modestly relegated to the rear end of the magazine. I heartily congratulate the editor, Prithwis Chandra Ray, upon the success of his venture.

Hindi Punch.] [Bombay.

Motherly Advice.

HIND (To Miss Congress preparing for a flying visit to England): "Put on your richest dress, your most winsome smile, and your best manners, my dear, when in Sister Britannia's home, and you are sure to capture hearts!"

THE INDEPENDENT REVIEW.

THE most impressive article in the July number is a brilliant paper by Mrs. J. R. Green on the case of Sir Antony MacDonnell.

"THE MARTYR OF ENGLISH MEDIOCRITY."

The writer exposes in scathing sentences the dark exception which Ireland offers to the rule of English success in government, whether democratic government in Canada and Australia, or absolute government, as in Egypt or India. She declares, "As a matter of fact the opinions and wishes of the Indian native are more consulted and considered in legislation by the Indian Government than those of the inhabitants of Ireland by the Dublin Boards under alien officials, or the Westminster Parliament." She thus sums up the MacDonnell incident :—

Such a story gives us the measure of Irish administration, its squalid controversies and excited panics, the limitation of its thought, and the monotony of its failure. There is nothing in which the narrow, uninformed, parochial temper of Englishmen needs more enlightenment from the broad affairs of the great world than in the government of Ireland. That island has never been allowed to taste of the benefits of English statesmanship, far less of Imperial wisdom. Ireland has been the martyr of English mediocrity.

"A NEW WAY WITH THE LORDS."

Mr. J. A. Hobson's "New Way with the Lords" is certainly new to English politics, but scarcely to the mind of reforming Englishmen. He would provide against the absolute obstruction of the Upper House under a Liberal Government, and its utter subservience to a Conservative Government, by instituting the Referendum to settle a deadlock between the two Houses, and the Initiative to prevent both Houses enacting measures opposed to the will of the nation.

UNLUCKY FRANCE.

Mr. Robert Dell says there are only three choices before France : Napoleonic enforcement of the existing law by fine and imprisonment against clerical offenders ; or abject submission to the Vatican ; or the present measure of separation. The provision it contains for handing over Church property in each parish to an association of not less than seven persons might conceivably enable the laity to assert themselves ; whence the bitter opposition of the Vatican to this clause. But the writer thinks the more likely result of Separation will be "an increase in the power and influence of the extreme Ultramontane Party, and a still further decline in the hold of the Church on the French people."

THE PROBLEM OF THE SMALLER STATES.

"A Swedish Patriot" thinks that Sweden and Norway will stand together against an enemy He still hoped, when he wrote, that they would stand together under the same King. But in any case, he is confident

The ultimate form of the combination, whether reduced into writing or not, will have to be found, and, when found, it will be an example for the whole world. The problem facing smaller States must be solved ; and it is not unlikely that the two peoples on the Scandinavian peninsula will be forerunners in finding a solution. All the Great Powers are frankly expansionists, and can, therefore, contribute nothing towards the solution of the problem how combination should be carried out in order to prevent further encroachment by themselves, singly or in concert.

Is the writer thinking of a Danish, Swedish, Norwegian, and possibly Dutch League, which might, with combined naval forces, give even a Great Power pause?

GOOD WORDS.

Good Words contains a paper by Mr. Tighe Hopkins on Mrs. Ballington Booth, "The Little Mother of American Prisons," a most admiring tribute to her work among the inmates of American gaols.

Mrs. Ballington Booth, it may be remembered, some time ago left the Salvation Army, and her Volunteer Prison League movement has nothing to do with it, and is, indeed, absolutely dissimilar in method and government. At first she merely tried to meet the prisoners, and get to know them individually ; then, having won their confidence, to put them on their mettle, and gradually induce them to stand up in prison with the Volunteer Prison League badge on their breasts. The rules of a member of the League are :—

First—To pray every morning and night.
Second—To read the Day Book faithfully.
Third—To refrain from the use of bad language.
Fourth—To be faithful in the observance of prison rules and discipline, so as to become an example of good conduct.
Fifth—To seek earnestly to cheer and encourage others in well-doing and right living, trying, where it is possible, to make new members of the League.

Even men serving life sentences belong to this League. Mrs. Booth hardly ever enters an American city now without coming upon some of those she had helped in prison, who, having left it, are now doing well.

THE TREASURY.

THE July number of the *Treasury* contains many interesting articles. Canon Dodd, of Adelaide, opens the number with a sketch of Dr. Harmer, the new Bishop of Rochester, who has been working in South Australia the last ten years as Bishop of Adelaide. His administration in Adelaide, says the Canon, has failed to rouse much enthusiasm, due perhaps to a temperament shy and retiring, and he has lacked boldness in putting the needs of his diocese before the public ; but in philanthropic movements he has always taken an active interest.

This biographical paper on the new Bishop is followed by an article on Whitby, as the Paradise of Miss Mary Linskill. Mr. Reginald A. R. Bennett thinks Miss Linskill deserves to be remembered for her descriptions of Yorkshire coast scenery, and in the story "The Haven under the Hill" Whitby comes in for a large share of descriptive writing.

THE STRAND MAGAZINE.

IN the July *Strand Magazine* Father Gapon begins "The Story of My Life," telling how he rose from the peasant class to the priesthood.

Mr. Gordon Colborne, in another article, writes on Genius, by Counties. He says division into counties is no mere arbitrary geographical distinction, the inhabitants in most cases have distinct physical and moral traits. Certain soils are propitious for the growth of genius. The writer traces our greatest men to their birthplaces :

Warwickshire, he writes, contained the precise ingredients of Shakespeare—his sanity and serenity, his good-humour and philosophy—and when circumstances were favourable the man appeared. Shakespeare was Warwickshire crystallised by Fate.

Over sixty great names are attributed to London, for "all the provinces pour their talent into the lap of London, and talent breeds talent."

THE REVUE DES DEUX MONDES.

THE only political article in the *Revue des Deux Mondes* of June 1st refers to the War in the Far East. René Pinon, who entitles his contribution "After the Fall of Port Arthur," gives a brief history of Port Arthur. The city, which was known only to a few sailors, missionaries and consuls twenty years ago, suddenly took its place in history in 1890. The events which followed made this strategic point the symbol of Russian rule in Northern Asia, and to the Japanese it was the great stake in the struggle, as it has since become the sign of victory.

The masterwork of the nineteenth century was the conquest of the world by the European nations, and the consequences are just beginning to develop. By the side of economic and mercantile expansion a place must be given to the propaganda of ideas. The Christian missionaries have never shown more ardour or more disinterested zeal; they have conquered souls, but they have not transformed nations. The efforts of Europeans to make the Africans and the Asiatics real partakers of our civilisation have only been incoherent and fragmentary.

Contemporary Europe is not yet ready to understand the lesson of Port Arthur. What do the examples of history matter to great commercial houses concerned about nothing but their balance-sheets? It is in the nature of States founded on commercial lines to be satisfied with immediate results. Christianity divided against itself has lost its power of cohesion. The power of Japan has been made, not so much by her regiments and warships as by our discords, the want of an ideal capable of raising the European nations above their immediate interests. The real yellow peril is in ourselves. If the lesson of Port Arthur is not a sufficient warning to the European nations, it is to be feared that no other force in this world would stop their economic *régime* till commercialism has achieved its work of destruction and imperialism has killed the empire.

In the second June number René Doumic discusses the Personal Novel. He describes the personal novel as that in which the writer confuses himself with his chief character. In the personal novel the author reveals his inner life to the public. The most brilliant period of its history in France was the early part of the nineteenth century. The transition from the personal novel to the novel of manners was made by the historical novel in the first place, and afterwards by the realistic novel.

THE NOUVELLE REVUE.

ALBERT SAVINE contributes to the *Nouvelle Revue* of June 1st a short character sketch of the King of Spain. When Alfonso XIII. was born on May 17th, 1886, nearly six months after the death of his father, and Spain was again rejoicing in the possession of a king, the widow-mother could only murmur: "A son! what a joy! and how sad that my poor Alfonso cannot see him!" Madame Tacon, his first governess, was very strict, and the little king and she did not get on too well together. From his earliest years he was conscious of what was due to him as king, but he had the charming manners and the Bourbon courtesy befitting a descendant of Louis XIV. Among other accomplishments he can play the violin, whereas his father was absolutely anti-musical. He is very popular, and likes to enjoy his popularity. The manœuvres form one of his favourite pastimes, and he is specially interested in the Spanish cavalry. He is an excellent horseman, but it is stated that he prefers his motor to his horse, and he has been charged with running it in the streets of Madrid at a speed prohibited by the police.

A scientific article, by Lefebvre Saint-Ogan, gives an account of Benoit de Maillet, 1656-1738, as a French precursor of Lamarck and of Darwin. In his work, "Telliamed: the Conversation of an Indian Philosopher with a French Philosopher," he expounded his ideas on the origin of the different animal races.

In another article, Henri Dagan writes on the French Co-operative Union, a federation of some three hundred different societies, dispersed in almost every department of France. Its Central Committee is at Paris, and the economist, Charles Gide, is the President. The all-important question before the June Congress at Paris is that of Licences. A recent law enacts that all French co-operative societies and agricultural syndicates must have licences from the beginning of next year, and not unnaturally a strong protest will be made against the new law.

The second June number opens with a hitherto unpublished article against the Censure of Plays, by Jules Claretie, written some twenty years ago. It was to be the preface to a book entitled "The Censure under the Second Empire," and the book was to give the secret reports prepared by the censors of Napoleon III. on the majority of pieces played between 1850 and 1870. In 1892 the book was published by Armand Charpentier without the preface. Jules Claretie thinks the Censure intolerable, and its chief defect is that it prevents nothing which it pretends to prevent. Its distinctive characteristic is ignorance. It makes war on words, but it cannot interfere with gestures. In a play entitled "Pinto" occur the words "Down with Philip!" and as the cry "Down with Philip!" might be supposed to refer to the king, the phrase was suppressed, but the actor replaced it by a mute sign producing the same effect. The first piece to suffer by the Censure under the Empire was "La Dame aux Camélias," and the last "The Prussians in Lorraine."

In the same number is begun an article on Joseph Ignace Guillotin (born 1738) and the Guillotine, by Pierre Quentin Bauchart. As a professor of anatomy, pathology, and physiology, Guillotin was an important personage in the scientific world in the reign of Louis XVI. After his marriage he took up politics, and in 1788 was the author of the "Petition of Citizens Domiciled in Paris," which greatly agitated public opinion, and prepared it for the great events of the following year. It was in December, 1789, that he proposed decapitation as the least painful form of capital punishment, besides being the quickest and surest.

LA REVUE.

IN the first June number of *La Revue*, Emile Faguet writes on the Louis the Seventeenths imprisoned in the Temple from 1793 to 1795. The mystery increases, for the two Louis the Seventeenths have now become four—the real Louis XVII. and three substitutes.

Jean Longuet, writing in the same number, contributes an interesting article on Socialism in the United States. He quotes the words of the late Marcus Hanna to the effect that the future struggle in American politics would be not between Republicans and Democrats, but between the Republican Party and Socialism. In the last century America was the soil chosen by most of the Utopians and their followers, and the writer notices Robert Owen, Fourier, and Cabet. But he does not think there is any connection between these communistic colonies and the

present day Socialist movement. In the last fifty years the growth of Socialism has been remarkable. The American Socialist Party and the American Socialist press have an enormous influence—in the land of trusts. In Illinois, for instance, the Socialist vote, which was 9,600 in 1900, became 20,000 in 1902, and in November, 1904, attained to the number of 70,000. This article is followed by one on the Fusion of the two English Aristocracies of Birth and Fortune, by Jacques Bardoux.

Paul Gsell, who writes on Edouard Détaille, protests against the placing of this artist's work, representing the celebration of human butchery, in the Panthéon, opposite to the principal entrance, at a time when the Russo-Japanese War is filling the world with consternation, and is demonstrating that if war is a frightful necessity, it is in no case an occasion for glory. There is not even the excuse of talent, and the pretended military glory is not represented in its tragic grandeur. The work is both immoral and vulgar; and the administration of the Beaux Arts is responsible for allowing Edouard Détaille to succeed the sublime Puvis de Chavannes.

The writer goes on to say that in the art world there are certain reputations quite illegitimate, and it is necessary to enlighten the public as to the mediocrity of these great pontiffs. In the present *Revue* he begins with Edouard Détaille, and criticises severely his military pictures:—

> In all the work of M. Détaille th[illegible] is not an emotion, not a thought, not a natural movement, not a[illegible]al gesture; there is nothing but parades and salutes.

Dr. J. Regnault, in the second June number, raises the serious question, May we and ought we to hasten the death of incurables? Dr. Ox is reported to have written:

> Why prolong the agony of a man whose death is inevitable? Why exhaust the resources of medical science to keep him in his misery? Would it not be more humane to deliver him from his sufferings? We do not hesitate to put an end to the life of a dog or a horse whose recovery seems impossible. Shall we show less pity to a human creature than to an animal?

Under the title of "Medical Assassination and Respect for Human Life," M. Guermonprez has written a book on the subject, from the triple point of view of medicine, tradition and religion, in which he indignantly rejects any practice whatever which might lead to euthanasia, calling it medical assassination pure and simple.

Dr. Regnault refers to a case of a woman who remained in the hospital for three years before death released her. She was suffering from ataxia and blindness, and was unable to move in her bed. The monotony of her existence was only broken by the frightful lightning pains caused by her dread disease. She had no friends, she felt she was a useless burden on society, and that she was occupying a place which might have been of use to more curable cases. She begged for a quick and easy death, but no one dared to realise her wishes. The morphia injections were measured parsimoniously, and were sometimes replaced by distilled water, so as not to develop the morphia habit. To-day, perhaps, adds Dr. Regnault, our action may be approved of; to-morrow it may be described as inhuman and cruel.

THE June issue of the London *Bookman* is devoted almost entirely to Edward Fitzgerald. Mr. Wilfred Whitten thinks the most surprising thing about Fitzgerald's "Omar" is that it was done at all. At forty-four Fitzgerald did not know a word of Persian, and up to that age he had not attempted any hard task-work. Fitzgerald's version of the "Rubáiyát" forms a supplement to this number of the *Bookman*.

THE REVUE DE PARIS.

IN both June numbers of the *Revue de Paris* Jacques Rambaud discusses the problem of Italian emigration. The United States, he says, have an attraction for Italian emigrants which can only be explained by the progress of the country and the stability of the government. In 1898-99 the Italian immigrants in the United States amounted to 76,489, in 1900-01 the number was 135,658, and in 1902-3 it was 230,622, out of a total number of emigrants to the United States of 857,046 persons. This was the highest number yet attained by any nationality. This enormous afflux of Italians surpasses that of Ireland in the years of famine, and it has become a serious problem for the United States, for the arrivals in most cases fall into the category of undesirables. The only Italian colony which is really prosperous is in California.

South America is more favourable to the Italian emigrant than the Northern Continent, and race, language, climate, and the immense uncultivated territories ought to facilitate Italian expansion. Argentina is the chief centre of attraction, and the larger Argentine cities have been built by American workmen. It is certain, the writer says, that if the continent of South America is not quickly taken up by Europeon emigration and European capital, the United States will soon take it in hand. That it may maintain its Latin influence the Italian element is the most desirable, for neither France, nor Spain, nor Portugal can send a sufficient number of emigrants.

In the number for June 1st Victor Bérard takes Spain for the subject of his article on foreign affairs. He discusses routes, railways, etc. For Algeria and Morocco, Spain, he says, ought to be the terminus of the French land routes. There are two routes which might restore the fortunes of Spain, and which are necessary to French interests—Paris to Cadiz and Paris to Carthagena. Tunnels and new lines are necessary to shorten and accelerate the traffic. In conclusion, the terms of the Franco-Spanish Treaty of August, 1904, relating to three new international railways between France and Spain are quoted.

The League of the Empire Record.

THOSE who follow either Imperial movements such as that for the celebration of Empire Day or the inter-Colonial and inter-Imperial system of linking schools in different parts of the Empire of like grades for correspondence and exchange of work, will find much to interest them in the current number of the *League of the Empire Monthly Record* (League of the Empire Offices, Caxton Hall, Westminster, post free 3d.) The particulars of Lord Meath's silver challenge cups and League of the Empire prizes for competition on Empire Day, 1906, are published, as well as illustrated accounts of the celebration of Empire Day this year, and a special article by Lord Meath on "The Empire Day Movement." There is also an illustrated paper on the Crystal Palace exhibit of the League of the Empire. Empire Day was celebrated, Lord Meath says, in 1904 by five self-governing and twenty-four Crown colonies, as well as by some 4,000 British schools. Empire Day in 1905 was celebrated by six self-governing colonies; including all the Australian colonies excepting New South Wales, besides British Columbia, Nova Scotia, New Brunswick, and several other Canadian provinces; also in twenty-four Crown colonies, and by 5,415 British schools and education committees, including sixty-nine secondary schools, besides which 129 addresses and sermons were delivered on May 21st referring to Empire Day. Truly a wonderful growth in the movement during a single year.

THE ITALIAN REVIEWS.

THE *pièce de résistance* of the *Nuova Antologia* this month is Maggiorino Ferraris' solid article—seventy pages long—on Italy's naval finance. The distinguished deputy, Italy's foremost financial authority, has embarked on a crusade in favour of the reform of naval administration, in order that the country may derive full advantage from the large sums expended on the navy. Needless to say his assertions have excited much controversy in the Italian press. The article, which consists largely of a financial comparison between the Italian navy and those of England and Germany, is far too long and technical for an adequate summary, but it is pleasant for English readers to find so many complimentary references to the British Navy. The same number openly laments the downfall of M. Delcassé, considers that he has been treated with ingratitude by France and sacrificed to Germany, and declares that should a conference take place France would find a firm friend in Italy. P. Toldo discusses the identity of plot that exists between Shakespeare's two tragedies of "Hamlet" and "King Lear" and a Gascon folk-lore tale as regards the first, and an old Corsican legend as regards the second. Certainly the "Hamlet" resemblances are very close, and suggest the questions whether and in what shape Shakespeare can have been familiar with the story when he composed his play.

The recent sacerdotal jubilee of Mgr. Bonomelli, the patriot-Bishop of Cremona, has been the signal throughout North Italy for a great demonstration of affection towards the venerable prelate, in which the *Rassegna Nazionale* has taken no small share. The two June issues, both of exceptional interest, deal very fully with the subject, and furthermore discuss the problem of Italian emigration, with which Mgr. Bonomelli's name is so intimately associated. In regard to permanent emigration, "A Piedmontese" describes the conditions that await the Italian emigrant to the United States, complaining that, whereas the German and Irish immigrants are regarded forthwith as part of the nation, the Italians are regarded to the end as foreigners. They herd in the poor quarters of the great cities, and to remedy this it is now proposed to direct the stream of Italian emigration as far as possible to the vast agricultural districts of the South-West, where, for climatic reasons, they ought to succeed better than immigrants from Northern Europe. Dr. Guido Gray, on the other hand, writes concerning the condition of life of the temporary emigrants, those thousands of Italian labourers who annually cross the Alps for a few months of wage-earning in foreign lands. Ildefonso Stanga gives excellent practical advice to ladies living in country districts, describing first the wide-spread evil of absenteeism, and then indicating the various lines of activity that should suggest themselves, such as technical and domestic training for village children, and the encouragement of co-operative associations.

The Mazzini centenary has excited less notice in the Italian monthly press than one would have anticipated. The *Rivista d'Italia*, however, publishes a complete Mazzini volume of considerable interest to his many admirers, dealing with various aspects of his career, philosophical and political. A large number of Mazzini's letters are printed at the same time.

La Nuova Parola develops more and more into a psychical research magazine. This month it contains interesting articles on psychic force, on W. S. Moses and his psychic studies, and on the history of superstition.

THE DUTCH REVIEWS.

Onze Eeuw contains an able article by Mr. Smissaert on the proposed law concerning compulsory insurance against illness. The principle of such a law, as exemplified by the German method, is to give the employer power to deduct a certain weekly or monthly sum from the wages of his workers, add a percentage himself, and hand the combined sum over to those entrusted with the administration of the municipal or national fund; to this fund the State also contributes. One of the questions which is agitating the Dutch mind is: Shall the administrative council consist of workmen, or employers, or both? There is, of course, the further suggestion that it should be controlled by State or municipal officials. There are advantages and disadvantages in all those methods, but it would appear to the onlooker that the fairest way would be to have a combination of workmen, employers and State officials.

In the same review Mr. Hugo de Vries gives another instalment of his description of Tucson and the West American Desert, where a land of plenty has been made to spring from the wilderness, mainly by means of irrigation. The essay on Proudhon, the French economist, and his system of contradictions is good reading; the writer contrasts Proudhon's ideas with those of Hegel, from whom Proudhon appears to have drawn his inspiration in good part. Hegelism, we are told, is gaining much ground in the German universities, and is also spreading among the students of the Dutch universities.

In *De Gids* the subject of the paternity law comes up for discussion as the result of the latest project for an Act to give larger powers to those interested in discovering the father. The article is headed by a quotation in French, from Perreau, to the effect that so many of the laws by which we are governed appear to have been made by men for themselves. This condition is slowly being altered, and the new Bill, as we should call it, is another step in this direction of equality.

De Gids also contains an article which should be read in conjunction with one on the same subject, Municipal Finance, in *Vragen des Tijds*. Both are learned and lengthy, and have been inspired by the appearance of a book on that interesting topic, written by an authority. The Dutch towns, as a whole, are suffering from the same complaint as the London Boroughs—a constant increase in the rates. Some of the towns can bear it, but others are in a bad way, and Government aid is necessary. Some people think that there would have been a different tale to tell if the town dues had not been abolished. The writer of the book in question is inclined to think that the trouble has arisen not because the municipalities have been too large-minded in their ideas, but rather because they have crimped the expenditure to a point where they have practically frustrated their own good intentions. "The Arrangement of Electoral Districts," a familiar subject with us, is another burning question which comes in for treatment in *Vragen des Tijds*.

Elsevier has a well illustrated account of a jaunt to, and in, Giethoorn; this place is so lovely and interesting that—so says the writer—it cannot be properly described, and the task would have been altogether hopeless had he not had the assistance of the lady whose photographic views are reproduced. Some notes on the Battle of Waterloo, a very readable drama of the days of the Crusades (the *locale* is Jerusalem and the time 1131), and the usual features make up an average number.

THE TENT, HOLLY BUSH, HAYLING ISLAND.

READERS of the REVIEW OF REVIEWS who enjoy camping out will be welcome at the tent, provided they only come two at a time, and that they are either married or are of the same sex. There are two camp beds in the tent, which is in a field close to Holly Bush Cottage, and within quarter of a mile of the sea. Campers must supply their own food. The tent was in constant use at Cambridge House by members of the Mowbray House Cycling Association. All applications should be sent in in advance to Mrs. Stead, Holly Bush, Hayling Island. Holly Bush stands about half a mile from the Parish Church, and a mile from Hayling railway station.

The Tent at Holly Bush.

The Woman Movement in Sweden.

IN the *Young Woman*, Miss Dora M. Jones describes the girls of Sweden. She thus reports on the advance of women in that kingdom:

The girls of Sweden within the last generation have entered fully into the movement for opening new careers to women, and if one of them decides to prepare for a profession, to take up literature or art, or to devote herself to some form of study or research, no one is surprised. Last year there were in Sweden three women doctors of philosophy and nine doctors of medicine engaged in the practice of their professions. There was also a lady doctor of laws, who has been appointed to a lectureship at the University of Upsala. Madame Sonia Kovalesky, the famous woman mathematician, was the first woman appointed in Sweden to a University professorship. Women are doing valuable work as members of School Boards and Boards of Guardians, they vote at communal elections and engage in all sorts of social activities, with little (so far as one can judge) of the asperity or self-consciousness which has sometimes discredited the "New Woman" Movement in England. Among living Swedish women writers are two who have won fame beyond the limits of their own country—Ellen Key, as an essayist and lecturer, and Selma Lagerlof, by those extraordinary and powerful stories, "The Legend of Gosta Berling" and "Jerusalem," which reveal the mystical and romantic side of rural Scandinavian life. . . . It is pleasant to note that Swedish girls, healthy and vigorous both in body and mind, have not lost that charming politeness which is one of the best traditions of their nation.

HOLIDAY SCHOOL FOR WALWORTH CHILDREN.

SECOND YEAR: JULY 31ST–AUGUST 23RD.

CHILD-LIFE in the slums of Southwark at the best is sad indeed, but during the hot summer months it is pitiable in the extreme. The schools are closed. There is no park in the Borough. The district is in the very heart of the County of London, and at the greatest distance from the open country. Some of the more fortunate are away on country holidays, but the immensely greater proportion are left behind. The mothers, already full-handed and overburdened, dread the holidays, when the little ones wear out their clothes and boots to no good end. The only resort open to them is the street—hot, dusty, and often overcrowded, or the still hotter and more stifling tenement. Thus the holiday, which ought to bring joy and health to child-life, is here a time of dreary and dangerous monotony, and instead of being creative tends to physical and moral degeneration.

The Browning Settlement last year did something to brighten and improve the lot of the children during these trying weeks, by arranging some modification of the Vacation School.

There were no lesson books, only the attractive blending of work and play. Classes were formed in painting and drawing, musical drill, bathing and swimming, stencilling, clay modelling, story-telling, with the use of story-books, and each afternoon an outing to Tooting Common.

This experiment was a great success. The children enjoyed it to the utmost, and another School is clamoured for this year. The number and nature of the classes will depend on the extent of help which can be secured. The Settlement asks for the honorary service of friends who will act as teachers, play-leaders, story-tellers, accompanists, and guides to the Common and baths.

The London County Council has already granted the free use of the Sandford Row Schools. The hours are from ten to twelve.

A certain amount of expense will be involved in providing materials, tram fares, etc. Who will help in cash or kind or personal service? Friends willing to help in any way are requested to communicate with the Head of the School, Miss ETHEL LANCASTER, Browning Hall, Walworth S.E.

The Quarterly Review and a Quarterly Reviewer.

WHEN I wrote in the May number I ought to have discriminated more closely between the article of a *Quarterly* Reviewer writing in the *Quarterly Review* and articles contributed by the same anonymous contributor over the signature of the *Quarterly* Reviewer in other periodicals. His original article in the *Quarterly*, although extremely harsh in its criticism of the Tsar, refrained from inciting to assassination, and in so many words disclaimed any desire that readers should draw such a deduction from his exposition of the Tsar's reign and character. It was not until he began to contribute to other periodicals that he threw off the mask, and wrote what the *Daily Express* described as direct incitement to assassination. It is rather hard on the *Quarterly Review* that because it opened its columns once to a writer that he should ever afterwards write as "the author of the article in the *Quarterly Review.*" It adds a new terror to editors who publish anonymous articles. Who knows but that some day I may find an article in some magazine advocating parricide or polygamy, or opposing woman's suffrage, signed "by the author of the article in the REVIEW OF REVIEWS on ——"?

THE BOOK OF THE MONTH.

"PICTURES FROM 'PUNCH.'"

FOR some time past our genial and witty contemporary *Punch* has been issuing, in shilling monthly parts, a reissue of the pictures which have appeared in its columns during the past sixty-three years. The complete series is now issued in four

Dressed Crab.

neatly bound volumes at seven and sixpence each, or thirty shillings the set. I have made arrangements with the proprietors of *Punch* to undertake the publication of the completed sets in Britain, Australia and the United States.

Good wine needs no bush and the pictures of *Punch* need no recommendation. The astonishing success which attended the republication of the complete series of *Punch* volumes is the best attestation of the esteem in which *Punch* is held by the British public. For the set was sold at £15, and no one who had not a good-sized library could find accommodation for the long row of portly volumes. I have had a set of these volumes in my house, and it was interesting to me to note what feature most attracts the attention of the general reader. I soon discovered that it was not the letterpress, but almost always the pictures to which the casual reader turned. The political cartoons interest only those who have some acquaintance with the political history of last century. The most of the letterpress is of a passing interest, and the files of *Punch* without illustrations would be as unsaleable as the files of a daily paper. The social sketches and illustrations are the cream of the set. Now in "Pictures from *Punch*," Punch himself has creamed the cream, and offers the result in four handy well-bound volumes. There are about 500 pages in each volume and nearly 1,000 pictures. All the best artists who for half a century and more have devoted their talent to delineating the salient features of English life, from the highest circles to the slums, are here represented with their best work: Leech and Du Maurier, Phil May and Charles Keene, E. T. Reed, Corbould, Partridge and Jalland are all to the fore. There is a laugh on every page. Humour, pathos, grotesque absurdity jostle each other side by side.

Sir F. Burnand, the present Editor of *Punch*, in a preface to the work, remarks that in turning over the leaves of these cunningly illustrated pages we behold in this so-called twentieth century what caught the fancy of our fathers and mothers and set our grand fathers and grandmothers a-laughing: —

> Take, for example, the adventures of Mr. Briggs. Dress him as you plea[illegible] e him where you will, John Leech's short rubicund, [illegible] typical upper-middle-class hero is immortal. He is [illegible] a brother to Jorrocks, another of John Leech's creations. [illegible] n look at Charles Keene's sober-minded,

A Disenchantment.

VERY UNSOPHISTICATED OLD LADY (from the country): "Dear me! He's a very different looking person from what I had always imagined."

CHARLES KEENE.

"In Extremis."

PAT: "Do ye buy rag ... d bones her...
MERCHANT: "We do.
PAT. "Thin, be jabers ... put me ...

What rich veins of humour, fun, and, mind you, moral teaching into the bargain, if you only dig deep enough! Du Maurier in the park and the drawing-room; Keene in the street and in the kitchen. Phil May, with his marvellously life-like gutter-snipes, his real 'Arriets and 'Arries, is incomparable. Note how smartly Corbould turns out some specimens of *Mr. Punch's* stud. Then there is the fun and "go" of Jalland's scenes in the hunting-field. Examine the work by Bernard Partridge; what rare humour inspires the pencil of this veritable magician, skilled beyond compare in the black (and white) art. Irresistibly absurd is the quaint work of Edward T. Reed, the exceptionally gifted catcher of likenesses in the Houses of Parliament, all taken on the spot "while he waits." Then we have Tom Browne, in a line and style peculiar to himself; Brock, with his light comedy manner; and Ralph Cleaver, with delicate touch and refined humour. Besides the above, there is a first-rate display of work by Messrs. Ralston, Howard, Everard and Arthur Hopkins, *cum multis aliis*, the pick of the profession, whose names to enumerate might occupy as much space as did Homer's list of ships, and whose works, in goodly company, speak for themselves.

business-like, self-satisfied citizens; at Keene's and Leech' buxom matrons, prim housekeepers, grumpy four-wheeler "cabbies," chaffy drivers of hansoms, and humorous 'bus men. As *hoc genus omne* was then, so it is now, with little variety in the species. Are not Leech's and Keene's butlers and coachmen, and their comfortable type of the old family servant, with us nowadays? We are grateful for their survival. It will be a bad day for England when the ancient ser itor wh has been "in the family" or on the estate "man and boy," shall have disappeared. The type, including the ...ekeeper, survives in Mr. Raven-Hill's pictures, as als... n those of Mr. Armour, who, as *Mr. Punch's* "Master of the Horse," gives us the latest type of jockey, *more Americano*. Is there any one of these volumes we could not linger over? Is there a page we would willingly allow to escape us? You will give expression to a note of heartiest admiration as you pause awhile before the splendid, dashing work of that great black-and-white knight, Sir John Gilbert, powerful illustrator, master alike of brush and pencil. What artistic power! What broad humour does he not display in his "Knight before the Battle"!

For quaintness of humour commend me to Mr. E. L. Sambourne's "Dressed Crab," as served up on the ninety-eighth page of the first volume in such guise that, merriment being the sworn foe of indigestion, you may surfeit on this Sambournian crustaceous invention, and be all the better for the meal. "Dicky Doyle's" inimitable work, a laugh to every line of it, crops up now and again throughout the collection. Sir John Tenniel, knight of the crayon, and chevalier *sans peur et sans reproche*, gives ...avian life. . . . ...que "Shakespearian Illus... healthy and vigorous both...ce seen, will always charming politeness which is ...henever you may ...nation. ...s he has selected

It is indeed a kaleidoscope of amusing pictures. No better book exists for those who wish to while away half an hour in a doctor's waiting-room. Even when spending some minutes in dread anticipation of the dentist's ministry, the victim may smile and half forget his aching molar as he turns over the pages of "Pictures from *Punch*." In a drawing-room, in a boudoir, in a club reading-room they are

JOHN LEECH.

The Christening of Jones' First. (A fact)

SECOND STREET BOY (without ditto, ditto, ditto): "Why—don't yer see '—it's only a kitten going to be 'ung'"

SIR JOHN TENNIEL.

Contemplative.

DUSTMAN (*loq.*): "Ha! if them slops fitted him yesterday what hawful night the poor feller must ha' passed to pull him dow

indispensable. The four volumes are a veritable history of the social movement, the caprices of fashion, the amenities and the vulgarities of life in England, Scotland, and Ireland in the Victorian period. None of the pictures are dated. To place them you must turn to the index. A very amusing hour may be passed endeavouring to place from internal evidence the approximate date when the picture first appeared. The rise and the fall of the crinoline, the beginning of the æsthetic craze, the Great Exhibition.

PHIL MAY.

"And SHE ought to know!"

"That's supposed to be a portograph of Lady Solsbury. But, bless yer, it ain't like her a bit in private!"

the advent of the gigantic female that Du Maurier loved to draw—all these and many other well-known features of English social life can be fished out piecemeal from these amusing volumes, where they have been mixed up in the most admired confusion.

Railway companies might, in charity to passengers by overdue trains, supply their waiting-rooms with sets of these volumes, and *trains de luxe* should carry them in their library. No volume would while away the tedium of a long journey more successfully. And no slight element in their popularity is that they appeal to every age man, woman and child find

E. T. REED.

The Wild, Wild East.

FIRST COSTER: "Say, Bill, 'ow d'yer like my new kicksey's? Good fit, eh?"

SECOND COSTER: "Fit! They ain't no *fit*. They're a *haperplictick stroke!*"

them equally attractive. Nor can the most sensitive discover anything in these pages to scandalise, to shock, or to pain. I append a few illustrations reduced from "Pictures from *Punch*" as specimens of the multifarious subjects dealt with, and the different styles of the various artists.

As only a limited number of complete sets have been printed, an early application is advisable. The four handsome quarto volumes described above are to be obtained for thirty shillings. The first three volumes are ready now, and will be sent to any address in the United Kingdom on receipt of thirty shillings, and the fourth volume will be delivered as soon as it is ready (at the beginning of December).

The Review's Bookshop.

July 1st, 1905.

THE Whitsuntide holidays and the fast approaching holiday season combined had a very noticeable influence upon the publication and sale of books during the past month. Many of the more important volumes have been held over until the autumn. Except for books of topical interest and fiction of the light and holiday variety, the shelves of my bookshop have but a moderate show of new books.

BOOKS ON RUSSIA—GOOD AND BAD.

Russia has entirely displaced Japan as far as the book world is concerned. Last year we had a plethora of books on Japan, for the most part pitched in the key of extravagant eulogy. This year there has been a stream of volumes on Russia, most of them of the sensational-gossipy type, or the work of avowed partisans. Their effect, if not object, has been to prejudice and mislead public opinion. I have one such volume on my shelves this month. It is a good specimen of a mischievous type. It bears the title of "Russia from Within" (Heinemann. 290 pp. 8s. 6d. net.), and is written by Alexander Ular. He has the calm assurance to inform his readers in his preface that his "facts" are "authentic, historical, and exact," and he then proceeds to serve up the most highly-seasoned and imaginative gossip conceivable. On this account I am all the more glad to be able to welcome and commend two admirable books that give, as far as it is possible to do so, an accurate and true picture of Russia. Sir Donald Mackenzie Wallace's book on Russia has long been a standard work. It has, however, not been easily procurable. It has now been republished in a new edition which has been brought up to date and largely rewritten (Cassell. 2 vols. 24s. net). It is an historical record of the domestic, social and political condition of the Russian people that should be widely read and carefully studied. Another excellent volume is Luigi Villari's "Russia under the Great Shadow" (Unwin. 330 pp. Illus. 10s. 6d. net). It is a well-informed, well-written and impartial account of Russia at the present day. Mr. Villari travelled throughout Russia during the war, and this volume describes what he saw. His is not merely a sectional picture of Russian life, but a successful attempt to portray the nation as a whole. He points out with much good sense that revolutions are not the work of a day or a week, but a long evolutionary process extending over a number of years :—

Russian Pilgrims.

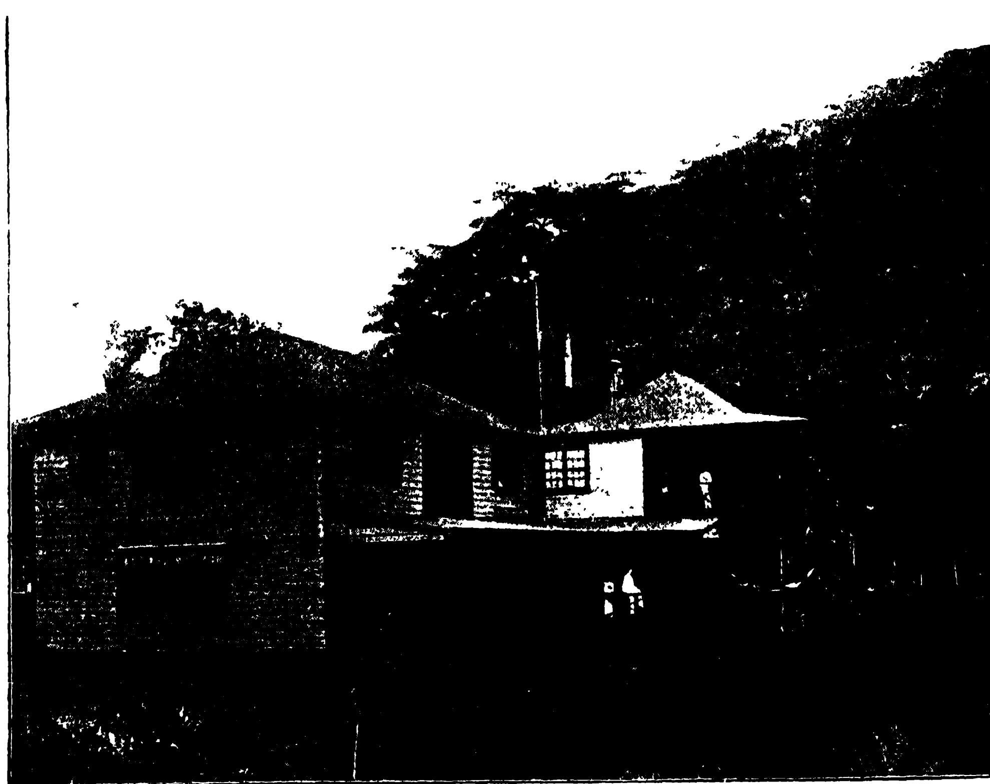
We must not expect to see the results immediately, and to find Russia settling down under a Liberal constitution within six months. The English Revolution lasted from 1640 to 1689; that of France from 1789 to 1815—almost to 1871; that of Italy from 1821 to 1870. Russia, too, will probably have to go through a long period of turmoil and unrest before she can find lasting peace.

He also points out that the new spirit is due to the awakening of large classes of Russians, and "not to the work of mysterious secret societies about whose organisation, funds, and plans sensational writers on Russian affairs are so eloquent."

THE JAPANESE TRIUMPH, AND AFTER.

Every self-respecting war correspondent seems to consider that he has failed in his duty unless he embodies in volume form his experiences after each campaign. From the three or four volumes of this description that have been placed on my shelves during the month I pick out one, "From Tokyo to Tiflis," by Mr. F. A. McKenzie (Hurst and Blackett. 340 pp. Illustrated. 7s. 6d.). I do so not only because Mr. McKenzie's narrative is both graphic and interesting, but because he has the courage of his opinions, and does not hesitate to express them, even when they run counter to popular preconceptions. In the concluding chapter of this book of uncensored letters from the war he asks, What is likely to be the result of this sudden emergence of a strong military Power into the front rank of world Powers? How far will her advance work for or against the well-being of our own people in generations yet unborn? To that question he makes no uncertain answer :—

An overwhelming Japanese victory is surcharged with possibilities of world disturbance. The plane of civilisation on which Japan stands is not ours. A victorious Japan means within half a century a fermenting India and a threatened Australia. Should Japan carry the war to a successful issue, her expansion will be phenomenally rapid. For the time we are working together in an alliance, planned and imposed on us by the Elder Statesmen of Tokyo. Without this alliance Japan could not have declared war. As the result of it we may at any time be embroiled with our European neighbours. I, for one, am convinced that much of the future growth of Japan will be at the cost of our Eastern trade, our prestige, and eventually our territory.



As a striking example of all this he points to Korea, where "it is not too much to say that Japanese dominance has already gone very far to kill European trade there." Mr. McKenzie gives some interesting instances of the bureaucratic nature of the Japanese Government which are not unworthy of the exploits of Russian officials in Petersburg.

A HISTORY OF THE BOER WAR.

"The *Times* History of the Boer War" moves slowly towards completion. After an interval of three years I have received the third bulky volume, in which the events that succeeded the Black Week are described in minute detail. (Sampson Low. 597 pp. Illustrated. 21s. net.) The scale is colossal, some 600 pages being devoted to the record of three months' warfare. Mr. Amery appears to have taken Kinglake as his model. He has done his best to make his narrative accurate, and at the same time readable. He is not sparing of criticism, and is lavish in his censure of almost every British general in command. No pro-Boer could be more scathing. The story makes sorry reading, and places on permanent record the manifold shortcomings of the British Army. Mr. Amery is a whole-hearted believer in the policy of thorough. He is especially irate at the attempt to carry on war on the limited liability plan. He regards Lord Roberts' disinclination to incur heavy losses as the one blot on his fame as a general. Mr. Amery must read the casualty lists from the Far East with a peculiar satisfaction. They, at any rate, are heavy enough to satisfy the most ruthless advocate of scientific warfare.

EDWARD FITZGERALD AND G. F. WATTS.

There are two biographies which you will read with much pleasure. Edward Fitzgerald has had many biographers. His latest is Mr. A. C. Benson, the writer of a monograph in the English Men of Letters Series (Macmillan. 207 pp. 2s. net). It is certainly one of the best sketches we have had of this eccentric genius, who during his lifetime so strenuously endeavoured to conceal himself from the public gaze. Mr. Benson has made much use of Fitzgerald's letters, weaving them most deftly into the narrative. The volume is almost equally divided between an account of Fitzgerald's uneventful life and of his writings, with a final and intensely interesting chapter on his habits and character. Another fascinating volume is the book of Reminiscences which Mrs. Russell Barrington has compiled as her tribute to the memory of G. F. Watts (Allen. 21s. net). For twelve years she was the great painter's next-door neighbour and one of his intimate friends. Gifted with a retentive memory, and aided by a vast number of notes and letters written to her by Mr. Watts, she has been able to place before the reader a most attractive and life-like picture of the man and the painter. It is instinct with the personal note, and will enable many admirers of the painter the better to understand the man.

Stevenson's House at Vailima.

STEVENSON FRAGMENTS.

The cult of Robert Louis Stevenson shows no signs of waning. There is no end to the number of books that are published about him. A book by him, however, at

this late date is a rare occurrence. But last month one was published, a volume entitled "Essays of Travel" (Chatto. 247 pp. 6s.). It is a collection of some fourteen papers recording the impressions left on Stevenson's mind as the result of his wanderings in many lands. The longest paper is his account of his experiences in crossing the Atlantic as an amateur emigrant, several others are devoted to Alpine memories, and one charming little paper describes a mountain tour in France. The book is a collection of fragments, but will be none the less welcome on that account to the devout Stevensonian. Among these can hardly be numbered Mr. Arthur Johnstone, whose book of "Recollections of R. L. Stevenson in the Pacific" (327 pp. 6s.) was issued simultaneously by the same publisher. Mr. Johnstone's literary style is in some respects deficient, but he has an interesting subject. The book deals entirely with Stevenson's life in the Pacific, at Honolulu, at Vailima, and other places. It discusses his knowledge of the Polynesian, and concludes that his judgment of that race was much at fault, and that in later years Stevenson somewhat modified his first glowing impressions. There is much about the Damien letter, which Mr. Johnstone thinks unintentionally cruel and unjust, and much about Father Damien himself. Scattered throughout the book there are many interesting anecdotes.

A HANDBOOK FOR THE NORWEGIAN CRISIS.

A slim little volume, which you will find indispensable in following the Norwegian crisis, is Nansen's able presentation of the Norwegian case under the title of "Norway and the Union with Sweden" (Macmillan. 96 pp. 2s. net). It is a lucid review of the history of the relations of the two kingdoms, and statement of the principal causes that have led up to the present rupture. Nansen points out that all references to Home Rule in this case are beside the mark, as Norway is and has always been an independent and sovereign state, united to Sweden for a century by a personal tie in the person of the king.

THE ABLEST NOVEL OF THE MONTH.

By far the most able and powerful novel published last month was Mr. E. F. Benson's "The Image in the Sand" (Heinemann. 334 pp. 6s.). Its main theme is the possibilities that would ensue supposing the spirit of a man who had been nearly four thousand years in his tomb was let loose on the world. Add to this that the spirit is one of Evil, and you have a fair indication of the contents of Mr. Benson's story. If I read this interesting and thoughtful book aright, Mr. Benson draws the sharpest distinction between spiritualism—the communication of the spirits of those left on earth with the spirits of those they love who have passed from earth in the realisation of their actual though unseen presence—and occultism, "Black Magic," the tampering in a spirit of curiosity with the unknown forces by which long ago the spirit of Samuel was raised up. All forms of occultism, from the materialising medium with the power of rendering visible the spirit form, to the awful dominance of one mind or will over another, known as hypnotism, are, in the writer's opinion, of the Devil. He does not deny the possibility of the exercise by certain natures of the most terrible occult powers; he merely denies the rightness of that exercise. The plot of the book is original, and the character-drawing often careful and clever, but the real interest lies in the underlying ideas. The "Black Magic" is that of Ancient Egypt: the spirit raised that of an ancient Egyptian: the man by whom its power is ultimately foiled an Arab. I cannot but feel, however, in reading Mr. Benson's pages, that he does not possess a really deep knowledge of his subject. Had he done so he could hardly have made this novel the vehicle of his convictions.

VICTORIA CROSS'S NEW STORY.

"The Story of Anna Lombard" was Victoria Cross's greatest success. None of her subsequent stories attained the high level of that most remarkable work. It was a bold thing, therefore, of this very audacious authoress to challenge comparison with herself at her best by advertising her new story, "Life of my Heart," as the companion volume to "Anna Lombard." It is, indeed, a variant upon the same theme. Anna Lombard marries a Sikh. Her new heroine lives with a Pathan. In the former case, the white woman's passion for the native was treated as a thing purely physical, and was brought into strong contrast with Anna's white *fiancé*. But in her new story, Victoria Cross idealises and glorifies the conduct of the Anglo-Indian heiress of twenty who flies from her father's bungalow and lives among the Pathans as the Pathans do. No male creature so utterly contemptible as the Anglo-Indian as pictured by Victoria Cross exists in this planet, and as a foil we have the Apollo-like young Pathan, who is not only as faultlessly beautiful as a Greek statue, but who is so devoted a lover that, although he locks his wife up all day, he finds Paradise in her company from sundown to sunrise. Victoria Cross has done a daring thing in thus exalting the sacrifice of everything for the love of a bronze archangel in disguise, and if she had not idealised her lover in the latter part of the book, she would have gone perilously near suggesting that the best thing a girl can do is to elope with the best-looking fellow—white or coloured makes no matter—who crosses her path. Her book escapes that accusation by a glorification of the intellectual and uxorious side of his character. But what, in the name of fortune, makes Victoria Cross so crazy about exalting the superiority of natives as husbands over the typical Anglo-Indian? Compared with her ideal Pathan, the Anglo-Indian subaltern or Civil servant is a kind of white-skinned, red-eared cousin to the chimpanzee. As a corrective to the conceit of the Anglo-Indian the book may be useful. It is not equal to "Anna Lombard," which was more complex, and touched a much higher note. But it is admirably told, and some of the descriptions of India are almost equal to her never-to-be-forgotten description of the coming of the monsoon.

THE NEW KNOWLEDGE.

I have received two books which the ordinary man who takes an interest in the general conclusions of scientific research, while not troubling overmuch about technical details, will heartily welcome. One is the reprint of Professor Ray Lankester's Romanes Lecture delivered at Oxford last month. Its title is "Nature and Man" (Clarendon Press. 61 pp. 2s. net). It is a luminous though brief survey of the history of man's development as it may be followed in the light of the new knowledge acquired by the "Nature-searchers"; and an urgent plea for greater attention being paid to obtaining a firmer control of the conditions of life under which we live. Man, he points out, is a rebel against Nature, and if he is not to perish miserably in the struggle he must make the most of the power which the new knowledge has placed within his grasp. He asserts, for example, as one of many instances, that "by the unstinted application of known methods of investigation and consequent controlling action all epidemic disease could be abolished within a period so

short as fifty years." The other book is Professor R. K. Duncan's volume, "The New Knowledge" (Hodder. 263 pp. Illustrated. 6s. net). It is a popular presentation of the results of the new scientific knowledge which has been acquired within recent years. He also indicates how the new knowledge has affected our views of many old problems such as the sun's heat, the age of the earth, and the pressure of light. It is a volume which should have a wide circulation, and has appeared very appropriately when general popular attention is for the moment attracted by scientific investigation.

PARADOXES AND GOSSIP.

There are two books of literary essays which you will find well worth dipping into. Unquestionably one of the freshest and brightest books published last month was Mr. Chesterton's "Heretics" (Lane. 306 pp. 5s. net). There is much in it that you will disagree with, and much that you will question. Mr. Chesterton delights in startling paradoxes; it is his literary vocation to produce them. They may not convince—possibly they are not meant to do so—but they do not bore—not yet, at any rate. To most people the most attractive—they are certainly the soundest and ablest—of the essays are those on Mr. Bernard Shaw, with whose philosophy Mr. Chesterton has the honour entirely to disagree; on "Omar and the Sacred Vine," and on "The Mildness of the Yellow Press." If you do not relish paradox, but prefer literary gossip of the nobler kind, you will find infinite pleasure in the perusal of "Talks in a Library with Laurence Hutton" (Putnam. Illus. 457 pp. 10s. 6d. net). Mr. Hutton was an eminent American critic, who had the good fortune to be personally acquainted with most of the famous players, writers, and artists of his day. In these conversations, delightfully recorded by Isabel Moore, he gossips pleasantly of the men and women he has known. The volume is illustrated by many curious and interesting illustrations, original letters, caricatures, drawings and portraits. They add greatly to the attractiveness of a very charming volume.

THE YOUNG NAPOLEON.

Napoleonic literature is so vast that it is strange we should have had to wait until last month for an adequate study of the youth of the great Corsican. Mr. Oscar Browning has chosen the apt title of "Napoleon: The First Phase" (Lane. 316 pp. Illustrated. 10s. net) for his painstaking and interesting monograph. It is the record of the first twenty-three years of Napoleon's life, ending with the siege and capture of Toulon. It is, on the whole, a pleasant picture of a laborious and brilliant youth, and will do something to fulfil Mr. Browning's desire that we should look with a kindlier eye on the man and the conqueror. Especially noteworthy are some of the juvenile letters and essays of Napoleon quoted at length by Mr. Browning.

TWO PATRON SAINTS.

St. Patrick, one of the most famous of all saints, has at last found a biographer who approaches his subject in the spirit of historic research. Professor Bury's "St. Patrick and His Place in History" (Macmillan. 404 pp. 12s. net) is the result of much careful investigation of the fragmentary material that is available. From the ordeal St. Patrick has emerged a far more substantial and less legendary personage than many persons would have anticipated. Professor Bury's conclusions in regard to the saint tend to show that the Roman Catholic conception of his work is, generally, nearer to historic fact than the views of some anti-Papal divines. He has followed a most commendable method in recording the result of his researches—throwing the narrative into the form of a literary biography, and relegating to appendices the scaffolding by means of which the edifice was reared. John Knox may justly claim to be the patron saint of Scotland, and to his biographies mentioned last month, must be added one by Dr. Henry Cowan, contributed to the Heroes of the Reformation series published by Messrs. Putnam (404 pp. Illustrated. 6s.).

RAILWAYS AND THEIR RATES.

Mr. Edwin A. Pratt is a well-known authority on railways, and he has brought together a vast amount of information which has hitherto been difficult of access in his "Railways and Their Rates" (Murray. 361 pp. 5s. net). Mr. Pratt sets forth the companies' side of the rates question, and explains the reason for many of those apparent anomalies which are so irritating to the shipper and quite inexplicable to the general public. He certainly makes out a very good case, and it is one that needs to be carefully considered. Not the least valuable portion of his book is that in which he describes some of the Continental railway systems in order to afford a basis of comparison with the English lines. A most interesting chapter describes how the railways of Holland were made prosperous by the device of turning the station-masters into coal agents.

AN EDUCATOR OF KING DEMOS.

Major Stewart L. Murray, recognising the difficulties in the way of democracy conducting an intelligent and successful foreign policy, has made an attempt to educate his masters in the elementary facts of peace and war. His "Peace of the Anglo-Saxons" (Watts. 2s. 6d. net) is addressed to the working men of Britain and their representatives, and has received the endorsement of Lord Roberts. It is a curious mixture of sound common sense and much that is the antithesis of common sense. The whole structure is reared on the monstrous assumption, natural to a soldier, that the chief end of man is war. War he regards as the normal, peace as the abnormal condition of mankind. That I do not do Major Murray an injustice will be seen from the following sentence, which may be regarded as one of the chief foundation stones of his book:—"This is the great point to firmly grasp, that peace never has been, and never will be as long as the passions of mankind endure, more than a lull of shorter or longer duration between the storms of war."

POETRY OF THE MONTH.

The lovers of poetry have been better provided for last month than usual. First of all they have the complete edition of the poems of Ernest Dowson, enriched by a most sympathetic memoir by Mr. Arthur Symons, by four illustrations by Aubrey Beardsley, and by a portrait (Lane. 166 pp. 5s. net). Ernest Dowson died when he was only thirty-two, "worn out by what was never really life to him, leaving a little verse which has the pathos of things too young and too frail ever to grow old." He could never have developed, Mr. Symons thinks, and those who read his delicate poetry will agree with this judgment. The first volume of a uniform edition of Swinburne's tragedies was published by Messrs. Chatto and Windus ("The Queen Mother and Rosamond." 288 pp. 6s. net). Of the newly published verse, by far the most notable is Mr. Bridges' masque "Demeter" (Clarendon Press. 1s. net).

Mr. E. Nesbit has collected a little volume of dainty poems under the title of "The Rainbow and the Rose" (Longmans. 142 pp. 5s.). They are filled with what the old Elizabethans would have called quaint conceits. They are short, musical, and, on the whole, less gloomy in tone than most poetry of the present day. Among the other slim volumes of poetry that have found their way into my hands during the month I may mention the following:—"The Love-Song of Tristram and Iseult" (Stock. 87 pp. 3s. 6d.), by Cyril Emra, contains, besides the title-poem, several smaller pieces, some of them graceful and charming: some, like "The Man whose Soul was Dead," serious and thoughtful, even striking. Mr. Maurice Browne's "Zetetes and other Poems" (Stock. 66 pp. 3s. 6d. net) is more ambitious in its aim, the poems mostly taking the form of odes. There is some good verse in the volume. Mr. Leicester Romayne's "Tea Table Rhymes" (Johnson. 67 pp. 2s. 6d. net) are pretty and quaint, some of them in the smooth artificial style of Pope.

HOLIDAY FICTION.

I have many inquiries for holiday fiction—novels as light as the driven foam; the sort of books one can lazily read, half-asleep, lying by the seaside. There are many such on my shelves this month, in fact, they outnumber the volumes of all the other branches of literature. Here are a few picked from the month's output that may safely be commended. One, though much better written than the average novel, is Dora S. Shorter's "The Country House Party" (Hodder. 6s.). It is a collection of short stories told in a country house, mostly by men of the party, to illustrate some particular point, some phase of character—usually woman's character- that they have observed. The stories are good and the interest well sustained. Mr. Arnold Bennett rightly calls his "Loot of Cities" (Rivers. 1s. net) "a fantasia." It is absolutely fantastic, yet redeemed from tiresomeness by a vein of satire. It is, moreover, a very lively story. A mordant satire on the ways of a gentlemanly thief is Mr. Barry Pain's "Memoirs of Constantine Dix" (Unwin. 3s. 6d.). Dix has a soul above anything so low as ordinary burglar's tools; he is a very aristocrat, not to say a prince, among rogues, filling in his time by reclamation work, and living in princely style on the public at large. There is also Mr. William Le Queux's "Who Giveth this Woman?" (Hodder. 6s.), a fine specimen of Mr. Le Queux's methods and style. There is mystery, of course. There is an amateur detective, a young man of old family, employed as a clerk in the City at a few shillings per week. The Russian detective system also plays a large part in the tale, which is original and ingenious. Among others, I may mention "Lagden's Luck," by Tom Gallon (Arrowsmith. 3s. 6d.), a lively story of a chase after a priceless diamond; Mr. Louis Becke's "Tom Gerard" (Unwin. 6s.), a story of Queensland mining life, with strong and very good local colour, and a charming sun-browned Australian girl, terribly overburdened with lovers, as heroine; a volume of short stories, some of which are well-written and rather uncommon, by Mr. Hopkinson Smith, entitled "At Close Range" (Heinemann. Illustrated. 6s.). The scenes are laid mostly in the Western States of America. Mr. M. P. Shiel has returned to the subject in which he first made his mark, and in "The Yellow Wave" (Ward, Lock. 6s.) has constructed an utterly impossible tale of adventure out of the present war in the Far East.

NOVELS WITH AND WITHOUT A PURPOSE.

Fiction other than the merely recreative does not occupy a very large space on my shelves. There are a few novels, however, that will provide reading for the more serious readers of fiction. The Very Rev. Canon Sheekan, for instance, has written another of his tales of Irish life. The principal *motif* of "Glenanaar" (Longmans. 321 pp. 6s.) is the Irish hatred of an "informer." The descriptions of Irish life, the light thrown on Irish character, and the ever-recurring, dominating hatred, enduring even to the third generation, of an informer, or anyone with the tinge of an informer's blood in his veins, makes a story which is pleasant in style and is possessed of a real interest. A novel with a purpose, and a strong one, is "The Unwritten Law" (Nutt. 6s.), by Arthur Henry. The scene is laid in New York, and the purpose of the book is to demonstrate the perils which arise from a wilful withholding from young people of the facts of life. It is well written, but somewhat too strenuous in tone. A tale of a different stamp, and quite one of the prettiest stories I have come across for some time, is Gyp's "Cloclo" (Chatto. 3s. 6d.). It has been well translated by Nora M. Statham. The story is lively, fresh and original, and Cloclo a most delightful study of a little girl. A novel which is truly described by its author as "nondescript" is Mr. Harry Furniss's "Poverty Bay" (Chapman. 6s.). It is a curious medley, in which a haunted house is a prominent ingredient. Mr. Furniss's sketches, of which there are many, are even better than his story. Two well-known writers of fiction have put forth tales which are a disappointment, and which do not do justice to their ability. Mrs. Craigie was ill-advised when she attempted to transform her play, "The Flute of Pan" (Unwin. 6s.) into a novel. In this guise it is not a success. There is no background worth speaking of, and the action is disjointed and unconvincing. We are accustomed to much more careful work from Mrs. Craigie. I also expect something better from Mr. Algernon Gissing than his latest novel, "Baliol Garth" (Chatto. 6s.). It is in a way a problem novel, and aims at giving the reader something to think about.

F. C. G.

A collection of Mr. Gould's political cartoons needs no commendation to readers of the REVIEW, and No. 9 of the Westminster Cartoons (*Westminster Gazette.* 1s.) is certain of a hearty welcome from them. It contains

A Cheerful Party.

"We're a fair old, rare old, rickety-rackety crew

forty-seven of the best of Mr. Gould's caricatures, illustrating the political events of 1904 to 1905. Mr. Gould has also illustrated with several hundreds of his smaller drawings Mr. Lucy's diary of the sessions of 1897 to 1902, now published under the title of "Later Peeps at Parliament" (Newnes. 578 pp. 7s. 6d. net).

AN IRISH PRESS.

I have much pleasure in calling the attention of the frequenters of the Bookshop to a volume of stories by William Butler Yeats, printed at the Dun Emer Press, Dundrum. In many respects this is the most interesting volume that I have received during June. The stories are Irish, they are written by an Irishman, printed on Irish paper, set up and machined on an Irish press. The "Stories of Red Hanrahan" (12s. 6d. net) is printed in beautiful eighteenth century type at the Dun Emer Press. Miss Elizabeth C. Yeats and two young girls do the whole work of the press between them, composing, presswork and all. It is a most encouraging attempt to revive an interest in fine printing. After examining this specimen of the work Miss Yeats is doing, I am not surprised to learn that the first books issued from her press are now quite valuable, and fetch about four times the published price. Two of the stories of the Red Hanrahan are completely new, and the three others which have been published before have been practically re-written. A little design facing the front page represents the four cities of wisdom in Celtic romance, the cities from which the talismans in Hanrahan come. I have before now mentioned a similar enterprise that is being carried on at the Bever Press, at Laleham, near Staines. Two finely-printed little volumes have now been added to the books issued from this press—Abraham Cowley's "Essay on Liberty" and Hans Andersen's tale of "The Old House." From the same press I have received the "Sayings of Jesus and a Lost Gospel Fragment," the title of a collection of village sermons preached by Canon Rawnsley in three papyrus fragments,

. . . . from the dry,
Dumb sands of Oxyrhyncus.

There are sonnets prefatory and valedictory. The volume is handsomely printed and bound by the Canon's son and daughter-in-law.

"THE REVIVAL OF GAELIC."

This is the title of a little shilling volume I have received from the *Irish Times* office. It is an original and interesting monologue by a Welshman—Mr. H. P. Hughes—who, being a practical man as well as an idealist, suggests that the Irish Celts, in reviving their ancient tongue, should also revise it, using the Latin character and phonetic spelling. The author has evidently studied his subject carefully, but for the sake of the uninitiated he should have added the two alphabets, Welsh and Irish.

STANDARD WORKS IN NEW EDITIONS.

Following my custom, I must briefly mention the reprints of standard works that have come into my hands during the past month. I am glad to see that Messrs. Bell have now included in their excellent York Library a book hitherto expensive and hard to obtain—Arthur Young's "Travels in France during the years 1787, 1788, 1789," under the competent editorship of Miss Betham-Edwards, with notes and a biographical introduction (358 pp. Cloth, 2s. net. With index). The editress, in introducing these travels, which are still a standard work on France and an excellent travelling companion in that country, says that while many fairly-educated English folk have hardly heard Young's name, it is familiar to every French schoolboy, edition after edition of his unabridged Travels having appeared in Paris. Macaulay's famous history being now out of copyright, Messrs. Chatto and Windus have taken advantage of this opportunity to publish it in five neat volumes, printed on India paper, and published at 2s. the volume. Mr. H. R. Allenson has done a real service to readers of first-class spiritual books by bringing out a new edition of "The Life of Madame Guyon" (6s.) and of the "History and Life of Dr. Tauler" (6s.), the old fourteenth century Dominican monk best known by Whittier's verses. His life and sermons have hitherto only been obtainable at exorbitant prices. A volume that many will be glad to possess is that containing a reprint of "Nelson's Letters to Lady Hamilton," published by the Library Press (2s 6d. net) Messrs. Hutchisson have added to their library of standard biographies an abridged version of Carlyle's "Cromwell" (1s. net); and "Jonathan Wild" (1s. 6d. net) to their classic novels. Messrs. Bell have published "Swift's Journal to Stella" in cloth at two shillings net, and Patmore's "The Angel in the House" at one shilling. Messrs Methuen's standard library, published at sixpence a volume, now includes "The Imitation of Christ," "The Poems of Milton," and Goldsmith's "Poems and Plays" You can also now obtain Mrs. Bishop's "Korea and Her Neighbours" in a popular edition, published at 5s net by Mr. John Murray.

GUIDE BOOKS TO ENGLISH BEAUTY SPOTS.

Travel and guide books make an appropriate appearance at this season of the year. Anyone who may spend a portion of his vacation in exploring the Thames in its lower reaches will find "London to the Nore" (A. and C. Black. 60 coloured illustrations. 254 pp. 20s. net) a delightful companion and a pleasant souvenir of a holiday ramble. "Beautiful Wales" (Black 213 pp. 20s. net) is the title of another sumptuous travel book illustrated in colour by Robert Fowler, with descriptions of the country in a light and humorous style, by Edward Thomas "Dorset" (Methuen Excellent map and illustrations. 2s 6d. net) has been added to the Little Guide Series. The feature of the book is the first appendix containing a list of Dorsetshire places and the assumed names given to them in Mr. Hardy's novels. Another little book which appears opportunely is a shilling volume on camping in the Highlands of Scotland—"Cycle, Camp and Camera in the Highlands," fully illustrated, by L. L. Henderson and John Walker (Menzies and Co, Edinburgh. 225 pp.). It is not a guide-book, but there could be nothing more useful to anyone contemplating a similar tour, which, the the authors say, can be had for less than the cost of a week end at a hydro, or a Saturday-to-Monday trip to the coast. Abundant practical information is contained within the covers of this useful little book, and the authors add that they will be glad to give estimates of the cost of any given tour to anyone wishing to undertake a camping expedition in the Highlands.

NOTE.—I shall be glad to send any of the books noticed above to any subscriber, in any part of the world, on receipt of their published price, except in the case of net books, when the amount of postage should also be sent. Any information my readers may desire as to the books and other publications, either of the current month or of earlier date, I shall endeavour to supply. All communications must be addressed to "The Keeper of the Review Bookshop" at the Office of the "Review of Reviews," Mowbray House, Norfolk Street, London, W.C.

No. 49. Issued as an integral part of the "Review of Reviews" of July, 1905.

THE PHYSIQUE OF THE PEOPLE.

FORMATION OF THE NATIONAL LEAGUE FOR ITS IMPROVEMENT.

LAST month the National League for the Improvement of the Physique of the People, with the formation of which Sir Lauder Brunton and Lord Alverstoke have been so busily engaged for some time, was successfully launched at a great meeting at the Mansion House. This League is quite distinct from the National Service League, whose advocacy of physical training is merely conscription in ambush. It is a *bona-fide* organised effort practically on the old lines laid down long ago as the scheme for the Civic Church and for the National Social Union for the federation of all agencies now in existence working for the physical improvement of the race. If only the League succeeds in making the British mother thoroughly ashamed of herself if she deprives the British infant of the rightful inheritance of its mother's milk, it will have done no mean thing. But that is only its starting-point. Its scope embraces all the vast programme of the Departmental Committee's report, full particulars of which were published last year in this REVIEW. The deterioration of physique among the gutter-bred city dwellers can only be checked by more vigorous measures than by increasing the opportunities for loafers to watch cricket and football matches and imagine that by lolling round a field they are indulging in sport. The Duke of Argyll reminds us in the *Nineteenth Century* that other nations -

almost all have the good sense to encourage bodily fitness. A regular gymnastic course is part of the education of boys in Switzerland, and Government manuals give the drill required of all pupils in all boys' schools and normal institutions. In France, the Minister of Public Instruction does the same, an elaborate book being issued giving illustrations of all the best methods of exercise, from boxing and singlestick to running, leaping, and vaulting. In Germany "Turnier" festivals are the outcome of preparatory training in the excellent schools of every State in the Empire.

Lord Roberts last month made an eloquent appeal for £100,000 in order that rifle clubs should be established in every village. If £100,000 is available, it had much better be used in financing the Physical Health League. A man may become a very expert shot with his rifle without improving any part of his body with the exception of his eye. We heartily wish the Physical Improvement League every success.

"WHERE'S WHERE?"

A NOVEL GUIDE TO THE PLACES IN FRANCE.

THE need for a handy guide or dictionary to the Continent that would be at once a companion to "Baedeker" and a key to the Continental "Bradshaw" has often been recognised. Who is there amongst us who has not at one time or another been suddenly confronted with the necessity of reaching some town or district in Europe when he has not the remotest idea as to how to get there, how much it will cost him, and the best line of route to travel? The happy thought occurred to Mrs. W. K. Clifford that a handy book might be compiled under the title of "Where's Where?" which would enable the intending traveller to turn as easily as in the "A. B. C. Railway Guide" to an entry which would tell him precisely what he wants to know—the distance, the railway fare, the line of route, the length of journey, and the other information necessary to enable him to start with a comfortable assurance that he knows exactly where he is going, how long his journey will last, what it will cost him, and what kind of a place he will find when he reaches his destination.

At the end of this month I shall publish the first part of what, it is expected, will become part of the indispensable reference books of foreign travel. It has been compiled under the direction of Miss Constance A. Barnicoat, who has admirably carried out Mrs. Clifford's ideal. Part I. is devoted exclusively to France. All the information which the book contains has been carefully compiled with the aid of the most experienced travellers, and most of the entries have been submitted for examination and verification to the best local authorities on the spot. The introductory chapters contain much interesting matter; one in particular—that which deals with the topographical novels, romances and works of fiction in France—will be found invaluable by the traveller who wants something to read that will give him an idea of the place to which he is going, and enable him to take a keener interest in the district and its people.

Part I., which is bound in cloth and supplied with a large-sized map of France, will be published towards the end of July at 3, Whitefriars Street at 2s. 6d. net.

THE PREDOMINANCE OF BRITISH TRADE.

THE most sensational article in the *Engineering Magazine* for July is Mr. Del Mar's account of the gold ships and their anticipated vast cargoes of gold. The article of next greatest interest to the general reader is that by Professor Elihu Thomson, consisting of personal recollections of the development of the electrical industry since 1876. Mr. C. R. King sketches the works at Epernay for building and repairing locomotives. He says that French locomotives are attracting the attention of English and American constructors. Mr. W. P. Digby continues his study of the engineering exports of Great Britain, Germany, and the United States. He attempts to appraise their relative prominence in the most important trade zones. Without the diagrams and maps which accompany his paper, it would be difficult to convey much of its contents. One map shows that British trade predominates in the whole of South America, Africa, Australasia, India, Burma, China, and Japan. The trade in the United States predominates in North America, and German trade predominates in the whole of Europe. The map is a striking tribute to the ascendency of British commerce. The other articles are of more interest to the expert reader.

STATISTICS OF WOMEN'S EMPLOYMENT.

ALL educated women workers have heard of the Central Bureau for the Employment of Women, now located at 9, Southampton Street, Holborn; many of them have possibly consulted it, many more have probably criticised it. There exists a widespread idea, especially among women workers, that the Bureau is merely an employment agency. It is an employment agency, no doubt, but to judge it solely on its work in that single capacity is nowise just or fair, seeing that the work of fitting together employers and would-be employées is but part of its various activities, and a part, moreover, considered by the Council of the Bureau as by no means the most important. For it is not merely to promote the employment of women, especially well-educated women, that the Bureau was formed, as was explained to me, during a recent call, by the present secretary, Miss Mary Spencer; it is to collect statistics and information in general about any calling open to women, and to render such statistics and information easily accessible.

A WOMAN'S BEST CHANCES.

"It is by what we do in securing situations, I know," said Miss Spencer, "that we shall be and are chiefly judged; but to get the best possible post for the worker who is best suited to it depends on much more than appears on the surface. The Council think it of the first importance to obtain statistics of women's employment, collected from women's employment agencies and allied employment bureaux all over the country, so that whenever we are asked, as we so frequently are, about the prospects for a girl in any particular calling, we can at once give an idea of the actual state of the labour market, rate of pay, chances of employment, etc., in that particular calling. Nothing like
Bureau has ever been done before."

"Where do you get your information as to the pay, prospects, best training, and chances of employment for typewriting and shorthand work, for instance?" I asked, taking one of the best-known professions open to women.

"From any London typewriting firms of standing, and, of course, we have our provincial reports."

"Then journalism?" I asked, taking a much more difficult and complex profession.

Miss Spencer mentioned several well-known women journalists who were always ready to answer any questions she asked.

"What about nurs I asked.

"Nursing is a profession that we do not touch," Miss Spencer replied, "at least not as a rule, though we fill matrons' positions. Any applicant for information as to the work of a nurse is referred to what we believe to be the best society or book dealing with the subject. With teachers, also, we do not deal, as there are already such excellent agencies for teachers' employment."

LADY SERVANTS AND LADY COOKS.

"What about the vexed question of lady servants?" I asked.

"I am glad you mentioned them," was the reply. "We are constantly applied to for information about lady servants, as to how far they are a success, and what are their numbers; but hitherto, owing to the newness of the work, there have been no statistics available. Now, only now, we have a worker tabulating and getting the exact figures and details of our dealings with lady servants for five or six years past. We are beginning with lady cooks. The others will follow. Lady servants have certainly not been an unmixed success, though I know several ladies who are abundantly satisfied with the experiment. We still have an immense number of applications for posts as companion—the old 'companion' idea is dying very hard—and for lady housekeepers, 'any position of trust.' We have far more of such applications still than of any other kind, and often from people, women of twenty-eight or so, without the slightest idea of any training or special knowledge being necessary, without the vaguest conception of supply and demand."

THE NEED OF TRAINING.

"Is not that getting a little better?"

"Slowly, very slowly," Miss Spencer replied, with the air of one who does not expect a revolution all at once. "I do think women are beginning to look ahead a little more, and to realise the need for training. For instance—and this is really one of the chief ends for which the Bureau was created and for which it now exists—women of middle age often write to us to say that they are getting too old for their present work; they have such and such qualifications; what is open to them? Much of our work consists in answering questions about employments open to women, what openings there are, what training is necessary, what it costs. You will have noticed," she continued, "the list of institutions and firms offering training, classified under the heads of the various occupations, which we publish at the end of our little monthly penny paper *Women's Employment*."

"*Women's Employment* is, I believe, self-supporting, which is very rare in the case of such a publication."

Miss Spencer was glad to say that this was so. Indeed, with its list of vacant situations, its statistics of women's employment in the provinces, its entertaining paper on holiday-making in Iceland, full of practical details, and its other useful features, the June number of this little publication is a really remarkable pennyworth. Perhaps the most generally interesting part of the paper is the two prize essays on "My Profession: Its Advantages and Opportunities," one prize-winner's profession being physical training, the other that of an elementary school teacher. Nothing could be more practical than these two 1,000 words papers.

FEWER UNPREPARED.

"One of our great difficulties," said Miss Spencer, "is that people who have obtained employment through us or through having acted on our advice, will not trouble themselves to let us know. This impairs the accuracy of our statistics. The most hopeful feature of our work last year was certainly that the Unprepared class had diminished. Far more applications for information as to openings and training are received than at first, and about eighteen months ago a new edition of 'Open Doors for Women Workers' was published. By means of a system of card indexing of all employers and applicants we keep track, as far as we can, of every one who consults us. But, though I am in favour of developing the registry side of our work yet more, I yet think, with most of our Council, that to improve the status of the educated woman worker the first essential is exact and well-organised knowledge not only of all employments open to women, but of all possible opportunities for occupations either untried or very nearly so. And this information, I think, we can give as it has certainly never been given before."

THE plea for one hundred more bishops which, we regret to say, was erroneously mentioned last month as appearing in the *Sunday Magazine*, really appeared in the *Sunday Strand*.

DYING OF LONDON AIR.

A PLEA FOR A HOLIDAY.

Dying of London air—that was all the matter with Tommy Troff; so the doctor said. He had no special disease, and his mother did a mother's best for him, working early and late to send him to school so pathetically neat and clean that a casual observer might even have supposed him "too respectable" to want a gratuitous holiday. "*The only thing for him is at least a fortnight in the country where he can breathe some pure air. That would be life for him.*" But this is a medicine beyond the power of his mother's purse.

There are hundreds of such laddies in this teeming London—to whom ten or twelve shillings would spell health and vigour. But there are some dear lads yet worse off than Tommy, whose parents do not work for them, and to whom a fortnight of *regular feeding* is as great a treat as the holiday itself. These are the young working lads, whose small and intermittent earnings are every penny needed to swell the meagre family income, lads who have exchanged the days of school for a long incessant round of labour, of hours so interminable that when the day ends, to give place to a short breath of hot palpitating night, they are too tired even to be glad. These are lads who are outside the range of any of the holiday schemes for school children, yet they want the boon of a fortnight by the sea more than any. They are boys, too, whose souls as well as bodies may be said to be "dying of London air"—withering day by day amid the sordidness of London back-streets life.

To such the wholesome surroundings of a fortnight in a well-managed camp often mean a new start, morally as well as physically. They are not only braced up in body to face the hardships of another year, but their minds are stored with golden memories of helpful friendship, of fun and freedom unsoiled by sins, and of good resolutions they have made "ter live strite" when they go home again.

For these young working lads, who are so likely to get left behind when others go for their summer treats, the St. Christopher's Camp at Deal is especially designed, and for such we earnestly appeal. Body and soul, these dear lads are "dying of London air." Added to what they manage to put by themselves, ten shillings will cover a lad's holiday. Here is a chance of such great gain for so slight an outlay. Who will give the boys a holiday?

Donations will be gratefully received, either in money or in goods for the commissariat, and acknowledged by Mr. Guy Pearse or George Devine, St. Christopher's Boys' Club, 39, Fitzroy Square, London, W.

[I gladly insert the above appeal. In 1903 a similar appeal resulted in the receipt of money from our readers, which enabled eighty boys to have a fortnight in the country. I hope that this year they may make it a hundred by sending in £50. But I would not publish this appeal for London boys if I did not supplement it by an even more earnest appeal for London girls. If any reader will send me 10s. to be spent in providing a London girl a fortnight's holiday in the country, I will see to it that the money is applied for that purpose. Address "Holiday for London Girls," REVIEW OF REVIEWS. Norfolk Street, London, W.C.]

THE MOVING PLATFORM SUBWAY.

IN NEW YORK; WHY NOT IN LONDON?

THE *Magazine of Commerce* reports a new development of American enterprise in the matter of improved transit, and urges the prompt adoption of the novelty in London. It says:—

In spite of the many lines of electric tramways, of its elevated railway, and rapid transit subway, the traffic of New York remains congested in certain thoroughfares during the busy times of the day. In order to remedy this inconvenience, a new subway is about to be constructed for the reception of a moving platform, on much the same principle as the well-known rolling platform of the Paris Exhibition of 1900. The subway will be of reinforced concrete, divided between the stations into two vertical halves by a partition provided with manholes. The moving platform will consist of four continuous platforms of steel plate, rubber covered to ensure a safe footing, the first two of these nearest the station platform will move at a speed of three miles an hour, the third at six miles and the fourth at nine miles. Platforms 1, 2, and 3 are merely stopping platforms, and are provided with posts to support passengers moving from one to the other. No. 4 is provided with transverse seats, to seat three abreast, giving the platform a seating capacity of 48,000 an hour. The terminal stations will be provided with two entrances and two exits equipped with escalator platforms instead of staircases. The first platform is an auxiliary which runs at three miles an hour for a few hours after midnight, when the larger platform is at rest. This moving platform has a capacity exceeding that of a four-line railway, with a service of one minute's headway. If subways were built under the main London thoroughfares running east to west and north to south, and provided with moving platforms, they would prove of inestimable benefit by alleviating the insufferable congestion which clogs the large arteries, during certain hours of the day more especially.

OBITUARY FOR JUNE.

May 27.—Mr. Protab Chunder Muzumdar (Calcutta), 65.
June 1. Mr. H. C. Richards, K.C., M.P., 51.
June 2.—Sir F. R. Drummond-Hay, 74 . Mrs. E. Hubbard
June 3. The Duc d'Audiffret-Pasquier (Paris), 82.
June 5.—Rev. J. Hudson Taylor (China), 72.
June 7.—Professor Steggall, D.M., 79.
June 8.—Prince Leopold of Hohenzollern, 69.
June 10.—Dr. C. de Friesen (Stockholm).
June 11. Canon A. Storey Farrar, D.D., 79.
June 12.—Prebendary Blomfield Jackson, 66.
June 13. The Archduke Joseph Karl Ludwig, of Austria, 7[illegible] Baron N. Rothschild (Vienna), 68 ... M. Delyanni (Athens), 79.
June 14. Colonel W. G. Webb, M.P., 61 ... M. Ackerman (Minister for Sweden and Norway to France), 65.
June 15. Mr. James Mansergh, F.R.S., 71 ... Major von Wissmann (African traveller).
June 16. -General Sir J. R. Glyn, 80 ... Sir John Willox (journalist), 63.
June —General Maximo Gomez (Cuba).
June 22.—Herr Ellstatter, 78.
June 23. -Dr. Blandford, C.I.E., LL.D., F.R.S., 72 ... Lord Romilly, 38
June 24. —Sir Augustus Gregory (Brisbane), 84 ... Sir J. W. Akerman, 7[illegible].
June 26. Dr. Max Hirsch (Homburg), 73.
June 27. -Mgr. Nugent, 82.
June 28. Admiral Sir Baldwin Walker, 81 ... Surg. General Cunningham, C.S.I., M.D., LL.D., 76 ... Right Hon. A. S. Hill, K.C., 80.

A SHORT time ago it was shown that the Kaiser was partly of French descent. Mr. J. Vicars Foote now writes a note in the July *Gentleman* to show that there was some connection between the family of the Duke of Wellington and that of Napoleon.

Languages and Letter-writing

AT this time of the year my post bag contains letter after letter earnestly asking if it be possible to make an arrangement whereby my correspondents can go to France or Germany during the two months holiday season, giving their services for their board always with the pathetic adjunct, "I have a great desire to study languages abroad, but my parents cannot afford the expense" for it is the poorer students who are usually the most eager to learn. Alas! not once in three years can I make the desired arrangement, for in France and Germany schools are of course, shut and few families desire a holiday teacher. True, here and there, the County Councils give one or two travelling scholarships. The *entente cordiale* this year has done nobly, and gives two scholarships in November, but what is needed is generous benefactors such as France can boast of. The *Revue Universitaire* gives annually several scholarships, and now twenty six of the value of £12 each are offered by another patriot. Is it *impossible* to find such generosity in England? Will any help to wipe out such a national disgrace? The Modern Language Association would be only too glad to organise and arrange if the money were forthcoming. Here is the account of what our neighbours are doing.

The well known magazine *Les Annales Politiques et Littéraires*, 17 Rue St Georges, Paris, receives exactly the same requests as we do. The editor thought much on the subject, and he had a generous friend M. Lapisse, President of the Administration of the Credit Mobilier, who came forward with a magnificent donation £400. Here was a foundation, which the editor of the *Annales* will increase himself, and so the sinews of war are provided. But in France all must be done with

to the Minister of Education. Now came another question "How are you going to choose your scholars? Not by competitive examinations; we have long p that such methods are very defective." Again thought and consultation between the editor and his adviser, and the following is the ideal result. In each college or lycée of the twenty six chosen, the pupils themselves will elect 'that one amongst their number who is most fitted to receive benefit and the most certain to do his or her country honour by good behaviour.' I earnestly hope some amongst us will find the power to do the same for our own country. There are those who have the will but not the power.

The list from France of those who would like to make an exchange of visits grows very large.

Pastor Bieler writes that he is again arranging in Switzerland a holiday home; the cost is about £2 a week.

A Dutch gentleman would much like to exchange homes with an English gentleman for the summer holidays.

The *Manchester Despatch* lately published a long article on the exchange of homes, quoting Sir Oliver Lodge (who has made use of the plan for his own children) amongst others, with the result that a Committee for Manchester has been arranged. The Modern Language Association is desirous of helping in the organisation of a committee but fears it is too late for this season. Would any parents like to exchange with France a boy or girl for a whole year? Several young Germans in Hamburg would like English correspondents.

PROGRESS OF ESPERANTO.

With so much to write about it is difficult to know where to begin, so let me first mention two occurrences. The *Daily Express* not so long ago described the visit of a Portuguese warship to Plymouth. The commander had had an accident and was lying ill. It was etiquette for the commander of a British warship to send and inquire about his health; so a naval lieutenant and some junior officers in full uniform went with a message from their chief. They were received with great courtesy by the Portuguese officers but conversation was impossible—for they spoke only French and Portuguese, and our men only English. Comment is scarcely necessary. A few days ago a North Countryman came to inquire about Esperanto. He went over to France for a holiday, and into a hotel which bore the usual notice, 'English spoken here' but the English speaker was out, and it was getting late. The landlord suddenly had an idea: he went to the coffee room where were a party of Germans, French, and English, all speaking Esperanto, which the landlord himself knew. Our Tyneside man explained his needs to his fellow countryman who translated into Esperanto to the landlord. Our friend naturally chummed with the Esperanto speakers, but he was still very doubtful as to whether there was a "fake" somewhere. He is a shorthand writer, so his English friend dictated several sentences, which he (not understanding) transcribed—and then read out aloud finding from the faces of the Frenchmen and Germans that they quite understood the meaning of the sounds although he did not. Thus he was assured that Esperanto is not difficult to pronounce. I must not forget to mention that an American agent cabled to his firm over here a single word message in Esperanto which was sent to me to see if I could find out its meaning. This was perfectly simple, and the firm got three English words for the price of one.

THE FRENCH DICTIONARY.

The French Esperanto dictionary which has so long occupied M. de Beaufort and his colleagues in France and other countries will shortly be issued. Its price will be 15 frs if ordered before the end of July, and largely increased afterwards. It is published by the Presa Esper. So., 33, Rue Lacépède, Paris. Its value is very great for it is more a dictionary of phrases than of words. Take the word 'touch,' for instance, some fifty sentences are given around the word.

LONDON CLUB.

The London Club has now arranged with St Bride's Institute, Bride Lane, Fleet Street, and will hold its weekly meetings there on Friday evenings from six to nine o'clock. Esperantists and enquirers will always receive a very hearty welcome. The British Esperanto Association has now printed its examination papers and preliminary examination (London Club) will take place at St Bride's on July 7th. No doubt other groups will do the same. The names of those who pass will be published in the August number of the *British Esperantist* (1d). Special advantages will be granted to those going to the Congress by the South Eastern Company, and it is to be hoped many will take advantage of this. Dr Zamenhof himself will, of course, be at Boulogne.

Propaganda Post Cards, calling attention to the Congress, price 6d per dozen, and a chorus, specially composed, price 2d, can be obtained at the REVIEW OF REVIEWS Office—the manual and dictionaries also.

Diary for June.

PRINCIPAL EVENTS OF THE MONTH.

June 1.—A bomb is thrown at the carriage of President Loubet and the King of Spain in the Avenue de l'Opéra, Paris; neither is injured.

June 2.—The King of Spain visits St. Cyr and Versailles. Scutari, in Albania, is wrecked by an earthquake; 250 persons are killed and injured. There is a severe earthquake in Japan.

June 3.—Mr. Whitelaw Reid, the new American Ambassador, arrives in London. In a dense fog the battleship *Cæsar* comes into collision with the sailing ship *Afghanistan*, from Hamburg, and sinks her, with her crew. The King of Spain dines with M. Delcassé in Paris. The Crown Prince's bride, the Duchess Cecilia of Mecklenburg-Schwerin, makes a state entry into Berlin. The annual report of the L.C.C. tramways shows a net surplus of £7,054.

June 4.—About 500 unemployed men begin their march from Leicester to London.

June 5.—An Imperial Ukase published in St. Petersburg places all matters connected with crime, public safety and police in the jurisdiction of the Assistant Minister of the Interior, M. Trepoff. M. Boulygine resigns. The King of Spain arrives in London and is met by King Edward. Mr. Whitelaw Reid presents his credentials to the King. The festivities in connection with the German Crown Prince's marriage continue.

June 6.—The King of Spain holds a reception at Buckingham Palace, visits the Roman Catholic Cathedral, Westminster, the House of Parliament, etc. The London County Council adopts a scheme for the creation of an Insurance Fund of its own to insure the Council's properties. The Crown Prince of Germany is married in Berlin to the Duchess Cecilia of Mecklenburg-Schwerin. Count von Bulow is raised to the rank of a Prince. M. Delcassé resigns the post of French Minister of Foreign Affairs. In Russia the proposed Congress of *Zemstvos* at Moscow is forbidden by the Government, the members nevertheless assemble privately, and adopt a resolution demanding the immediate convocation of a National Assembly.

June 7.—The King of Spain visits the City, and is entertained at the Guildhall. Lord Goschen lays the foundation stone of the new buildings of University College, Reading. Mr. J. Lockie, formerly M.P. for Devonport, is charged at Newcastle-on-Tyne with the fraudulent appropriation of over £89,000 of shipping companies' money while their managing director. The Norwegian Storthing dissolves the Union of 1814 with Sweden, and passes a resolution setting forth their views, which they forward to King Oscar. M. Rouvier officially undertakes the temporary charge of French Foreign Affairs in consequence of M. Delcassé's resignation. The sittings of the Cotton Congress are resumed in Manchester and Liverpool.

June 8.—The King, accompanied by the King of Spain, reviews the troops at Aldershot; in the evening they attend a gala performance at Covent Garden. The Submarine A8 suddenly founders outside Plymouth breakwater, and fourteen of the crew are drowned. A special session of the Swedish Riksdag is summoned. The Chancellor of the Exchequer receives a deputation on Imperial Cables and Rates. President Roosevelt sends an identical note to the Russian and Japanese Governments asking them to consider the question of Peace.

June 9.—The Tsar telegraphs his thanks to Admiral Rozhdestvensky and the Baltic Fleet. The Allan liner *Victorian* leaves Montreal having on board 200 Canadian manufacturers. Mr. Lowther, the British Minister, is received by the Sultan of Morocco. The new Norwegian flag, without the mark of Union, is hoisted on the citadel of Christiania. There is a serious riot at Minsk, where nearly 100 persons are shot. The Swedish Council decides not to recognise the provisional Government in Norway.

The German Royal Wedding: Welcoming the Bride to Berlin.

A hundred young girls chosen from all classes of Berlin society, dressed in white, with garlands of roses in their hands, greeted their future Empress. As the Imperial carriage passed the girls pelted its occupants with flowers.

June 10.—The King of Spain leaves London on his return home. The Leicester unemployed reach London. Mr. F. G. Bigelow, who is convicted of defrauding the First National Bank of Milwaukee of £300,000 while he was President, is sentenced to ten years imprisonment. President Roosevelt receives Japan's formal reply; his note is not at present to be published.

June 12.—The Submarine A8 is raised and docked. Newfoundland protests against a proposal of their Government to hand over a large territory to Messrs. Harmsworth, London, for the manufacture of paper pulp. The Co-operative Congress opens at Paisley; the inaugural address is delivered by Hans Muller of Switzerland.

June 13.—Russia's formal reply to President Roosevelt received by him, but not yet to be published. M. Delyannis, the Greek Premier, is assassinated on his way to the Chamber. There is a great demonstration of grief in Athens. The New South Wales Parliament opens. King Oscar of Sweden addresses a letter to the President of the Norwegian Storthing. The list of the Cambridge Mathematical Tripos is published. Mr. J. E. Littlewood and Mr. J. Mercer are bracketed as Senior Wranglers.

June 14.—The Report of Sir William Butler's Committee is published as a Blue-book. King Oscar issues a manifesto to the people of Sweden thanking them for their sympathy in the present crisis. The King and Queen give a wedding garden-party at Windsor attended by 6,000 guests. The International Ornithological Congress meets in London.

June 15. Princess Margaret of Connaught is married in St. George's Chapel, Windsor, to Prince Gustavus Adolphus of Sweden and Norway. The Very Rev. Dr. Gibson is enthroned as Bishop of Gloucester. Baron Fejervary receives the consent of the Emperor to his programme as Hungarian Premier. The British Government refuses to take part in the proposed international conference on the foreign affairs of Morocco.

June 16. The Honours conferred by the King in connection with the Royal marriage are gazetted. The appointment of the Premier, M. Rouvier, to the Ministry of Foreign Affairs in France is announced. Twelve thousand workmen at the Putiloff works, St. Petersburg, go out on strike.

June 17.—The Prince of Wales, accompanied by his two eldest sons, inaugurates the opening of the London County Council's new Thames River Service. The Secretary for Scotland receives in Edinburgh a deputation of the four largest cities of Scotland on the Scottish Education Bill. The funeral of M. Delyanni takes place in Athens with great solemnity. The Emperor of Austria-Hungary goes to Budapest in order to part with Count Tisza and to receive Baron Fejervary, the new Premier, and his Cabinet. Five hundred persons are killed by an explosion in a Russian coal mine at Khartsisk. Crowds welcome the unemployed delegates on their return to Leicester from London. The Pan-German League opens its conference at Worms.

June 19. The delegates of the Canadian Manufacturers' Association arrive in London, and are received by the King at Windsor. The Tsar receives in private audience the delegates from the Moscow Congress of *Zemstvos*; he promises to summon the elect of the nation without delay. The Report of Mr. Rider Haggard on the agricultural and industrial colonies of the Salvation Army in the United States is published as a Blue-book. King Oscar receives a deputation of officers of the Swedish Army and Navy on the occasion of his attaining sixty years as an officer in both branches of the service.

June 20. The Spanish Ministry is defeated in the Cortes; the Premier tenders his resignation. A Court Martial is held at Plymouth on the four survivors to investigate the loss of the Submarine A8. The Federal High Court of Australia gives judgment that the New South Wales Arbitration Court has no power to order employers to give preference to Unionmen.

June 21. At a meeting of the Venezuelan bondholders in the City, Lord Avebury explains the Venezuelan Government's arrangement for the settlement of its external debt, which is approved. The Swedish Riksdag is opened by King Oscar, who reads his speech from the throne on the question of Norway; he sanctions the recommendation of the Swedish Government to negotiate with the Norwegian Storthing for the peaceful dissolution of the Union. A vote of want of confidence in the new Hungarian Cabinet is carried both in the Upper Chamber and in the Diet. President Roosevelt directs that Mr. Bowen, the United States Minister to Venezuela, shall be dismissed from the public service.

June 22.—Mr. Fisher, in the Canadian House of Commons, announces that Canada is applying for permission to be included in the terms of the Anglo-Japanese Treaty of 1894. Owing to a terrible accident on their line, the New York Central Railway decides to abandon its eighteen hour service to Chicago. Sir E. R. Elles, Military member of the Indian Viceregal Council, tenders his resignation. The Swedish Riksdag decides to refer the Government's proposals of settlement with Norway to a special committee of both Chambers. At a meeting of the Court of Common Council, the proposal of the L.C.C. to extend the tramways over Blackfriars Bridge is passed.

June 23.—A circular is issued by the Russian Ministry of the Interior asserting that the Tsar's language to the Zemstvo delegates is incorrectly interpreted. The publication of the *Russ* is [illegible] month. The new Liberal Spanish Ministry, under the Premiership of Señor Montero Rios, is sworn in. The town of Lodz, in Poland, is in a state of revolt; the troops kill 50 persons and wound 200. The French Note on Morocco is handed to the Kaiser. The Canadian Government enter into a contract with the North Atlantic Trading Company of Amsterdam to carry out a plan of emigration work from Northern Europe. The First Commissioner of Works issues an order curtailing the privileges of motorists in Hyde Park.

June 24. Fighting continues in Lodz between the people and the soldiers; the number of killed and wounded is very large. The Royal Commission is appointed to inquire into the military stores business in South Africa, with Mr. Justice Farwell as chairman. M. Ralli forms new Greek Cabinet. The State Premier and Treasurer of New South Wales announces a large surplus.

June 26. Prince and Princess Arisugawa of Japan arrive in London on a visit to the King. The King confers a peerage on Mr. W. C. Gully. The Corporation arrive at an understanding with the L.C.C. which assures the construction of tramways over Westminster and Blackfriars Bridges. A Danish training ship is sunk in collision near Copenhagen; twenty-two cadets are drowned. Prince George of Crete's advisers tender their resignation, which he does not accept.

June 27. The King commands the Duke of Connaught, as Grand Master of the Order of the Bath, to invest Prince Arisugawa of Japan with the insignia of the Grand Cross of the Order. The German reply to the French Note on Morocco is delivered by Prince Radolin to M. Rouvier. There is a long debate in both Houses of the Swedish Riksdag on the settlement with Norway, which is referred to a Special Committee. Lord Curzon threatens to resign unless the orders regarding military commands are modified. At Warsaw 672 persons are arrested. The Tsar issues a Ukase investing the Governor-General of Warsaw with supreme military powers.

June 28.—A sailor having been shot for demanding better food for the crew on the Russian battleship *Kniaz Potemkin*, the officers were murdered by the crew. The mutineers brought the body of their comrade ashore at Odessa and threatened to bombard the town. The Commonwealth Parliament is opened by Lord Northcote, at Melbourne; a Ministerial crisis is impending.

June 29 and 30. The situation at Odessa is more serious, much property is destroyed by fire, the killed and wounded number 2,000. Admiral Kruger is ordered to Odessa with four warships to capture or sink the insurgent ships.

BY-ELECTIONS.

June 1. In the Whitby Division of Yorkshire, owing to the succession of Mr. Beckett (Conservative) to a peerage:

Mr. Noel Buxton (L.)	4,547
Mr. G. Beckett (C.)	4,102
Liberal majority	445

Liberal Party gain.

June 2. In the Chichester Division of Sussex, on Lord Edmund Talbot's appointment as Junior Lord of the Treasury:

Lord E. Talbot (C.)	4,174
Mr. J. E. Allen (L.)	3,762
Conservative majority	412

The 1892 Conservative majority was 1,575.

June 14. In Cork, Mr. Augustine Roche is elected without opposition to succeed Mr. J. F. X. O'Brien.

June 28. In Finsbury East, on the death of the Conservative member:

Mr. J. Allen Baker (L.)	2,320
Mr. N. L. Cohen (C.)	1,552
Liberal majority	768

THE WAR.

June 1.—In the naval battle in the Korean Straits, Russia loses twenty-two ships, the Japanese three torpedo boats. The Russian loss of men is between eight and nine thousand, that of Japan is under 800 men and officers.

June 3.—Three Russian cruisers arrive at Manila more or less injured, with many wounded on board.

June 4.—Admiral Rozhdestvensky's wounds are healing rapidly; Admiral Togo visits him in the naval hospital at Saseho ... The Japanese decide to erect a lighthouse as a monument in memory of the great naval victory in the Sea of Japan ... The officers of the British steamer *Oldhamia*, which was seized by the Russian Fleet on May 18th, are released at Nagasaki by the Japanese.

June 5.—The Government of the United States decides that the Russian ships which have taken refuge in Manila Harbour must leave in twenty-four hours, or else be interned till the close of the war.

June 7. The number of prisoners taken by the Japanese in the naval battle in the Korean Straits is reported as 6,143.

June 9.—The Russian men-of-war, not quitting Manila within the appointed twenty-four hours, are interned by Admiral Train, of the American Navy.

June 10.—Both Russia and Japan accept President Roosevelt's offer to bring the two Governments together to discuss terms of peace.

June 13.—The Japanese forces advance in Manchuria, occupying positions from which they have driven the Russians.

June 15.—The Grand Duke Alexis resigns his post of Commander-in-Chief of the Russian Navy .. Both Japan and Russia agree on Washington as the place of meeting for their respective plenipotentiaries ... News has arrived that the Russian cruiser *Don* sank the German steamer *Telartos* on May 30th in the North China Sea.

June 17.—The Japanese occupy places north, south, east, and west, defeating the Russians severely.

June 23.—Count Lamsdorff hands to Sir C. Hardinge instructions to the captains of Russian cruisers to abstain from sinking neutral ships, these orders to be delivered by British war ships. The *Dnieper* is ordered to furnish a report on the sinking of the *St. Kilda*.

June 24. The *Dnieper* arrives at Jibuti, having on board the crew of the *St. Kilda* ... News arrives that the Russian cruiser *Terek* sank the British steamer *Ikhona* on June 5th, 150 miles north of Hong Kong .. The sunken Russian cruiser *Bayan* is floated at Port Arthur . The Japanese defeat the Russians north-west of Nan-shan-chen-tze.

June 27.—A Singapore telegram gives details regarding the sinking of the *Ikhona* by the *Terek*.

PARLIAMENTARY.

House of Lords.

June 2.—Afghanistan; speeches by Lord Newton, Lord Bath, and Lord Lansdowne.

June 5.—The Fiscal policy of the Government and the Colonial Conference; speeches by the Duke of Devonshire, Lord Lansdowne, Lord Spencer, the Lord Chancellor, and Lord Rosebery.

June 6.—Importation of Intoxicating Liquor in West Africa; speeches by the Archbishop of Canterbury and the Duke of Marlborough.

June 20.—The House approves the election of Mr. J. W. Lowther to the Speakership of the House of Commons.

June 26.—Merchant Shipping (Aliens) Bill is defeated .. Finance Bill is read a second time.

June 27.—Finance Bill passed.

House of Commons.

May 31.—Mr. Akers-Douglas, in the absence of Mr. Balfour, proposes Monday, June 5th, for the debate on Sir E. Grey's vote of censure; to this Sir H. Campbell-Bannerman objects .. Repeal of Crimes Act (Ireland); speeches by Mr. Asquith and Mr. Long; rejected by fifty-seven votes.

June 1.—Local Government Board: Supply .. Motor-cars: speed and accidents; speeches by Mr. Long, Mr. A. Stanley, and Mr. Gerald Balfour ... North-Eastern Railway Bill ... Feeding of School Children; speeches by Mr. Will Crooks and Sir John Gorst.

June 2.—Plural Voting Bill: second reading rejected by 71.

June 5.—Mr. Soares questions the Prime Minister on Colonial Conference. Mr. Balfour replies ... Finance Bill; discursive debate. Bill read a third time by a majority of seventy-two ... Workmen's Compensation Bill (brought up from the Lords).

June 6.—The Speaker announces his retirement. Mr. Balfour and Sir H. Campbell-Bannerman express the deep regret of the House ... Supply—Board of Trade vote is passed by a majority of sixty-nine.

June 7.—Mr. Balfour moves the resolution which conveys the thanks of the House to the Speaker for his distinguished services; seconded by Sir H. Campbell-Bannerman, Mr. Redmond, Sir A. Thomas and Mr. Bell, as leaders of parties ... Church of Scotland Bill is introduced by the Lord Advocate .. Debate on the Government's fiscal policy and the Colonial Conference.

June 8.—The House elects as new Speaker Mr. J. W. Lowther. Sir M. Hicks-Beach proposes, and Sir W. Hart-Dyke seconds his election; they conduct him to the Chair.

June 20.—The House reassembles ... The new Speaker takes his place in the Chair ... Sir H. Campbell-Bannerman asks the Government's intentions on the report of Sir W. Butler's Committee. Mr. Balfour suggests a Committee of Inquiry ... Mr. Gerald Balfour moves the second reading of the Unemployed Workmen's Bill; speech by Mr. Long. All amendments are rejected; the Bill is read a second time by 228 votes against 11.

June 21. South African contract scandal: Mr. Balfour proposes Royal Commission instead of a Committee of the House ... Annual grant to Mr. Gully of £4,000 ... Mr. Keir Hardie moves the reduction of the vote, which is negatived by a large majority ... Committee on Indian Revenue account; speeches by Mr. Brodrick, Sir R. Fowler, and Lord G. Hamilton. The usual formal resolution is agreed to.

June 22. South African contract scandal: Mr. Balfour promises that the Commission of Inquiry shall be invested with statutory powers .. The Education Vote for Scotland of £1,817,290 is reported.

June 23. Consolidated Fund (No. 2) Bill; speech by Mr. Arnold-Forster. The Bill is read a second time ... The Secretary of State for India is authorised to raise a loan of twenty millions.

June 26.—Mr. Brodrick states that he has not received any communication from Sir E. Elles resigning his position as military member of the Indian Viceregal Council ... Sir R. Reid moves the Opposition vote of censure in connection with the supply and disposal of stores, etc., to contractors in South Africa at the end of the war; speeches by Mr. Brodrick, Mr. Arnold-Forster, Mr. Balfour, and Sir H. Campbell-Bannerman. The motion is rejected by 329 votes to 255—majority 74.

June 27.—The Aliens Bill—in Committee; speeches by Sir C. Dilke and Mr. Lough. Progress reported.

June 28. The Attorney-General introduces the War Stores (Commission) Bill ... Aliens Bill; progress reported.

SPEECHES.

June 1. Lord Lansdowne, in London, on the continuance of the Treaty with Japan and its consolidation.

June 2.—Mr. Balfour, in London, acknowledges that the by-elections go against his Government . Sir H. Campbell-Bannerman, at Oxford, on Sir W. Harcourt.

June 3.—Mr. Chamberlain, at St. Helens, on fiscal questions and our relations with the Colonies .. Mr. Balfour, in London, criticises the Radical Party and praises his own.

June 9.—Lord Rosebery, in Edinburgh, on literature as commerce.

June 10. Mr. Choate, in New York, on the "almost perfect" relations existing between Great Britain and America ... Colonel Sir F. Younghusband, at Cambridge, on the true relationship of this country with India.

June 14. Lord Rosebery, at Bathgate, on some aspects of the Scottish Church crisis.

June 27.—Mr. Chamberlain, in Birmingham, on the need for unifying the Empire.

TRAFALGAR.

The Centenary of the Battle of Trafalgar is to be celebrated on October 21.

No. 190. Vol. XXXII.] [October, 1905.

THE REVIEW OF REVIEWS

THE PROGRESS OF THE WORLD.

MOSCOW, Sept. 26th, 1905.

Progress Indeed!

Writing from the ancient capital of the Russian nation, I must leave the task of chronicling the progress of the world as seen from the meridian of London to my staff at Mowbray House. But I would not like even one number of this REVIEW to appear, especially at this time, without a personal word of good cheer. We have, indeed, reason to thank God and take courage. For a long time, for a period which is almost conterminous with the ascendency of the Unionist party in Great Britain, there has been an apparent check to the forces of progress. Alike at home and abroad there have been wars, tumults and an unloosing of the baser forces which war against the ideal. But it is evident the period of arrest is ending. Everywhere the human race is in movement along the upward path. And nowhere is the bugle note "En Avant!" more clearly audible than here, beneath the shadow of the Kremlin. There is an American scientist in my hotel who, last night, was telling me that the latest conclusions of investigators point to the fact that the ice cap, which lay a mile deep over six million square miles of America and Europe during thousands of year during the glacial period, melted away in about a thousand years. The ice cap of arbitrary rule that has lain heavy on the two continents is melting—melting faster than anyone believed to be possible, and already the released potencies of a mighty nation are beginning to reveal themselves with all the energy and delight of gladsome spring.

The Peace and After.

The conclusion of peace with Japan was not hailed with very great enthusiasm in Russia. It was so unexpected. Everybody had come to the conclusion that the war was to go on. The news that the Japanese had consented to make peace without a farthing of indemnity came like a thunderbolt from the clear sky. It seemed impossible. And those who resented the cession of Southern Sakhalin went about gloomily shaking their heads, declaring that they hated the peace even worse than they hated the war. After a few days, however, when they saw how disgusted were the English Jingo papers with the peace they began to think perhaps the peace was not such a bad thing after all. When, on the top of that the mob of Tokio began to riot and burn Christian churches to express their dissatisfaction with the peace, their spirits revived. "You see what barbarians they are after all," was the complacent reflection, and they began to love the peace the more the Japanese hated it. The felicitations and congratulations which poured in upon the Russian Government from all quarters also helped to convince them that they had not done so very badly after all. They were, however, in no mood to give anything like a popular welcome to M. Witte. The St. Petersburg Town Council refused to give him a public reception, and everybody seems disposed to say as little as possible about the war, and to settle down to business.

The New Trend in Russian Policy.

One of the pleasant incidents in my foreign travels is to come every now and then upon "Constant Subscribers" who are also diligent readers of the REVIEW. One of these unknown friends, who is now one of the Ministers of the Empire, expressed very happily the new direction of Russian policy. He said: "The Manchurian war was the last word of the extensive policy of the Russian Empire. We are now commencing our intensive period. It is with Empires as it is with farms. Hitherto the one idea of our peasant is to add to his acres. More land, always more land; that has been his one idea of increasing prosperity It has not hitherto

occurred to him that if he can make two blades of grass grow where one grows to-day he increases his wealth as much as if he doubled the acreage of his holding. One great task is to introduce the intensive system of agriculture among our Russian peasants. Instead of merely spreading themselves over a surface which they barely scratch, they must go deeper into the soil and develop the resources of their one holding. And the lesson is as important for the Empire as for the peasants."

The Future Relations of Russia and England.

The conclusion of the new Anglo-Japanese Treaty has excited less resentment in St. Petersburg than might have been anticipated. The fact that it points directly at Russia, and is indeed in fact, although not in form, an offensive and defensive alliance against Russia, is not ignored; but there is no disposition to emphasise that unpleasant aspect of the alliance. I have talked with many people, both high and low, as to the possibility of Russia consenting to a similar agreement for guaranteeing the *status quo* in Asia. Everyone without exception agrees that Russia will not for years to come attempt to extend her frontier in any direction, and a joint guarantee of the *status quo* would not be unacceptable to many. I think, however, that the proposals put forward in the English papers that Russia should be invited to take Constantinople is nonsense, and slightly mischievous nonsense. Russia's interest is peace, and if she cultivates her own garden she has work enough to keep her busy for many years to come. The notion that Russia can be seduced into an anti-German alliance by any such bribes is transparently idiotic. The relations between the Kaiser and the Tsar were never more cordial than they are at present. The Germanophobists can carry their offers elsewhere.

LONDON, Oct. 2nd, 1905.

The Terms of the Treaty.

The new Treaty is more than a mere expansion of the old Treaty. It marks a new departure of a drastic kind in the history of our Empire, and of all that the Empire involves. Its terms require corresponding attention. Signed by Lord Lansdowne and Viscount Hayashi in London on August 12th, and given to the world on September 27th, it states its object very definitely in the following preamble:—

(*a*) The consolidation and maintenance of the general peace in the regions of Eastern Asia and of India;

(*b*) The preservation of the common interests of all Powers in China by ensuring the independence and integrity of the Chinese Empire and the principle of equal opportunities for the commerce and industry of all nations in China;

(*c*) The maintenance of the territorial rights of the high contracting parties in the regions of Eastern Asia and of India, and the defence of their special interests in the said regions.

The first article prescribes full and frank communication between both Powers and joint consideration if any of these rights and interests be menaced. Article 2 runs:—

> If by reason of unprovoked attack or aggressive action, whereve: arising, on the part of any other Power or Powers, either contracting party should be involved in war in defence of its territorial rights or special interests mentioned in the preambl of this Agreement, the other contracting party will at e to the assistance of its ally, and will conduct the war on, and make peace in mutual agreement with it.

In the old Treaty two Powers must attack either of the contracting parties before the other was required to assist. Now "the aggressive action" of a single Power involves both allies in war. This is the serious addition. Had it been in existence before the last war we should have been compelled to fight Russia. Before so vast a new responsibility was assumed the British nation ought to have had some chance of saying Yea or Nay. In Article 3 Great Britain recognises Japan's paramountcy in Corea. In Article 4 Japan recognises the right of Great Britain to take such measures in the proximity of the Indian frontier as she may find necessary for safeguarding her Indian possessions. The other articles refer the conditions of armed assistance to consultation between the naval and military authorities of both Powers; preclude separate arrangements with other Powers relating to common interests except by joint consent; and fix ten years as the period during which the Treaty shall be in force, twelve months' notice by either Power being thereafter sufficient at any time to determine it. The Treaty has generally been received with approval, except in Germany. Lord Lansdowne's covering letter to Count Lamsdorff showed, at least, his desire to cause as little annoyance as possible to Russian sentiment. If only Great Britain and Japan keep clear of the Jingo rabies during the next ten years, the treaty will, by maintaining the *status quo* in Asia, establish a sort of Truce of God among the nations, giving them a much needed respite from the alarms of war, and enabling them to attend to internal reforms.

Rose of the Dawn.

The Zemstvo Congress which met 300 strong at Moscow towards the end of the month have been certainly providing programme enough to keep Russia busily engaged at home for a generation or two. They demand equality before the law for all citizens; the freedom of conscience, faith, speech, Press, meeting

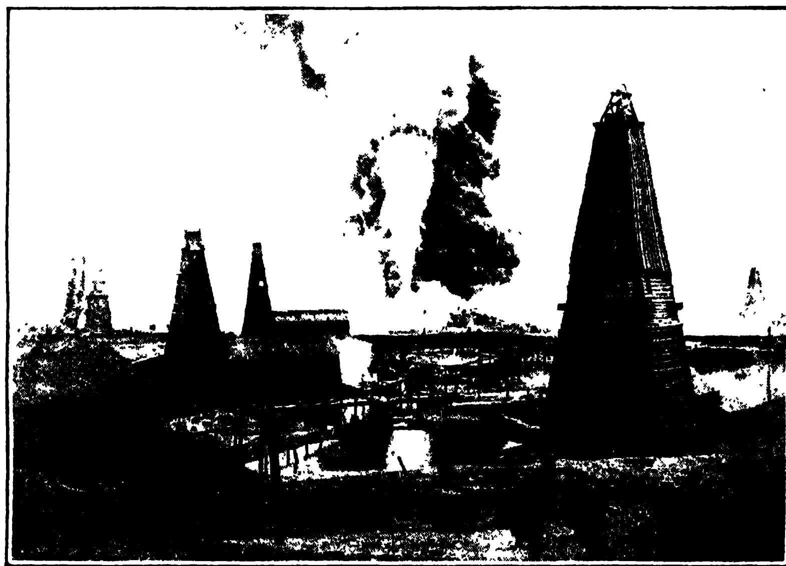
and association; popular control over finance and administration; representation based not on class, but on nationality; a national assembly elected by universal suffrage; the reform of education; a State system of workmen's insurance; revision of land tenure; distribution of land among the working peasantry, etc., etc. These latter proposals "rope in" the Peasants' Union. There have also been accepted demands for the autonomy of Poland and other national areas; Home Rule all round, as we should say, within an elastic federation. The multitudinous splendour of our "Newcastle Programme" is altogether outshined by this Moscow myriad of measures. But whether practicable soon, or late, or never, they afford glorious proof of the new hope. Evidently "Bliss is it in this dawn to be alive." The prospect of M. Witte becoming the chief Minister in the new *régime* is variously estimated. After an enthusiastic reception by the Kaiser as he passed through Germany, the returning plenipotentiary has received public congratulations from the Tsar, along with the title of Count.

The Caucasus Aflame.

The immense difficulties facing those who are engaged in the reconstruction of Russia have been set in a lurid light by the explosion of civil war in the Caucasus during the month. How the trouble arose is not exactly known. The oil wells of Baku have drawn together a motley crowd of the most diverse nationalities, creeds, and grades of culture. Tartar labourers, Russian artisans, Armenian workers and traders, English managers, Persians, Georgians, have all been flung into this international hotchpotch; Moslems and Christians, Orthodox and heretic, have added the sauce of bitter bigotry; while Social Democrats and strikers have imported the hatreds of industrial strife. At Tiflis, for example, the mayor and town council are mainly Social Democrats. The first shot is said to have been fired by a striker at a car full of soldiers sent to repress a strike. Armenians and Tartars, already mutually apprehensive, mistook the signal, so the story runs, and flew at each other's throats. The Moslems proclaimed a holy war against the infidel. Then followed a welter of battle and massacre, in which more than a thousand are said to have been killed, with many thousands wounded beside. The police and military were powerless or inert. Foreigners fled in panic. Four Englishmen, after four days' siege in their works, were finally rescued and enabled to escape. As many as 15,000 Persians hurried back to their native land. The havoc of fire was added to the horrors of carnage. The oil wells and oil works were transformed into a flaming inferno. Early rumours put the damage at twenty million sterling, and proclaimed the complete ruin of the oil industry. Both accounts proved later to be exaggerations. Some eleven thousand soldiers were hurried up by command of the Tsar with a battery of artillery. Meantime Armenian and Tartar, either tired of slaughter or afraid of Imperial justice, came to terms, and are reported to have actually signed a treaty of

A General View of Baku.

The Tartar Rising in the Caucasus: Map showing the Disturbed Region.



peace. Order will doubtless be restored, although the shooting down of a town's meeting by Cossacks at Tiflis is rather a rough start.

Peace Riots in Tokio.

At the beginning of the month the world was startled by news of rioting in a place where such an outbreak was least expected. The Japanese people had at last lost self-control, and vented their wrath at losing the anticipated war indemnity by tumult and arson. Later versions seem to put the disturbances in another light. The account reads like a strange echo, with many differences, of the Battle of Trafalgar Square. It is alleged that the crowd went to demonstrate their disappointment as peaceable citizens in a municipal park, which, according to the subsequent protests of the Mayor, they had a perfect right to enter. But the police refused to let them in. It was this exclusion that caused the tumult. The Minister of the Interior, who was apparently responsible for the closing of the park, but was certainly not responsible for the terms of peace, was at once marked out for vengeance, and his house was set on fire. When the troops were called in the crowd cheered them, just as they cheered the Guards on Bloody Sunday in Trafalgar Square. But ball had to be used, with resulting wounds and death; and martial law was proclaimed. The police were specially obnoxious to the crowd, and were accordingly massed, for safety's sake, at central points, leaving the rest of the city unprotected. Rowdies and students saw their chance and took it. Ten Christian churches were burned down and other damage was done. Quite apart from these excesses, it is evident that the peace roused no enthusiasm in Japan. The unexplained fire which blew up and sank Togo's battleship, the *Mikasa*, on the 12th, might have suggested to a classic poet the fancy that the good ship herself, like the hundred Japanese who took their own lives in disgust at the retrocession of Port Arthur after the Chinese War, had vented her wrath at the imperfect garnering of the fruits of her victories by committing *hari kari*. Japan did not seem to recover equanimity until the publication of the Anglo-Japanese Treaty on the 27th. Then the streets of Tokio were illuminated.

The Morocco Episode Closed.

The Peace and the Treaty are probably responsible for the modification of German designs in the western Mediterranean. Most of the month has been spent in diplomatic deliberation between France and Germany over the future of Morocco. But on the day after the Treaty was published, the world was informed that agreement

Oil Wells at Baku.

had been arrived at on all points of dispute. The forthcoming Conference of the Powers which, it is suggested, should meet at Algeciras, will, it appears, have little more to do than endorse with unanimity the various items of the Franco-German agreement. The litigants have practically settled the case out of court, and now simply invite the Conference to pronounce formal judgment accordingly. France seems to have held her own, while allowing Germany to "save her face"; but if the main purpose of the Kaiser in the episode was to win France from her good fellowship with England and to make her his ally—or vassal—then it only remains to be said that his diplomacy has had precisely the opposite effect.

The Austro-Hungarian Quarrel.

While nations which are quite independent politically are peacefully settling their differences, nations which are politically united are approaching the brunt of open conflict. One is reminded of the old story of the quarrelsome husband pointing his quarrelsome wife to the peaceful way cat and dog lay side by side on the hearth, and receiving the irate answer, "Tie their tails together and then see!" Austria and Hungary seem to be pretty much like cat and dog tied together by their tails; and Europe resounds with the noise of their wails and growls. During September events have been marching rapidly on the way from deadlock to separation. Baron Fejervary, who held office as Premier in the teeth of an overwhelming majority in the Hungarian Chamber, resorted to the daring expedient of bringing forward a project for Manhood Suffrage, and, it is whispered, of forcing it into law by Royal authority alone. This measure, it was calculated, would simply swamp the Hungarian minority of the population, who now hold the preponderance of political power: and would bring in a Parliament concerned about other matters than the quarrel with Austria. The Coalition were clearly disconcerted by the move: for a bid of this kind from a Prime Minister is not likely to be forgotten by the as yet unenfranchised multitudes. But the Emperor-King was not prepared to go so far—it is said the Austrian Premier interposed to prevent the unconstitutional act and bade the Baron modify his proposals. The Baron then resigned, and Francis Joseph was left face to face with a majority committed to what he considered an impossible policy. He sent them word that he wished to form from them a Ministry if their leaders would wait upon him with an acceptable programme.

A Curt Interview.

The chiefs of the Coalition accordingly met his Majesty at the Hofburg, Vienna, on the 23rd. Then came a dramatic surprise. Instead of hearing their proposals, the aged monarch read them his terms. These were, in effect, that there must be no meddling with existing arrangements as to the language of command and service in the army, nor as to the army generally or foreign representatives; economic or other revision could only take place by mutual consent between both States; the ordinary estimates, military contingents and supplies must be voted, delegations elected, and a defence bill based on two years' service must be passed. In short, the Hungarian leaders must pledge themselves to do just what they and their supporters were resolved not to do. The monarch then told them they might give their reply to Count Goluchowski. So the curt interview ended. The leaders sent their proposals to the King by a Hungarian Count—Goluchowski is a Pole—and are summoning a national convention for the 3rd inst. to discuss the King's ultimatum. The party of independence are louder than ever. Among a host of considerations which may produce a calmer temper, two may be mentioned: (1) Russia is back in Europe again; and (2) Pan-Germans are waiting their opportunity. To these may be added a third: an uneasy feeling as to the possibilities involved in the suggestion of manhood suffrage. For the world at large the divorce of Austria-Hungary is fraught with such stupendous dangers as to make the temporary satisfaction of Hungarian *amour propre* a very trifling matter. Possibly these factors have influenced the Hungarian leaders to welcome the later explanation of their King that he meant no infraction of Hungary's rights in fiscal negotiations. The Austrian Premier has expressed the hope that "a new form of co-existence" will yet be devised.

The Parting of Norway and Sweden.

Further North an international divorce has been effected by mutual consent and in an amicable spirit. The decree *nisi* has been pronounced by the Swedish and Norwegian delegates, after more than three weeks' conference at Karlstad, and only waits to be made absolute by the two legislatures concerned. The most essential article in this agreement is the first:—

> All differences arising between the two countries which they are unable to settle by direct diplomatic negotiations shall be referred to the permanent Court of Arbitration at the Hague, provided that such differences do not concern the independence, integrity, or vital interests of either country.

This limiting clause is, however, rendered practically innocuous by the provision which follows, and which stipulates that if differences should arise as to whether a question concerns the vital interests of either, this difference also shall be submitted to the decision of the Court at the Hague. Some provision of the kind is needed in every Treaty which exempts "independence, integrity, or vital interests" from arbitration. This article holds good for ten years. The second provides for the establishment of a neutral zone on either side of the frontier between the two countries, never to be used for military purposes, except against a common foe. This arrangement is "perpetual." Recently built Norwegian forts in this zone are to be destroyed. Another convention, to last thirty years, forbids the prohibition of import or export of goods, or the imposition of higher transport dues. The waterways of each country shall be governed by its own laws, but common and vested rights shall be respected in both countries. Nomadic Laplanders are allowed their ancient grazing rights in both countries. All disputes arising on any of these stipulations are to be referred to the Hague Tribunal. Public opinion in both nations seems to accept the terms of the agreement. Only the aged King Oscar allows himself to disclose his grief to the Press. But he, too, regards the decision as inevitable and irrevocable. The elections for the Swedish Second Chamber did not turn on the question of the union, but on proposals of internal reform. It is significant that on the present restricted franchise as many as fourteen Socialists have won seats in the Upper House; but even without their help the Liberals have secured a majority.

The Second Hague Conference.

It will have been seen that the Scandinavian scheme of the future really depends for its efficacy and success upon the Arbitral Court at the Hague. That tribunal, which at first was regarded in many quarters with something like contemptuous tolerance, has proved more and more indispensable to international business. It has become the keystone of the international arch. Already the need has grown urgent for a fuller development of the law which it has to administer. The inter-Parliamentary Conference at Brussels this summer even went so far as to consider an American Senator's proposal to establish at the Hague a legislature representative of the nations of the world, and enacting laws binding upon the constituent peoples. The Conference also received proposals for the formation of a World-Capital at the Dutch metropolis. But while these things belong to a future, nearer perhaps than we now expect, but certainly beyond the range of what is immediately practicable, the proposal of a second Hague Conference, made to President Roosevelt by the inter-Parliamentarians on their trip to St. Louis last year, has already reached the stage of diplomatic actuality. The President, it will be remembered, took the first steps in sounding the Powers, but the project was inevitably postponed till war had ceased. As soon as this hindrance was out of the way, Mr. Roosevelt wisely resigned his initiative into the hands of the prime originator of the whole movement. The Tsar took prompt action. Peace was signed on September 5th. On the 21st of the same month invitations to the Governments to take part in a second Peace Conference were despatched from St. Petersburg.

The Place of Russia in World-Politics.

No more conclusive refutation could have been devised of the idea that Russia's effacement in world-politics must follow her defeats in the Far East. Scarcely have the guns ceased firing in Manchuria than Russia re-enters the forum of the nations as leader in the new world-policy of juridic peace. Just as effectually does this decisive step dispel the absurd illusion that the Tsar is a weak and broken man. His fine gentleness and personal modesty will no longer mislead a bullying world into mistaking the strength of purpose which can, within three weeks of the close of a most disastrous war, and while engaged in the task of reconstructing a colossal empire on the basis of Constitutional freedom, calmly resume the leadership of the planet in the cause of peace. The business of the Conference, when assembled, will, it is stated, be purely of a practical kind, disposing of concrete questions which have arisen in the late war. Sir Thomas Barclay suggests that the assembled Powers might agree on the establishment of neutral zones crossing the oceans, in which merchant-vessels would be exempt from seizure or stoppage in time of war. This may be more difficult than the neutralisation of a canal or of a clearly demarcated stretch of territory. But the more widely the area of neutralisation extends the better. Whatever the business discussed at the Hague, be it small details or great principles, the habit of omninational agreement will be strengthened, and the planet will be made more of a unit. The horrors which have been perpetrated in the Congo international State, which have again been in painful evidence during the month, ought to come up for judgment; and if a crowned head be

proved the criminal, we may gain some hint of the penal measures available by the world's chief court of justice.

One Pound a Head for Runaway Chinamen.

The Congo atrocities are one phase of the Labour question—the question within what limits, and under what conditions, the capitalist may or may not exploit the labourer. The same question has broken out with unusual violence in the southern part of the same continent. The imported Chinese do not seem to enjoy their life in the compounds on the Rand. It is officially admitted that more than 500 "deserted" at one time, and 100 at another. Following on their escape came horrible stories of murder, robbery, rape, and mutilation. The police captured 300 runaways, but there are numbers still at large. In response to vigorous representations from the white inhabitants, the Government has allowed firearms to be issued for purposes of self-defence, has imposed restrictions on the "liberty" of the compound, has authorised private persons to arrest "deserters," and has offered a reward of £1 per head for every captured Chinaman. The South African paradox grows in grim humour every day. The Boers, disarmed lest they should use their rifles against the British garrison, have now been allowed to re-arm to protect themselves from Chinese ruffians introduced by the British. And a British Government offers rewards for the capture of fugitive slaves! For, as the Bishop of Hereford solemnly protests, the forcible detention of these 40,000 Chinese for the purpose of exacting from them labour is practically indistinguishable from slavery. And this is the outcome of a war said to be waged in the cause of freedom, of employment for British labour, and of humanity to the "inferior" races! The increasing import of opium and the extension of the opium habit are other by-products of the blessing of our sway. It is reported that even the mine-owners are growing sick of Chinese labour and are hoping soon to secure black labourers. Lord Selborne, though he perforce supports the Chinese Ordinance, seems to be doing excellent work in fraternising with the Boers, treating them as men and not as inferior creatures, and winning their affection as well as their respect. This new temper will make the coming changes all the easier and safer to accomplish.

An Empire Labour Party.

The Chinaman on the Rand may be the symptom or cause of many crimes, but whatever comes of him, he has rendered one important service. As was remarked in these pages when his arrival was first mooted, he has precipitated into something like effective agreement the scattered Labour parties of the Empire. He joined them all into one vehement and sustained protest against his coming. The obvious consequence of an Empire Labour Party, which we then suggested, is beginning to take shape. The Labour Representation Committee is announced to be sending deputations round the self-governing portions of the British world to promote concerted action between all Labour parties on questions affecting them in common. This is practical Imperialism of the dynamic kind. The problems of the Unemployed, of access to the land, of improved conditions of work, of heightened standard of life, of public insurance against accident, sickness, old age emerge in all self-governed parts of our Empire; and the competition of the coloured labourer near or far is also universal. To get the forces of Labour to keep step on these questions in South Africa, Australia, New Zealand, Canada and the home country would be the work of a statesman of the very first rank; and the army so disciplined would introduce a new era into the history of political strategy. But before these remote possibilities are realised, much might be done by more constructive accord. Steps such as have been acquiesced in by the Labour party in the Australian Commonwealth during the last month, for facilitating immigration and for peopling the empty interior of the island continent, might be quickened and multiplied at the instance of Labour combinations in this country. Even on the much controverted fiscal question Labour may show greater solidarity than has been expected. The Trades Union Congress, which met at Hanley in the beginning of the month and elected Will Steadman, L.C.C., to be its Secretary, reaffirmed its rejection of tariff reform by 1,253,000 votes to 26,000. A little later the Dominion Trades and Labour Congress, meeting at Toronto, unanimously declared its loyalty to the British Trades Union Congress, and condemned Mr. Chamberlain's fiscal policy as certain to impose fresh burdens upon wage-workers both in Canada and in the home country. Poor Mr. Chamberlain!

A Portentous Contest.

In this connection the North Belfast election was a bit of a portent. A Labour candidate, William Walker by name, of the Carpenters and Joiners, opposed Sir Daniel Dixon—head of a great shipowning firm, Irish Privy Councillor, and six times Lord Mayor of Belfast—and came within 474 votes of capturing this once-thought impregnable Tory seat. Mr. Walker is an L.R.C. candidate.

He is opposed to Home Rule, as is, of course, inevitable in an Orange constituency, and was therefore called a Unionist; but he is in no way identified with the Unionist Party. His programme was the Labour programme. More prominently than any other candidate in recent times he has put the demand of Pensions for All in Old Age in the forefront of his platform. He polled 3,966 votes, and is confident of victory at the next General Election. This achievement reveals the strategy of the new Party to which he belongs. The Labour man may be Unionist in Belfast, Home Ruler in Cork; a Disestablishmentarian in Wales, a Church Defender where the clergy are strong; a Tory in Lancashire, a Liberal in Yorkshire; always provided he does not identify himself with either party or wear their party names. But always and everywhere he supports the Labour programme. The obvious result will be that in working-class constituencies conventional and traditional politics will take a back seat, and social questions will occupy the front row on the platform. Mr. Steadman, the new Secretary of the Trades Union Congress, has declared that if the Labour Party and what he calls the Nonconformist Party were to act together, the world would be the gainer. But this common action could only extend to social and economic questions. By concentrating on these questions the new order of politicians will tend to relegate other matters to the category of pious opinions; whereat the old order of politicians is likely to indulge in language that is not pious. It is needless to trace how the same tactics would operate if applied to Imperial politics, if Labour men were free to assume local colour in Australasia, South Africa, Canada, Great Britain, and Ireland, while unswervingly the same in pushing forward certain elementary social demands.

Lord Rosebery on the Curse of Party.

The disgust with both historic parties and the weary barrenness of party warfare which has given rise to the Labour Party, receives vigorous expression from the pen of Lord Rosebery in a preface to Mr. Alfred Stead's new book on Japan. He begins by saying that Japan is the stimulating example and object lesson of efficiency. He goes on:—

We have been so successful in the world without efficiency that in the ordinary course of events we shall be one of the last to strive for it without some outside pressure.

He hopes we may be moved by the example of Japan rather than by sudden catastrophe or obvious decline. An older nation than ours, she scrapped "nearly everything but patriotism," and began again. But one great obstacle to our quest after efficiency is interposed by our party system:—

Politically speaking, we begin and end with party. We are all striving to put ourselves or our leaders into offices or expel other people from them. . . . Do we ever stop to reflect what is the outcome of it all; the net result of millions of words, words, words; of great debates and incessant divisions and spirited autumn campaigns? In truth, exceeding little. "The hungry sheep look up and are not fed."

The fact is that party is an evil, perhaps, even probably, a necessary evil, but still an evil. It is the curse of our country that so many, especially in high places, should worship it as a god. . . . Its operation blights efficiency. It keeps out of employment a great mass of precious ability. . . . Efficiency implies the rule of the fittest; party means the rule of something else not the unfittest, but of the few fit, the accidentally not unfit, and the glaringly unfit.

Lord Rosebery hankers after an arrangement like that in which the Duke of Newcastle exercised the patronage and Pitt did the work of the Government. He bids us learn from Japan "how to obtain efficiency in spite of party." Meantime, charity and religion pioneer the pathway along which collective civic effort will later travel.

General Booth's Scheme.

By a unanimous vote the freedom of the City of London has been conferred upon the veteran leader of the Salvation Army. This action fittingly expresses the wonderful alteration in public opinion. A few years ago the General was scoffed at, slighted, even assaulted; to-day he is recognised as one of the foremost practical reformers of the day, whose opinion is quoted and followed even in Government reports. No sooner had he returned from his remarkable world-trip than he undertook a motor journey—which became a triumphal progress—through Great Britain. On his return to London he announced a great colonisation scheme, and telegraphed to the rulers of our Colonies to know if they would co-operate. A few years ago who would not have laughed at the idea? The scheme embraced all the Colonies, but interest has centred chiefly upon what Australia would do. It is the first time that the States have been definitely challenged to prove whether they really wanted more settlers for their sparsely-peopled land. The General approached Mr. Deakin—who is now Prime Minister of Australia—offering to send 5,000 families to Australia if the Government would co-operate with him. Knowing Australia as he does, General Booth made it very clear that the people he proposed to send would not be drawn from the lowest classes, but from those who, brought up in the country, had drifted into the great cities, where they found it impossible to live. The Army would select and see to all arrangements for sending out the settlers. Mr. Deakin himself

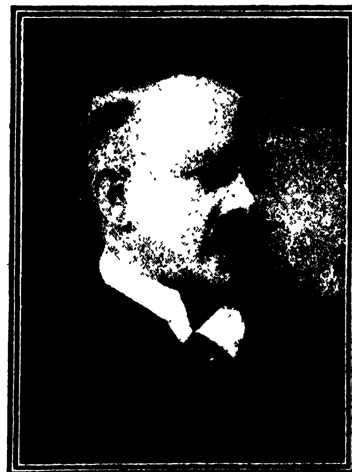
Lord Chelmsford.

(Newly-appointed Governor of Queensland.)



warmly supported the General's scheme, but could do nothing except telegraph on the proposals to the Premiers of the six different States comprising the Commonwealth, for the Federal Government has absolutely no control over the land—that is entirely in the hands of the States. West Australia, Queensland, and New South Wales replied favourably, although many points will have to be settled before a definite arrangement is arrived at.

Australian Immigration.

This scheme of General Booth's brings up the whole question of Australian immigration. It is a hopeful sign that the Deakin Government proposes to modify the clause in the Immigration Restriction Act which excludes everyone coming out under contract, whether from Great Britain or elsewhere, and generally seems inclined to do what it can to attract settlers. But the Commonwealth Government can do very little beyond making it easier for people to get into the country. Once there it is for the States to see that the immigrant can take up land on which to settle. There is plenty of State-owned land in Australia, millions and millions of acres of it. Although plenty of this is good, the greater part is as yet useless owing to inaccessibility or lack of water. The best land has naturally all been taken up long ago by early settlers, but a sane system of resumption is at last being put in force. Every State in Australia declares itself anxious to attract immigrants, but all say that the intending settler should have £200 to £500 capital to carry him over the first year or two. There is no doubt that anyone so situated would do well in Australia if he went the right way about it, but immigration on a large scale would never be by people possessed of so much money. It is to be hoped that General Booth's scheme will be the beginning of better things. If it is the means of bringing about radical changes in the immigration laws, and, still more important, brings order into the chaotic land laws—the despair of statesmen in every State—it will indeed be a boon.

The Rescuer of 60,000 Children.

The policy of emigration on a large scale is enforced not only by General Booth's colossal schemes, but by the life work just ended of Dr. Barnardo. Of his general career this REVIEW, in July, 1896, contained a fairly extensive sketch under the title, which has since become current, of "The Father of Nobody's Children"; and it need not now be repeated. The close of his life came very suddenly; and tributes of profound esteem from all classes of the nation followed him to his grave. The best tribute to his memory is the fact that he rescued 60,000 children, and for that purpose raised over three millions sterling. Dr. Barnardo was a great emigrator. For many years he has been sending out from 1,000 to 1,500 children to Canada, where nearly all of them have done well. We are said to be at the beginning of a great Collectivist era. That may be true, but even if the race does grow more and more, it is not true that "the individual withers." Here is

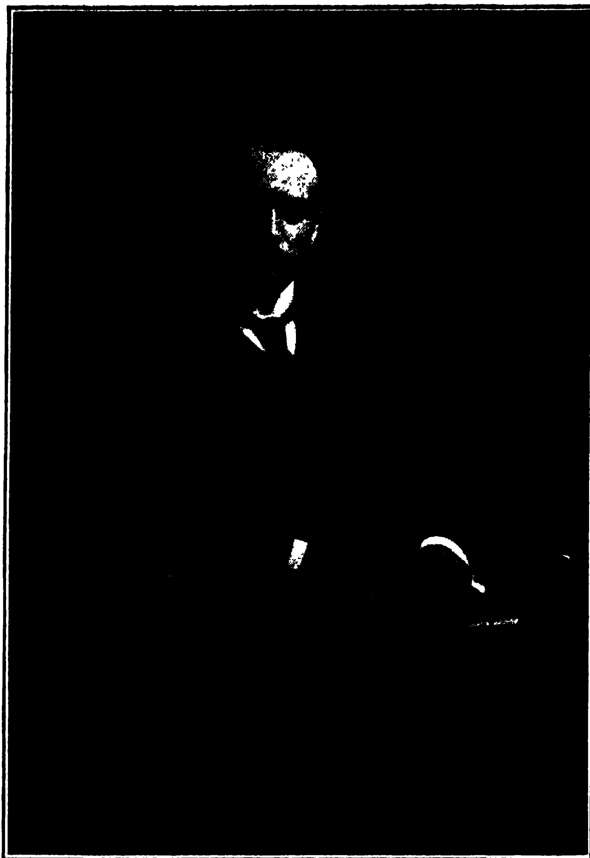
The Funeral of Dr. Barnardo.

The Doctor's empty cab is following behind the coffin.

capitals. South of the border a similar change is the transition from "territory" to "State." Together they cover roughly half a million square miles, and contain as many souls. The inaugural ceremony took place with much rejoicing, for Alberta on the first, and for Saskatchewan on the fourth of the month, when the new Lieutenant-governors were installed by Lord Grey and Sir Wilfrid Laurier, and the first Premiers were invited to form their governments. One feature in the Act creating these new autonomies has aroused fierce controversy. The existing arrangement, whereby Protestants and Catholics are allowed to set up separate denominational schools, to rate themselves for their support, and on that ground to receive exemption from the general school-rate, has been rendered permanent by

General Booth — there was Dr. Barnardo — two individuals, each effecting more "off his own bat" than many a State with all its enginery of taxation and officialdom. Yet possibly their greatest individual achievement has been to show how the community can and ought to carry on the social service to which they have devoted their lives.



The Birth of Two New Provinces.

Of State success in the fostering of immigration perhaps no sounder instance can be shown today than the remarkable development of Western Canada. The last ten years have seen a great tide of new life attracted to these new lands from Europe and the United States. The annual increment of population grew to be as much as 100,000. This growth in numbers has led to the "districts" of Saskatchewan and Alberta being promoted to the dignity of "provinces," with Regina and Edmonton as the respective

Mr. W. T. R. Preston, Dominion Commissioner of Emigration.

· The man chiefly responsible for the great influx of population into Western Canada.

the Federal Government. This compromise with denominationalism, which, be it remembered, was come to by a Liberal Government, was vehemently but ineffectually opposed in the name of religious liberty and provincial autonomy. More may be heard of it shortly, when the "religious difficulty" reappears in the legislative arena of the Home country. Already the Archbishop of Westminster has, *fortiter in re* though *suaviter in modo*, proclaimed to his Catholic compatriots what is politically a holy war against the Liberal Party for threatening to interfere with the newly established privileges of Voluntary Schools.

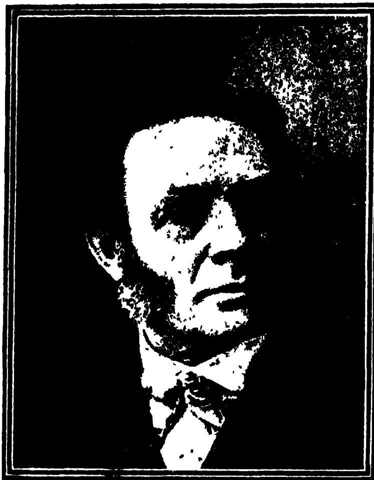
Necessitous Districts and the School Rate.

More immediately serious than the quarrel over religion in the schools is the difficulty of maintaining them out of the local rates. The strain which has reached breaking point in East Ham and in other neighbourhoods where the rateable value is very low compared with the abundance of children, has compelled the Government to announce the appointment of an inter-departmental committee to inquire into the whole question of educational expenditure. This problem of "necessitous districts," affecting, as it does, other questions than those of school administration, seems to demand some modification of the municipal system, which has, after all is said and done, been one of the glories of the English-speaking race. From the Southern States of the great American Republic, famed as it is for its educational enthusiasm, we hear of vast stretches of country without schools of any kind, and of populations growing up illiterate because the community is too poor to stand the requisite outlay. The desire that the starving children in our schools be fed out of public funds if private funds are not forthcoming, has been definitely refused by Lord Londonderry, but for all that will abide as a further complication of the local problem. Many signs point to education being counted more and more as a national rather than a local interest, and to its cost, like the cost of the Army and Navy, being defrayed out of the National Exchequer. The possibility of State-aid displacing rate-aid suggests other possibilities, which might render the religious difficulty with its "passive resisters" less acute.

The Volunteers and King and Country.

Our unfortunate Government has added much to its burden of unpopularity by its seeming disparagement of our Volunteers. This has been a bitter pill to that section of the working classes which have liked the Government for its Jingo tendencies, and have found in Volunteering an innocent outlet for their own taste for militarism. Whatever military experts may think of it, the nation does not relish attacks on its citizen army. With that instinct for the popular feeling which with his Majesty almost amounts to a sixth sense, King Edward has seen it necessary to express his mind

[*F. C. G. in Westminster Gazette.*



A Volunteer Medal.

Which will NOT be issued by Mr. Arnold-Forster to commemorate the Volunteer Review in Edinburgh.

on the subject, constitutionally but unequivocally. The grand review of Scottish Volunteers, which was a principal feature of the King's visit to Edinburgh, offered a suitable occasion, of which his Majesty availed himself right royally, affirming, in message after message, his appreciation of the value of the Volunteers. Members of this much-depreciated force can rest assured that whoever else is against them, "King and country" are on their side.

Appeal from Dictator to King.

This "perfectly correct" intervention of the monarch may suggest to his sorely tried subjects a royal way out of a most grievous political *impasse*. We are at present suffering from a veiled but very real dictatorship unconstitutional in essence, though it may be correct in form. We are governed neither by Parliament nor by Cabinet, but by the will of one man. A most charming and delightful man he is, yet, if we look below forms to the moral fact, as essentially a *tyrannos* as any of those who usurped the supreme authority in an ancient Greek State. It is remarkable how he has gathered into his hands all the power usually supposed to reside in his colleagues and in the legislature. The Cabinet has sunk to be little else than the council of our autocrat. It is rumoured among those who ought to know that even the Anglo-Japanese Treaty, with all its tremendous significance for the nation's future, was settled by the Premier - after consultation, it is true, with Lord Lansdowne—and only communicated as a *fait accompli* to the rest of the Cabinet. At the same time everyone knows, the autocrat himself with the rest, that he is ruling in defiance of the will of the nation. The vastly reduced majority of the Ministerialist at North Belfast and the vastly augmented Liberal majority in the Elgin Burghs are the latest electoral reminders of the national revolt. More and more the wistful looks of the people are being turned to the one constitutional quarter whence relief may come. Even in the matter of securing national help for the unemployed, so stalwart a tribune of the people as Will Crooks appeals past Parliament and Cabinet to the King. And the longing grows in many minds that from the autocrat who tyrannises over the people without overtly violating constitutional forms, the nation may yet be delivered by the interposition of the monarch in harmony with the strictest constitutional correctitude. If the Royal interpretation of the national will, conveyed to Mr. Balfour in unmistakable terms, found that Minister unwilling to assume responsibility for the executive action involved, the constitutional course is obvious. The King can readily find other Ministers to assume the requisite responsibility, and the naked authority of the Crown would never appear. Mr. Balfour has, at other times, enlarged on the growing power of the monarchy. It would be interesting if he were to furnish the most piquant illustration of that tendency.

The Boycott in China and India.

The peoples of Asia are seemingly bent on seizing the opportunity which Peace and Treaty afford for asserting themselves. China has by a single edict abolished the system of examination in the ancient classics as the means of entrance into the Civil Service and substituted tests of modern proficiency. This is revolution at a stroke. It means the Westernising of the Mandarin. It Japanises all Chinese standards right away. Already the new national self-consciousness has declared itself in the attempt to retaliate on the United States for the Chinese exclusion law by a popular boycott of American goods. The Asiatics apparently, if deprived of other arms, mean to use the formidable weapon of the commercial boycott. The partition of Bengal, which has been accomplished, has aroused intensely bitter feeling. In a single week over a hundred meetings of protest have been held, attended by half a million Indians. Other motives may be present of an interested order, but the agitation has taken the form of a solemn resolve to boycott British goods. 50,000 persons assembled at the greatest temple in Bengal swore, "in the holy presence of the goddess Kali," not to buy "anything made by the foreigner which our countrymen can make." Here is protectionism, patriotic and religious, which the Tariff Reform League must envy.

Trade Prospects.

At the opening of the Iron and Steel Institute, the president, Mr. Hadfield, felt able to declare that there was an improvement in trade prospects throughout the world; he thought there were signs of a wave of prosperity for both employers and employed. From over the Atlantic we hear that North-West Canada has yielded an unprecedentedly good harvest; and the reports of the yield from the Western States south of the border are exceptionally favourable. Opportune rains in certain districts of India have lessened the danger of famine. All this is cheering news, but the anticipation in parts of London where the unemployed mostly abound is of a very hard winter. Already the wives of the unemployed are organising in Poplar under the leadership of Mrs. Will Crooks, and the "distress committees" are being formed in the metropolitan boroughs. From far Cape Town comes news of the unemployed waiting on the Prime Minister. Perhaps the gloomiest forecast of all is that attributed to Mr. Rockefeller, who is in one way the central sensorium of the commercial world. He is said to have declared that the present prosperity of American trade would cease in two years, and would be followed by a season of depression intensely severe. During the last bad season three million men were out of work; but in two years' time he predicted the workless would number ten million! If this prophecy comes true, it will be a bad time for Mr. Rockefeller and the millionaire class generally. Perhaps some of his kind might be induced even now, while yet there is time, to save the unemployed of London from demoralisation or desperation. A single stockbroker gave away to charities, at the beginning of September, the sum of £100,000—about twice as much from one person as the whole Mansion House Fund raised last winter for the unemployed.
